This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

THE

ANNUAL CYCLOPÆDIA.

A

ABBOT, Rev. GORHAM DUMMER, LL. D., an eminent scholar and teacher, a son of Rev. Jacob Abbott, and younger brother of the prolific and popular writers, Messrs. Jacob and John S. C. Abbott; born in Brunswick, Me., September 3, 1808; died at South Natick, Mass., August 8, 1874. Mr. Abbot was educated, like his brothers, at Bowdoin College, from which he graduated in 1826, and pursued a partial theological course at Andover with the class which graduated there in 1831. He was next settled as a Congregationalist minister at New Rochelle, N. Y., where he remained for three years, doing at the same time some literary work for the American Tract Society. He then established a female seminary, first in Lafayette Place, then on Washington Square, then the Spingler Institute on Union Square, where he remained for thirteen years, and subsequently remodeled the Townsend Mansion on Fifth Avenue, which for a time he conducted in connection with the Spingler Institute, and finally his school was removed to the Suydam Mansion on Park Avenue. During much of the more than thirty years he was thus engaged in teaching, his seminary occupied high rank not only in New York but throughout the country. Mr. Abbot was not only a skillful and successful teacher, but he was an excellent judge of character and possessed great executive ability. He retired from his seminary in 1869 or 1870 with an ample competence, which subsequent unfortunate investments materially diminished. But Dr. Abbot (he received the honorary degree of LL. D. from Ingham University in 1860) was not a teacher only, he had also achieved a good reputation as an author. His "Family at Home," "Nathan Dickerman," "Mexico and the United States," and other works, were creditable alike to his thorough research and his rhetorical ability. He was greatly interested in Biblical study, and imported at his own expense a set of the plates of the Annotated Paragraph Bible of the London Tract Society, and published several editions of that admirable work, at a low price, to facilitate Biblical instruction.

ADVENTISTS. I. SEVENTH-DAY ADVENTISTS.—The statistical returns of this denomination show it to have fifteen State Conferences, three hundred churches, seventy-five ordained ministers, sixty licentiates, and fifteen thousand members. Meetings of the General Conference were held at Battle Creek, Michigan, in November, 1873, and August, 1874. At the former meeting, November 14, 1873, the treasurer reported his receipts to have been, including the balance on hand at the time of making his previous report in March, 1873, $9,039.63, and his expenditures, $4,879.88; showing a balance still on hand of $4,159.75. A committee, appointed at the previous General Conference for that purpose, reported that several families holding the views of the denomination had been induced to remove to Battle Creek, where the Conference was endeavoring to establish a strong centre of influence. This committee were requested to continue their efforts for another year. Fifty-two thousand dollars had been pledged to the fund for the establishment of a denominational school. Resolutions were adopted by this Conference declaring the denomination to be intrusted with two great truths, which it was its duty to set before men, viz.: "The doctrine of the near advent of Christ, and that of the commandments of God and the holy Sabbath;" expressing regret at the opposition of many of the Advent people "to the Sabbath and the law of God;" but disavowing the existence toward them of a spirit of contention or bitterness, and uttering the hope "that with many of them a more candid spirit toward these great truths might yet prevail." The Seventh-Day Baptists were recognized as "a

which God has highly honored in making known just before the depositaries of his [illegible] and the duties which [illegible] as far as practicable, to cooperate with them in leading men to the conscientious observance of the commandments of God." A quickening was noticed from both the health and tract reforms, and the people were enjoined "to arouse and make these subjects matters of conscience." Increased confidence was expressed in the gift of the "spirit of prophecy which God has so mercifully placed in the third angel's message;" the endeavor was resolved upon "to maintain an affectionate regard for its presence and its teachings;" and the Executive Committee were requested to prepare, or cause to be prepared, a work giving the reasons for believing the testimonies of Sister White to be the teachings of the Holy Spirit. The Executive Committee were advised to take steps for the speedy publication of tracts and periodicals in other languages. Measures were taken to secure the consolidation of the systems of the Tract and Missionary Societies by some general organization, and for the formation of an Educational Society.

The meeting of the General Conference in August was held in connection with the annual camp-meeting of the denomination, which continued from the 6th to the 17th of that month. The organization of the General Conference and Missionary Society was completed. During the year about one-half of the local Tract and Missionary Societies connected with the General Conference showed that sixteen million pages of tracts had been distributed and sold during the year. Elder J. N. Andrews was commissioned as a missionary to Europe, with instructions to look after the Swiss Mission and other points of interest on the Continent. Provision was reported in the efforts to establish a denominational school. The school had been opened, under the care of Mr. S. Brownsberger, a graduate of the Michigan University, in the latter building, for its use was nearly completed, on a lot of twelve acres extent. The report of the Seventh-Day Adventist Publishing Association, made at its fourteenth annual meeting, November 17, 1873, showed the amount of its assets to have been then $[illegible],707.21, and its debts $67,319.12, leaving $[illegible] as the value of its net assets.

THE ADVENT CAMP-MEETINGS AND CONFERENCES.—The Michigan Advent Camp-meeting of the Advent Christian Association was held at Springfield, Massachusetts, August 6th to 9th. A meeting of ministers was held just before the camp-meeting, to consult on topics involving the interests of the work of the Association "in spreading the knowledge of the speedy coming of the Lord," at which a congregational form of government was devised. Each organized church, with its members and officers, will remain an independent body, but the formation was recommended of quarterly, State, and General Conferences, as bodies for the more perfect [illegible] harmonious and efficient labor [illegible] the country."

The annual meeting of the [illegible] vent Missionary Society was held [illegible] tion with the camp-meeting, [illegible] treasurer reported his total [illegible] been $5,113.74, and his [illegible] $4,592.96. This Society was [illegible] 1865; since which, to the time [illegible] meeting, it had received and [illegible] work $28,000.

III. EVANGELICAL ADVENTISTS.—The American Evangelical Advent Conference [illegible] at the Hebron Camp-ground, [illegible] Massachusetts, August 20th [illegible] Committee on Worship reported [illegible] service. The Committee on Systematic Benevolence reported that the attendance of the previous year had been [illegible] out, and that preparations had been [illegible] continue the presentation of their [illegible] Committee on Ordinations reported [illegible] cases for ordination had been [illegible]

The annual meeting of the American Millennial Association, which has charge of the [illegible] post and publishing interests of the [illegible] tion, was held at Rutherfordville, [illegible] The treasurer reported his report [illegible] year ending July 1, 1874, to have [illegible] ing the balance and cash on hand [illegible] ginning of the year, $7,697.10, and [illegible] ditures, $6,689.01.

IV. LEAGUE AND ADVENT UNION.—The annual camp-meeting of the American League of the Advent Union was held at Springfield, Massachusetts, beginning August 1st. The [illegible] niversary of the Union was held [illegible] Leonard C. Thorne, of New York, [illegible] president. The treasurer reported [illegible] for the year just ended to have [illegible] 87, and his expenses $4,484.81; [illegible] was also due him, on the previous [illegible] count, of $1,297.32. The sum of [illegible] pledged on an effort to raise $[illegible] purposes of the Union for the [illegible] be devoted to the publication of [illegible] pamphlets, and books.

AFGHANISTAN, a country in Central Asia, bounded north by Toorkistan, east by India, south by Beloochistan, and west by Persia. In an official correspondence between the cabinets of St. Petersburg and London, especially in the dispatches of Lord Granville, dated October 17, 1873, and of Prince Gortschakoff, dated January 31, 1874, Russia and England agreed upon the regulation of the northern frontier of Afghanistan. According to this new agreement, Afghanistan is [illegible] to embrace—1. Badakshan with the [illegible] district, Wakhan, from Shignan in the [illegible] far as the confluence of the river [illegible] with the Oxus (Amu-Darya), which [illegible] the northern frontier of this province [illegible] entire extent; 2. Afghan Turkistan, [illegible]

embraces the districts of Kunduz, Khulum, and Balkh, and is bounded north by the Oxus in its course from the mouth of the Koktcha as far as Khodja Sala, a post-station on the road from Bokhara to Balkh. The Emir of Afghanistan can claim nothing on the left bank of the Oxus below Khodja Sala; 3. The interior districts of Akhshee, Siripul, Maymene, Shibergan, and Andjai, the latter of which is the extreme possession of Afghanistan in the northwest, while the desert beyond it belongs to the independent Toorkoman tribes; 4. The west frontier of Afghanistan between the territories of Herat and the Persian province of Khorassan has not undergone any change.

Since the new regulation of the frontier, the area of Afghanistan is estimated at 278,647 square miles. The population is estimated at upward of 4,000,000. The population of the provinces into which Afghanistan is divided is given by a Russian military periodical as follows: Caboolistan, 900,000; Hasareh, 195,000; Khorassan with Herat, 1,654,000; Seistan, 280,000; Kunduz, 400,000; Khulum, 300,000; Balkh, 64,000; Andjai and Shibergan, 60,000; Aktche, 10,000; Maymene, 100,000; in all, 3,963,000. In this report, no statement is made of the population of the provinces of Badakshan and Wakhan. The population of the former is estimated by E. Schlagintweit from 100,000 to 150,000. To the territory of Maymene, Vámbéry now assigns a population of 300,000.

Afghanistan was again, in 1874, the scene of serious dynastic difficulties, which attracted great attention from the fact that both Great Britain and Russia appeared, as usual, to take a profound interest in them, and to use them with a view to establishing their ascendency in this region. Russian and English accounts of these troubles widely differ, and in many cases it is at present impossible to ascertain the truth. The recent disturbances arose in consequence of the appointment of Abdallah Jan, the younger son of Shere Ali, the present ruler, as heir-apparent to the throne, with the exclusion of Yakoob Khan, the eldest son, who for some time had been governor of the important province of Herat. The latter at once prepared to enforce his claims to the throne by a resort to arms, and to reopen the civil war among the members of the dynastic family, from which the country has already suffered so much. As all the living members of the ruling family who had taken a part in the former civil wars of the country may be expected to appear again on the scene, a brief retrospect of the former family quarrels will help to elucidate the present complication. Shere Ali, the present ruler of Afghanistan, had been preferred by his father, Dost Mohammed, in the same manner in which he now favors his youngest son. When, on the death of his father, he assumed the reins of the government, his elder brothers, Afzool and Azim, at once rose against him. Afzool placed himself at the head of the rebellion in Balkh, while Azim fought in the east, and finally a younger brother, Emin, raised the standard of revolt in Candahar. The latter was killed in the battle of Kelat-il-Ghilzie, in which Shere Ali also lost his beloved eldest son. Soon the sons of the rivals took a prominent part in the war. The eldest surviving son of Shere Ali, Ibrahim, is a weak and insignificant man, while the second son, Yakoob, who, when a boy, had detected the disguise in which the Hungarian traveler, Vámbéry, traversed these countries, soon gained great renown for his sagacity and bravery. Rhaman Khan, the oldest son of Afzool, is likewise a brave warrior, and the two cousins fought many hotly-contested battles against each other. After many vicissitudes, Afzool Khan was overtaken by death, while advancing at the head of his victorious columns. His brother Azim, who by his misgovernment had become extremely unpopular, died soon after. The brave Rhaman, after several crushing defeats, was driven by Yakoob Khan out of the country, and Shere Ali recognized as ruler of the Afghans. But, although Shere Ali was indebted for the throne to his son Yakoob, he soon began to favor his younger son, Abdallah Jan (born in 1862), the child of his favorite wife. This preference was shown in an ostentatious manner when Shere Ali, in 1869, had an interview with the Viceroy of India. Lord Mayo by no means encouraged the plan, and, when Yakoob Khan attempted to secure his right of succession, he used his whole influence to bring about a reconciliation between Shere Ali and his disaffected son. The latter was appointed governor of the province of Herat, and until 1874 the relation between father and son continued of a peaceable nature. It was, however, expected all the time that, whenever Shere Ali should officially proclaim Abdallah Jan as his presumptive successor, Yakoob Khan would again rise in rebellion, and that in such a case Rhaman Khan would also appear on the scene. As Rhaman Khan had closely allied himself with the Russians, the British statesmen have looked forward with considerable anxiety to the time when civil war might once more reign in Afghanistan.

The province of Herat is situated in the northwestern corner of Afghanistan, and is bounded by Persia, Khiva, and Bokhara. The great distance from the capital of Afghanistan made it possible for Yakoob Khan, not only to be virtually the independent ruler, but also to prepare for another war against his father. He appears to have had secret diplomatic correspondence with the governments of the neighboring countries, but the character of the negotiations is not yet fully known. He is believed, however, to have courted the friendship of Russia, which, according to the papers of British India, has of late built two roads leading to the frontier of Afghanistan — one from Urgentsh to Herat, and the other from Urgentsh to Meshid.

The policy of the British authorities with regard to the civil troubles in Afghanistan, if we are to believe their official professions, has been one of non-intervention. They claim to have been willing, all the time, to recognize the victor, whoever he might be. During the wars following the death of Dost Mohammed, both Shere Ali and Afzool Khan received letters from Lord Lawrence, who, in one of those to Afzool Khan, expressly declared that as long as Shere Ali held possession of Herat, and desired friendly relations with England, he would recognize him as Emir of Herat, while at the same time he felt no hesitation in recognizing Afzool Khan as Emir of Cabool and Candahar as long as he held those places. Toward the end of the civil war between Shere Ali and his rivals, the Government of India appears, however, to have taken a very active interest in the success of Shere Ali. After the battle of Mainmanah, in 1868, and after the victorious entrance of Shere Ali into Cabool, the Indian Government sent him £60,000 sterling, to enable him to fully conquer his opponents. At the durbah of Amballah, Lord Mayo is reported to have promised to Shere Ali an annual subsidy of £120,000. From the English Blue-Book it appears that in November, 1869, Prince Gortchakoff remarked to the British embassador in St. Petersburg that the Indian Government was supporting the Emir of Afghanistan with regular subsidies. In 1873, shortly before the proclamation of Abdallah Jan as heir to the throne, a Mohammedan was sent by the Government of India as special envoy to Cabool, and it was surmised that he was to assure Shere Ali of the approval of the proposed change in the succession by the viceroy, and to promise him support in case of war.

In September, the hostilities between Shere Ali and Yakoob Khan actually commenced. The latter was supposed to have the entire sympathy not only of Russia, but Persia, which has been hankering after Herat ever since she lost it. In November, a report was received in Calcutta that Yakoob Khan had been treacherously arrested and imprisoned in his own capital. He was charged with the design to surrender Herat to the Persians. It was expected that this arrest would be followed by serious complications.

AFRICA. The growth of Egypt stands from year to year more conspicuously forth as the prominent feature of the recent history of Africa. A new expedition under Colonel Gordon has been sent into the regions of Central Africa, which in 1873 were explored by Sir Samuel Baker, and it now appears more probable than ever that immense tracts of land extending southward to the equator may soon be permanently incorporated with Egypt. A war with the Sultan of Darfur resulted in a complete victory for Egypt, and may lead to the annexation of this country also to the dominions of the Khédive. While thus in point of extent the country will probably become one of the largest empires of the world, great reforms continue to be introduced in all the branches of public administration. (*See* EGYPT.)

The war of England against the Ashantees, which began in 1873, was a brilliant success. One of the worst native governments of Africa was thoroughly humbled, another powerful blow dealt to the slave-trade, and a new road paved for the steady progress of civilization in Western Africa. (*See* ASHANTEE.)

A war between the English colony of Natal and the Zulus, under their chief, Langalobele, which also began in 1873, ended early in 1874, by the capture of the Zulu chief, who on February 9th was sentenced to banishment for life. An appeal against this sentence was moved by Bishop Colenso, on the complaint of several members of the tribe, and was allowed.

The new Emperor of Morocco, though just, is reported to be severe and energetic. Toward the close of the year he set out on an expedition to punish several rebellious tribes. The imposition of a gate-tax at Mogador was considered by the foreign consuls of that town as a violation of the commercial convention between Morocco, Great Britain, and Spain. (*See* MOROCCO.)

The trade of the eastern coast of Africa, which is chiefly in the hands of East Indians, has assumed much larger dimensions since the opening of the Suez Canal. In January, 1873, a monthly steamship-line was opened between Aden, Zanzibar, and Madagascar; the vessels belong to the British Indian Steamship Company. The revenue of the company in December, 1873, from goods shipped from Zanzibar to Aden, was about $20,000; and their vessels were not large enough to satisfy all demands.

The diamond-fields in South Africa continue to attract large crowds of natives from the interior, who find it easy to be employed by the diggers, and who returning to their homes diffuse among the native population a general acquaintance with the progress of civilization. New extensive gold-fields were discovered in September on the Blyde River.

The new British possession in South Africa, Griqualand West, which on October 27, 1871, was annexed to the Cape Colony, has been organized by a royal decree, dated February 7, 1873, and proclaimed by the governor of the Cape Colony, on July 5, 1873. It has received the official name, Province of Griqualand West, and will have a lieutenant-governor, and a Legislative Assembly, consisting of four members, elected by the three districts, Kimberleg (2), Barkly (1), and Hag (1), and four members appointed by the crown.

The total area of Africa is now estimated (*see* Behm and Wagner, "Bevölkerung der Erde," II., Gotha, 1874) at 11,555,855 square miles; population, 203,300,000. This includes the island of Madeira and the Canary Islands, which often are considered a part of Europe.

The following table gives the population of the large geographical divisions of Africa, and their political subdivisions:

GEOGRAPHICAL DIVISIONS.	Population of Divisions.	Population of Subdivisions.
NORTHERN AFRICA	15,260,000	
Morocco		6,000,000
Algeria		2,414,218
Tunis		2,000,000
Tripoli and Fezzan		848,000
Barca		302,000
Sahara		3,700,000
NORTHEASTERN AFRICA	24,500,000	
Egypt		8,400,000
Territory of the Kabdi		68,000
Territory of the Coomana		150,000
Abyssinia		3,000,000
Gallas		7,000,000
Soumali (peninsula)		3,000,000
Countries east of the White Nile		7,840,000
Mohammedan countries of the Middle Soudan	33,800,000	
Western Soudan	17,600,000	
Upper Guinea	26,000,000

Madagascar, and adjacent islands		4,000,000
Other islands in the Indian Ocean		813,000
Total, Africa	208,300,000	

AGRICULTURE. The year 1874 was not especially favorable to the husbandman, but one of the great crops being above the average, and the protracted drought of the months of July and August, and the first half of December, having seriously reduced the crops of corn and fodder, as well as the root-crops and the pasturage, throughout the States of the Atlantic slope. In the States beyond the Mississippi, over a tract nearly 600 miles in length from north to south, and varying in width from about 100 miles at the north to 250 miles in Southern Kansas, the grasshoppers, or more properly the locusts, made almost a clean sweep of every green thing, in some cases making a partial devastation at first, and then a second invasion a few weeks later, and destroying grass, corn, the later cereals, and buckwheat, potatoes, beets, and indeed all vegetable crops not harvested. It has usually been the fact that, when our crops were not excessive, there has been a large export demand, produced by short crops in Great Britain, France, Portugal, etc., so that a crop below the average has often proved as profitable as a larger one in consequence of the higher prices obtained. But this has not been the case the past year. The wheat and barley crop in Great Britain was exceptionally large, and that of France much better than for many years previous, and consequently the export demand which in the year ending June 30, 1874, was 60,551,181 bushels for Great Britain alone, and 71,039,928 for all foreign countries, has fallen off heavily for the new crop, and every effort to increase shipments has resulted in a reduction of price both in England and the United States, which has rendered the export nearly or quite unremunerative. The export of barley and oats, never very large, has been decreased from the same causes, while the crop of Indian-corn was so much below the average, and much of it so poor in quality, that there was comparatively little to send abroad; and our export, which in 1872–'73 was more than 88,500,000 bushels, or about one-thirtieth of the crop, will not probably in 1874–'75 reach 20,000,000 bushels. The export demand for cotton was insufficient, even with the diminished crop, to maintain the price, and there was a steady reduction in values, even in the old crop. The tobacco-crop was, in the States most largely engaged in its production, almost an entire failure. Still, so wide is the extent of our territory, and so varied the climate, soil, and productions of different sections, that the losses and deficiencies of one section are made up by the more ample productions of another, and though there may be somewhat less to export, or a diminished demand for our products from abroad, a general famine is hardly possible. There is in one part or another of our country "bread enough and to spare." The lateness of the autumn in this as in the preceding year was very favorable to the gathering of cotton, corn, and the fruits and root-crops generally.

The *Wheat* crop was in condition and yield per acre about 2 per cent. below that of the previous year, but the increased acreage, amounting to 7 per cent., makes the entire crop somewhat larger than that of 1873. It may, we think, be safely estimated at 305,000,000 bushels, being a little larger than in any previous year. On the Pacific coast, as well as in portions of the Mississippi Valley, the yield was considerably above the average, but the great wheat-growing States of Indiana, Illinois, Wisconsin, Minnesota, Iowa, and Kansas, produced not quite their average amount.

Indian Corn.—This crop was materially injured by the drought of July and August in all the States which produce the largest quantities of it. The number of acres planted was considerably in excess of 1873, but the production was decidedly less to the acre even where it was not destroyed by the grasshoppers. The Agricultural Department early in the season estimated the yield at 812,000,000 bushels, but the favorable weather in September and October secured the ripening of the

[illegible] 354,000,000 bushels were [illegible] crop of 1873, which was not [illegible] to exceed 370,000,000 bushels, actually [illegible] was to be 330,000,000.

[illegible] crop is about 8 per cent. below [illegible] average, but probably does not differ [illegible] widely from that of last year. We should [illegible] it at 14,000,000 bushels, or 90 per cent. of [illegible] average crop in quality, is larger [illegible] than usual, having been devoted to [illegible]. In New England and in the Pacific coast the yield was very large and the quality excellent. In the central and south-western States, drought, rust, the chinch-bug, and the grasshoppers have done extensive injury to [illegible]. The estimate of the Agricultural Department is 230,000,000 bushels, which is [illegible] per cent. below the yield.

[illegible] crop, though early in the season [illegible] slightly below the average, has [illegible] [illegible], and will probably [illegible] amount than in any previous year. [illegible] Department estimates it (probably [illegible] below the truth) at 32,704,000 [illegible], or 7 per cent. advance on the largest [illegible].

[illegible] is never a very large crop, and is [illegible] States. In New England it [illegible] average crop; in the Middle States [illegible] short; in the Northwest its [illegible], and in portions [illegible] the grasshoppers destroyed it. It is [illegible], in the Southern States, in West Virginia, Tennessee, and very slightly in North Carolina, and in these it was a fair crop. It is seldom grown for two successive years on the same land. The yield may possibly reach [illegible],000 bushels.

Potatoes, (Solanum tuberosum).—In New England the crop was more than an average. [illegible] drought, Colorado beetles, chinch-bugs, it is said, to be *S. canthoris*, and, above all, the grasshoppers, made sad work with the crop, except on the Pacific coast, where it was an average crop. The rot was not as severe as usual. The crop is estimated at 100,000,000 bushels. The Colorado beetle (the ten-lined [illegible]) has appeared in considerable numbers east of the Mississippi, and a few have been seen in Pennsylvania, New Jersey, and New York.

Sweet Potatoes (Batatas edulis).—Owing to the drought, the crop was from 8 to 10 per cent. below the average. It probably reached 22,000,000 bushels.

Hay.—The protracted drought materially [illegible] the pasturage, and rendered the early [illegible] necessary, and prevented in most sections the cutting of the aftermath. [illegible] crop, properly so called, was not affected, and the [illegible] was, for the most part, excellent. The Agricultural Department estimate the crop at [illegible],000 tons; and later reports may show that it exceeded this amount. On the Pacific [illegible] [illegible] [illegible]

remains that the land which will not yield in average years at least half a bale (200 lbs.) to the acre is either very poor land or very badly tilled.

STATES.	Average Number of Pounds of Ginned Cotton per Acre. 1870.	Average Number of Pounds of Ginned Cotton per Acre. 1871.	Average Number of Pounds of Ginned Cotton per Acre. 1872.	Average Number of Pounds of Ginned Cotton per Acre. 1874.	REMARKS.
Virginia.....	165	172	...	163	Crop very uniform, but lands poor.
North Carolina...	175	143	150	172	Cotton-lands generally sandy.
South Carolina...	170	117	188	194	Some improvement. Increased manuring.
Georgia.....	178	120	184	136	Best lands not sown to cotton, and little or no manure.
Florida.....	165	85	126	100	Generally sandy land, and no manure.
Alabama.....	155	130	151	129	Lands unproductive from constant cropping.
Mississippi	205	150	172	139	Gradual deterioration of cotton-lands.
Louisiana.....	252	150	180	178	Rich soil, but imperfect tillage.
Texas.....	275	180	221	170	Highest average in the South.
Arkansas.....	255	215	195	108	Rich lands, but poor tillage.
Tennessee.....	190	180	190	143	Poorer lands, but better tillage.

Sugar-Cane.—The sugar-crop was unusually good in Louisiana, Texas, and Southern Alabama, which are the areas of the largest production, and very nearly an average in Georgia, Florida, and Mississippi. A little is grown in Arkansas and Tennessee, but it is an uncertain crop in both States. The yield is fully 175,000 hogsheads and perhaps more. *Sorghum* is reported as a crop in twenty-one States, and in those States where it is most largely grown the yield was much above the average. It is mainly used in the form of syrup or molasses, and the production must have been somewhat more than 16,000,000 gallons. *Beet-Sugar* is becoming a production of considerable importance in California, and the year was unusually favorable for the manufacture of sugar from the *maple*, an industry which is largely followed in the Eastern and Middle States.

Flax.—Returns from only fifteen States are given, but of these those most largely engaged in its culture, Indiana, Wisconsin, Minnesota, Iowa, and Kansas, all report an excess over last year's abundant crop, while the other States are nearly up to last year's production, except Kentucky, where, for some cause, there is only two-thirds of a crop. The product is probably not far from 28,000,000 lbs.

Peas and Beans were not quite an average crop, though probably amounting to nearly 15,500,000 bushels.

There are no satisfactory returns of the *Rice* crop. It is cultivated as a crop only in North and South Carolina, Georgia, and Florida, and perhaps to a small extent in the Gulf States. The usual production is now about 88,000,000 pounds.

Fruits.—In all the Northern, most of the Western, and all the States on the Pacific coast, the year was an exceptionally fine one for fruit. In the Southern States the protracted drought, and in some sections insect destroyers, impaired the crop from 10 to 30 per cent. The grape is becoming one of our most important fruits, not only for table-use, but for the manufacture of wine and brandy, which is every year assuming a greater magnitude, and within the next decade will probably diminish our importation of these articles to a very small amount. Both in quality and quantity the grapes of 1874 in the principal wine-growing districts, East and West, were greatly superior to ordinary vintages. In this crop California takes the lead, having now nearly 100,000,000 vines in full bearing, including all the best species and varieties of Europe, as well as all the native and cultivated varieties of all parts of our own country. The *Apple* crop was very abundant throughout a part of the Eastern, and all of the Middle States, most of the Northwestern, and all of the Pacific States. In the Southern and Southwestern, as well as in the Northeastern States, it was less than an average. The quality of the fruit was not, however, equal to the quantity, the winter apples rotting early and fast. *Pears* were much below the average in quantity, except in New England and on the Pacific coast, but for the most part the quality was good. The *Peach* crop was below the average, especially in Delaware and Maryland, but the quality of the fruit was generally very good. The Northwestern and the Pacific peach districts did not yield so largely as in some seasons. The early small fruits, *strawberries*, *raspberries*, *blackberries*, and *cherries*, were very plentiful, strawberries especially being lower in the great markets than for several years.

On the next page we give, instead of our usual table of statistics of the number and value of live stock in each State and the Territories, at the beginning of 1875 a table showing the aggregate numbers, prices, and total values of each kind of live-stock for the whole country for the ten years 1866–1875 inclusive.

In the ANNUAL CYCLOPÆDIA for 1873 attention was called to the diminishing yield of wheat per acre, even in our newest wheat-growing States, as an alarming fact, and the experiments of an English farmer, Mr. J. B. Lawes, on the beneficial effects of different kinds of manures, experiments running through a series of years, were detailed as demonstrating that there was no necessity for such a diminution. We present this year another series of experiments, approaching the subject in an entirely different direction, that of the quality and quantity of the seed sown. Major

F. F. Hallett, of Manor-Farm, Kemptown, England, has been for more than twenty years a highly-intelligent, practical wheat-grower, and has devoted much time and study to the nature and habits of the wheat-plant and the best means of developing it. He found that where wheat had the opportunity (from sparse or thin sowing) to expand, "tiller," or "stool," i. e., to spread out its joints and eventually its stems from a single grain, it always availed itself of the opportunity, and that each of these offshoots produced a stem, and an ear or head of wheat. He discovered further that by a proper selection of grains for sowing, and then planting (by drill) at a sufficient distance apart, this tillering and spreading process could be greatly increased, so that he exhibited at the Exeter meeting of the British Association a plant of wheat from a single grain, which had 94 stems, each crowned with its ear of wheat; a plant of barley from a single grain with 110 stems, and a plant of oats from a single grain with 87 stems. These results were obtained, not by the use of any manure or by any new process of tillage, but by the following means: His seed was selected on the following plan: choosing the best and most productive plant, of either wheat, barley, or oats, viz., the one which had tillered the most and formed the best heads, he planted the grains from it in rows, twelve inches apart every way, and so arranged that the grains from each head or ear should be in a row by themselves. At harvest he selected from these, after careful study and comparison, the finest plant—that which had tillered most and produced the finest, largest, and fullest ears. This process he repeated for four or more years, the improvement being at first rapid, but after a series of years having apparently reached its limit. The following table shows the results of four or five years' repetition of this process:

* This includes milch-cows, the enumeration not having been made separately.

Table showing the Importance of each Additional Generation of Selection.

YEAR.	EARS.	Length.	Containing	No. of ears on finest stool.
		Inches.	Grains.	
1857...	Original ear.....	4¾	47	..
1858...	Finest ear.....	6¼	79	10
1859...	Finest ear.....	7¾	91	22
1860...	Ears imperfect from wet season.....	...	...	39
1861...	Finest ear.....	8¾	123	52

Thus, by means of repeated selection alone, the length of the ears has been doubled, their contents nearly trebled, and the "tillering" power of the seed increased fivefold. The wheat used for this series of experiments was the original red; experiments subsequently made with Hunter's white wheat increased the number of grains from 60 in the original ear to 124 in the fourth year's best ear; with the Victoria white, from 60 to 114; with the Golden Drop, from 32 to 96 grains; with Grace's white, still more remarkable results. Major Hallett thus gives his seed-wheat a "pedigree," as he terms it, growing always from the best and producing the wonderful results stated above and the more wonderful ones which follow. He deduces from his observations and experiments the following laws of the development of cereals:

1. Every fully-developed plant, whether of wheat, oats, or barley, presents an ear superior in productive power to any of the rest on that plant.

2. Every such plant contains one grain, which upon trial proves more productive than any other.

3. The best grain in a given plant is found in its best ear.

4. The superior vigor of this grain is transmissible in different degrees to its progeny.

5. By repeated careful selection the superiority is accumulated.

6. The improvement, which is at first rapid, gradually, after a long series of years, is dimin-

ished in amount, and eventually so far arrested that, practically speaking, a limit to improvement in the desired quality is reached.

7. By still continuing to select, the improvement is maintained, and practically a fixed type is the result.

But there are two other conditions necessary to the highest success in these experiments, viz., that the grains should be sown sparingly, in order to give ample room for tillering or spreading; and uniformly, that there may be no alternation of crowded and thin patches; and that it should be sown early, that it may have the advantage of the autumnal growth, and spread out its stools ready for early growth in the spring.

The yield of wheat per acre in England, in favorable seasons, is much greater than with us, averaging, Major Hallett says, 34 bushels; and he has taken the pains to count the average number of heads on ears per acre, which he states to vary very slightly from 1,000,000. Of ordinary No. 1 wheat there are 700,000 grains to the bushel. Of the "pedigree" wheat there are, in consequence of its superior size, but 460,000 grains to the bushel. The usual practice in England has been to sow from a bushel to two bushels of wheat to the acre. Major Hallett asserts, from many years' experience and careful counting and manuring, that five pints of his pedigree wheat, drilled in by single grains 12 by 12 inches apart, to the acre, will produce more than 1,000,000 heads or ears to the acre; and that from these ears, in consequence of their great yield and size, the product will be not less than 70 bushels to the acre of the very best wheat, and more than this quantity if the wheat is sown the last of August or the first of September, and is hoed or cultivated when it first comes up, to prevent its being smothered by weeds. Major Hallett states that in average seasons (in England) wheat sown by or before September 1st comes up in 7 days; on or about October 1st, in 14 days; on or about November 1st, in 21 days; and on or about December 1st, in not less than 28 days. The earlier the sowing the smaller the quantity of seed required, the more perfect and extensive the tillering, the better the resistance to the winter, and the earlier and larger the crop. From five pints to six or eight quarts are ample seed if sown on the last of August or the first of September; from the middle to the end of September three or four quarts should be added for each week's delay. He claims that by his method there will be a great saving of seed, amounting, if it were carried out in England, to 8,000,000 bushels of wheat, or one-eighth of the largest amount ever imported from this country; a great increase of production, amounting to a doubling of their present crop, which would effectually prevent any necessity for importation of grain; the quality of the wheat would be improved; the power to withstand frosts and injurious insects would be greatly increased; the farm-work would be materially forwarded; the crop would never be "winter-proud;" the harvest would be from two to three weeks earlier, and would be far less liable to be affected by unfavorable seasons in its ripening. Of course, comparatively few of our farmers can afford the time or trouble to obtain their seed-wheat, barley, or oats, on the "pedigree-plan," but in every wheat-growing district there are one or two who will be willing to raise seed-wheat or other grains on this principle, and who will in four or five years have a supply, not only for themselves but for their neighbors; and meanwhile, the Agricultural Department is procuring a small supply to test it; but the early sowing and the use of the drill, planting the single grains far enough apart to permit them to tiller well, and also the hoeing or cultivating, is possible for every wheat-grower. The same principle of selection, too, may be tried here, as it has been in England, with root-crops, hops, strawberries, cotton, rice, etc.

We are sometimes met with the objection from the farmer, that it is of no use to increase the production of grains, corn, cotton, etc., because that the market being glutted, the price falls so low that production is unprofitable, and the farmer is the poorer for his great crop. There is some truth in this view, but not in the inference those who take it would draw from it. In favorable years, cotton, wheat, Indian-corn, and perhaps some other articles, are produced beyond the demand for exportation, or perhaps the existing home demand; but the remedies for this condition do not lie in restricting the production, but in enlarging the market; not in half-tilling 200 acres to get twelve or fifteen bushels of wheat or 125 pounds of cotton to the acre, but in such thorough and careful cultivation of forty or fifty acres as shall bring from fifty to seventy bushels of wheat or 500 pounds of cotton to the acre, and devoting the rest of the land to other and needed crops; not selling cotton at whatever price it will bring, to buy corn for fattening hogs, but growing the corn; not buying hay, but raising it; not buying sugar, or cloth, or linen, but making them, or at least growing the sorghum, keeping the sheep, and raising the flax, of which they are made. The remedy for this difficulty of overproduction is moreover in great part removed by creating a home-market; wherever manufactures prosper, there a permanent market for agricultural produce, at good prices, is established; one infinitely better than a foreign one, because it is not dependent on so many chances of failure. On this subject the words of Mr. J. R. Dodge, Statistician of the Agricultural Department, in an address delivered before the National Agricultural Congress in May, 1874, are worthy of consideration, and are to the following effect:

When we consider that less than a third of the area of the States, and less than a fifth of the entire

domain of the United States, is mapped into farms, and remember that of this farm-area only one-fourth is tilled or mowed; and when we further reflect that the average yield per acre could be doubled if the many could be brought up to the plane of the few in the practice of intensive culture, then we begin to realize what numbers our country is capable of feeding, and what waste of toil and effort comes from neglect of the economic lessons taught by the statistics of scientific agriculture.

We now know that our wheat occupies an area less than the surface of South Carolina; and, if the yield should equal that of England, half of that acreage would suffice. We know of our national crop, maize, which grows from Oregon to Florida, and yearly waves over a broader field than all the cereals besides, that it covers a territory not larger than the Old Dominion, and might produce its amplest stores within narrower limits than the present boundaries of Virginia. The potato-crop could grow in the area of Delaware, though yielding less than a hundred bushels per acre; the barley for our brewing requires less than the area of a half-dozen counties; and the weed of solace, sufficient to glut our own and European markets, is grown on the area of a county twenty miles square.

The average farmer of the Eastern States disregards the logic of facts which reveals success only in high culture. His brother of the West has cheap lands, very fertile, easily worked, without obstructions interfering with the most varied employment of agricultural machinery. His own lands may be low in price, because poor in plant-food; his sons have gone into trade and manufactures, and to virgin soils toward the sunset; his surplus earnings have gone to the savings-bank, or to Illinois or Kansas, as a loan at ten per cent., until, rheumatic, and declining with age, he finds production also declining, his herds and flocks decreasing, and the conclusion inevitable that "farming does not pay." Labor is scarce and high because in demand by other industries, which in turn offer high prices for farm-products; fertilization is needed everywhere, draining in many situations, and irrigation in some others. But these things cost money, and he has neither the ambition nor the confidence for its expenditure, and, worse still, in many instances the money is lacking. These may be potent reasons for discouragement, but they do not prove that farming there, with money, youth, enterprise, and skill, may not be highly profitable. And the teaching of statistics, in examples of high success with high culture, disproves the current assumption of unprofitableness. There are numerous cases in which the gross return per acre has been hundreds of dollars instead of tens. I know an instance there in which a common vegetable, usually known in field-culture rather than in gardening, returned in 1873 $12 for every day's labor expended on it. The lesson of statistics of Great Britain, of Holland, of all countries of dense population, proves success to be only possible by enriching the soil and increasing the yield. Though Massachusetts farmers constitute but one-eighth of the aggregate of all occupations, there is no reason why they should not be able to feed all, if Great Britain, with one-sixteenth of her population, can furnish more than half her required food-supplies. And if, in the present state of Massachusetts agriculture, the value of her annual product be $442 to each farmer, while the cultivator of the rich prairie State, Illinois, earns but $560 (and in point of fact it is probable that unenumerated products of the former State would swell the total to the latter figures), then the results of intensive culture throughout the Commonwealth would be comparatively munificent. This is a valuable lesson which New England will ultimately learn from statistics, far more thoroughly than is now known and practised by a few of her best cultivators.

The West has also much to gain from the teachings of statistics. Iowa, vigorous and ambitious, too young for despondency, is in a spasm of indignation against monopoly and an excess of middlemen, and yet in trade and transportation she has but eight per cent., or little more than half the proportion of the Middle States. She may have too many and too greedy go-betweens, and she needs justice in the transportation of her products; but these evils remedied, the burden of her trouble would still remain. The great difficulty is, her corps of industry has sixty-one per cent. of farmers instead of twenty-five. Double-track railroads, canals vexed with steam-propellers, grange-association, free trade, and every other fancied boon obtained, she will still remain in comparative poverty and positive discontent while she continues to have less than fourteen per cent. of her people engaged in manufacturing and mechanical industry. History does not point to a permanently prosperous people having such preponderance of population in agricultural pursuits.

Minnesota is only happy when the people of Great Britain are supposed to be in danger of starvation. That danger is greatly over-estimated. Statistics will show that in some years but three per cent. of our wheat-export, and but a trifling proportion in any season, can be sold to any except subjects of Great Britain. On one-sixteenth the area of that island is grown in a good year 100,000,000 bushels of wheat; in an average season 90,000,000; and in fifteen years, from 1858 to 1872 inclusive, the deficiency made good by importation was a fraction less than 66,000,000 per annum. Could home-culture be extended to meet this demand, the total breadth required would be equal to one-ninth the surface of Minnesota. An increase in the average yield of wheat in France from fifteen bushels to eighteen, by a small advance in culture, would fully equal the British deficiency, as was recently stated by the well-known statistician, Mr. James Caird. Russia, with her broad and cheap acres, also stands near to compete for this deficiency. Minnesota, meanwhile, as her crop is maturing, can never ascertain whether the want will be 40,000,000 or 90,000,000, or whether the home price will be fifty cents or $1, or the ultimate result debt or competence. And yet seventy per cent. of the cultivated area of Minnesota is put in wheat, and fifty-seven per cent. of her people are engaged in its cultivation; eight per cent. in sending it to market; a large proportion of its fourteen per cent. of mechanics and manufacturers are building mills and grinding wheat; and its twenty-one per cent. of professional men expect much of their income from wheat. There are reasons why wheat should be temporarily grown there, but dependence upon foreign markets, evidently felt by many, for a permanent and increasing demand, is shown by statistics to be foolish and futile. The home-market is the only reliable and permanently valuable one for this cereal, and the nearer to the place of growth the surer and larger the benefit derived.

The cotton States have been especially persistent in disregarding the teachings of statistics and defying the laws of political economy. Every intelligent publicist knows that a certain amount of money, say a present average of $300,000,000, may be derived from cotton. If the average quantity is increased the price diminishes, and *vice versa*.

If fluctuations are frequent the speculator or manufacturer, and not the producer, derives an advantage. If you choose to produce 5,000,000 bales, you obtain ten cents per pound and lose money; if you grow but three, you get twenty cents and obtain a profit. Now it is better for the world, and in a series of years better for the grower, to produce regularly enough to supply the current wants of the trade at a medium and remunerative price, or as near a regular supply as possible, for the vicissitudes of the season will inevitably cause injurious fluctuations despite the highest effort of human wisdom and foresight. As the uses of cotton increase, and markets are ex-

tended throughout the world, its manufacture will be enlarged, and its culture should obtain corresponding enlargement. To overstep the boundary of current demand and glut the market, may be pleasing to the speculator and to the manufacturer, so far as he combines speculation with weaving, but it is death to the grower.

There is much false reasoning on this matter. A planter may truly affirm that he obtains $30 per acre for his cotton and but $25 for his corn, and he thereupon and therefore declares that he will plant no more corn. Let all act upon this suggestion, and instead of $55 for the acre of cotton and that of corn, the total return of the two acres of cotton will be but $30. A surplus of corn may be put into meat, and wool, and whiskey, or used to eke out a scarcity of some kind of forage for animals; but a surplus of cotton must wait for the slow grinding of the mills of the fabricating gods, usually until disgust at low prices reduces production correspondingly.

Thus, while cotton is and long will be the leading product and the most profitable field-crop at fair prices, its prominence in the list has kept, and is now keeping these States in comparative poverty, which is unnecessary as it is inconvenient and injurious. It does not produce money enough to give wealth to a population of 9,000,000. The other crops, instead of barely equaling in the aggregate the receipts from this, should represent at least $4 for every one of cotton. The census-record of production in these States is but $558,000,000; the record should be made to read $1,500,000,000. With three-fourths of the people of ten States employed in agriculture, the value of agricultural products exceeds but little that of the States of New York and Pennsylvania, where only one-fourth are so employed. The averages for each person employed in agriculture in those States are respectively, as deduced from the census, $677 and $707, while those of Georgia and Mississippi are $239 and $282. For the ten States the average is $267; for the four populous Middle States, $686. Even the States producing cheap corn show a large return, the average for one man's labor in the five States between the Ohio River and the lakes being $498, while the six sterile Eastern States produce $490 for each farmer. It may be the census is less complete in the cotton States, but it is undeniable that agricultural industry makes a smaller aggregate return there than in any other section. Nor is the reason wanting; it is due to the prominence of cotton, the return for which is substantially a fixed quantity, and the neglect of all other resources.

Let us glance at the topography and capabilities of this section. The area occupied by cotton, allowing 10 per cent. addition to usual estimates, is less than one-fortieth of the surface of these States; it is but one-thirteenth of the proportion actually occupied as farms. Forty-six per cent. of the census crop was grown in 81 counties, which are all that produce as much as 10,000 bales each; and 77 per cent. grew in 215 counties, making not less than five bales each. The total acreage in cotton is scarcely more than one-sixteenth of the surface of Texas. What is to be done with the other fifteen-sixteenths? A very large proportion of the area of these States is unadapted to cotton, either by reason of elevation or of soil. There is no other section of the country with resources so varied; none presenting such a field for new and promising enterprise. Competition is possible with the sea-islands in oranges and bananas and other fruits in Florida, and with New York and Michigan in apples and other fruits, on the table-lands of the Alleghanies. More than half the value of all cotton exports is paid for imports of sugar, which could and should all be grown in these States. But one pound in ten of the required supply is now made, upon a smaller surface than half of a single county twenty miles square. The demand of the world for oils—cotton, rape, *palma christi*, and many other—is large and prices are remunerative, and this section is peculiarly adapted to their production. A hundred million pounds of cheese, to compete with an equal quantity in New York, without danger of glutting the market, could be made from grasses of the glades that grow on lands costing one-twentieth the value of Empire-State pastures. More than two hundred million acres of these States are covered with wood, and the axe is still brought into requisition to girdle the monarchs of the forest, and await a slow decay for replacing fields worn out by a wasteful culture, while a timber-famine threatens other sections of the country, and a thousand forms of woody fabrication can readily be transmuted into gold—at least into greenbacks, which seem to be preferred to gold in certain districts. Even the forest-lands, certainly those of the coast-belt, are covered with wild grasses, only partially utilized, which, in connection with the herbage of the prairie sections, are worth, in flesh and wool, at a meagre estimate, half the value of the cotton-crop. The list might be increased indefinitely. With the introduction of the best machinery, the most economical methods, and the most efficient means of fertilization, with well-directed and persistent labor, adapted to the wants of all classes of workers, the present population is amply sufficient to double the gross product of agricultural industry, and far more than double its profits.

I have hitherto only spoken of agricultural industry. The suggestions relative to the necessity of other productive industries in the West apply with augmented force to the South. While the proportion engaged in them ranges from 14 per cent. in Iowa to 24 in Ohio, it only runs from 3 per cent. in Mississippi to 6 per cent. in Georgia. The intelligent planter of Georgia knows perfectly well, by the test of local experience, that the manufacture of cotton in his State is far more remunerative than the same business in Massachusetts, not only on account of saving freights and commissions, both on raw material and manufactured goods, but in the greater abundance and cheapness of labor. It might be considered a fair division of the crop, and certainly a generous one on the part of the South, to keep one-third for home manufacture, to send a third to the North for manufacture into finer goods, and the remaining third to Europe. This would insure a steady and imperative demand, and a great enlargement of net profits.

There is no good reason why Virginia should not equal Pennsylvania in manufacturing and mining production, as she now does in resources of mine and forest. There is no sufficient cause why 25 per cent. of the people of Pennsylvania should produce in agriculture a value of $52 annually for each inhabitant of the State, while 59 per cent. of the people of Virginia should only divide $42 per head of total population. The influence of home markets on prices, with the reflux influence of prices on fertilization and culture, is sufficient to answer for all this difference. I ask, in all sincerity and deference, if it is manly or just to decry others who take advantage of opportunities enjoyed in equal fullness by ourselves, while we utterly refuse to use them? In this connection permit me to repeat what I said years ago, in the sincerest and most friendly spirit, of the unsurpassed facilities for mining and manufacturing enjoyed by the southern portion of the Atlantic slope: "This path of progress has been equally open to all; laws supposed to favor a diversified industry have been applicable to all States alike; the best water-power and the cheapest coal are in States that make no extensive use of either; milder climates and superior facilities for cheap transportation have furnished advantages that have not been transmuted into net profits; and yet such communities, daily inflicting irreparable injuries upon themselves by neglecting the gifts of God and spurning the labor of man, are wont to deem themselves injured by the prosperity flowing from superior industry and a practical political economy."

ALABAMA. During the latter part of 1874 the condition of affairs in this State attracted much attention. The reports, however, have been so conflicting that it is impossible to determine which are correct, or what the actual facts have been. On the one side it has been reported that the most flagrant outrages have been perpetrated in certain counties, especially Sumter, Greene, and Pickens; that a bitter war has been waged upon the negroes, who have been secretly threatened and murdered; that diabolical deeds have been committed by the Ku-klux, or other disguised assassins; and that generally there has been a reign of terror. On the other side these reports have been denounced as false, and as having been circulated for political purposes; and it has been declared that the peace of the State has not been disturbed by political crimes. This conflict of testimony has existed both among correspondents and the editors and public men of the State. Of the many statements that have been made, two opposing ones may be selected as carrying the greatest weight of authority. The first of these was made in a letter, dated September 7, 1874, written by Hon. Charles Hays to Hon. Joseph R. Hawley. Mr. Hays was the Representative in Congress of the Fourth Congressional District of Alabama, in which most of the disorders are alleged to have occurred. In a note to Mr. Hays requesting this written statement of facts for publication, Mr. Hawley says: "I know you as a native and life-long resident of Alabama, engaged largely in planting, formerly the largest slaveholder in the State, and a soldier in the Confederate army throughout the war. Please give me in writing, as compactly as clearness will permit, the substance of what you have told me. I want to publish it at home, and give it to my neighbors and constituents as the account of a gentleman of unimpeachable honor." Mr. Hays in his letter recites numerous instances of foul deeds, giving the names of the victims, and the times and places of the outrages, which he alleges were inflicted upon orderly negroes by their political opponents. He prefaces this enumeration with the following general statement:

I am anxious that the true condition of affairs in the State of Alabama should be known as soon as possible to the whole country, in order that they may begin to realize the fact that the spirit of rebellion against the laws and Government of the United States, to extinguish which so many brave and gallant men laid down their lives, still exists in the hearts of many misguided people. They embrace every opportunity to commit deeds of lawlessness and crime, that are everlasting stigmas upon the fair name of the nation, and an open insult to the flag of our country, which many of your people are vainly patriotic enough to believe is an ægis of protection, wherever it floats. I had fondly hoped that the "reign of terror" in the South was over, and that peace, good-will, and prosperity, might henceforth reign supreme. In this hope I am sadly disappointed, for candor compels me to say that to-day riots, murders, assassinations, and torturings, for the purpose of terrorizing the true friends of the Government are more common than they have been at any hour since Lee surrendered to Grant, and unless the strong arm of Federal power can avert the calamity I can see nothing in the future save gloom and despair to the loyal men of the South, ruin to the material interests of the country, and death to those of us who uphold the honor and integrity of the nation, and counsel submission to the laws of the United States. But I need make no appeals to the patriotism or the sympathy of the Northern men, who, like yourself, have bared their breasts to the battle-storm in the dark and bloody days of the eventful past. The bare recital of proved facts shall be my only appeal. That will cause the heart to shudder, the cheek to blanch, and the mind to wonder how such dastardly outrages, such unprovoked murders, and such fiend-like conduct, can be tolerated for an hour. I shall be particular to narrate no rumors, to color no atrocity, to "set down naught in malice," but simply to give you well-authenticated facts, with dates, names, and localities, so that every man in the land may himself verify the accuracy of my statements, if he deems it necessary. These, then, I proceed to give you, with the deliberate opinion on my part that the half cannot be told, and that to-day many victims of hellish murder are sleeping in unknown spots and secluded places, from which they will never be wakened until the final judgment-day.

The first case mentioned by Mr. Hays was that of Captain W. P. Billings, a former resident of Brooklyn, N. Y., who he alleges was "brutally murdered," on about the 1st of August, in Sumter County, about one mile from his residence, on the Gainesville branch of the Mobile & Ohio Railroad:

When discovered he and his horse were both lying dead in the public road, his body pierced with buckshot, and that of his horse riddled with bullets. The "hiding-place" of the assassins was found, but the coroner's jury returned the usual verdict, "that he came to his death by gunshot-wounds, and that the parties firing were unknown." Captain Billings was a Republican, and had that day addressed a Republican meeting at Abraham's plantation, some fifteen miles distant from the spot where he fell. He had about a twelvemonth since purchased a cotton-plantation in the county, was a man of unimpeachable character, and did not know he had an enemy in the world.

"The next example," says Mr. Hays, "is, perhaps, one of the most atrocious, unprovoked, and terrible, that has ever stained the pages of Southern desperation." This was the case of Thomas L. Ivey, "an inoffensive, intelligent, honest, and hard-working colored man, appointed a United States mail agent on the Alabama & Chattanooga Railroad, running between Meridian, Miss., and Livingston, Ala." On the 29th of August, near Livingston, in Sumter County, the train was signaled by a man standing on the track, and when it stopped "the report of a number of guns or pistols was heard, and Ivey was found shot to pieces." After mentioning other instances of outrages in Sumter County and in Mississippi, near the Alabama line, Mr. Hays says:

Not only are murders and whippings resorted to, to effect a change in the politics of the negroes, but other means also, as will be seen from the following "notice," which was taken from a sign-board on the cross-roads near Livingston, Ala., and handed me

by a Democrat. It is one of many of like import, and is evidently intended to appeal to the well-known superstitious dread of the most ignorant colored people:

"WARNING!

[A picture of a coffin.]

The inviaible monarch rules in Sumter, and watches the doings of his people from a little star above you. All 'niggers,' white and black, will take warning from the fate of Billings and Ivey. They were killed by unknown hands, which will never be known. Those hands will destroy again. Colored men, who want to live in peace and be protected, can do it by inquiring where they can sign the white man's constitution. 'Inquire,' and our monarch will send a man to you, who will have the 'roll.' Never vote the Radical ticket again. Sign, and live. Refuse, and die. Signed at the Spirit-Land, at the hour of death, and by the graves of the dead.

V. V... V."

Mr. Hays cites two cases in Pickens County, where he declares outrages are frequent, but, "from the terrorism existing in that locality, only an occasional murder leaks out." He says:

In Carrollton, Pickens County, four colored men, who were supposed to be "emissaries," sent to post the negroes on their rights, were taken the third week in August from their cabins and hung by the roadside. This deed was perpetrated in open daylight by a body of unmasked white men. On August 20, 1874, the bodies of three men, two colored and one white, were discovered floating down the Tombigbee River, lashed to some logs. When found the bodies were badly decomposed, and their personal identity to this day remains undiscovered. The white man had a placard pinned to his neck saying, "This is the way we treat Dutch niggers," evidently alluding to the nativity of the man, who seemed to be a German. The other two were placarded, "To Mobile, with the compliments of Pickens County."

Instances are given of peaceable meetings of colored persons having been broken up in Hall, Russell, and Coffee Counties, resulting in the last-named county in the death of two, and the wounding of six colored persons. The disorders in Choctaw County are thus specified:

On or about the 1st of August the newspapers of Alabama were filled with accounts of large bodies of armed negroes congregating in Choctaw County for the purpose of commencing a war upon the whites. Of course the excitement was intense. Hundreds of whites from different sections swiftly hurried to the scene of the supposed conflict, but when they arrived no armed negroes could be found. Yet something must be done to make an example. So a company of whites ambushed a party of negroes returning from church, killed ten and wounded thirteen. Again, Green Lewis, colored route agent on the Selma & Meridian Railroad, was warned that if he continued to run on that road they would murder him. I had his route changed to save his life. Again, Hon. Joseph H. Speed, Superintendent of Public Instruction, was attacked and beaten by a mob at Marion, Ala., because he had that day made a Republican speech in the town. Hons. Adam C. Felder and William H. Seawell, two prominent white Republicans, were shot at in Greenville, Ala., some night in July last, on their return from the courthouse, where they had been making Republican speeches. They were also "rotten-egged" and otherwise insulted. Full particulars of this outrage were published at the time. W. A. Lipscomb, belonging to one of the most reputable families in the South, was found dead in the public road in Marengo County last week. He was shot to death, and was an earnest Republican.

In concluding his statement, Mr. Hays says:

These, my dear sir, are a few of the "troubles" in Alabama, for the suppression of which I, in company with others, have asked the intervention of the Federal Government. No one regrets that such action has been deemed necessary more than myself. Born, educated, and living all my life in the South, I thought I knew the feelings and the passions of our people. Up to this time not a single white Democrat has been murdered, outraged, or otherwise maltreated in any way in the State of Alabama. The killing has all been on one side. The reports even of our sufferings have been held back and kept back from the people of the North. The agents of the Southern Associated Press alone furnish news to your papers. Every agent of this association in Alabama (and in the South generally) is a rebel and a Democrat. Our views, speeches, platforms, writings, and actions generally, are garbled and missent to deceive the people of the North, and convince them that the South is being plundered by adventurers; that corruption and infamy stalk forth with monstrous iniquity in all our public places, and that every man who dares to raise his voice for the principles of Republicanism is a felon, and unworthy to walk the earth on which he lives. All these things, and more, too, have we borne in silence.

This statement of Mr. Hays was bitterly denounced by the opposition press. In regard to some of the outrages specified, it was denied that they were committed, while it was stoutly maintained that politics had nothing to do with any of them. On the 1st of October the Democratic and Conservative State Executive Committee issued an address intended as a reply to the statements made by Hays, and "for the purpose of repelling the slanders circulated against the good people of this State for political purposes." Before proceeding to notice specifically the allegations made by that gentleman, the committee say:

1. That we were selected as the Executive Committee of our party in a full convention assembled here on the 29th day of July last, and thus we are the legitimate representatives of our party.

2. That the Republican or Radical party in Alabama is composed of about nine-tenths negroes and one-tenth whites.

3. That the Democratic and Conservative party is composed almost exclusively of the white people of the State, embracing a majority of the people.

4. That, to show the spirit which governed and now governs our party, we quote a paragraph from the address of our Executive Committee issued on the 27th day of August, 1874:

"We especially urge upon you carefully to avoid all injuries to others while you are attempting to preserve your own rights. Let peace not only prevail, but let our people avoid all just cause of complaint. Turmoil and strife, with those who oppose us in this contest, will only weaken the moral force of our efforts. Let us avoid all personal conflicts; and, if these should be forced upon us, let us only act in that line of just self-defense which is recognized and provided for by the laws of the land. We could not please our enemies better than by becoming parties to conflicts of violence, and thus furnish them plausible pretexts for asking the interference of Federal power in our domestic affairs. Let us so act that all shall see, and that all whose opinions are entitled to any respect shall admit, that ours is a party of peace, and that we only seek to preserve

our rights and liberties by the peaceful but efficient power of the ballot-box."

The speeches of our candidates and our other public speakers in this canvass have reflected, encouraged, and illustrated the sentiments thus urged, as essential to good order, obedience to law, and to the complete triumph of our party in the coming election—and we here declare that we do not believe that in a single instance has any authorized speaker of our party departed from the line of conduct above recommended.

But notwithstanding these peaceful, law-abiding declarations and conduct of our party, the public press of the Republican party North and the Republican press of Alabama have teemed with the vilest slanders of our people; slanders concocted, we fully believe, by the leaders of the Republican party in Alabama, for the express purpose of misleading the public mind, and against law, justice, and honesty, to secure to themselves another lease of ill-gotten power, heretofore used to wrong and oppress the good people of this State.

We recognize the fact that a large proportion of the most worthy and respectable people in the North, East, and West, are to be found in the ranks of the Republican party, and that their party associations are dictated by an honest judgment and true patriotic feeling.

But with us in Alabama the case is widely different.

The negroes, forming nine-tenths of the party here, are of course as a body ignorant, and from their recent condition of slavery a low order of morality prevails among them.

The remainder of the party is made up chiefly of professional politicians and their hangers-on, who live by office, and a few worthy people who have been induced heretofore to act with the Republican party. This little army of office-holders, with a few honorable exceptions, feel that the contest is one for their daily bread, and, though "work they will not," yet they are not ashamed to "beg," to steal, or to lie.

We assert on our word as men of character who have something to lose by asserting a falsehood, that no unprejudiced man of either party in the North, East, or West, who knows any thing of the facts, or of the character of those by whom the charges are made, can come to any other conclusion than that they are made without foundation in fact, were known by those who made them to be unfounded, and were made for the vile purpose of obtaining for themselves and their associates a continuance of their power to be exercised for purposes of plunder.

That Governor Lewis, who has some character to lose and who must be informed of all the facts, has failed to give any official sanction to the complaints against our people, is of itself suggestive of their utter falsehood.

And, in order the more easily, as they supposed, to secure their purposes, the leaders of the Republican party have represented to the President of these United States that our party is opposed to the Government of the United States, and in favor of a new rebellion, when they well knew that our opposition is not to the Constitution or Government of the United States, but only to the persons who have abused the public trust, squandered the people's money, bought and sold our public offices, and who have in every conceivable manner violated the principles of a just and pure government.

The greater portion of the address consists of affidavits, cited to show that there was "little foundation in truth" for that portion of Mr. Hays's statement concerning a general war between the whites and blacks of Choctaw County. In one of these affidavits the deputy-sheriff of Choctaw County, E. C. Glover, gives the particulars of going in August with a *posse* of 150 men to arrest Jack Turner and about thirty other negroes for having attempted to lynch one Huff Cheney. The negroes disbanded and scattered, and were not found at that time; but eleven of them were subsequently arrested without any disturbance. The deputy-sheriff concludes his affidavit, which is dated September 26th, by saying, "I have not heard of a negro being killed or wounded in this county during the time I have been acting as sheriff, now nearly seven months." Other affidavits are adduced to corroborate these statements. The address then concludes as follows:

These affidavits not only show that this charge is false in fact, but that Mr. Hays must have known it to be false when he wrote his letter to General Hawley.

All the other charges contained in the letter of Mr. Hays, except the fact of the killing of Billings and Ivey, are equally destitute of any foundation in truth, and are admitted to be untrue by every intelligent and unprejudiced man in this State.

That Billings and Ivy were killed, is true; but there is not one scintilla of evidence to show that either was killed by Democrats, or for party purposes. But the facts as they have been developed tend strongly to show that other than political causes produced the death of Billings and Ivey.

The general charges made against our people, by Hays, White, Spencer, Martin, Stokes, and Pelham, to the effect that there is a reign of terror in this State, through intimidation practised by our party to control the voters and to prevent the free expression of opinion, are untrue, particularly and generally. Letters and affidavits of Republicans of respectable standing have been published in the counties where such terrorism is particularly alleged to exist, showing that no such terrorism and no such intimidation have been practised. The fact that there are, to-day, two negroes, nominated by the Republican party, the one in this district, and the other in the Mobile district, daily traveling through these two most southern districts, and making speeches, unmolested, is proof positive that the peaceful disposition of our people has been basely slandered. From the beginning of the canvass, there has never been a disturbance of a Republican speaker, or of a Republican audience, by any member of our party, according to the best of our knowledge, information, and belief.

Yet, upon such charges as these, with no better foundation than we have shown, United States troops have been sent to the State of Alabama, and they are now engaged in arresting and handcuffing white citizens of this State, and dragging them from their families, and incarcerating them in the dungeons, under the leadership of deputy United States marshals, members of the Republican party. And this is done when there is no obstruction to the full execution of the laws of Alabama, or of the United States, and while there are hosts of officers willing to execute the law in every nook and corner of this State, and when there is not a just shadow of pretext that the officers or people of this State are either unwilling or unable to enforce the law.

We call especial attention to the fact, that the chief executive officer of this State belongs to the Republican party, and he has never asked for troops of the United States to aid in the execution of the laws.

As a significant fact, showing the *animus* of those who have thus slandered the people of our State, it is now notorious that the fund appropriated by Congress for the overflowed districts in this State has been and is now distributed for electioneering purposes, by Republican instrumentalities, generally in

the State, without reference to overflowed localities, among those whom they suppose can be corrupted.

We here avow, that we have long resided in this State, and are generally acquainted with the people, and we declare that, to the best of our knowledge, information, and belief, there does not exist in this State any White League, or any secret political association of our party. And we further declare that we believe that the charges made against our people and party have no real foundation in fact; and they were known to be untrue when they were first published, and they have been published and circulated for wicked and corrupt purposes.

On account of these reported outrages, and the consequent state of the public feeling, the political campaign was attended with unusual excitement. The Democratic Conservative party assembled in convention in Montgomery on the 29th of July, and adopted the following platform:

The Democratic and Conservative people of Alabama, in convention assembled, do resolve and declare:

1. That the radical and dominant faction of the Republican party in this State persistently, by false and fraudulent representations, have influenced the passions and prejudices of the negroes, as a race, against the white people, and have thereby made it necessary for the white people to unite and act together in self-defense, and for the preservation of civilization.

2. That the rights of all classes of men under the Constitution and laws of the land must be respected and preserved inviolate, but we deny that Congress can constitutionally enact rules to force the two races into social union or equality.

3. That the so-called civil-rights bill recently passed by the Federal Senate, and now pending in the House, is a flagrant and dangerous invasion of the ancient conservative principles of personal liberty and free government, and is a palpable violation of the Federal Constitution, and presents an issue of vital moment to the American people, and calls upon them to decide at the ballot-box whether they will or will not be coerced to absolute, social as well as political, equality of the negro race with themselves. We view with abhorrence the attempt on the part of the Federal Government to take control of schools, colleges, hotels, railroads, steamboats, theatres, and graveyards, for the purpose of establishing negro equality, and enforcing it under numerous penalties of fines, damages, and imprisonment.

4. Civil remedies for the protection of civil rights are adequately provided by the common law to all races of men in this State, and added to these are social remedies for social wrongs, which every race and class of men are perfectly left free by the laws to adopt for themselves; so that the negro race has the same means of protecting itself against the invasion of its civil rights under the law, and against intrusion upon its so-called rights and privileges by the white race, that we have to preserve and protect ourselves and families against the intrusion of the negro race. Under these laws, the race to which in the providence of God we belong has achieved an eminence among the people of the world, which is our proud inheritance, and has become to us a trust we cannot resign without dishonor. We therefore denounce as a violation of the letter and spirit of our Constitution, and as dishonoring to the genius of our race, all legislative enactments which attempt to convert into crimes the rules and maxims of our social intercourse, to which we are indebted for the excellence and glory of our civilization, or to punish with degrading penalties our refusal to admit an ignorant and barbarous race to equal participation with our families in our social institutions.

5. That we extend to all our race, in every clime, the right hand of fellowship, and a cordial invitation to come and settle among us, and unite their destiny with us.

6. That proper laws should be enacted by the Legislature to secure to the employés of railroad corporations liens upon the property of such corporations for the payment of wages.

7. The exigencies of the times and the impoverished condition of the people render it imperative that the State government should return at once to that system of economy in public expenditures which conduced so much to the successful and satisfactory administration of the government and the prosperity of the people before the war. Through radical legislation and misgovernment new and unnecessary offices and agencies have been created, with large salaries, and every other service conceivable to our enemies and oppressors resorted to, until our State government, no longer under the control of the people, has in its practice and precepts reversed, abrogated, and annulled the democratic maxim that governments are based upon the consent of the governed. Retrenchment in the number of offices, in official salaries, and in the fees or commissions of agents, is necessary and indispensable to the public welfare, and we pledge ourselves to reduce every public expenditure, and abolish and dispense with every office demanded by an economical administration of the government.

8. The Democratic and Conservative party of Alabama is pledged, so soon as it shall be placed in power by being intrusted with the State administration, to cause to be made such speedy and thorough investigation as shall, by its result, make known to the people of the State and the world our true financial condition, and, by its representatives here assembled, it resolves that every dollar justly owing by the State shall be faithfully paid when it is able to do so. At the same time, it is firmly determined that the welfare of the people of the State and the interests of its honest creditors shall not be put in jeopardy by the payment of unlawful or fraudulent claims of any kind.

The ticket nominated was as follows: Governor, George S. Houston; Lieutenant-Governor, Robert F. Ligon; Justices of Supreme Court, Thomas J. Judge, Robert C. Brickell, Amos R. Manning; Attorney-General, John W. A. Sanford; Secretary of State, Rufus K. Boyd; Treasurer, Daniel Crawford; Superintendent of Public Instruction, John M. McKleroy.

The Republican State Convention assembled in Montgomery on the 20th of August, and after a session of three days adopted the following platform:

The Republican party of Alabama, in State Convention assembled, again declares its unshaken confidence in, and its unalterable devotion to, the great principles of human liberty which called it into existence, namely, the civil and political equality of all men, without distinction of race or color.

2. In the practical application of these principles we have neither claimed nor desired the social equality of different races or of individuals of the same race, neither do we claim or desire it now, and all assertions to the contrary are without the slightest foundation. In point of fact, we reject the issue of race against race, which is tendered us by the Democratic party, as fraught with incalculable evils to our whole people, which sows the seeds of ruin to all our national, social, and political interests, and which, if persisted in by that party, will plunge us again into a war with the Government of the United States.

3. We have not made a race-issue in the past, neither do we make or tender such an issue. What we demand for one man we demand for all, with-

out distinction of race or color, and we point with pride and confidence to every line of our political record in proof of this declaration, and we denounce the assertions that have made it necessary for a whole people to unite and act together in self-defense and for the preservation of white civilization as untrue, and an emanation of that selfish spirit which in the past demanded every thing for one race and was unwilling to concede any thing to the other; that the race-issue tendered by the Democracy of Alabama is but the outcropping and is the natural sequence of the ambitious spirit which led a peaceful people into a war with their Government in 1861; which during that war rode rough-shod over the people of the South, and after the war perpetuated its carnival of blood by a career of crime in the Ku-klux Klan, which in the extent of its organizations, the numbers involved in it, the multiplicity and heinousness of its crimes, and the manner of their commission, finds no parallel on the rolls of human history. It is now, as it was then, each in its different mode, for resistance to the Constitution and law of the land. Again they will commit the same acts, with vengeance sharpened and envenomed by continued and repeated persistence in wrong.

5. That we neither desire nor seek the invasion of the rights of the white people by the colored; we only ask equal advantages in matters of public and common rights. This we consider to be all that is embraced in what is known as the civil-rights bill, and in order that we may be understood, and no false charges made against us, we hereby declare that the Republican party does not desire or seek mixed schools or mixed accommodations for the colored people, but they ask that in all these advantages they shall be equal. We want no special equality enforced by law. We recognize the fact that every home is sacred from intrusions, and that in a free country every one can dictate for himself the line of social exclusion that society gave us by laws more inexorable than statute or common law, and opens or closes its door to whomsoever it will, and that no civil law can or should invade it.

6. We hold that governments are instituted among men for the protection of life, and liberty, and property, and we demand a rigorous execution of the laws of this State and of the United States for that purpose, and we call on the Governor of this State to take all legal means at his command for the purpose of discovering and bringing to trial all persons offending against the laws. Murder by lying in ambush, whether by one or many, must be put an end to, and the peace and security of the humblest home must be respected and protected.

7. The good faith and the credit of the State were well sustained, and the price of its bonds, when the government passed from the hands of Governor Smith to his Democratic successor in November, 1870, is unmistakable evidence of the fact; and we pledge ourselves to use the means of the State for the payment of all its just debts, and to provide for the proper adjustment of what is called the railroad indebtedness of the State, and to put an end to the further indorsement of the bonds of all private corporations. These results can be achieved by an economical use of our resources without oppressing the people. Good faith, economy, and retrenchment of all unnecessary expenses in the use of our resources, will secure the result.

8. That the seizure of the Alabama & Chattanooga Railroad by the Democratic administration has resulted in greatly impairing the value of the allotted security held by the State to provide for the payment of the State liability thereon, and we are of the opinion that, instead of seizing the road and thereby destroying the security it furnished to protect the State from loss on the bonds it has indorsed, the plainest principles dictate that the road should be managed by those most interested in it.

A convention of the colored voters of the State was held in Montgomery on the 25th, 26th, and 27th of June. An address to the people of the State was published, in which, after reciting the constitutional provisions that had been framed to secure the rights of colored citizens, they say:

We are denied the facilities of traveling upon the public highways of the country, unless we submit, as we are compelled to do, to the most inconvenient and sometimes filthy accommodations which the public carriers may think proper to furnish, while others are accommodated with comfortable and cleanly quarters, and fully protected from intrusion and insult, to which we are often subjected, notwithstanding the same fare is exacted of us that is paid by those who are more favored.

We are denied accommodation in the public inns and eating-houses in the country while traveling from place to place, and are therefore placed at great trouble and inconvenience without any fault on our part.

Notwithstanding the constitutional guarantees hereinbefore referred to, there is a political party in this State, known as the Democratic and Conservative party, which, regardless of the constitutional oath to which its members have subscribed, is engaged in a ruthless crusade against us as a race, with the avowed purpose of not only preventing us from exercising the constitutional rights which have been secured to us, but of abridging these rights to the fullest extent of its ability, should it obtain power in this State. To this end it is engaged in exciting the baser prejudices and passions of the white men against us as a race, and is openly threatening us with a civil and relentless war of extermination, falsely charging us with being enemies of the white man because we have heretofore refused to support and sustain that party.

The position of this class of voters in the politics of Alabama is indicated by the following resolutions adopted by this convention:

Whereas, It is charged by the organ of the Democratic white man's party in Alabama that the colored people of Alabama are trying to force an issue of race in said State, for the purpose of creating dissension and strife among the people; and—

Whereas, It is evident that the white man's party means the alignment of all the white people of the State against the colored people:

Resolved, That the colored people of Alabama are in favor of free schools, free churches, freedom of speech and thought and action by all men; that we are in favor of the civil and political rights of all men as embodied in our constitution and our free institutions.

Resolved, That the colored people of Alabama, while according to all men those inalienable rights born of American citizenship, demand that the same shall be guaranteed to them, and that they favor such legislation as will secure them fully in these rights, and place them beyond the control of the "white man's party," or any other party.

Resolved, That we are opposed to bringing strife and discord in this State between the people; that we are in favor of every measure of legislation which tends to protect our people from the enmity and hatred of the so-called white man's party; and we will use all honorable means to secure by legislation every right due us as a people which comes within the province of legislation and which can be enforced in the courts.

Resolved, That the Republican party having exhibited its fidelity to the cause of human rights and to the best interests of the colored people, we hereby pledge that party our continued support and adherence.

Resolved, That, in order to bring about the success of the Republican ticket in November next, we encourage our people everywhere to the adoption of that great statesmanlike idea upon which parties never fall but may ever stand, the great idea that the office should seek the man and not the man the office; that we impress upon the members of the Republican party in the State of Alabama, that they nominate none for office save those they know to be true to the principles of the party, and who can bring to the support of our State ticket the greatest number of voters for our district, county division, congressional and State candidates.

Resolved, That the members of the Republican party everywhere be urged to see to it that our conventions be fairly and patriotically assembled, and assembled solely for the purpose of advancing the interests of the party, and not the interests of individuals.

Resolved, That the convention through its State Representatives impress upon the legislative body of the State of Alabama, at its next session, the importance and urgent necessity of their creating a compulsory school bill, feeling assured that, without such a bill as is here asked for, the rising generation will be (intellectually speaking) but little superior to generations gone before, and our Government grow weaker and weaker, for the want of an educated, intelligent class of citizens.

After a very exciting contest, the election was held on the 3d of November, and resulted in the success of the Democratic Conservative ticket, the vote being as follows:

Governor—George S. Houston, 107,118; D. P. Lewis, 98,928.

Lieutenant-Governor—R. F. Ligon, 107,109; H. McKinstry, 93,532.

Attorney-General—J. W. A. Sanford, 106,923; George Turner, 93,493.

Secretary of State—R. K. Boyd, 106,882; N. H. Rice, 93,612.

Treasurer — Daniel Crawford, 106,575; Arthur Bingham, 93,455.

In a total vote, therefore, of 201,046, Houston's majority was 13,190. At the previous election of 1872, the total vote for Governor was 171,239, of which Lewis received 89,868, and Herndon 81,371, giving the former a majority of 8,497. President Grant's majority in the same year was 10,828, the total vote for President being 169,716.

After the election the Executive Committee of the Democratic party, which had now come into power for the first time in several years, issued an address, in which the future policy of the party was indicated as follows:

The party we represent is firmly pledged, by all that is sacred among men, to use its utmost endeavors to bring the blessings of good government to all the people of this State, and, under the providence of God, it remains to be seen whether our party is equal to the responsible and arduous duties it has undertaken to perform. These duties require of us, that justice must be fairly administered according to the laws of the land; that the rights of all the people of Alabama, both of person and of property, must be preserved inviolate; that there must be no oppression of any race or class of men; that the credit and good name of this State must be restored; that harmonious relations of mutual confidence and good-will must be cultivated and adjusted, among all the conflicting interests represented among the people of this State; that yielding a cheerful obedience to the laws of the United States, and promptly bearing our share of the burdens of the General Government, whether in war or in peace, we must also cultivate such other relations that the citizens of every State composing our great Union who may from time to time have business with us, or come into our midst, shall receive that justice and hearty welcome at our hands due to brethren of the same great household, without regard to difference of political opinion. If we fail to accomplish substantially these results, just so far will we disappoint the hopes and expectations of a large majority of the people of Alabama. A bright future is before us, and we feel that, with proper exertions on our part, there can be no reasonable doubt they will speedily result in prosperity to all the people of our beloved State.

George Smith Houston, the successful candidate for Governor, was born in Tennessee, in 1809. At the age of twelve he went with his parents to Alabama, and settled in Lauderdale County. In 1831 he was admitted to the bar, and in the following year was elected to the Legislature. In 1834 he removed to Limestone County, and in 1837 was elected to the office of Solicitor. He continued in this office until 1841, when he was elected to Congress on the Democratic ticket. He was reëlected in 1843, '45, '47, '51, '53, '55, '57, and 1859. But before the expiration of the last term he withdrew from Congress, when Alabama seceded from the Union. In 1860 he was a "Douglas Democrat," and opposed secession, but subsequently went with his State when it seceded. After the war he was elected to the United States Senate, but was refused admission, when he retired to private life and there continued until the campaign of 1874.

The Legislature assembled on the 16th of November, and continued in session till December 17th, when it adjourned until January 13, 1875. The most important act passed was the bill authorizing the Governor to appoint two commissioners, citizens of Alabama, who with the Governor shall constitute a board to adjust and liquidate the bonded liabilities of the State. The Governor at once complied with the law by appointing, for the required term of two years, L. W. Lawler, of Talladega, and J. B. Bethea, of Montgomery, who are said to be able financiers. The commissioners are required to report their action to the Governor, by whom it must be communicated to the Legislature. The powers and duties of the commission are set forth in the second section of the act as follows:

SECTION 2. *Be it further enacted*, That it shall be the duty of said commissioners, and they are hereby authorized and empowered to take charge and ascertain, liquidate, and adjust the subsisting legal liabilities of the State of Alabama on the bonds issued and the bonds indorsed by the State of Alabama and the coupons on the same in such manner as the interests of the State may require, and by negotiation to provide for the payment of such amount of the said several legal liabilities as may be arranged for under the powers hereby conferred, and the interest that may be agreed to be paid upon the principal so negotiated, in such a manner and at such times as to them may seem advisable; and for this purpose said Commissioners shall, by advertisement or otherwise,

at as early a day as practicable, require the presentation of all claims of the character aforesaid to them, with the amount claimed, and may inquire into the consideration alleged to have been paid or given to the State therefor, or that is alleged in support of the liability claimed against the State: *Provided*, however, that no adjustment of said alleged liabilities, or any part thereof, or an arrangement for the payment of any sum in discharge thereof, shall be binding on the State unless and until approved and ratified by the General Assembly thereof.

The total receipts into the State Treasury during the year ending September 30, 1874, amounted to $1,870,757, and the disbursements to $1,624,363. The aggregate direct indebtedness of the State is reported by the Treasurer at $10,452,593. This includes the bonds issued for State purposes to the amount of $6,619,800 due at different times from 1886 to 1894, and on which the annual interest amounts to $411,896. The nature of this indebtedness is indicated in the following exhibit:

Total bonded debt, as above stated		$6,619,800 00
EDUCATIONAL FUND INDEBTEDNESS.		
University fund	$300,000 00	
Sixteenth section fund	1,740,300 29	
Valueless sixteenth section fund	97,091 21	
Surplus revenue fund	669,086 80	
Total educational fund indebtedness		2,806,378 30
Outstanding State certificates per Treasurer's report		81,535 00
Outstanding obligations		944,880 00
Aggregate direct indebtedness		$10,452,593 30
(Annual interest on trust funds, $224,510.25.)		

The contingent liabilities of the State, under acts approved in 1867 and 1870, are reported at $15,051,000, as follows:

Indorsement of Railroad Bonds, etc., to September 30, 1874.

NAME OF ROAD.	Miles.	Amount.
Alabama & Chattanooga	295	$4,720,000
Alabama & Chattanooga, reported excess issued	...	580,000
East Alabama & Cincinnati	25	400,000
Mobile & Alabama Grand Trunk	55	880,000
Mobile & Montgomery	...	2,500,000
Montgomery & Eufaula	80	1,280,000
Selma & Gulf	40	640,000
Selma, Marion & Memphis	45	720,000
South & North	183	891,000
Savannah & Memphis	40	640,000
Total	763	$12,751,000
State Bonds for Railroad Purposes.		
Alabama & Chattanooga	.....	$2,000,000
Montgomery & Eufaula	.....	300,000
Total	.....	$2,300,000
Aggregate	.....	$15,051,000

The present condition of the Alabama & Chattanooga Railroad is of the greatest importance to the credit of the State, as its liability for the indorsed debt of that corporation is the only obstacle to the resumption of the payment of interest on the State debt. The liability of the State as indorser under the acts of the General Assembly of Alabama for $4,720,000 of the bonds of that corporation has never been questioned by any department of the State. On that liability the State paid, during the administration of Governor Lewis, in interest, the sum of about $834,000, and there are now in arrears $944,000 as interest, and it is believed that this is short by $110,000. The State also became responsible for $312,000, as purchase-money bid by Governor Lindsay at bankrupt sale, and has paid large sums as fees to attorneys; $140,000 have been paid to the employés of the road, under the receivership of the State when first seized by Governor Lindsay.

On the 9th of September Governor Houston sent a special message to the Legislature concerning this corporation, in which he said:

> Since entering upon the discharge of the duties of Governor, I find the complications connected with the Alabama & Chattanooga Railroad, and its company, so numerous and extensive, that fear may be properly entertained that the important interests of the State, arising out of the indorsement of the bonds of the Company for the construction of that road may be seriously endangered. I regard it of the highest importance to the State that it shall not in any sense become a party to any of the suits pending in the Federal courts touching the interest of that road. Nor should the State submit its interest, or rights secured by statute, to the jurisdiction of those courts, or do any act tending to defeat or impair its statutory lien. With the view that the true condition of the road and the State's interests therein may be ascertained, and the future policy of the State for the protection of its interests in this regard be determined, I invite your early attention to the subject, assuring you of my purpose to cooperate with you in your efforts to protect the rights of the State.

The South & North Alabama Railroad has complied with the act of the General Assembly, approved April 21, 1873, and has surrendered her indorsed bonds to the amount of $3,635,000, and received from the State bonds to the amount of $841,000, under said act of the Legislature.

The Savannah & Memphis Railroad has made no default in payment of its interest, and has completed twenty miles of additional road, for the examination of which commissioners have been appointed, but have not yet reported.

The other railroads for which the State has indorsed bonds are in default in the payment of interest on their bonds, and those which are incomplete are doing nothing in the construction of their roads.

ALASKA. This Territory of the United States, which was formerly known as Russian America, comprises all that portion of the North American Continent lying west of the 141st parallel of west longitude, together with a narrow strip of land between the Pacific Ocean and the British dominions. The Territory also includes all the islands near the coast and the whole of the Aleutian Archipelago, except Behring and Copper Islands, on the coast of Kamtchatka. The area of Alaska, including the islands, is 580,107 square miles. The population in 1870 was 29,097, of whom 26,843 were natives of the Territory, 1,421 half-breeds, 483 Russians, and 350 were natives

of the United States and foreigners, not Russians. There are not more than 1,500 completely civilized inhabitants. Sitka, or New Archangel, is the capital, and only considerable town of the Territory; it is situated on a small but commodious harbor on Baranov Island, in latitude 57° 8′ north and longitude 135° 17′ west. It was long the headquarters of the Russian-American Fur Company, though the natural centre of the fur-trade is the island of Kodiak, south of the Aliaska peninsula. At the time of the transfer of the Territory to the United States in 1867, Sitka, although founded in the last century, was little better than a collection of log-huts, about one hundred in number, with a few superior buildings occupied by government officers. St. Paul, the principal settlement on Kodiak Island, is the main depot of the seal-fisheries, and is surrounded by the best farming-land in the Territory. Next in importance as a settlement is Captain's Harbor, on the island of Unalashka, where is found the best anchorage in the Aleutian group. The remaining civilized places in Alaska consist for the most part of small trading-posts scattered throughout the country, the principal of them being Fort Yukon, near latitude 66° north, the most northerly station of the Hudson Bay Company. The interior of Alaska has been but little explored, and our knowledge of the country is confined mainly to the islands, the coasts, and a few of the larger rivers. The entire coast line of the Territory, without including the smaller indentations, measures 4,000 miles in length, and is bounded by three seas, the Arctic Ocean on the north, Behring Sea on the west, and the North Pacific on the south.

The climate is by no means as severe as that of corresponding latitudes on the eastern coast of North America. In regard both to climate and agriculture, the Territory is naturally divisible into three regions: the Yukon district, comprising all the country north of the Alaskan Mountains; the Aleutian district, comprising the islands of that name and the peninsula; and the Sitka district, comprising the remainder of the Territory. In the Yukon district the mean annual temperature is about 25° Fahr., and the ground remains frozen to within two or three feet of the surface throughout the summer. The amount of rainfall is not accurately known. In winter the ice on the Yukon, which is the chief river of Alaska, averages five feet in thickness, and, where there is sufficient water, it has been known to freeze to a depth of nine feet. The summer is short, dry, and hot. May, June, and July constitute the pleasant season; then the rainy weather begins and lasts till October. The lowest temperature ever recorded in this region was —70° Fahr. The climate of the Aleutian district is warmer, the mean annual temperature being from 36° to 40° Fahr. The average annual rainfall is about 40 inches, distributed among 150 rainy days in each year. January, February, and June, are the pleasantest months. A still warmer and moister climate is characteristic of the Sitka district. The town of Sitka is said to be the rainiest place in the world outside of the tropics. From 60 to 90 inches of rain fall annually, and the number of rainy days in each year varies from a minimum of 190 to a maximum of 285. The mean annual temperature is 44°; but the average temperature in winter is proportionately much higher than in summer, being only a little below the freezing-point; while the excessive rains in summer make that season unduly cold. Ice fit for consumption scarcely ever forms at Sitka.

The agricultural resources of Alaska are practically confined to the Aleutian and Sitka districts. The abundant growth of rich perennial grasses in the valley of the Yukon affords excellent fodder for cattle, but no grain has ever been raised there, and the only vegetables which have succeeded are radishes, turnips, and lettuce. The most fertile land is found at Cook's Inlet on Kodiak Island, and among the Aleutians, where good oats, barley, and root-crops, can be raised without much difficulty. Whether the potato can ever be successfully cultivated in Alaska, is doubtful. In the most favored farming districts the agricultural production can scarcely ever exceed the local demand.

The leading industries of Alaska are the fisheries and the fur-trade. In 1870, the product of the fisheries, in salted codfish alone, was 10,612,000 pounds. The great source of wealth of the Territory, and its commercial importance, is the production of fur-seal skins. The total annual catch of fur-seals throughout the world has been estimated, by high authority, at 160,000, of which 100,000 are taken from the waters of Alaska. The value of the entire fur-products of Alaska has been stated at upward of $1,200,000 per annum. Prior to 1867, the large fur-products of this country were collected by the Russian-American Fur Company of St. Petersburg, through its agents in Alaska, and, being concentrated annually at Sitka, were forwarded by ship to London and St. Petersburg. The furs are mainly those of the fur-seal taken in two small islands in Behring's Sea; the sea-otter skins taken mostly along the shores of the Aleutian or Fox Islands; and, general furs, such as beaver, fox, marten, bear, etc., found in the forests of the main-land. These are nearly all collected by the natives of the Territory, and by them traded off for the necessities of their mode of life. The fur-sealing on the two islands of St. Paul and St. George, situated three hundred miles from any other land, is a special branch of the trade. These islands are the summer home of these peculiar animals, to which they resort from May to November in each year, for the purposes of reproduction, rearing of their young, and shedding their coats of hair. As winter approaches they all migrate, and are not seen again until the following spring. Dur-

ing the summer millions of these animals line the shores for miles, and, notwithstanding that thousands are killed each year, they continue to multiply and increase. The demand for this particular fur having increased very largely in recent years, it is a matter of national importance to preserve the race of fur-seals. In 1868 parties from San Francisco, California, and New London, Connecticut, visited the islands of St. George and St. Paul, and secured large numbers of these skins. As the fur-bearing seal had been nearly exterminated in other parts of the world, the Congress of the United States extended special jurisdiction over the islands of St. Paul and St. George, forbade any one to go there without authority, and in due time passed a judicious law to govern the taking of the animals; sent proper persons to enforce the same, leased the islands, and laid a tax upon the skins taken, which is producing an annual revenue to the Government of over $300,000. The law wisely provides that none but male seals shall be killed. The breeding females, the young, and old bulls, are not molested. The proper season for killing is strictly observed, and thus the animals are likely long to continue to supply their beautiful fur.

The seal-islands of Alaska are leased by the United States Government to the Alaska Commercial Company of San Francisco, a corporation organized under the laws of California. The number of fur-seal skins which this company are allowed to take is now limited to 100,000 per annum; this entire product is sent to London, and there sold at the great semi-annual auctions. The company are under heavy personal bonds to the Government, faithfully to observe all laws of Congress relative to the time and mode of killing the animals, and the treatment of their native employés. They have the exclusive right to capture the fur-seal at St. George and St. Paul Islands, but all other kinds of fur-bearing animals may be taken by any persons, and the general fur-trade is open to free competition. The company have from sixteen to twenty trading-posts on the main-land and islands of Alaska, at which are gathered every year large numbers of furs and skins. They employ about a dozen vessels, and a corps of traders or factors, and concentrate their gatherings annually at San Francisco, whence they are forwarded to the best markets. The extent of the fur-trade of Alaska is indicated in the following approximative statement of the number of skins annually brought to San Francisco:

Fur-seal, 100,000; hair-seal, 150; sea-otter, 3,700; land-otter, 1,500; silver fox, 475; blue fox, 3,400; cross fox, 1,200; red fox, 6,400; white fox, 575; beaver, 17,600; marten, 10,700; sable, 600; mink, 6,700; bear, 425; musquash, 4,000; lynx, 250; ermine, 1,350; squirrel, 100; bird-skins, 100; reindeer-skins, 100; moose-skins, 200.

Under the provisions of the act of April 22, 1874, authorizing the Secretary of the Treasury to appoint a person qualified by experience and education to visit the trading-stations and Indian villages in the Territory of Alaska, Seal Islands, and the large islands in Behring's Sea, to collect authentic information relating to the varied interests of the Government in that Territory and the adjacent regions, Mr. Henry W. Elliott was designated as a special agent for that purpose. The report presented by him to the Treasury Department as the result of his labors contains a comprehensive statement of the character of the country, the condition of the natives, the present state of the seal and other fisheries, and the trade of the Territory, with minute descriptions of the haunts and habits of the seal and other fur-bearing animals, as also many valuable suggestions in regard to the management of the natives, the preservation of the seal-fisheries, and the economical collection of the revenue. No more satisfactory exhibit of the condition of the Territory and of its probable resources has hitherto been presented to the Treasury Department.

The Government has derived an income from the tax on seal-skins and from the rent of the fur-seal islands, since the acquisition of the Territory, as follows:

Tax on seal-skins	$1,150,219 75
Rent of fur-seal islands	170,480 75
Sale of seal-skins taken by Government agents, under section 6, act July 1, 1870	29,529 17
Making a total income of	$1,350,229 67

ALEXANDER, William Cowper, LL. D., a distinguished lawyer, scholar, and political leader, of New Jersey, for fifteen years past the President of the Equitable Assurance Society of New York, born in Virginia in 1806; died in New York City August 23, 1874. He was the second son of Rev. Archibald Alexander, D. D., the celebrated pulpit orator and theological professor, and a brother of James W. Joseph Addison, Henry M., Samuel D., and Archibald Alexander, Jr., all eminent in their several professions. William C. Alexander graduated from Princeton College in 1824, and was admitted to the bar in 1827, when he soon attained distinction both for his profound legal attainments and his remarkable and commanding eloquence as an advocate. He early took an active part in political matters, never seeking, and often peremptorily declining office, but ever striving to maintain principle, integrity, and honor. He was for several years President of the State Senate of New Jersey; and, sorely against his will, was the nearly successful candidate for the governorship of the State. He would have been chosen United States Senator from the State by a large majority, but he prohibited the use of his name. He was a delegate to the Peace Congress in 1861. It was while thus esteemed and honored that he withdrew almost entirely from political life, to devote himself, as he has

done with great assiduity and zeal, to the interests of life assurance. He was chosen President of the Equitable Life Assurance Society at its organization in 1859, and remained in that office till his death; and, by his commanding influence, and his rare executive ability, won for it an unprecedented success. Though an elegant and forcible writer, and an eloquent speaker, he had published very little beyond occasional addresses and arguments. He took a deep interest in education generally, and especially in the prosperity of Princeton College. He made the address of welcome to President McCosh on his inauguration, which was an eloquent and enthusiastic greeting, although he had but a few hours for its preparation. He received the honorary degree of LL. D. from Lafayette College, Easton, Pa., in 1860.

AMERICA. The progress of affairs in the States of North America was attended with no unusual event. A favorable summer resulted in large and abundant harvests. In the United States some disturbances arose with small parties of Indians, and in Louisiana the dissatisfaction with the State government continued, and required the presence of a small force of the United States troops. A disturbance also arose at Vicksburg, between blacks and whites (*see* MISSISSIPPI). The question of mixed schools of white and black children was extensively discussed in the Southern States, in anticipation of the passage of a "civil rights" act by Congress. Financial affairs throughout the country continued in an uncertain state, and a general embarrassment prevailed. The relations with foreign governments have been of the most peaceful character.

With the exception of the Plate provinces, where absolute tranquillity has been unknown since the Paraguayan War, the whole of South America has enjoyed a year of profound peace; and it would seem as if political turmoils and internecine strifes had at last ceased to be the normal occupation of the people, and were about to give place to the development of those inexhaustible natural resources which rank the South-American states among the richest and most beautiful in the world. Industrial enterprise is carried on with unabating energy in Chili and Peru, and commercial intercourse is rapidly extending between all the countries and the United States and Europe. Railways and telegraphs are multiplying in Brazil, Uruguay, Peru, Chili, and the Argentine Republic; and a concession was granted in the course of 1874, for the construction of a line of railway to unite the Atlantic and Pacific seaboards, bringing Buenos Ayres within sixty hours of Valparaiso. The completion of the submarine cable from Lisbon to Pernambuco has put almost all of South America in direct connection with the great telegraphic net-work of our globe; and local lines are fast extending the links to every corner of the country. Education is the object of much zeal in all the states; and in this respect Mexico is among the foremost; nor are the five Central-American states, spite of their endless international disputes, forgetful of the happy results to be obtained by the diffusion of useful knowledge. Large appropriations have been made during the year for the construction of school-houses, and the importation of books and teachers, for which purpose agents have already been dispatched to the United States by more than one of those little republics.

An alliance between the republics of the Pacific and Atlantic had been suggested for the avowed purpose of protecting republican principles in all of them; but, notwithstanding some diplomatic steps already taken, it is not probable that the project will receive much serious consideration.

ANGLICAN CHURCHES. *The Public Worship Regulation Act.*—On the 20th of April the Archbishop of Canterbury introduced in the House of Lords a bill for the better administration of the laws respecting the regulation of public worship. He supported it with a strong argument, showing the necessity for additional legislation to suppress irregularities in ritual, and preserve the peace and harmony of the Church. The bill was long and fully discussed in the House of Lords, and passed its third reading toward the end of June. In the House of Commons, it was again subjected to a rigorous scrutiny. Of the speeches made in this House, that of Mr. Gladstone against the bill, on the 9th of July, and that of Mr. Disraeli in favor of it, on the 16th of July, received the most attention. The bill passed the House of Commons on the 3d of August, having received some amendments which were concurred in without delay by the House of Lords, and it became a law on the 7th of August. It is commonly cited by its shorter title, as "The Public Worship Regulation Act, 1874." It provides that the Archbishops of Canterbury and York may, with the approval of her Majesty, or that her Majesty may, if the archbishops fail to act, appoint a suitably-qualified person to be, during good behavior, a judge of the Provincial Courts of Canterbury and York. In case of a vacancy in the office of official principal of the Arches Court of Canterbury, or of official principal or auditor of the Chancery Court of York, or of Master of the Faculties to the Archbishop of Canterbury, this judge shall become *ex officio* such official, principal, auditor, or Master of the Faculties. The judge, before entering upon his office, must file a declaration that he is a member of the Church of England. It is further provided that "if the archdeacon of the archdeaconry, or a church-member of the parish, or any three parishioners within which archdeaconry or parish any church or burial-ground is situated, or for the use of any part of which any burial-ground is legally provided, or in case of cathedral or collegiate churches, any three inhabitants of the diocese," being

members of the Church of England, male persons of full age, and qualified by residence, "shall be of the opinion—1. That in such church any alteration in or addition to the fabric, ornaments, or furniture thereof has been made without lawful authority, or that any decoration forbidden by law has been introduced into such church; or, 2. That the incumbent has within the preceding twelve months used or permitted to be used in such church or burial-ground any unlawful ornament of the minister of the church, or neglected to use any prescribed ornament or vesture; or, 3. That the incumbent has within the preceding twelve months failed to observe, or caused to be observed, the directions contained in the Book of Common Prayer relating to the performance, in such church or burial-ground, of the services, rites, and ceremonies ordered by the said Book, or has made or permitted to be made any unlawful addition to, alteration of, or omission from such services, rites, and ceremonies," such person or persons may represent the same to the bishop: *Provided*, that no proceedings shall be taken concerning any alteration in, or addition to, the fabric of a church which has been completed five years before making complaint. The bishop on receiving the representation may, with the consent of the parties, hear the case, and pronounce such judgment and issue such monition as he may think proper: "*Provided*, that no judgment, so pronounced by the bishops, shall be considered as finally deciding any question of law so that it may not again be raised by the parties." If the parties do not give their consent to the hearing by the bishop, he shall forthwith transmit the representation to the archbishop of the province, and the archbishop "shall forthwith require the judge to hear the matter of the representation at any place within the diocese or province, or in London or Westminster." Failure by the person complained of to answer the representation is to be regarded as a denial of its truth or relevancy. The judge is given the usual powers of a court of record, and is authorized to pronounce judgment, issue monitions, and make orders for costs. An appeal lies from his judgment or monition to her Majesty in council. Obedience to the monition or order of the bishops or judge "shall be enforced, if necessary," by an order inhibiting the incumbent from performing any service of the Church, or otherwise exercising the cure of souls within the diocese for a term not exceeding three months; which inhibition shall not, however, be relaxed until the incumbent shall have undertaken in writing to pay due obedience to the monition or order, or the part thereof which shall not have been annulled. If, however, the inhibition shall remain in force for more than three years from the date of issuing the monition, or if a second inhibition in regard to the same monition shall be issued within three years from the relaxation of an inhibition, the benefice or preferment held by the incumbent complained against shall become void, and the patron may make a new appointment; but he shall not reappoint the person who has been the subject of the proceedings. In case the bishop is the patron of the benefice, the incumbent of which is proceeded against, or is unable to act in the case, the archbishop of his province is authorized to act in his place; if the archbishop is the patron or is disabled, it is provided that the Queen shall appoint an archbishop or bishop to act in his stead. In cases in which a cathedral or collegiate church is involved, the duties otherwise assigned in the act to the bishop of the diocese are to be performed by the visitor. Complaints concerning the fabric, ornaments, furniture, or decorations of such cathedral or collegiate church must be made against the dean and chapter thereof; complaints concerning the ornaments of the minister, or the manner or form of conducting the services must be made against the clerk in holy orders who is alleged to have offended in the matter complained of; and the visitor shall have the same powers as to the infliction and execution of penalties as are given to the judge and bishop in the case of other ministers. This act is to go into force on the 1st of July, 1875.

The Convocation of Canterbury met for organization March 6th, in St. Paul's Cathedral. The Bishop of London presided at the opening meeting, in the absence of the archbishop, who was ill. The Latin sermon was preached by Dr. Merivale, Dean of Ely. The venerable R. Bickersteth, D. D., Archdeacon of Buckingham and Vicar of Aylesbury, was elected prolocutor of the Lower House. He made an opening address, in which he reviewed the work of convocation during the previous five years. He regarded the question of the Athanasian Creed as set at rest, at least for a generation, by means of the synodical declaration which had been adopted in 1873. The revision of the English version of the Holy Scriptures would, he thought, unless the existence of this Convocation were cut prematurely short by some political convulsion, be presented by it to the critical judgment of Biblical students. He trusted that the work would be found to be worthy of a place by the side of the present authorized version, and in time come to occupy the position that incomparable volume now held. He expressed the hope that some legislative action would be taken to give power to the Queen to subdivide unwieldy dioceses; and he thought that by this means the subject of the reform of convocation might be satisfactorily settled. He hoped that the movement which had been begun in convocation for intercommunion with the Churches of the East would tend to promote the union of the universal Church. After effecting their organization, both Houses were adjourned to April 28th.

On the 29th of April the Bishop of Lichfield, in the Upper House, presented a number of petitions on the subject of a second Pan-

Anglican Council. He referred to addresses which had come from Canada, from the West Indian bishops, from the Protestant Episcopal Church in the United States, and from the Church in Australia, on the subject; and expressed himself convinced that so general a call for a conference indicated that the time had come when the Anglican communion should have an acknowledged head. He moved for the appointment of a joint committee of both Houses of Convocation to consider a report as to what was the exact position that the Archbishop of Canterbury held with regard to the different branches of the Church scattered throughout the world, and that his Grace should be requested to convene a general conference of the Anglican communion in continuation of that of 1867. The archbishop, in speaking upon this motion, remarked that, with regard to the former conference of bishops at Lambeth, his predecessor had distinctly disavowed any claims of authority, and that it was still more necessary to do so now, on account of the changes which had taken place in the status of colonial churches. By the act of the home Government each of these churches was now an independent and voluntary communion, possessing, as in the act of forming, a definite constitution. They did not recognize their bishops as alone representing the Church, and did not give them power to decide upon laws and doctrines. The motion of the Bishop of Lichfield was amended by the addition of a clause directing that its provisions be communicated to the Primate of the Northern Provinces, and was adopted. The Bishops of London, Winchester, Lichfield, Gloucester and Bristol, and Peterborough, were appointed to act on the committee. The committee made a report in the Upper House on the 10th of July, recommending that a second meeting of the Lambeth Conference be convoked by his Grace the archbishop, for the year 1876; that then the work begun in 1867 be continued, and the reports of committees be taken into consideration; also, that the relation of the Archbishop of Canterbury to the other bishops of the Anglican communion be that of primate among archbishops, primates, metropolitans, and bishops.

On the 28th of April petitions, influentially signed, in relation to the bill introduced in the House of Lords by the Archbishop of Canterbury for the regulation of public worship, were presented in the Upper House of Convocation by the Bishop of Peterborough, and in the Lower House by the Dean of St. Paul's. In offering the memorials, the Bishop of Peterborough made an address, the tone of which was in favor of restraining lawlessness, but against permitting infringements of the just rights and liberty of the clergy. The Bishop of Lincoln spoke in favor of toleration. In the Lower House a message was received from the Upper House asking whether it still adhered to its action of 1869 on the subject of Church discipline, and inviting it to give its opinion regarding the inhibition of practices affecting the ritual of the Church declared unlawful by the courts (as presented in the new bill), and the relation of such inhibition to the liberty of the clergy. The reply of the Lower House was conveyed in the following declaration:

The Lower House of the Convocation of Canterbury, in answer to the two questions submitted to it by his Grace the president, on April 28, 1874, respectfully answers:

1. (*a.*) That the Lower House does adhere to all the resolutions on the subject of "clergy discipline" passed by the late Lower House, in the sessions of June, 1869; but that the Lower House would object to their partial application for the correction of a particular class of offenses; as the resolutions of the late Lower House were intended by the Lower House to be applied to the general reformation of all procedure in all cases tried in ecclesiastical courts. (*b.*) That the Lower House "recommends, as a particular mode whereby such resolutions can be made effective," the immediate preparation of a plan for the purpose with a view to an application to the crown for "assent and license" to enact it, and also with a view to obtain such statutable aid from Parliament as may be found needful.

On the 1st day of May, the Lower House resolved:

That this House, recognizing the necessity of speedy legislation in the matters involved in the question proposed to this House by his Grace the President, regrets its inability to approve the provisions of the bill recently introduced into the House of Lords for the purpose, and now requests that his Grace will be pleased to direct the appointment of a committee of this House to consider the provisions of the said bill; and further to request that his Grace will be pleased to summon Convocation at an early date, to receive such report.

(*a.*) And also that his Grace will be pleased to direct that it be an instruction of the committee to inquire whether the particular mode of action for the purposes in question, and especially for facilitating the proceedings in the Ecclesiastical Courts of Appeal, would be the proper "canonical drafts" with a view to application to the crown for "assent and license" to enact them; and (*b*) further to inquire into the measure of statutory aid which it may be needful to obtain from Parliament.

The archbishop replied in behalf of the Upper House to these resolutions, that the Lower House, by adhering to the resolutions of 1869, appeared to agree in the principles embodied in the proposals which were then before the public for the discipline of the clergy, including morals and doctrine. Their lordships (the bishops) were quite ready to consider all the matters, but they regarded it as desirable that the various subjects should not be unnecessarily united together, and were anxious to separate those relating to public worship. The appointment of the committee as asked for was agreed to. The committee appointed under the resolutions cited above made a report to the Lower House, May 7th, suggesting that further regulations respecting the conduct of the service according to the use of the Church of England should be by canon rather than by statute, and suggesting a number of objections to the archbishop's bill. They recom-

mended several specific amendments to the bill, and professed that, even with these modifications, they were unable to recommend legislation in the manner proposed by the bill. They further expressed the opinion that if the "Church Discipline Act" were repealed, and the existing consistory courts were reformed, there would be little difficulty in dealing expeditiously with such cases as were contemplated by the bill. The House resolved to transmit this report to the Upper House, with the request that their lordships would consider the objections it presented, and the amendments it proposed. The Upper House replied, through the archbishop: "We have given such consideration as we well can to the report which has been placed in our hands. There are in it certain proposed amendments of the present system of clergy discipline recommended by the committee, and some worthy of serious consideration, and they will receive very serious consideration, probably both here and elsewhere. There are other recommendations, too, worthy, no doubt, of no less serious consideration than the others, but which do not approve themselves to the majority of this House; but perhaps, on further consideration, these objections may disappear. Partly there are things in the report which do, and partly there are things which do not, commend themselves to our minds, and this difference of opinion was naturally to be expected." The Public Worship Bill was also discussed incidentally at the meeting of the Convocation in July. A gravamen was presented against it in the Lower House; and in the Upper House the archbishop made an explanation respecting it, and the Bishop of Lincoln made some criticisms of it.

The Convocation proceeded, at its session in July, to discuss the fourth or final report of the commission on ritual. A committee was appointed to consider and report on the previous action of the Lower House on the subject of ritual, with instructions to report as early as convenient upon the "Ornaments Rubric" and the position of the celebrant. The recommendations of the commissioners with regard to a daily service were adopted, as follows:

The directions concerning the daily use of the Church services are retained, not as an indispensable rule, but as a witness to the value put by the Church on daily prayers and intercessions, and on the daily reading of the Holy Scriptures.

The Committee of the Whole on the Ornaments Rubric, which had been in session in the interval since the last meeting (in May), reported in the Upper House the following resolution, which was adopted:

Resolved, That the Ornaments Rubric is of doubtful and difficult interpretation, and that it is most desirable that it should be replaced by a rubric which shall clearly define what dresses and ornaments of the ministers shall be permissible in the Church of England.

The Bishop of Lichfield offered the following resolution, which was seconded by the Bishop of Peterborough:

Whereas, In the 34th Article it is affirmed that every national Church has authority to retain, change, and abolish ceremonies or rites of the Church ordained only by man's authority: *And whereas*, In the Preface to the Book of Common Prayer it is affirmed that rites and ceremonies, being in their nature "things indifferent," may be changed upon weighty and important considerations, according to the various exigencies of times and occasions: *And whereas*, A large number of the clergy and of the faithful laity of the Church of England are of opinion that the use of distinctive dress in ministering the Holy Communion of the Body and Blood of Christ would tend to reverence and edification: *And whereas*, It would tend to peace that the desire of the clergy and laity should be granted: *Resolved*, That it is desirable that the use of a distinctive dress be permitted in ministering the Holy Communion, but only at such places and upon such conditions as shall be hereafter approved by lawful authority.

The Bishop of Lincoln proposed as an additional clause:

Provided it be distinctly understood nothing is symbolized by such Eucharistic vestments as is in any way at variance with the doctrines of the Church of England, as contained in the order of the Holy Communion in the Book of Common Prayer.

The resolution and amendment were referred to the committee of the whole House.

The report of the Committee on Intercommunion with the Eastern Churches was presented in the Lower House of the Convocation on the 8th of May. A resolution was passed expressing gratitude for the directions issued by the Patriarch of Constantinople to his metropolitans, instructing their clergy to perform the rites of Christian burial for deceased members of the English Church. A resolution calling on the Archbishop of Canterbury to use his endeavors to secure intercommunion between the two Churches, and especially to enable members of the English Church residing within the jurisdiction of the Eastern Church to avail themselves of the rites and sacraments of that Church, was, after discussion, withdrawn.

Measures were taken during the earlier sessions of the Convocation for the preparation of a Manual of Private Prayers for members of the Church of England, to be submitted for consideration; for the preparation of a Form of Prayer to Almighty God, in behalf of the ministers of the Church, to be used on suitable occasions, with the sanction of the archbishop and bishops; and for an inquiry into the expediency of the appointment of a day of public intercession on behalf of the missions of the Church once in each year, or at such intervals as may be deemed expedient.

The Convocation of York met for organization March 6th. An address to her Majesty was unanimously adopted, praying that Parliament would maintain and improve the laws upon the subject of intemperance. At a subsequent meeting, May 22d, the following resolution was adopted in reference to the bill introduced in the House of Lords by the Archbishop of Canterbury for the regulation of public worship: "That while some legislation is expedient for the better administration of

the laws respecting the regulation of public worship, it is most desirable that, simultaneously with such legislation, the rubrics, canons, and general laws of the Church, be revised, with a view to their being more clearly defined, and that the existing ecclesiastical courts be reformed."

The Church Congress.—The English Church Congress met in its fourteenth session at Brighton, October 6th. At the beginning, sermons were preached in St. Peter's Church by the Bishop of Ely, and in St. Nicholas's Church by the Bishop of Salisbury. The Bishop of Chichester, as bishop of the diocese in which the Congress was held, presided, and delivered the opening address. After giving counsel in regard to the temper in which the deliberations of the meeting should be conducted, he called attention to the subjects introduced by the committee of arrangements, which had not been brought forward at any previous Congress, of which the most important was the Old Catholic movement on the Continent. He characterized this movement as a phenomenon of the deepest interest to the English people, as the beginning of a reformation in the Roman Catholic Church, the principles of which were not unlike those which had governed the reformation in their own Church. He trusted that the Conference would show that it thoroughly sympathized in the struggles of the leaders in this movement to free themselves from connection with the Roman Church. The discussion of this subject was opened formally in a paper read by the Bishop of Winchester. He gave a brief account of the history and character of the Old Catholic movement, and spoke favorably of the Conference just held at Bonn, which he had attended. Prof. Meyer followed, with an account of the persecutions which he represented the friends of the Old Catholic movement to have had to suffer in Roman Catholic countries. The subject was further discussed by the Bishop of Melbourne and Dr. Littledale. A paper was read by the Rev. M. H. Banning, on "Foreign Missions, especially in Reference to Modern Judaism," in which the number of converts from Judaism to Christianity at the present day was spoken of as encouraging to further efforts among the Jewish people. The subject was continued in a paper by the Rev. Dr. Barclay, who claimed that mission-stations had been established in the chief centres of the Jewish population in all the nations of Europe except Russia, on the north coast of Africa, in Western Asia, and in Jerusalem. He estimated that one-half of the Jewish population of ten million souls were reached directly or indirectly by missionary efforts, and that twenty thousand Jews had been baptized into Christianity. The subject of "Foreign Missions in Relation to Mohammedanism and other Oriental Systems of Religion" was discussed in papers and addresses on "Mohammedanism," by the Earl of Chichester; "Buddhism in Ceylon," by Bishop Claughton; and "China," by Bishop Horden. The discussion of the subject of "Church Patronage" was opened with a paper prepared by the Bishop of Lincoln, and read by Mr. Walter Phillimore. Canon Ashwell read a paper on the same subject, which was continued, with addresses by Mr. Walter Phillimore, the Earl of Harrowby, J. G. Hubbard, M. P., Canon Gregory, and the Rev. E. Garbet. All of the essayists agreed in condemning the abuses practised in the sale of livings and advowsons, and various suggestions were made of measures of reform. On the subject of the "Convocations of the Church of England," papers were read by Lord Alwyne Compton and Canon Ryle, in which the admission of laymen to the Convocation was favored; and others by Canon Trevor and Canon Parr, in which it was opposed. The discussion was continued by Colonel Bartlett, M. P., and Canon Freemantle. Several points involved in the controversy between the Ritualistic and Evangelical parties were touched upon, and much excitement, and even disorder, resulted. The "Adaptation of the Fabrics and Services of the Church to the Wants of the Times" was considered in papers and addresses by Mr. Beresford Hope, M. P., the Rev. W. Cadman, Prof. Donaldson, Mr. G. E. Street, the Rev. J. W. Perry, the Dean of Manchester, Canon Rawlinson, and other persons. A variety of views were offered. The subject of "Skepticism, Critical, Scientific, and Popular," was introduced with a paper by Canon Westcote, on "Skeptical Criticism." Prof. Pritchard read a paper on "Scientific Skepticism," in which he dealt prominently with the atomic theory of Prof. Tyndall. Prof. Birks read a paper on the same subject. The Rev. Dr. Hersey, the Rev. J. W. Tidcombe, the Rev. Dr. Hayman, the Rev. Dr. Wright, and the Bishop of Edinburgh, took part in the discussion which followed. Papers were read on "The Spiritual Life; its Helps and Hinderances," by the Dean of Norwich and the Rev. G. H. Wilkinson; on "The Education of Women," by the Rev. C. Bigg, the Rev. J. L. Davis, Mr. W. E. Hubbard, and the Rev. Prof. Plumtre; and on "Church Music," by the Rev. Dr. Stainer. A meeting for working-men was held during the sessions of the Congress, at which the Dean of Chichester presided. Addresses were made by Canon Miller, Canon Ellison, Mr. Gorst, and the Rev. Mr. Wainright, and the subject of "The Influence of Social and Sanitary Conditions on Religion" was discussed. On Saturday, October 10th, a special service was held in Chichester Cathedral. A dispatch was received from the Congress of the Protestant Episcopal Church in the United States, sitting in the city of New York, conveying the hearty greetings of that body, and was suitably answered. The Patriarch of Syria and the Bishop of Jerusalem, of the Eastern Church, were presented to the Congress at one of its sittings. Private meet-

ings of the Ritualistic party were held during the session, at which it was decided to present a petition to the Convocations of Canterbury and York in favor of such action as should insure the "retention of such ornaments of the Church and of the ministers thereof as were prescribed by and used under the Prayer-book of 1549." At similar meetings of the Evangelical party, resolutions were adopted pledging resistance to all attempts at a revision of the rubrics in "an anti-Protestant" direction, and more particularly to all proposals to legalize vestments and the Eastward position. The Congress was regarded as a very successful one. The attendance was so large as to make necessary a division into two sections. The various schools of opinion in the Church were well represented in most of the discussions.

A Church Congress was held at Edinburgh May 18th, 19th, and 20th. The programme embraced papers and discussions upon the following topics: "The Past and Present Condition of the Episcopal Church in Scotland;" "The Evangelizing Work of the Church;" "Foreign Missionary Work," on which subject a paper was assigned to Bishop Callaway, of Independent Kaffraria; "Church Finance," papers by Messrs. W. Mitchell and Lordson Walker; "Diocesan, Parochial, and Congregational Organization," papers and addresses by the Rev. J. Erskine Clarke, of Battersea, Canon Humble, of Perth, Dr. Mackness, of Broughton Ferry, and the Rev. F. Sandford, of Edinburgh; "Christianity in Relation to Modern Unbelief," papers and addresses by Provost Cazenove, of Cumbral, Provost Powell, of Inverness, Prebendary Clark, of Taunton, Dr. McCann, of Glasgow, and the Rev. Gedart Jackson, of Leith; "The Training and Supply of Clergy," discourse by Canon Barry, of King's College, London, Prof. Lorimer, of Edinburgh University, and the Rev. J. Cowper, of Aberdeen; "On Quickening and Strengthening Spiritual Life in the Church," the Rev. W. D. Maclagan, of Newington; "The Relation of the Church to Education," discussed by the Rev. W. Percy Robinson, of Trinity College, Glenalmond, the Rev. Julius Lloyd, of Greenock, the Rev. F. Teesdale, of Inverness Grammar-School, and Mr. G. Auldjo Jameson, of Edinburgh; "The Ecclesiastical Architecture of Scotland," Sir G. G. Scott; "The Cathedral Organization of Scotland," Rev. Mackenzie E. C. Walcott, Precentor and Prebendary of Chichester.

The Exeter Reredos Case.—The questions of the lawfulness of images in churches and of the power of the bishop over the cathedral were partly involved in a case known as the "Exeter Reredos Case," which engaged the attention of the ecclesiastical courts in the summer of 1874. The Dean and Chapter of Exeter Cathedral, in repairing the cathedral building, had determined to erect a reredos, containing figures sculptured in *alto-rilievo* and arranged in groups to represent the Ascension, the Transfiguration, and the Descent of the Holy Ghost. The spot where it was intended to set it up had been occupied by tablets containing the ten commandments. The bishop opposed the erection, but, his authority to forbid it having been disputed, proceedings were instituted before Mr. Justice Keating to test the legal points. It was held on behalf of the bishop that the work was illegal from the beginning, having been commenced without his faculty, and that the images were forbidden by the rubrics. The dean and chapter pleaded that in matters of cathedral decoration their authority was quite independent of that of the bishop; that the images, being in relief, and not statues, were not of the class forbidden in the rubrics; and that, by being arranged in groups to represent events, they were not liable to the objection attached to single images. Justice Keating affirmed the power of the bishop in the premises, and sustained his decision that the images were unlawful. The bishop pronounced a judgment in accordance with the opinion of Justice Keating. An appeal was taken by the dean and chapter to the Court of Arches, by whom a decision was given in August, reversing those of Justice Keating and the bishop.

In order to meet a supposed emergency requiring the provision of facilities for enlarging the episcopate in India, the Judicial Committee of the Privy Council, at the suggestion of the Christian Knowledge Society, early in the year recommended the passage of an enabling act empowering the bishops in India to rearrange their existing dioceses, to constitute new dioceses, and to consecrate additional bishops. They suggested the appointment of coadjutor bishops for the missions of Southern India, as a temporary expedient, and even went so far as to suggest the amount of income that should be allotted to each bishop.

The report of the joint committee on the new canons and constitutions was presented to the convocations of Canterbury and York during the year. It proposed a reduction of the one hundred and forty-one canons of 1603 to ninety canons.

A society has been formed in England, of which the Bishop of Winchester has been chosen president, with the object of bringing about the union with the Anglican Church of Nonconformist bodies that hold the fundamental tenets of Christian faith, such as the doctrine of the Trinity, the Incarnation, and the Atonement. The society purposes to avoid carefully compromising in any way the creeds and the constitution of the Church. It intends, however, to advocate freedom of action in matters of secondary importance. Its plan of work is: 1. To diffuse, by means of lectures, public meetings, and other instrumentalities, a better knowledge of the history, principles, and formulas of the Established Church; 2. To promote kindly feelings between Churchmen and Nonconformists by means of friendly

intercourse and such acts of united worship as ecclesiastical law allows; 3. To remove the obstacles to the admission of properly-qualified Nonconformist ministers to orders in the Church of England. The headquarters of the Society will be in London; branch associations are to be formed throughout the kingdom.

The annual festival of the Confraternity of the Blessed Sacrament was held on the day of Corpus Christi. The occasion was observed with special service in about fifty churches. The society in England is about twelve years old. Its especial objects are: 1. To promote "the honor due to the presence of the Lord" in the Sacraments; 2. "Mutual and special intercession;" 3. "The promotion of fasting communion."

From statistics given in *Mackeson's Guide to the Churches of London and its Suburbs* for 1874, it appears that there are 759 churches in London. Information is given as to the mode of conducting the services in 745 of these churches. The Holy Communion is observed weekly in 240 of them, and daily in 26; "Early Communion" is held in 310 churches; Saints'-day services are held in 316, and daily service in 181 churches. No week-day services are held in 126 churches; 265 churches have surpliced choirs; 185 churches pay their choristers partly or wholly; 331 churches have weekly offertories; the seats are appropriated in 110, and are free in 130 churches; floral decorations are used in 153 churches; altar-lights in 36, and Eastward position is taken on Holy Communion in 74 churches.

Society for the Propagation of the Gospel.—The receipts of the Society for the Propagation of the Gospel in Foreign Parts for 1873 were $551,000. The Society had provided wholly or in part for the support of 484 ordained missionaries, who were thus distributed: In America and the West Indies, 220; in Africa, 94; in Asia, 125; in Australia and the islands of the Pacific Ocean, 44. Among the missionaries enumerated were included 49 native ministers in India. The Society employed also about 322 catechists and lay teachers, most of whom were natives of the countries in which they were laboring, and had 141 students enrolled in its colleges.

Church Missionary Society.—The seventy-fifth anniversary of the Church Missionary Society was held May 5th. The "ordinary income" for the year was reported to have been £127,720, while the "total income" had reached £261,-221. At the previous annual meeting a deficit of nearly £12,000 was reported in the account of receipts and expenditures. This deficit had been made good during the current year, and a surplus remained, after meeting all claims, of £10,407. A legacy of £22,800 had been received from the estate of Mr. T. W. Hill, of Bristol, and a gift of £20,700 had been made to the Society by Mr. Walter Jones, of Manchester. The contributions for the Henry Venn Memorial Fund, for aiding in the internal development of native churches, had reached the sum of £8,544. The report of the Society sketched the progress of missionary work carried on under its direction at Sierra Leone, Yoruba, the Niger Mission, the Mediterranean Mission, Northern and Western India, Southern India, Ceylon, Mauritius, and Madagascar, China, Japan, New Zealand, Northwest America, and on the North Pacific coast. The number of principal stations under the care of the Society was stated to be 157; of ordained missionaries employed, 854, of whom 142 were native ministers; of unordained laborers, 34; of teachers, 2,244; of native communicants in the mission churches, 22,555; of native Christians, 107,268. In consequence of the action of the Society for the Propagation of the Gospel in Foreign Parts, in appointing a bishop for Madagascar, the Society had withdrawn its missionaries from that country, in order that it might not be made a party to interference with the work of the London Missionary Society.

The Irish Church.—The report of the Representative Body of the Church of Ireland for 1874 states that that board had agreed to purchase all the glebes except three. The sum of £144,877 10*s.* 7*d.* had been paid in part payment on this account to the Church Temporalities Commissioners. Of this amount £86,942 11*s.* 8*d.* were contributed by the parishes, and £6,310 18*s.* 2*d.* were received for sales to the public. The receipts from the clergy on account of rents, after allowing four per cent. interest on the balance of £51,614 0*s.* 9*d.*, had produced a surplus of £9,318 17*s.* 5*d.* The number of commutants on the 31st of December, 1873, was 2,058, or 102 less than the whole number of annuitants. The amount granted for composition up to the same date was £968,500, the commutation capital of the annuitants being £1,974,500. The amount advanced under Table III. was £933,000, extinguishing annuities to the amount of £84,300. The balance arising from commutation of church offices was £206,226. The balance of the general sustentation fund amounted to £155,781 19*s.* 11*d.*, the interest on which, at four per cent., was £8,360 7*s.* To this fund had been added the unappropriated subscriptions to the 31st of December, 1873, amounting to £11,335 4*s.* 11*d.* A list was given in the report of the amounts allotted to the various parishes entitled to claim a portion of the £500,000 granted on account of private endowments. The total sum allocated on account of the Boulter and Robinson funds was £140,222 17*s.*; and on account of general endowments £78,764 3*s.* 5*d.* The total estimated cost of glebes directed to be purchased out of this fund was £18,122 3*s.* 8*d.*, and the sum set apart to provide an indemnity for unsettled cases, and to meet other contingencies, was £17,890 15*s.* 11*d.* The balance remaining unappropriated was £150,000, for which, together with £15,000 of accrued interest, the report proposed a definite schedule of allocation.

The fourth meeting of the General Synod of the Church of Ireland was held at Dublin, beginning April 9th. The Lord Primate presided. But little progress was made during the session in the work of revising the Prayer-book. A large proportion of the amendments proposed by the revision committee, and approved by the laity, were defeated upon a division of orders by failing to receive the requisite two-thirds vote of the clergy. Thirty-three petitions were presented in favor of the revision and eight against it. Among the adverse memorials were an address signed by 550 of the clergy, and one signed by more than 800 gentlemen of rank and position, 200 clergy, and 6,600 members. A number of amendments to the ritual, relating to the Form for the Consecration of Bishops, to the Form of Prayer for June 30th, and to various prayers, thanksgivings, and collections, were agreed to without opposition, and with but little discussion. A proposition to omit from the answer to the second question of the Catechism the words, "whereby I was made a member of Christ, a child of God, and an inheritor of the kingdom of Heaven," was negatived on a division of orders, as were also several other alterations of the Catechism proposed by the revision committee. A new question and answer were, however, approved, to be introduced into the Catechism before Communion, in the following terms: "*Question.*—After what manner are the body and blood of Christ taken in the Lord's Supper? *Answer.*—Only after a heavenly and spiritual manner, and the means whereby they are received and taken is faith."

A motion for leave to introduce a bill requiring the reordination of Reformed Roman Catholic priests seeking admission into the Church of Ireland was defeated by a vote of the clergy. A motion to substitute another form for the Commination service held on Ash-Wednesday was also rejected. The proposition to remove the so-called "damnatory clauses" of the Athanasian Creed was carried with the laity by a large majority. The clergy refused concurrence. A strong division of opinion was manifested upon the subject. Both houses finally concurred in an arrangement by which the Creed should be inserted entire and without change in the latter part of the Prayer-book, and should also be printed in the morning services with the "damnatory clauses" omitted, for recitation in place of the Apostles' Creed on the occasion of the festivals, when it is directed to be substituted for that article. It was the intention of this adjustment to leave it optional with the clergyman whether the Creed in question should be read entire or without the "damnatory clauses."

Provincial Synods of Canada, Australia, and the West Indies.—On account of its close connection with the Established Church in England, synodal action in the Episcopal Church in Canada was of doubtful legality before 1857. In that year an act was passed providing that the several dioceses in the Province of Canada might, by their respective bishops, clergy, and laity, meet to frame constitutions and make regulations for their own government. The same act further authorized them to meet in general assembly within the province, by such representatives as might be determined upon, to frame a constitution and make laws for the general management and good government of the Church. Under this act diocesan synods were formed in the dioceses of Quebec, Toronto, Montreal, Huron, and Ontario. When confederation took place, the Episcopal Churches in the Eastern provinces naturally desired to enjoy the benefits of a similar union. Accordingly, acts were passed by the Parliament of the Dominion extending the provisions of the Provincial Act to Nova Scotia in 1870, and to New Brunswick in 1870. These acts prescribed the manner in which the dioceses in the provinces named could be admitted to the Provincial Synod, and enjoy in that body the same standing as the Canadian Synods possessed. Application for such admission was made by the diocese of Nova Scotia in 1871, but, on account of a fatal defect in form, it could not be granted. The application was renewed in 1874 by an almost unanimous vote of the Synod, in proper form, and deputies were chosen to represent the diocese in the Provincial Synod. The Diocesan Synod of Fredericton (New Brunswick), which met June 30th, on the second day of its session, also resolved, by a vote of fifty to forty-six, to enter the Provincial Synod, and appointed deputies to represent it there. The Provincial Synod is pledged to continue an integral portion of the United Church of England and Ireland; to take the Holy Bible, "as set forth by that Church, on the testimony of the Primitive Catholic Church," as the rule and standard of faith; and, under the supremacy of the Queen, to receive and maintain, and transmit unimpaired to posterity, its Book of Common Prayer and its "Scriptural and Apostolic form of government and doctrine." It purposes for itself to deal chiefly with matters of discipline, government, and Church extention throughout the Dominion. By its constitution it consists of two Houses; the first, or Upper House, comprising all bishops having sees or officiating as assistant or missionary bishops under its jurisdiction; and the second, or Lower House, which is composed of twelve clerical and twelve lay delegates from each diocese united with the Synod. The Houses meet separately. The Metropolitan is President of the Upper House. The Lower House, at the beginning of each session, elects a prolocutor from among its own members. The Synod meets at Montreal every third year, on the second Wednesday of September.

The Provincial Synod of Canada met at Montreal September 9th. The meeting was opened by the metropolitan in a joint session of the two Houses, after which the Rev. J.

Gamble Geddes, of Hamilton, was chosen prolocutor of the Lower House. The delegates from the dioceses of Halifax and Fredericton were introduced and welcomed. Among the questions that received most attention was one in reference to the mode of appointing the metropolitan. The Queen, in nominating the first Bishop of Montreal, had selected that city as the seat of the Metropolitan See. The bishops were, however, not willing to accept as their prince, or the province as its metropolitan, a bishop in whose election they and the province had had no choice; on the other hand, the Diocese of Montreal could not be expected to consent to be deprived of its suffrage in the choice of a bishop. In order to meet these difficulties, the Provincial Synod at its previous meeting, in 1871, adopted a canon to be carried into effect if confirmed by the present Synod, providing that, on the occurrence of the next vacancy in the Diocese of Montreal, that diocese should cease to be the fixed Metropolitan See; that then, and subsequently on the avoidance of the Metropolitan See, the bishops of the Ecclesiastical Province should meet under the presidency of the senior bishop, and elect one of their own number to be president of the House of Bishops, and that the bishop so elected should become, *ipso facto*, metropolitan, and his See, the Metropolitical See of the Province; that the city of Montreal should continue to be the place of meeting of the Provincial Synod. The following canon was enacted: "No alteration or addition shall be made in the Book of Common Prayer and Administration of the Sacraments and other rites and ceremonies of the Church, the Articles of Religion, or the form and manner of making, ordaining, and consecrating bishops, priests, and deacons, or the version of the Scriptures authorized to be read in the Churches, unless the same shall be enacted at one session of the Provincial Synod and confirmed at another session of the same; provided their confirmation be approved by two-thirds of the House of Bishops and two-thirds of each order of the Lower House. Nevertheless, any alteration in or addition made to the Prayer-Book or articles by the Church of England in her convocation and authorized by Parliament may be accepted for use in this Ecclesiastical Province when passed by the Provincial Synod in one session only, without the necessity of future confirmation."

A conference of West Indian bishops was held near the beginning of the year, at Georgetown, Demerara. It determined upon the confederation of the West Indian dioceses into a separate province, of which the bishops would style themselves "Bishops of the West Indian Church." The establishment of a Provincial Synod, to consist of bishops only, and of a synod, or Church council, in each diocese, to consist of the bishop, clergy, and representatives of the laity, was decided upon. The organization of a bishopric endowment fund and a general sustentation and endowment fund was considered favorably.

At the meeting of the assembly of the Church of England in the Diocese of Melbourne, bills were passed creating a province in the colony, constituting the Diocese of Ballarat; regulating the appointment of future bishops of Melbourne; and making provision for the systematic religious instruction of the youth of the colony from moneys to be derived from "the selling or letting of school lands." The Bishop of Melbourne will be metropolitan of the newly-formed province.

ARGENTINE REPUBLIC (Republica Argentina), an independent state of South America, lying between latitude 22° and 41° south, and longitude 53° and 71° 17′ west; and bounded north by Bolivia; east by Paraguay, Brazil, Uruguay, and the Atlantic; south by that ocean and the Rio Negro, which forms the boundary-line with Patagonia; and west by Chili, from which it is separated by the Andes Mountains. The boundary question with Paraguay is still unsettled; numerous proposals have been exchanged with Brazil during the year, but that empire, persisting in affirming the injustice of the Argentine claim to the Chaco territory, north of the Rio Pilcomayo, war has been regarded as imminent; and the Argentine press severely censured the hostile policy and attitude of its Government toward Brazil. The vexed question of title to Patagonia is still the subject of angry discussion between the republic and Chili; but here the arbitrary policy of the latter elicited little sympathy, and, should war have followed, public opinion would have regarded the Santiago Government as chiefly to blame. Report represented Chili as about to take formal possession of the entire territory from the Santa Cruz River southward to the Straits of Magellan, which would seem to be a breach of the compact between the two countries—that neither should exercise jurisdiction over any portion of the territory until a mutually satisfactory solution should be reached; but Chili is said to have alleged, in its own defense, that the Argentines were the first to violate the agreement by erecting a fort on the southern bank of the river alluded to. It would, however, appear that the Argentine Government proposed to leave the matter to arbitration, as in the case of previous treaties.

The Argentine territory is divided into fourteen provinces, for which, with their area and population, according to the census of 1869, *see* Annual Cyclopædia, 1872. Some of the provinces doubled their population between 1849 and 1869, others in somewhat less than thirty years. Among those whose population increases most rapidly are Buenos Ayres, Entre-Rios, Santa Fé, Corrientes, Salta, and San Juan, which are the chief centres of immigration. The aggregate population of the republic very nearly doubled from 1849 to 1869, and the ratio of increase per decade has

The fourth meeting of the General Synod of the Church of Ireland was held at Dublin, beginning April 9th. The Lord Primate presided. But little progress was made during the session in the work of revising the Prayer-book. A large proportion of the amendments proposed by the revision committee, and approved by the laity, were defeated upon a division of orders by failing to receive the requisite two-thirds vote of the clergy. Thirty-three petitions were presented in favor of the revision and eight against it. Among the adverse memorials were an address signed by 550 of the clergy, and one signed by more than 800 gentlemen of rank and position, 200 clergy, and 6,600 members. A number of amendments to the ritual, relating to the Form for the Consecration of Bishops, to the Form of Prayer for June 30th, and to various prayers, thanksgivings, and collections, were agreed to without opposition, and with but little discussion. A proposition to omit from the answer to the second question of the Catechism the words, "whereby I was made a member of Christ, a child of God, and an inheritor of the kingdom of Heaven," was negatived on a division of orders, as were also several other alterations of the Catechism proposed by the revision committee. A new question and answer were, however, approved, to be introduced into the Catechism before Communion, in the following terms: "*Question.*—After what manner are the body and blood of Christ taken in the Lord's Supper? *Answer.*—Only after a heavenly and spiritual manner, and the means whereby they are received and taken is faith."

A motion for leave to introduce a bill requiring the reordination of Reformed Roman Catholic priests seeking admission into the Church of Ireland was defeated by a vote of the clergy. A motion to substitute another form for the Commination service held on Ash-Wednesday was also rejected. The proposition to remove the so-called "damnatory clauses" of the Athanasian Creed was carried with the laity by a large majority. The clergy refused concurrence. A strong division of opinion was manifested upon the subject. Both houses finally concurred in an arrangement by which the Creed should be inserted entire and without change in the latter part of the Prayer-book, and should also be printed in the morning services with the "damnatory clauses" omitted, for recitation in place of the Apostles' Creed on the occasion of the festivals, when it is directed to be substituted for that article. It was the intention of this adjustment to leave it optional with the clergyman whether the Creed in question should be read entire or without the "damnatory clauses."

Provincial Synods of Canada, Australia, and the West Indies.—On account of its close connection with the Established Church in England, synodal action in the Episcopal Church in Canada was of doubtful legality before 1857. In that year an act was passed providing that the several dioceses in the Province of Canada might, by their respective bishops, clergy, and laity, meet to frame constitutions and make regulations for their own government. The same act further authorized them to meet in general assembly within the province, by such representatives as might be determined upon, to frame a constitution and make laws for the general management and good government of the Church. Under this act diocesan synods were formed in the dioceses of Quebec, Toronto, Montreal, Huron, and Ontario. When confederation took place, the Episcopal Churches in the Eastern provinces naturally desired to enjoy the benefits of a similar union. Accordingly, acts were passed by the Parliament of the Dominion extending the provisions of the Provincial Act to Nova Scotia in 1870, and to New Brunswick in 1870. The Bishop of Melbourne will be metropolitan of the newly-formed province.

ARGENTINE REPUBLIC (República Argentina), an independent state of South America, lying between latitude 22° and 41° south, and longitude 53° and 71° 17′ west; and bounded north by Bolivia; east by Paraguay, Brazil, Uruguay, and the Atlantic; south by that ocean and the Rio Negro, which forms the boundary-line with Patagonia; and west by Chili, from which it is separated by the Andes Mountains. The boundary question with Paraguay is still unsettled; numerous proposals have been exchanged with Brazil during the year, but that empire, persisting in affirming the injustice of the Argentine claim to the Chaco territory, north of the Rio Pilcomayo, war has been regarded as imminent; and the Argentine press severely censured the hostile policy and attitude of its Government toward Brazil. The vexed question of title to Patagonia is still the subject of angry discussion between the republic and Chili; but here the arbitrary policy of the latter elicited little sympathy, and, should war have followed, public opinion would have regarded the Santiago Government as chiefly to blame. Report represented Chili as about to take formal possession of the entire territory from the Santa Cruz River southward to the Straits of Magellan, which would seem to be a breach of the compact between the two countries—that neither should exercise jurisdiction over any portion of the territory until a mutually satisfactory solution should be reached; but Chili is said to have alleged, in its own defense, that the Argentines were the first to violate the agreement by erecting a fort on the southern bank of the river alluded to. It would, however, appear that the Argentine Government proposed to leave the matter to arbitration, as in the case of previous treaties.

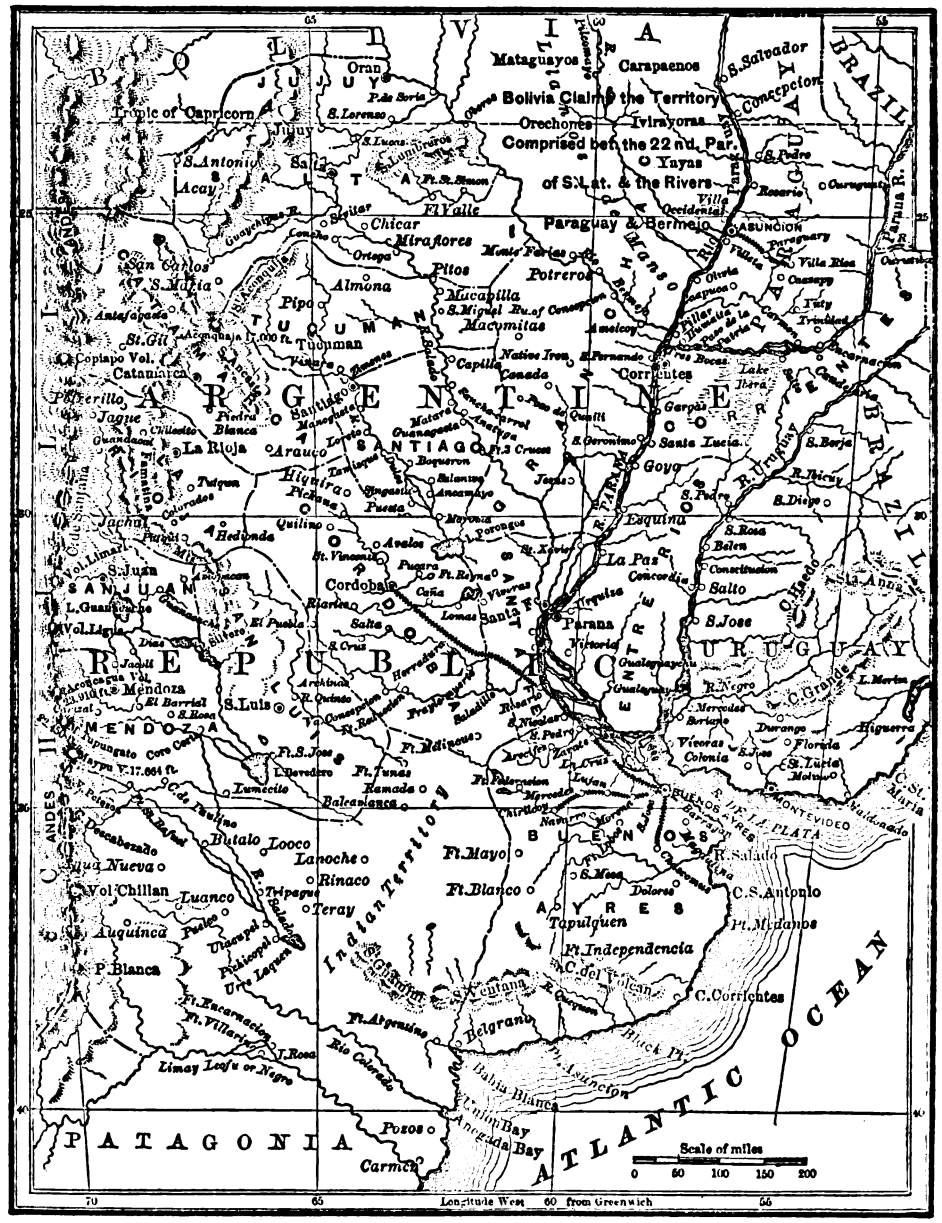
The Argentine territory is divided into fourteen provinces, for which, with their area and population, according to the census of 1869, *see* Annual Cyclopædia, 1872. Some of the provinces doubled their population between 1849 and 1869, others in somewhat less than thirty years. Among those whose population increases most rapidly are Buenos Ayres, Entre-Rios, Santa Fé, Corrientes, Salta, and San Juan, which are the chief centres of immigration. The aggregate population of the republic very nearly doubled from 1849 to 1869, and the ratio of increase per decade has

been approximately the same during the same period, according to the annexed official returns, the first two being only estimates:

YEARS.	Population.
1819	935,000
1859	1,304,000
1869	1,827,334

There are in the province of Buenos Ayres eight individuals to the square mile; in Tucuman, five; in Córdoba, three; in some of the upper provinces there is but one; and in the whole republic there are only three, or about fifty times less than in most European countries.

In 1873 the number of immigrants exceeded 79,000, or almost double the number of the previous year; and it would appear that the class of settlers shows a marked improvement—thanks to the superior condition and accommodations of the steamers now used in that service. Sailing-ships are almost entirely super-



seded, and twenty steamers monthly keep up a constant stream of emigration from Italian, French, Spanish, German, Belgian, and English ports.

The following is a comparative table of the arrivals in the six years, 1868–'73:

YEARS.	Arrivals.	YEARS.	Arrivals.
1868	29,234	1872	41,002
1869	37,934	1873	79,712
1870	41,058		
1871	21,758	Total in 6 years..	250,698

A statistical table, compiled from auctioneers' books, notaries' registers, and banking-houses in the city, shows that the value of property purchased by foreign settlers and of moneys remitted in small drafts to their friends at home reached the enormous figure of £2,600,000, or $18,000,000, viz.:

Public lands bought	£45,460
Returns of 24 auctioneers	1,280,000
Foreign investments at Rosario	240,300
Remittances to Italy	405,000
" to Spain	302,600
" to France	188,400
" to Gt. Britain and Ireland	84,200
" to Switzerland	89,500
" to Germany	24,000
	£3,603,460

Mr. Wilcken, the director of the immigration department, regards these figures as far below the truth; but it is, nevertheless, wonderful that the yearly savings of a hundred thousand families in Buenos Ayres and Santa Fé should average $1,800, or an aggregate sum equivalent to the revenue of not a few second-rate European monarchies. There is an interesting fact in real estate immediately traceable to the large numbers of immigrants referred to. The province of Buenos Ayres has an area of 70,000 square miles, and a population of 521,653, or eight inhabitants to the square mile approximately, 30 per cent. of whom are foreigners; while Santiago del Estero has an area of 35,000 square miles, and but four inhabitants to the square mile, only one per 1,000 of whom are foreigners. Now, in the former province, a single building-lot costs, in the suburbs of the capital, as much as one square league, or 6,660 acres of land in the latter. Mr. Wilcken ingeniously calculates in the following manner the accretion to the public wealth resulting from the immigration of 1878, adopting the United States basis of $1,000 per individual arrived:

79,712 immigrants, at $1,000	$79,712,000
Capital of immigrants on arrival	7,014,656
Increase of revenue at $12	956,544
Salaries at $200 each	15,942,000
	$103,725,200

This estimate, however enormous it may appear, is affirmed to contain no exaggeration; nor is it, after all, so very wonderful, if we are to accept as accurate the $18,000,000 of savings above cited for the same year. Little variation is noticeable in the proportion of nationalities, the Italians still standing for a full half of the arrivals. The sum appropriated in 1873 for the expenses of the department was $178,724, and these really amounted to but $105,784, leaving a surplus of $72,940. It may be curious to mention that the forwarding immigrants' letters to Europe free of charge is regarded as a most successful means of encouraging immigration; and an expenditure of $28,620 for free passages to Europe in favor of 106 deserving colonists was the means of securing 402 new settlers. Some 18 per cent. of the total outlay of the department is for the remuneration of fourteen agents in Europe.

It was estimated that the arrivals in 1874 would amount to 100,000.

The President of the Republic is Dr. Don Nicolás Avellaneda, elected in 1874; Vice-President, Dr. M. Acosta, elected in the same year; Minister of the Interior, Dr. Simon de Iriondo; of Foreign Affairs, Dr. Félix Frias; of Finance, Don Santiago Cortines; of Justice, Public Worship, and Public Instruction, Dr. Onésimo Leguizama; of War, Dr. Adolfo Alsina. Argentine minister to the United States, Sr. Don Manuel R. Garcia (in Europe since 1872); *chargé d'affaires*, Sr. Don Cárlos Carranza. The Governors of the fourteen provinces are as follows:

Buenos Ayres (*pro tem.*)	Colonel Barrios.
Minister of the Interior	Dr. A. Alcorta.
Minister of Finance	L. Basavilbaso.
Catamarca	Gen. O. Navarro.
Córdoba	E. Rodriguez.
Corrientes	M. V. Gelabert.
Entre-Rios	L. Echague.
Jujuy	A. Mas-Oller.
La Rioja	R. Ocampo.
Mendoza	H. Civit.
Salta	P. Sanavria.
San Juan	M. Gómez.
San Luis	L. L. Quiroga.
Santa Fé	S. Bayo.
Santiago	A. Ibarra.
Tucuman	B. Lopez.

In the estimated budget for 1875, the various items of revenue and expenditure stand as in the following tables:

REVENUE.

Import duties	$14,900,000
Additional duties	3,598,000
Export duties	2,200,000
Additional duties	1,200,000
Public warehouse fees	600,000
Stamped paper	430,000
Post-Office	200,000
Telegraphs	110,000
Dividend of Central Argentine Railway Co	116,620
Rio Cuarto and Port Ruiz Railways	130,000
Interest on Varela loan fund	100,000
Light-dues	80,000
Sundries	234,373
	$23,996,993

EXPENDITURE.

Finance:	
Interest on public debt	$7,762,229
Customs officials, etc	1,516,179
Discounting bills	500,000
Contaduría	151,632
Salaries, etc	248,209
Interior:	
Post-Office	610,789
Congress	493,400
Immigration	400,224
Public works, railways, etc	809,428
Telegraphs	256,560
Provincial subsidies	225,000
Engineers' department	91,800
Gran Chaco government	42,000
Public salaries, etc	190,128

Expenditure brought forward	$13,297,578
Army and Navy:	
Army	4,684,472
Navy	302,781
Indians	223,556
Extra appropriations	544,000
Justice, Public Worship, and Public Instruction:	
Federal judges	166,512
Bishops and churches	239,994
Public instruction	1,661,763
Observatory	39,140
Free libraries	22,776
Foreign Affairs:	
Foreign office	25,716
Legations, etc., abroad	22,148
	$21,348,866

The liberal appropriations for public works, public instruction, telegraphs, and the Post-Office Department, as they appear in the first table, are unequivocal signs of the financial prosperity of the country; but it should be observed that the Post-Office and telegraphs are still a heavy item of expense to the Government, inasmuch as they cost $867,349, and yield but $310,000. In the high estimated cost of the Post-Office, $610,789, are comprised the new Buenos Ayres Post-Office, and some new offices in the interior. The Central Argentine Railway dividend on 17,000 shares held by the Government makes up two-thirds of the sum required as guarantee; but since May, 1872, the line has paid no dividend, although there has been no interruption in the payment of the guarantee. The Rio Cuarto, Gualeguay, and Port Ruiz lines are not estimated to do more than cover expenses in 1875. The item light-dues, in the revenue table, is a new tax of six cents per ton for sea-going and one cent per ton for coasting vessels, to be collected commencing from January, 1875. It is presumed that this tax will produce upward of $120,000 per annum. It is also proposed to derive some $60,000 from dock-fees, at the rate of ten cents per ton on all merchandise landed at the Boca.

The interest on the public debt represents more than one-third of the total expenditure; the army and navy department stands for somewhat less than one-fourth, in spite of an increase of $22,868, and a proposed appropriation of $48,000 for the purchase of army stores; and the expenses of the foreign department do not amount to one hundredth of the national outlay, notwithstanding the establishment of two new legations, one in Peru and the other in Bolivia. The collection of customs costs 7 per cent.

The annexed table shows the growth of the revenue in the course of the ten years, 1863–'73, as compared with that of the Chilian revenue:

YEARS.	Argentine Revenue.	Chilian Revenue.
1863	$6,478,668	$6,700,659
1864	7,005,398	6,574,918
1865	8,295,071	7,301,042
1866	9,568,554	6,197,111
1867	12,046,287	9,756,838
1868	12,496,126	10,694,974
1869	12,676,680	11,484,806
1870	14,833,905	11,537,781
1871	13,682,155	11,681,082
1872	18,172,379	13,843,000
1873	20,160,380	15,392,557

The annual salaries of Argentine officials are expressed in the subjoined table:

President	$30,000	Chief of Agricultural Department	$3,000
Vice-President	10,000	Envoy ext'rdinary.	12,000
Cabinet minister	9,000	Sec'y of legation	3,750
Sub-secretary	3,500	Receiver of customs	5,000
Archbishop	5,000	Captain of port	5,000
Bishop	3,500	Admiral	2,500
Canon	1,100	Colonel	2,400
Federal Judge	8,500	Lieutenant-colonel.	1,400
Sectional " $3,000 to	6,000	Major	1,000
Brigadier-general	3,200	Captain	750
General	3,000	Lieutenant	500
Senator	3,500	Rector of National College	1,600
Deputy	3,500	Professor $1,050 to	1,350
Postmaster-general.	3,750	Navy-captain	1,200
Inspector of Telegraphs	3,750	Army-surgeon	3,000
Chief of Engineer Department	5,000	Port doctor. $1,350 to	3,000

The national debt amounted in January, 1874, to $71,031,081.50, comprising two branches, namely: the home debt, $20,933,976.50, and the foreign debt, $50,097,105.

The items of the home debt stood as follows:

	Emissions.	Paid off.	Balance.
Buschenthal	$2,674,823 50	$1,007,059	$1,667,764 50
National bonds	21,714,600 00	3,968,388	17,746,212 00
Roads & bridges.	1,248,000 00	86,000	1,162,000 00
National Bank	358,000 00	.....	358,000 00
Total	$25,995,423 50	$5,061,447	$20,933,976 50

In the course of eleven years interest was paid to the amount of $8,853,924.

The following table sets forth the elements of the foreign debt:

London loan of 1826	$8,850,500
" " of 1865	11,045,500
" " of 1871	26,443,490
Foreign claims	1,757,615
Total	$50,097,105

Notwithstanding this heavy indebtedness—little less than $35 for each inhabitant of the republic—Argentine stocks, within a very few years, reached par, for the first time it is true, on the London exchange.

The subjoined table presents a view of the distribution of foreign capital in public debts and joint-stock companies in the Argentine Confederation:

CENTRAL GOVERNMENT.		
Riestra loan, 1865	£2,138,000	
Public works, 1871	5,716,100	
Hard dollar loan, 1872	1,224,000	
		£9,078,100
BUENOS AYRES GOVERNMENT.		
Six per cent. loan, 1824	£819,400	
Three per cent. loan, 1824	888,200	
Six per cent. loan, 1870	1,001,800	
Six per cent. loan, 1873	2,040,800	
		4,750,200
ENTRE-RIOS GOVERNMENT.		
Seven per cent. loan, 1872		214,900
SANTA FÉ GOVERNMENT.		
Seven per cent. loan, 1874		300,000
Total amount due on March 1, 1874		£14,343,200

By reference to the table given above of the estimated budget for 1875, it will be observed that of the $23,996,893 of revenue, no less than $22,596,000 are derived from the customs department; that is to say, from export and

import duties, and warehouse fees or storage. It appears, from official returns, that the province of Buenos Ayres stands for 82 per cent. of that branch of the revenue; Santa Fé, for 11 per cent.; Entre-Rios, for 5 per cent., and the remaining eleven provinces, for 2 per cent.

Books, paper, printing materials and apparatus, plants, fruits, ice, tobacco (for sheep), gold, silver, church utensils, etc., scientific instruments, steamboat machinery, machinery for new industries, furniture, and immigrants' baggage and other effects, are admitted into the republic free of duty. Ploughs, coal, iron, lumber, salt, silk, wrought silver or gold, and steam thrashing and reaping machines, pay a duty of 15 per cent. *ad valorem*. Precious stones pay 8 per cent. *ad valorem*. All other commodities pay 25 per cent. *ad valorem*. On wines, etc., from Europe, an allowance of 10 per cent. is made for leakage. Hides, sheepskins, wool, beef, tallow, feathers, and bone-ash, pay an export duty of 6 per cent. *ad valorem*. All other articles exported are free of duty.

In the budget for 1874, the revenue is set down at $20,432,000, and the expenditure at $23,421,392, the deficit of $2,989,392 being covered by treasury bills.

In 1873 there was a surplus of nearly $5,000,000, the revenue having been considerably greater, and the expenditure less, than the estimates. The revenue for that year was in advance of that of 1872 by $2,044,852.

The municipal revenue and expenditure of Buenos Ayres City were as follows in 1873:

REVENUE.	
Weights and licenses	$139,059 40
Street-lighting	141,379 24
Markets	42,840 00
Funerals and graves	21,337 20
Abattoirs	14,699 96
Hackney-coach stands	21,220 00
Fines, fees, etc.	39,576 20
Total	$421,112 00

EXPENDITURE.	
Hospitals	$92,654 32
Scavengers	134,397 60
Free schools	68,596 64
Prisons, Board of Health, etc.	112,516 36
Public works	187,370 48
Lighting, etc.	124,200 60
Total	$659,736 00
Deficit	$238,624 00

The army of the republic consists of 9,000 regulars, and 150,000 National Guards; in all, 159,000 men. The regulars are, for the most part, stationed on the Indian frontiers at Mendoza, Rio Quinto, Rojas, Azul, etc.; and there is a small number garrisoned at the national capital. Of the National Guards, 40,000 are in the province of Buenos Ayres.

The navy is composed of a few old steamers, and a small number of iron-clads of recent construction.

Through the unremitting energy of ex-President Sarmiento, and the zealous coöperation of Dr. Avellaneda, then Minister of Public Instruction, and now President of the Republic, education is in a very prosperous condition. The number of public schools has almost doubled since 1868. According to official returns, there are 1,645 of these schools in the fourteen provinces, with an aggregate attendance of 103,000—the largest, in proportion to the population, in South America. The census of 1869 registered 312,011 individuals, or one-fourth of the adult population, who could read and write.

The figures given above for the agregate attendance at the schools include 400 youths receiving education at the national colleges.

A prize of $10,000, offered by Congress to any province one-tenth of whose population should attend school, has been successively awarded to Mendoza and San Juan.

There are 120 free libraries in the republic, exclusive of the State Library and the *Biblioteca Nacional* in Buenos Ayres. The sum of $22,776 is appropriated for their support.

Although the civil war in the province of Entre-Rios has sensibly checked the general prosperity, its hurtful influence has by no means extended to the foreign commerce of the nation, which is rapidly increasing, both in imports and exports, from year to year.

The trade with the various countries in 1873 is shown in the subjoined table:

COUNTRIES.	Imports.	Exports.
Belgium	$2,967,586	$13,891,508
Brazil	2,968,953	769,464
Chili	1,444,188	2,365,475
England	19,344,143	9,894,007
France	18,955,138	8,677,819
Germany	3,228,015	449,557
Holland	1,611,616	226,204
Italy	3,784,384	1,487,925
Spain	2,952,600	1,221,697
United States	5,167,616	3,032,949
Uruguay	2,735,299	992,949
Other countries	1,999,341	2,100,515
Total	$66,458,873	$45,122,105

In regard to the balance of trade, there was a marked and progressive improvement from 1870 to 1872, viz.:

YEARS.	Imports.	Exports.	Ratio.
1870	$46,624,776	$26,753,203	As 9 to 5
1871	29,393,000	23,442,543	" 5 to 3
1872	60,229,143	45,743,193	" 4 to 3

(The decline in 1871 is to be attributed to the yellow fever, which prevailed at Buenos Ayres in the early months of that year.)

But, on reviewing the trade of 1872 and 1873, a difference of 33⅓ per cent. in the imports over the exports is observed:

ARTICLES EXPORTED.	Quantities.	Value.
Wool	363,725,000 lbs.	$38,530,000
Tallow	205,902,000 "	12,872,000
Ox and cow hides	5,661,000 "	12,229,090
Horse-hides, bones, metals, etc.	.....	12,229,000
Sheepskins	123,000,000 "	2,916,000
Jerked-beef	181,300,000 "	4,120,000
Total	.....	$90,063,090
Imports for the two years	.....	$121,093,900
Excess of imports	.....	$30,011,810

England and France stand foremost among the countries exporting to the Argentine Republic, but the imports from the first, in the first five months of 1874, showed a decline of no less than 50 per cent. as compared with the corresponding period of the year before:

ARTICLES.	Value in 1873.	Value in 1874.
Cotton fabrics	$2,186,235	$1,197,925
Woolen "	582,175	288,805
Linen "	226,490	107,380
Clothing	654,890	257,520
Hardware	438,705	274,670
Total	$4,090,495	$2,076,300

The principal imports from the United States are lumber (70,000,000 feet in 1873), kerosene-oil, lard, starch, marine stores, agricultural implements, street and railway cars, hardware, and tobacco; and the trade is decidedly on the increase; but, until direct steam communication is established between the two countries, the commercial exchanges must of necessity remain restricted.

Belgium takes the largest quantity of Argentine produce, most of the wool being sent to Antwerp; next in order is Great Britain, which, like the United States (but more extensively), receives hides and tallow; then comes France, taking sheepskins, partly in exchange for fancy wares, silks, wines, etc.; the jerked-beef goes to Brazil and Cuba; and live cattle are driven over the Andes into Chili.

Wool, hides, jerked-beef, and tallow, are the staple articles of export. The farms of the province of Buenos Ayres alone have an aggregate stock of 60,000,000 sheep, yielding some 200,000,000 pounds of wool annually, which is in advance of the total clip of Australia. The farming stock of the fourteen provinces is estimated at 15,000,000 horned cattle, 4,000,000 horses, and 80,000,000 sheep, valued at $150,000,000 approximately, and yielding in exported produce about $45,000,000 per annum.

The exports to the United States in the year ending September 30, 1873, were as follows:

ARTICLES.	Quantities.	Value.
Dry ox and cowhides	388,177	$1,989,454 00
Salted ox and cowhides	1,000	7,241 00
Horse-hides	100	257 00
Wool	8,237 bales.	1,089,406 00
Sheep skins	2,975 "	409,515 00
" (loose)	74,719	89,992 00
Horse-hair	660 bales.	204,324 00
Goat-skins	561 "	220,582 00
Nutria-skins	170 "	37,203 00
Water-hog skins	15,376	3,488 00
Deer-skins	18,600	7,237 00
Feathers	203 cases.	138,187 00
Horns	381,076	33,293 00
Hide-cuttings	320 bales.	16,917 00
Bone-ash	636 tons.	15,491 00
Shin-bones (loose)	94,665	
Tallow	12 hhds.	516 00
Junk	1,137 tons.	26,747 00
Rags	74 bales.	
Sundries		7,774 32
Total value		$4,392,574 32

There are thirteen lines of steamers which ply regularly between Buenos Ayres and European ports, viz.:

Lines.	No. of Steamers.
Royal Mail (British)	6
Lamport & Holt (British)	26
Glasgow	2
Belgian	12
French	25
Genoa	12
Hamburg	5
Total number of steamers	88

Rosario, now the second city in importance in the republic, with respect to population, geographical position, commerce, and industry, has fairly entered upon a career of prosperity not equaled by any town in the Southern Continent. It is the natural key to the whole interior north of the province of Buenos Ayres to the Bolivian frontier, and west of the Paraná to the Chilian Andes. Although 350 miles from the ocean, it can be reached by the largest vessels, which can moor close to the town, and are discharged and reloaded with great facility. The Central Argentine Railway, opened to traffic between this place and Córdoba in 1870, and shortly to be completed to Tucuman, was the first element of good fortune for Rosario, and the feature mainly instrumental in placing it in direct contact with the Atlantic world.

The direct foreign commerce for this port in the three years 1870–'72, is officially reported as follows:

YEARS.	Exports.	Imports.
1870	$1,402,124	$4,661,793
1871	1,841,774	6,541,990
1872	2,756,001	7,181,726

From the foregoing statistics it is seen that both exports and imports have wellnigh doubled in the course of the triennium referred to.

The following table presents the direct foreign shipping movement (including entries and clearances) for the same period:

YEARS.	Steamers.	Sailing-Vessels.
1870	27,632 tons.	51,100 tons.
1871	103,490 "	51,534 "
1872	159,900 "	71,009 "

The value of the trade between Rosario and other Argentine ports, in 1872, was $6,498,287, of which $3,629,531 were for imports; and the carrying was accomplished by 1,372 vessels entered, with an aggregate of 111,797 tons, and 1,379 cleared, with 117,990 tons. These vessels are small craft manned and owned by Italians, and sailing under the national colors; and packet-steamers, one of which, the Edward Everett, flies the United States flag, by special permission from the Argentine Government.

Railway interests are fast advancing in the Argentine Republic; the following lines are already open to public traffic:

Lines.	Length in Miles.
Buenos Ayres Western, to Chivilcoy	101
Branch to Lobos	42
Buenos Ayres Northern, to Tigre	20
Buenos Ayres Great Southern, to Dolores	130
Branch to Las Flores	75
Central Argentine, Rosario to Córdoba	246
Villa María to Rio Cuarto	82
Buenos Ayres to Ensenada	37
East Argentine, Concordia to Federacion	36
Total	769

The lines expressed below are in process of construction:

Lines.	Length in Miles.
Buenos Ayres to Rosario	185
Branch to Rojas, Pergamino, etc	240
Buenos Ayres to Fort Campana	40
Central Northern, Córdoba to Tucuman	336
Andine, Rio Cuarto, to Rio Quinto	76
East Argentine, Federacion to Caseros	55
Western, Chivilcoy to Bragado	80
Total	1,262

Most of these are to be finished by 1876, and all of them in 1877.

Of the projected or conceded lines, the following are the principal:

Lines.	Length in Miles.
Transandine, Buenos Ayres to Mendoza, San Juan, and Valparaiso (about)	900
Bragado and Planchon to Chili	650
Rioja to Copiapó (Chili)	300
Totoralejos to Rioja (branch of Great Northern)	200
Paraná to Concepcion	155
Santa Fé to Swiss Colonies	17
Great Southern, Las Flores to Azul and Tandil	130
Corrientes to Mercedes	138
Caseros to Mercedes	91
Bahia Blanca to Tandil	140
Lobos line, Las Heras to 25 de Mayo	75
Total	2,796

By far the most important line in the whole republic, and one of the most so in the South American Continent, will be the International Railway, 935 miles long (or 840 exclusive of the branch from Mendoza to San Juan), as it will open up much-needed means of communication between the chief producing centres of the interior and the ports of Valparaiso and Buenos Ayres, passing Santa Rosa on the Chilian side of the Andes, and bringing Buenos Ayres and Valparaiso within from forty to sixty hours' transit of each other. The gauge is to be 39½ inches, as on the Tucuman line; the concession has already been obtained by Clark & Co. (who so successfully established the Transandine Telegraph); and their estimate of the cost is $29,325,000, being at the rate of $25,000 per mile from Buenos Ayres to San Juan, and $50,000 per mile across the Andes. This estimate would appear extremely moderate if compared with the $27,000,000 expended on the railway from Vera Cruz to Mexico, but 263¾ miles in length, though presenting perhaps greater difficulties for the engineers to surmount than the Argentine and Chilian route. The steepest grade, says Mr. Clark, by the Uspallata Pass would be 1 in 25 for a short distance, and a tunnel nearly two miles long would have to be opened through hard rock; by the Patos route, two tunnels and a viaduct would be necessary; so the contractors prefer the first route. The fare from Buenos Ayres to Valparaiso would be $50, or one-fourth the passage by steamer; and the contractors' estimate of the annual passenger traffic on the line is:

	Receipts.
Through-passengers (10,000)	$500,000
Way-passengers (40,000)	200,000
Total receipts	$700,000

The Argentine share in the cost of the line would be somewhere about four times that of the Chilian share. The guarantee on the total cost of construction is 7 per cent.

There are now 4,146 miles of telegraph-wires in the republic, 2,618 of which are government property; and extra wires from the capital to Córdoba and Santa Fé were contracted for at $75,000, the work to be completed by the end of 1874. The messages transmitted in 1872 reached the number of 181,773, the receipts being $78,528; and in 1873 they numbered only 170,823, but the receipts were larger by $3,300. The returns for the first quarter of 1874 were nearly double those of the year preceding. The uniform rate is 25 cents per message of 20 words, on the government lines. The line from Montevideo to the Brazilian frontier being completed, and the submarine cable between Lisbon and Pernambuco successfully laid, the Argentine Republic is now connected by telegraph with the old continent.

The returns for the Post-Office Department were as follows for the two years expressed:

ITEMS.	1872.	1873.
Letters, newspapers, etc	5,769,966	6,787,480
Receipts	$150,380	$173,108
Expenses	$189,492	$211,459

The new general post-office, at a cost of $90,000, is to be completed in March, 1875.

A postal treaty with Brazil was ratified on December 26, 1873.

The insurrection in Entre-Rios up to December, 1873, had undergone no sensible modification, nor was it deemed probable that the spirit of rebellion could be permanently crushed until the Government should resolve to dispatch an adequate force to the disturbed province. This decisive step was ultimately taken, and Colonel Gainza, at the head of a powerful army, completely overthrew Jordan's troops, then mustering about 6,000 horse and foot, with eight pieces of cannon. The rebel chief narrowly escaped capture, all his artillery fell into the hands of the Government troops, and the number of the killed was estimated at 1,000. Thus ended a petty struggle which, had prompt measures been adopted, might have been terminated immediately after it began, but which indecision permitted to be prolonged until a series of futile attempts to bring it to a close had cost the country no less a sum than $16,000,000. Industry, in the mean time, was not interrupted within the province; and the

value of the wool, hides, lime, and other produce locked up in the interior, and released only upon the reëstablishment of tranquillity, was estimated at $7,500,000. According to report, the principal officers who had served under Jordan tendered their submission to the national Government after the defeat. Gainza was rewarded with immediate promotion to the rank of general.

The most important event of the year was the electioneering campaign, which was to decide who should succeed Señor Sarmiento in the executive office. The three candidates were Mitre, Alsina, and Avellaneda: the first had already been President of the Republic, was brigadier-general in the army, and had been intrusted with diplomatic missions to Brazil, particularly after the termination of the Paraguayan War, in all which capacities he had gained much popularity; the second was at the time Vice-President, and had been Governor of Buenos Ayres; and the third, an able statesman and Minister of Public Instruction, was universally esteemed as the stanch friend of education. Shortly before the elections, Señor Alsina retired from the contest, and devoted his energies in favor of Señor Avellaneda, who was ultimately elected, and was proclaimed by Congress as the fortunate candidate on August 6th. The elections passed over with relatively little disturbance; but on October 1st a rebellion broke out at Buenos Ayres, headed by General Mitre, who urged, as a plea for the step, that fraud had been practised at the polls. The republic was declared in a state of siege, the National Guards called to arms, and some battles fought with varying success. Numerous arrests were made; Mitre tendered his resignation as general, and received the support of the navy; the press was clamorous for the confiscation of the property of the insurgents; commercial houses were closed, and commercial credit postponed by a Government decree; newspapers were suspended; banks closed; wealthy citizens fled to Montevideo, and foreigners hurried to their consulates for passports, to protect them from the universal conscription. The Government demanded of the Chambers an appropriation of $2,000,000 to defray the expenses of the war; and, to enhance the general excitement, tidings were received that Entre-Rios was in revolt, and that Jordan, at the head of the insurgents was hurrying toward Buenos Ayres to join Mitre. All public works were stopped, and thousands thrown out of employment. On November 6th the insurgent flotilla was near Buenos Ayres, but no action of importance had taken place. Mitre was the favorite candidate in Buenos Ayres, and the inhabitants of that province were determined to have him replaced in power.

About the middle of December Mitre declined to pursue the contest, and came to terms with the new administration. This terminated the civil war. President Avellaneda entered upon the executive functions on the 12th of October.

ARIZONA. This Territory was separated from that of New Mexico, and organized by act of Congress passed February 24, 1863. No complete survey of the Territory has been made. Its area is estimated at 118,000 square miles, and the Territory contained, according to the census of 1870, 9,658 inhabitants, exclusive of Indians. Tucson, in Pima County, is the capital, and largest town. Arizona City, in Yuma County, is a prosperous business place, situated at the junction of the Gila and Colorado Rivers. Prescott, the former capital, is situated in Central Arizona, and is the headquarters of the Military Department of Arizona. The number of Indians is about 32,000, of whom about 5,000 are on reservations, and the remainder are nomadic. Many of these Indians are friendly to the whites, but the greater number are hostile. Of the friendly Indians the Pimas and the Maricopas rank first in numbers and civilization. They occupy a reservation on the Gila River, about 200 miles east of Arizona City. The Papagos live south of the Gila, along the line of Sonora. The Mohaves and the Yumas live along the Colorado, the Utes on the Upper Colorado, and the Moquis and Navajos in Northeastern Arizona. These tribes are engaged in stock-raising and agriculture. Of the hostile Indians, the Apaches are the most powerful and warlike. They comprise several tribes, distributed over the greater portion of Middle and Eastern Arizona. All of the hostile tribes are becoming more peaceable than formerly.

The mountains of Southern and Central Arizona are nearly all mineral-bearing, and contain lodes of gold, silver, copper, and lead. Mining will doubtless constitute one of the leading industries of the Territory. But this source of wealth has not been developed to any considerable extent, owing to the lack of men and capital. What is most needed in the Territory is a large immigration of good, sturdy, industrious men with their families. Reports from the Territory say that such men can find or make plenty of work, at about the following wages: Blacksmiths, per day, $4 to $5, and board; carpenters, $5 to $8 per day; cooks, per month, with board, $40 to $60; farm-hands, with board, $30 to $60 per month; herders, $40 to $50 per month, and board; masons and bricklayers, per day, $5 to $8; miners, $3 to $5; laborers, $2.50 to $3; teamsters, $50 to $60 per month, and board.

The prices of provisions are moderate, being reported about as follows, at Prescott: Flour, $10 per hundred; bacon, 30 cts. per lb.; ham, 30 cts.; beans, 10 cts.; coffee, 60 cts. to $1; sugar, 25 to 35 cts.; beef, 20 to 30 cts.; pork, 25 cts.; mutton, 15 cts.; venison and antelope, 20 cts.; potatoes, by the ton, 3 and 4 cts. per lb., but retailing at 5 cts. per lb.; beets, turnips, onions, and cabbage, 5 cts. per lb. Lumber is

$40 to $60 per M., according to quality. Board is $10 per week.

Persons desiring to reach Arizona from the Atlantic States, and to settle in Northern or Central Arizona, will find the road *via* Albuquerque, New Mexico, the best and shortest. Grass, wood, and water, are plenty, except in one or two places; but, with a little care, no trouble need be encountered.

The distances are as follows: From Granada, or Las Animas, Colorado (railroad towns), to Prescott, about 615 miles; from St. Louis to either of these places by railroad is 850 miles. Persons who may desire to go to the southern portion of the Territory, can take the old overland road, *via* Mesilla, to Tucson, which is 835 miles from Trinidad, Colorado. Both of the above are excellent natural roads.

Immigrants coming from the Pacific coast to Northern or Central Arizona will find two roads from San Bernardino, California: one *via* Hardyville and the Hualpai mines to Prescott; the other *via* Ehrenberg and Wickenburg to Prescott or Phœnix, the chief town of Salt River Valley. The distance from San Bernardino to Prescott by either of these routes is about 400 miles. On the road *via* Ehrenberg is a semi-weekly line of stages. The fare from San Bernardino to Prescott is $75, currency. Immigrants desiring to go to the southern part of the Territory can take the road from San Diego, *via* Yuma, to Tucson, on which there is a tri-weekly line of stages. The fare to Tucson is $90; the distance about 450 miles.

The Colorado Steam Navigation Company run a line of steamers from San Francisco to the mouth of the Colorado River, a steamer leaving San Francisco every twenty days. River-steamers run up the river to Yuma, Ehrenberg, Mohave, and Hardyville. Fare from San Francisco to Yuma: Cabin, $40; steerage, $25. Most of the freight comes this way.

Freight by wagons from Los Angeles to Prescott, *via* Ehrenberg or *via* Hardyville, is 12 cents per pound; the same from San Diego to Tucson, *via* Yuma.

There are eight military posts in the Territory, as follows: Fort Whipple, and department headquarters, near Prescott; Camp Verde, 30 miles east of Prescott; Camp Mohave, on the Colorado River; Camp McDowell, on the junction of the Verde and Salt Rivers, some 20 miles above Phœnix; Camp Lowell, near Tucson; Camp Bowie, at Apache Pass; Camp Apache, 200 miles northeast of Tucson; and Camp Grant, at the foot of the Graham Mountains.

Lines of telegraph connect Prescott, Wickenburg, Phœnix, Maricopa, Wells, Florence, Tucson, Yuma, and other points, with San Diego, California, and it is believed that there will soon be direct telegraphic communication with points in Utah and New Mexico.

The climate of Arizona is mild and generally healthful. In the southern part of the Territory the temperature ranges from 34° to 118° Fahr. The atmosphere is dry, and this region is singularly free from malarious diseases. Snow falls in Central Arizona, but, excepting in the higher mountains, disappears in a few hours. The temperature in summer rarely exceeds 90° and seldom falls below zero in winter. Rain falls mainly in the months of July and August, but there are frequent showers in April and May, as well as in the winter months. The climate of Arizona is said to be highly beneficial to those afflicted with bronchial or lung diseases.

The Territory has special advantages for stock-raising and the production of wool; for, not only is the climate favorable, but on the hills and mountain-sides a rich and abundant pasturage is found.

Arizona has three newspapers: the *Sentinel*, a weekly, published in Yuma; the *Citizen*, also a weekly, issued at Tucson; and the *Miner*, daily and weekly, published at Prescott. The government is administered by a Governor, Secretary, Treasurer, and Auditor, who are appointed by the President of the United States. The Legislature and Delegate to Congress are elected by the people. The judicial power is vested in a Supreme Court, consisting of three judges, appointed by the President, and probate courts. The Supreme Court holds one session annually, at Tucson. The present Governor is Hon. A. K. P. Safford.

ARKANSAS. In no State in the Union, excepting perhaps Louisiana, have there been such stirring events and such public excitement during 1874 as in Arkansas; and in no State, with the exception named, have public affairs called for such earnest consideration on the part of the General Government, or claimed a larger share of public attention throughout the country. An appeal to arms was made to decide a determined contest for the Executive office, which had been pending for nearly two years. This was followed by a Constitutional Convention, called under extraordinary circumstances, and which in a brief period caused the entire organic law of the State to be changed, and led to another contest between opposing factions for possession of the State government.

The contest between Brooks and Baxter for the governorship had its origin in the bitter political campaign of 1872; and, in order to present the facts of the controversy more intelligibly, it will be necessary to trace the record briefly from that time.

In the spring of 1872 a division in the Republican State Committee led to the calling of two conventions, and the nomination of two State tickets. One of these conventions nominated Joseph Brooks for Governor, and declared in favor of Greeley and Brown, and the Cincinnati platform; the other, after indorsing the Administration of President Grant, chose Elisha Baxter as their candidate for Governor. Owing to this division in the Republican ranks, the Democrats nominated no

State ticket, but favored the election of the Brooks wing. The election was held on the 5th of November. On the 6th of January, 1873, the General Assembly convened, and at once canvassed the returns of the recent election, pursuant to section 19 of Article VI. of the constitution, which provides:

> That the returns of every election for Governor, Lieutenant-Governor, Secretary of State, Treasurer, Auditor, Attorney-General, and Superintendent of Public Instruction, shall be sealed up and transmitted to the seat of Government by the returning-officers, and directed to the presiding officer of the Senate, who, during the first week of the session, shall open and publish the same in presence of the members then assembled. The person having the highest number of votes shall be declared elected, but, if two or more shall have the highest and an equal number of votes for the same office, one of them shall be chosen by joint vote of both Houses. Contested elections shall likewise be determined by both Houses of the General Assembly in such manner as is or may hereafter be prescribed by law.

As it appeared that 41,784 votes had been cast for Elisha Baxter, and 88,673 for Joseph Brooks, the former was declared by the General Assembly to be the duly-elected Governor of the State, and was at once installed in the office. Meantime, on the 4th of January, Mr. Brooks, alleging that fraud had been practised at the polls by the supporters of Baxter, and that a majority of the legal votes had been cast in favor of himself, petitioned the Circuit Court of the United States to enjoin Baxter from exercising the functions of Governor. A similar suit was also brought before the same tribunal by William M. Harrison, who had been a candidate on the Brooks ticket for Associate Justice of the Supreme Court against Marshall L. Stevenson, his successful opponent, on the Baxter ticket. A decision was rendered in this case on the 13th of January, to the effect that a court of the United States had no jurisdiction in the premises. As the facts and principles of law were the same in this as in Brooks's case, no further proceedings were had in the latter.

On the 19th of April Brooks applied to the Legislature for permission to contest the election of Baxter, but his petition was rejected by a vote of 68 to 9. Application was then made, June 2d, by the Attorney-General, in behalf of Brooks, to the Supreme Court of the State for a writ of *quo warranto*, to try the validity of Baxter's title to the office of Governor, which, it was alleged, he had usurped. After elaborate arguments by counsel, this application was denied by the court, which held that, "under the constitution the determination of the question, as to whether a person exercising the office of Governor is duly elected or not, is vested exclusively in the General Assembly of the State, and neither this nor any other State court has jurisdiction to try a suit in relation to such contest, be the mode or form what it may; whether at the suit of the Attorney-General, or on the relation of a claimant through him, or by an individual alone claiming a right to the office. Such issue should be made before the General Assembly. It is their duty to decide, and no other tribunal can determine the question."

Brooks now brought suit against Baxter in the Circuit Court of Pulaski County, under section 525 of the Civil Code of Arkansas, which provides that, "whenever a person usurps an office or franchise to which he is not entitled by law, an action by proceedings at law may be instituted against him, either by the State or party entitled to the office or franchise, to prevent the usurper from exercising the office or franchise." His petition stated that he had received more than 45,000 votes for Governor, while less than 30,000 had been cast for Baxter, and prayed that the latter might be ousted as a usurper, and that the office of Governor, with $2,000 emoluments which had been received by Baxter, might be judicially awarded to himself.

It should also be recorded here that a similar suit, embodying the same facts and principles of law, was begun in the same court by Berry, who had been the candidate for State Auditor on the ticket with Brooks, against Wheeler, who had been declared elected by the General Assembly. But the Supreme Court, on the application of Wheeler, issued a writ of prohibition restraining the proceedings of the Circuit Court, on the ground that the latter had no jurisdiction. In pronouncing the opinion of the court, Chief-Justice McClure said: "As to all matters of contested election for the offices of Governor, Lieutenant-Governor, Secretary of State, Auditor, Treasurer, Attorney-General, and Superintendent of Public Instruction, I am of the opinion that it can only be had before the General Assembly."

Governor Baxter interposed a plea of want of jurisdiction in the Brooks suit, but, apprehending that a decision would be rendered in favor of his opponent at the October term, and that the latter would gain possession of the State government before an appeal could be taken to the Supreme Court, he sent a communication dated September 4, 1873, to the President of the United States, reciting the essential facts of the controversy, and asking that Federal troops be sent to Little Rock, "as the course of events may compel me to resort to the extreme remedy of martial law, as the only means by which an effectual stop can be put to the proceedings of those men who are now disturbing the peace and good order of the State." This application was refused by President Grant, on the ground that it was not made in accordance with the Constitution of the United States.

Nothing more was heard of the controversy till the spring of 1874. On the 15th of April, the Circuit Court of Pulaski County, in the absence of Governor Baxter's counsel, issued a judgment of ouster in favor of Brooks against Baxter. The former immediately took forcible possession of the Governor's office, and

placed a strong guard around the State-House. The following dispatch was now sent to the President of the United States:

EXECUTIVE OFFICE, LITTLE ROCK, *April 15th.*
U. S. GRANT, *President, Washington, D. C.:*

Having been duly installed as Governor of Arkansas by the judgment of a court, I respectfully ask that the commanding officer of the arsenal be instructed to deliver the arms belonging to the State, now in his custody, or hold the same subject to my order. JAMES BROOKS.

Governor Baxter having established his headquarters at St. John's College, sent the following communication to Washington:

LITTLE ROCK, ARKANSAS, *April* 15, 1874.
To the President of the United States:

I have been advised by public rumor that in the State Circuit for this county, in a long-pending case brought by Joseph Brooks for the office of Governor of this State, a demurrer to the complaint was overruled and an immediate judgment of "ouster" against me given. This was done in the absence of counsel for me and without notice, and immediately thereafter the Circuit Judge adjourned his court. The claimant has taken possession of the State buildings and ejected me by force. I propose to take measures immediately to resume possession of the State property, and to maintain my authority as rightful Governor of the State. Armed men acting under this revolutionary movement are now in charge of the Government Armory and Capitol buildings. I deem it my duty to communicate this state of affairs to the President. I trust the revolutionary acts may be settled without bloodshed, and respectfully ask the support of the General Government in my efforts to maintain the rightful government of the State of Arkansas, and that the commander of the United States arsenal at this post be directed to sustain me in this direction. I respectfully request a reply to this communication at an early moment.

ELISHA BAXTER, Governor of Arkansas.

The application of Brooks for the State arms in the arsenal was refused by the President, who was not advised that Brooks's "right to hold the office of Governor has been fully and finally decided by the courts of Arkansas;" and on the same day the following communication was sent to Mr. Baxter:

DEPARTMENT OF JUSTICE,
WASHINGTON, *April 16th.*

The Hon. ELISHA T. BAXTER, *Little Rock:*

I am instructed by the President to say, in answer to your dispatch to him of yesterday, asking for the support of the General Government to sustain you in the efforts to maintain the rightful government in the State of Arkansas, that in the first place your call is not made in conformity with the Constitution and laws of the United States; and in the second place, that as the controversy relates to your right to hold a State office, its adjudication, unless a case is made under the so-called Enforcement Act of Federal Jurisdiction, belongs to the State courts. If the decision of which you complain is erroneous, there appears to be no reason why it may not be reversed and a correct decision obtained from the Supreme Court.

GEORGE H. WILLIAMS, Attorney-General.

On the afternoon of the 16th Brooks issued the following proclamation:

EXECUTIVE OFFICE,
LITTLE ROCK, *April* 16, 1874.

To the People of Arkansas:

As you will recollect, I was a candidate for the office of Governor at the November election of 1872. That I received a majority of the votes cast for that office has never been denied, even by the friends of Elisha Baxter. I appealed to the Legislature and asked to be allowed to contest the election for the office of Governor, and my petition, at the instance and by the connivance of Elisha Baxter, who corruptly used his official patronage to bribe members of the Legislature, was rejected, and I was denied not only the right of petition which the Constitution guarantees to every citizen, but the right to have the question of election investigated or passed upon. The Attorney-General asked the Supreme Court for a writ of *quo warranto* against Elisha Baxter, for the purpose of compelling him to show by what warrant and authority he assumed to discharge the duties of the office of Governor. That tribunal declared it had no jurisdiction to hear and determine a contest for the office of Governor, and the cause was dismissed for want of jurisdiction.

I then commenced an action against Elisha Baxter, under the provisions of the code, in the manner prescribed by law for the recovery of the office and the salary received by Elisha Baxter during the time he wrongfully withheld the same from me. I served notice on Elisha Baxter that I would, at certain times and places named in said notices, take testimony in support of my claim. Elisha Baxter, for reasons best known to himself, neglected and failed to appear at the times and places mentioned, and treated the court proceedings with derision and contempt, openly boasting in public and private speeches and conversation that he would resist the execution of the judgment of any court of the State with the militia if it attempted to interfere with his discharge of the duties of the office of Governor. Notwithstanding his threats, I continued to take testimony and prosecute a suit for the purpose of asserting my own rights and vindicating your choice at the ballot-box. On yesterday the Circuit Court rendered a judgment in my favor for the office and the salary, and I at once took the oath of office and took possession of the same.

Elisha Baxter no longer holds the Executive office, and it is to be hoped that you will join your voice with mine, rejoicing that the man you chose for Governor has at last been duly installed into office. Being in office, it is but fair that I, to some extent, define my future policy, which the adherents of Elisha Baxter will no doubt misrepresent for the purpose of advancing their personal interests and gratifying their own ambition.

For my political tenets, I respectfully refer you to the platform of the Reform party, on which I was a candidate in 1872. From the principles therein enumerated I have not departed, and, God helping me, never will. No one man in the State has felt the power of ballot-box stuffers and political thimble-riggers to the extent that I have. I say to you that, so far as in me lies, the ballot-box and election machinery of the State shall never again be made an engine of fraud and oppression, as it was in 1872. This is a republican form of government, where the voice of the people should rule, and so far as I am concerned it shall rule from this time henceforth, and so long as I occupy the Executive chair every man shall have the free and undisturbed right to vote as to him shall seem best, and that vote once cast shall be counted as the man that cast it intended it should be.

Efforts no doubt will be made by designing men to convey the impression that it is the duty of the people to rally to the standard of a man who, no doubt, will claim he is Governor of Arkansas, who you all know was not elected, and who has no more right or claim to the office than any one of you has, for the purpose of placing that man again in the Executive office. I say frankly to you that all such attempts will lead to strife and bloodshed, for I shall resist and suppress the action of all mobs that may assemble together under the banner or at the call of

Elisha Baxter. No man in the State can regret strife and bloodshed more deeply than myself; but feeling as I do that self-government rather than self-aggrandizement is in the issue, I shall employ every means at my command to maintain its supremacy. Elisha Baxter forced me from the Legislature to the courts, and thus far I have patiently borne with the law's delay at all times, feeling that justice would be done me by the judgment of a court of competent jurisdiction. I am in the Executive office. When it is adjudicated that I am not there legally I will bow my head in silence to the decree of the court, be it what it may. The power that Elisha Baxter used to force me into the court I will use to make him respect and abide its decrees.

To one and all I say, keep quiet and pursue your different vocations. Your services are not needed at the capital to preserve either peace or good order. Should the time come when they will be needed, you will be notified in due time through the proper channel.

JOSEPH BROOKS, Governor of Arkansas.

Governor Baxter now began movements for regaining possession of the State government. On the evening of the 16th he issued the following proclamation, declaring martial law in Pulaski County:

Whereas, An armed rebellion exists in the county of Pulaski, against the State government, and it becomes necessary to employ all the force at my disposal to suppress it: therefore, by the authority vested in me by law, I hereby proclaim the existence of martial law within said county, and command all persons capable of military duty to assist in the putting down of the said rebellion. During the time that martial law shall thus prevail, every infringement of the right of peaceable and well-disposed persons will be severely punished by whomsoever it may be committed. The utmost respect shall be paid by all persons to citizens not in arms, and to their property, and to that of the Federal Government. In testimony whereof, I, Elisha Baxter, Governor of the State of Arkansas, do hereby set my hand, the private seal of said State being now not accessible to the Governor of the State. Done at Little Rock, this 15th day of April, 1874.

ELISHA BAXTER,
Governor of Arkansas and Commander-in-Chief.

Having issued this proclamation, the Governor marched from St. John's College with his force of about two hundred men, down into the heart of the city, and established his headquarters at the Anthony House. Guards were placed along the principal streets, completely surrounding the State-House with a cordon of sentinels. Baxter's forces, which were rapidly receiving additions from other counties, also took possession of the telegraph-office. The State-House was held by between one hundred and one hundred and fifty men, who were well armed and had two cannon. Governor Baxter now issued the following proclamation to the people of the State:

EXECUTIVE OFFICE,
LITTLE ROCK, *April* 16, 1874.

To the People of Arkansas:

An insurrection, organized in the interest of certain parties disappointed in an attempt to secure the influence of the Executive for proposed frauds in the approaching election, has effected the seizure of the Capitol, and now attempts to usurp the functions of government. The momentary success of this insurrection, so far as regards the occupation of the building, has been owing to that security which the political traditions of the American people give to legitimate government, in time of peace. The armed sentries and loaded cannon which, for the moment, support the usurpation within the precincts of the State-House, had not been deemed requisite to the maintenance of a recognized government; the unexpected and forcible occupation of the building could not, at the instant, be successfully resisted: aversion to unnecessary bloodshed has for a few hours withheld the arm of the State government from immediate vindication of its rights and dignity. Forbearance has seemed only to embolden the impudence of the handful of insurgents. Forbearance, therefore, is at an end.

General orders No. 1, from headquarters of the militia of Arkansas, of date correspondent with that of this proclamation, declares martial law in the county of Pulaski. It is due to the people of the State that the circumstances which have rendered necessary this course of action be published.

At the election of 1872, I was returned Governor of Arkansas. At a late stage of the session of the Legislature chosen at the same time, my opponent, Joseph Brooks, Esq., sought his sole, legitimate, and constitutional method of redress (had he been injured in the decision of the election), by an appeal to the representatives of the people. The appeal was summarily rejected.

Application was then made to the highest judicial authority of the State—the Supreme Court—for a writ of *quo warranto*, which should determine my right to the office of Governor. In that case, as in the suit instituted for the office of Auditor of State, the highest judicial tribunal of Arkansas decided that, under the supreme organic law of the State, the determination of the question of election of State officers is exclusively vested in the Legislature.

Public excitement was allayed. The State settled itself to quiet, under an administration which, I trust, has not been unfaithful to its professions, or obnoxious to the people.

Meantime, a proceeding had been instituted before a circuit court of a county for the possession of the office of Governor. I do not care, at present, to comment upon the question of authority of such a court to adjudicate a matter, from the decision of which the Supreme Court of the State had, upon constitutional grounds, not merely shrunk but affirmatively denied its own jurisdiction. The Pulaski Circuit Court did clandestinely assume upon a demurrer filed in court, but never submitted to the court for its action, to render judgment of ouster, against the officer who, for fifteen months, had exercised the functions of chief magistrate of the State. The judgment was rendered, upon the call of the contestant's attorney, in violation of the express agreement of counsel, that the case should not be taken up in the absence of the representatives of either party. It was rendered, therefore, in point of fact, without the knowledge, or even the suspicion, of the Governor or of his counsel.

In pursuance of a plot already matured, in anticipation of the decision of the Circuit Court, the conspirators—forgetting, in their haste, that *no writ of ouster had ever been issued*—betook themselves to the room where the Chief-Justice of the State (the sole dissenter from the decision of the Supreme Court in the matter) awaited them, by previous appointment; and then, armed with the Chief-Justice's attestation to Mr. Brooks's oath of office, proceeded forcibly to eject from the State-House the chief magistrate of the Commonwealth.

An appeal lies, of course, to the Supreme Court of the State. That Supreme Court has already, in a case involving the point at issue, determined that no court has the authority to decide the validity of election of any executive officer of the State. It need hardly be remarked that, pending an appeal, the effect of the judgment of the Circuit Court of Pulaski County is suspended, and that the undertaking to

sustain the enforcement of that judgment, pending the appeal, is without color of law, or moral palliation.

The forcible ejection of the chief magistrate from the premises was followed by prearranged and prompt summons to armed desperadoes to bar all access to the State-House of its legitimate occupants. Mr. Brooks has issued a paper entitled a proclamation, in which he distinctly announces his intention of bloodshed.

The Executive of the State has but one obligation to perform—that to which he is bound alike by his duty as a citizen and his official oath. The authority of the law will be immediately and effectively asserted, peaceably, if may be, but asserted in any event. The government proposes to occupy the Capitol. As Governor of Arkansas, I appeal to the people of the State to support the government of the State against shameless usurpation. Under the solemn obligations of my oath of office, I renew my promise to be true to them. I ask from them the support which they owe to their chief magistrate.

ELISHA BAXTER, Governor of Arkansas.

On the following day, April 17th, Captain Rose, being in command of the barracks at Little Rock, and having received instructions from Washington to "take no part in the political controversy in the State of Arkansas, unless it should be necessary to prevent bloodshed or collision of armed bodies," sent the following communication to Baxter, and a copy to Brooks.

HEADQUARTERS, LITTLE ROCK BARRACKS,
LITTLE ROCK, *April* 17, 1874.

SIR: I am informed by the United States Marshal of this district that there is danger of a collision between the forces under your command and those of certain forces under the command of Joseph Brooks.

I therefore have the honor to enjoin upon you that you make no movement with your forces in any direction in the city of Little Rock, Arkansas, or its vicinity, with a view to bring about such a collision, or that may bring on such a collision, or to make any movement that may possibly bring about a collision with the United States troops under my command, or to impede any movement I may wish to make with the troops of my command to prevent the shedding of blood and the collision of armed forces.

Very respectfully, your obedient servant,
T. E. ROSE,
Captain 16th Infantry, commanding post.

General ELISHA BAXTER, commanding forces in the State of Arkansas.

Baxter at once replied that he would not advance his lines that night toward the enemy, and added, "I trust that your request or injunction does not extend to the prohibition on my part of any military operations." Brooks replied that he did not intend to move any portion of his command from the State-House grounds, and that his force would "only be used to repel any attack that may be made by the forces under the command of Elisha Baxter, having for its object the custody or control of the State-House and State-House grounds. Any and all such attacks will be resisted with all the force at my command." A communication was now addressed by the Mayor of Little Rock to Attorney-General Williams, asking that the officers in command of the arsenal be instructed "to aid the city police in making the arrest of men who are openly violating the law and setting the same at defiance." The mayor added that with such aid he could preserve the peace of the city without being compelled to take sides with either of the contending factions, and wanted to know "if the Federal Government is powerless to protect the lives and property of twenty thousand inhabitants who are situated as we are." To this communication the Attorney-General sent the following reply:

DEPARTMENT OF JUSTICE,
WASHINGTON, *April* 18, 1874.

FREDERICK KRAMER, *Mayor of Little Rock, Ark.:*

You must be aware that the President cannot interfere in the domestic difficulties of a State, except in conformity with the Constitution and laws of the United States. He cannot recognize a call made upon him for military aid by the mayor of a city. He has instructed the officer commanding the United States troops at Little Rock to prevent bloodshed. That is all he can do under the existing circumstances. I will ask in answer to your inquiry whether the United States are powerless to protect 20,000 people situated as the citizens of Little Rock, if the people of Arkansas have not patriotism enough to allow a question as to who shall hold a State office to be settled peaceably and lawfully, and not bring upon their State the disgrace and ruin of civil war?

GEORGE H. WILLIAMS, Attorney-General.

A difficulty having arisen as to communications by mail and telegraph, since Baxter's forces held possession of the telegraph-office, and both contestants for the Executive office claimed the letters addressed to the Governor of Arkansas, the following instructions were issued to Postmaster Pollock and Captain Rose:

WASHINGTON, D. C., *April* 17, 1874.

Postmaster, Little Rock, Arkansas:

Letters addressed to Governor E. Baxter or Elisha Baxter, Governor, should be delivered to said Baxter. Letters addressed to Governor Brooks, or Brooks, Governor, should be delivered to said Brooks. Letters addressed "Governor of Arkansas," you will withhold until further orders.

JOHN A. J. CRESWELL, Postmaster-General.

EXECUTIVE MANSION,
WASHINGTON, D. C., *April* 18, 1874.

Colonel ROSE, *Commanding U. S. Troops, Little Rock, Arkansas.*

I have a dispatch from the Acting President of the Western Union Telegraph Company saying that Baxter's officers now inspect all messages at Little Rock before transmission, and will allow no messenger to pass out with any message for the Brooks party, whether from the United States officials or otherwise. Under these circumstances it will be seen that this company is unable at present to maintain the sanctity of telegraphic correspondence. While the Government takes no part in the unhappy state of affairs existing in Arkansas at this time, you will see that official dispatches of the Government, whether from the military or civil departments, are transmitted without molestation by either of the contestants for the gubernatorial chair. Report to the Secretary of War the situation of affairs. U. S. GRANT.

After Captain Rose had taken possession of the telegraph-offices in obedience to the above instructions, Governor Baxter sent the following dispatch to President Grant:

LITTLE ROCK, ARK., *April* 19, 1874.

To the President of the United States:

A few days since, in the absence of my counsel, and at a time wholly unexpected, the Circuit Judge of this county, a court of inferior jurisdiction, rendered judgment in favor of Mr. Brooks against me

for the office of Governor of this State, and without notice to me or my counsel I was at once forcibly put out of my office, and that without any pretense of a writ being served on me. All that was done, too, after the Supreme Court of this State had twice decided that no court in the State had jurisdiction of the case at all, and the Legislature alone had jurisdiction. At once, on being ejected from office, I took steps to restore myself, to get possession of office, and to carry on the government. The people are coming to my aid, and are ready to restore me at once. In making this organization I am obstructed by the interference of United States troops in displacing my guards from the telegraph-office, and now it is apprehended that there will be further interference. Such interference breaks me down, and prevents any effort on my part to restore the State government and to protect the people in their rights. I beg of you to modify any order to the extent of such interference, and leave me free to act in this way to restore law and my place as the legitimate Governor of the State. Such interference does not leave me any chance to assert my claim to the office of Governor.

In the interests of peace and of these people who are flocking here to my support by hundreds, I beg of you to remove the United States troops back to the arsenal, and permit me to restore legitimate government by my own forces, which I will do promptly if the United States will not interfere. There is an armed insurrection against the legal State government here, and I call upon you to aid in suppressing it; but if you will not, then leave me free to act, and order the United States troops, without an hour's delay, to their own ground, and keep them out of my way. I have been thwarted and delayed thus long and, in fact, ejected from my office because of the fact that I had heretofore disbanded the militia of the State.

I make this earnest demand to repress insurrection and prevent domestic violence under my sense of duty to the Constitution and laws of the United States, as well as the State of Arkansas, and I rely confidently, as I have all the time, upon the assurance contained in your letter of September 15, 1873, to prevent the overthrow of my official authority by illegal and disorderly proceedings. An immediate answer is requested; otherwise bloodshed may be the result.

ELISHA BAXTER,
Governor of the State of Arkansas.

On the following day application was made for Federal aid by Brooks, as follows:

LITTLE ROCK, ARK., *April* 20, 1874.

His Excellency U. S. GRANT, *President of the United States.*

SIR: I hereby inform you that one Elisha Baxter, a private citizen, pretending to be Governor of Arkansas, without warrant or authority of law, assumed to declare martial law in the capital county of the State, and to appoint a pretended military governor of the city of Little Rock, the seat of government; that he called out armed bodies of men for the avowed purpose of attacking and capturing the Capitol of the State by military force and installing himself as Governor of such State; that large bodies of armed men have assembled, and are continually assembling, under said Baxter's proclamation of martial law, and are in close proximity to the State-House, and have this day actually advanced on the State-House and confronted a body of Federal troops stationed in front of the State-House, under order from their commanding officer, acting under command to preserve the peace, and were only prevented from making the attack by the presence of Federal troops; that these armed bodies have seized and appropriated private property, and are hourly seizing and appropriating private property, without compensation; have conscripted and are continually conscripting private citizens, and compelling them to aid and abet them in their insurrectionary purposes, and have seized and are daily seizing railroads in the State, and appropriating them to the same illegal and insurrectionary purposes; that there are armed bodies at this moment assembled within a few hundred yards of the State-House, and threaten an immediate attack upon it; that the Legislature adjourned *sine die* in April last; has not since been convened; is not now in session, and cannot be convened in time to prevent the threatened attack; that domestic violence now actually exists in this State and at the seat of government which the civil and military authorities under my control are powerless to prevent or suppress. Therefore I, Joseph Brooks, Governor of the State of Arkansas, in pursuance of the Constitution and laws of the United States, hereby make application to your Excellency to protect the State capital and the State of Arkansas against domestic violence and insurrection.

In testimony whereof I have hereunto set my hand and caused the great seal of the State to be affixed at Little Rock this 20th day of April, A. D. 1874.

JOSEPH BROOKS, Governor.

By the Governor:
EDWARD CURREY, Secretary of State *ad interim.*

Little Rock now had the appearance of a military camp. The troops on both sides were being constantly reënforced. Great excitement prevailed throughout the city, and business was almost entirely suspended. On the 21st a body of colored troops, under Colonel White, marched to the Metropolitan Hotel, where they were addressed by Governor Baxter and their commander. Amid the cheers which followed these speeches, a shot was fired from the crowd which had collected around, into the body of Baxter's adherents. This led to an indiscriminate firing on both sides, which resulted in the wounding of several persons. The disturbance was quelled by the Federal forces.

On the next day the following telegraphic correspondence in relation to a settlement by the Legislature passed between Governor Baxter and President Grant:

LITTLE ROCK, ARK., *April* 22, 1874.

To the President of the United States, Washington:

As I cannot move with my troops to assert my claims to the office of Governor without a collision with the United States troops, which I will not do under any circumstances, I propose to call the Legislature together at an early day, and have them to settle the question, as they alone have the power. But to do this the members of the Legislature must have assurance of protection from you, and a guarantee that they may meet in safety. This will be a peaceable solution of the difficulty, and I will readily abide by the decision of the Legislature.

ELISHA BAXTER, Governor of Arkansas.

EXECUTIVE MANSION, WASHINGTON, *April* 22, 1874.

The Hon. ELISHA BAXTER, *Little Rock, Arkansas:*

I heartily approve any adjustment peaceably of the pending difficulties in Arkansas by means of the Legislative Assembly, the courts, or otherwise. I will give all the assistance and protection I can under the Constitution and laws of the United States to such modes of adjustment. I hope that the military on both sides will be disbanded.

U. S. GRANT.

Upon receipt of the President's reply, Governor Baxter issued the following proclamation, convening an extraordinary session of the Legislature:

EXECUTIVE OFFICE, LITTLE ROCK.

To members of the Senate and House of Representatives of the General Assembly of the State of Arkansas:

Events of the most extraordinary character, involving the peace and welfare of the people of the State, having recently transpired, as Executive of the State I communicated these matters to the Executive of the nation, stating to him that I had been forcibly ejected from the Executive office, and was prevented by the intervention of Federal troops from asserting by force my claims to said office. At last, on this 22d day of April, I sent the following dispatch to the President:

[Here follows a copy of the dispatch, and of the President's reply.]

Now, therefore, during the present occasion, one of sufficient magnitude, and after such assurances received from the Executive of the nation, I deem myself warranted in the exercise of the power vested in me by the constitution of the State, to convene the Legislature of the State of Arkansas, to meet at Little Rock, the capital of said State, on Monday, May 11, 1874, at twelve o'clock. In testimony whereof I have hereunto set my hand and affixed my private seal, the seal of the State not being at present accessible.

Done at the capital, this 22d April, 1874.

ELISHA BAXTER, Governor of Arkansas.

By the Governor:

J. M. JOHNSON, Secretary of State.

On the 27th of April formal application for Federal aid was again made by Governor Baxter, as follows:

LITTLE ROCK, *April* 27, 1874.

U. S. GRANT, *President:*

On the 19th day of this month, as Governor of this State, I telegraphed you there was an armed insurrection against the legal government of this State, and made a requisition upon you for aid to suppress it, and to prevent domestic violence. I have just now been advised that you never received the requisition. I now take occasion to say that an armed insurrection exists in this State against the lawfully constituted authority thereof, and, as the Legislature cannot meet until the 11th day of May, I call upon you for aid to protect the State against domestic violence.

ELISHA BAXTER, Governor of Arkansas.

Up to the close of the month the position of affairs had continued about the same as at the beginning of the difficulty. Brooks still held possession of the State-House, while Baxter's headquarters had remained at the Anthony House. The excitement throughout the city had not diminished, nor had business been resumed. Disturbances were frequent, and arrests were made by both sides, but there had been no general collision between the opposing forces. On the 30th, however, an action occurred at New Gascony, in Jefferson County, between a body of Brooks's troops, reported at two hundred strong, and a portion of Baxter's force, stationed at Pine Bluff, under General King White. The number of the Brooks party killed was variously reported from five to eleven, the wounded from twelve to twenty, and the captured from twenty to sixty. None of General White's troops were reported to have been killed, but seven were wounded. Different reports were given of the origin of this collision: one, to the effect that General White had marched against the Brooks troops because they were threatening Pine Bluff; and another, because they were committing depredations in Jefferson County.

On the 3d of May two of the judges of the Supreme Court, John E. Bennett and E. J. Searle, while on their way to attend a session of the court in Little Rock, were arrested at Argenta, opposite that city, and taken from the train by parties claiming to act under the authority of Elisha Baxter. The latter, however, disclaimed any knowledge of the arrest or of the disposition that had been made of the judges. For several days the whereabouts of the prisoners was unknown to the public, and it was even rumored that they had been assassinated. The public excitement, therefore, was very high. It subsequently appeared, however, that the captured judges had been taken by a military guard to Benton, in Saline County. While in custody at this point, Judge Bennett sent the following communication to Captain Rose:

BENTON, SALINE COUNTY, ARK., *May* 5, 1874.

Colonel ROSE, *commanding United States Troops, Little Rock, Arkansas.*

COLONEL: On last Saturday evening, as Judge Searle and myself were quietly seated in the cars at Argenta, opposite Little Rock, we were forcibly ejected and arrested by an armed body of men, numbering, I suppose, about twenty-five. We asked by what authority we were arrested, and were answered it was by order of Governor Baxter. We then demanded to know for what crime, or supposed crime, we were restrained of our liberty. They told us they would not tell, but said we should be immediately taken before Governor Baxter; but we have not been so taken, but have been forced to come to this place, where we now are, twelve o'clock, M. On yesterday I addressed a letter to Governor Baxter, narrating the above facts, and demanding that we should be informed of the nature of the accusations against us; but as yet he has not done so, nor do I believe he will do so. The premises considered, allow me to say we are American citizens of the State of Arkansas, have always been true and loyal to the government of both. We were both soldiers in the Federal army, Judge Searle a major and lieutenant-colonel; I have held all ranks from a sergeant to colonel of the Seventy-fifth Illinois Infantry; have been a first-lieutenant in the regular army. We have always been peaceful and quiet citizens; are at present holding the honorable positions of associate justices of the Supreme Court of the State of Arkansas; have never violated any laws of God or man for which we are amenable to any tribunal in the State of Arkansas or the United States, that we are aware of; but, notwithstanding all this, we are now restrained of our liberty—held by main force in a country not under martial law—not where we can demand our rights as citizens of this great republic—not where we can get the benefit of the writ of *habeas corpus*, or any other nominal writ known to the civil law. Therefore, we appeal to you for assistance for our liberation. Can we have it?

Respectfully, your obedient servant,

JOHN E. BENNETT,
Associate Justice Supreme Court.

Upon receipt of this note, troops were sent toward Benton by Captain Rose; but the two captured judges escaped on the 6th, and soon reached Little Rock.

On the 7th of May a session of the Supreme Court, attended by four of the five judges, was held in Little Rock, and an opinion delivered

in the case of Joseph Brooks against Henry Page, State Treasurer, which was an application for a mandamus to compel the Treasurer to pay a warrant drawn by Brooks as Governor. The chief question before the court had reference to the validity of Brooks's title to office as established by the judgment of the Circuit Court of Pulaski County. Chief-Justice McClure and Associate Justices Bennett, Searle, and Stephenson, concurred in the opinion "that the Circuit Court had jurisdiction of the subject-matter, and its judgment appears to be regular and valid."

In communicating this decision to President Grant, Brooks again made an urgent appeal for Federal interference in his favor.

As the time for the meeting of the Legislature drew near, activity seemed to increase on both sides. On the 7th the steamer Sallie, carrying about twenty-five Baxter men, was fired upon twenty miles above Little Rock, by a body of Brooks troops. Several were killed and wounded. A sharp skirmish occurred on the 9th between the opposing forces in Little Rock. The streets of the city were barricaded, and communication by telegraph and railroad was greatly interrupted.

At this juncture of affairs the representatives in Washington of the contesting parties were making strenuous efforts to compromise the difficulties. Finally, on the 9th of May, the following compromise was agreed upon, and copies telegraphed by the Attorney-General to Brooks and Baxter for their acceptance:

It is agreed this May 9, 1874, at Washington, D. C., between the respective attorneys and agents of Joseph Brooks and Elisha Baxter, claimants for the office of Governor of the State of Arkansas, that on account of the conflicting claims of the parties, and the division of sentiment among the people of said State, the Legislature of the State shall be called by the said Brooks and Baxter, to meet in extra session on the fourth Monday of May, A. D. 1874, at twelve o'clock, noon, at the usual place of meeting in the State-House, each to put a separate call forthwith for that purpose, and the Legislature so called shall be permitted to meet without molestation or hinderance by either of said parties or their adherents; that they shall receive and entertain a communication from Mr. Brooks, setting forth specifically the grounds for his claim to the office of Governor, as well as his reasons for contesting Baxter's rights thereto; that they shall investigate the facts and allegations so set forth by Brooks, and such investigations shall be conducted in the manner prescribed by the constitution and laws of the State, giving to both parties a full and fair hearing upon such competent and relevant testimony as either party may offer; that the Legislature shall determine, in the manner provided by law, which of the contestants received at the November election, 1872, a majority of the legal votes, and declare the result; and the parties shall abide by that action. Brooks and Baxter shall each relieve from duty and send home all his troops, retaining only as many as each may think necessary as a body-guard at Little Rock, not exceeding one company. All warlike demonstrations are to forthwith cease, and both parties are to keep absolute peace, and refrain from any interference with each other or their adherents until the contest is finally decided by the Legislature or the national Government has taken action thereon. That until the determination of the General Assembly as to who was legally elected Governor in a contest to be made before that body by Joseph Brooks, the question as to which of the contestants has the legal right to exercise the functions of the office of Governor may at his discretion be determined by the President on the applications heretofore made to him by the respective contestants. That the Legislature shall receive from each claimant to the office such communications as either may send to it until the contest for the office is finally decided by the General Assembly.

I submit the foregoing plan of adjusting the difficulties in Arkansas to the respective claimants to the office of Governor, it having been agreed to by all their friends and attorneys here, subject to approval; and I have to say that the President earnestly desires its adoption by both parties.

GEORGE H. WILLIAMS, Attorney-General.

This proposition was rejected by Baxter and accepted by Brooks, in the following terms:

LITTLE ROCK, ARK., *May* 9, 1874.

To the Hon. GEORGE H. WILLIAMS, *Attorney-General of the United States.*

SIR: Yours of this date, submitting a proposition for the settlement of the trouble in Arkansas, is received and fully considered. A similar proposition in all respects, except so far as relates to the joint call of the Legislature, was submitted by me some two weeks since, and rejected by Brooks. I cannot consent to any thing that will, in whole or part, recognize Brooks as Governor. Either I am Governor, or I am not Governor. The Legislature has been called together for the 11th of this month. The members are rapidly assembling, with nearly a quorum present now. With the belief that they will receive the protection of the General Government in their meeting and deliberations, I could not lawfully disperse them if I would; nor have I any means of compelling a Legislature that might be convened under the joint call to confirm the terms proposed. The Legislature might as well meet now and act under my call, because it might not return two weeks hence, and in the mean time we are in confusion, with no recognized Governor, and in a state of war. To dispose of all these matters, I have called the Legislature for the 11th inst., under the conviction that it would assemble and be protected by the General Government. I now renew my appeal to the President to protect the Legislature now called. If the Legislature meets now, the question may be submitted to it finally, and I will abide its decision fully. I am therefore constrained to decline the terms proposed.

ELISHA BAXTER, Governor of Arkansas.

BARING CROSS, ARK., *May* 10, 1874.

To Attorney-General WILLIAMS, *Washington:*

Your dispatch submitting a proposition to submit the question of who was duly elected Governor, and to refrain from warlike demonstrations until the contest is finally decided by the Legislature or the national Government, as proposed in your dispatch, is accepted. My claims to the governorship of Arkansas have already been adjudged in the Circuit Court, and the right to exercise the office declared by the Supreme Court in a proceeding where the main question at issue was, "Who is the Governor of Arkansas?" I feel so confident of my election and the justice of my claims that I am willing to submit the question to any other tribunals you have named, and peacefully abide the determination, at all times asserting that the only tribunal that can have or has the right to construe the Constitution is the Supreme Court of the State, which, in its late decision in the case of Brooks against Page, determined that the Circuit Court had both the power and jurisdiction to adjudicate my right to the office.

JOSEPH BROOKS, Governor of Arkansas.

On the 11th, the day appointed for the meeting of the Legislature, thirty-seven members of that body had arrived in the capital. This number, however, was not sufficient for a quorum. On the same day the following propositions, made by President Grant, for a short adjournment of the Legislature, were received by Brooks and Baxter:

WASHINGTON, D. C., *May* 11, 1874.

To the Hon. JOSEPH BROOKS, *Little Rock, Arkansas:*

I have suggested to Mr. Baxter that the members of the General Assembly, now in Little Rock, adjourn for a reasonable time, say ten days, to give you an opportunity to call in those members who may not respond to his call, so that there may be a full Legislature. The United States will give all necessary protection to the Legislature in meeting and transacting its business, as usual, at the State-House, and prevent, as far as practicable, all violence and disturbance of the public peace. I urgently request that the military of both parties be at once disbanded, which is the first step toward a peaceable settlement. Answer. U. S. GRANT.

To the Hon. ELISHA BAXTER, *Little Rock, Arkansas:*

I recommend that the members of the General Assembly, now at Little Rock, adjourn for a reasonable time, say for ten days, to enable Brooks to call to the body his supposed adherents, so that there may be a full Legislature. Any hasty action by a part of the Assembly will not be satisfactory to the people. Brooks's friends here agree that if this course is pursued no opposition will be made to the meeting of the Assembly in the State-House as usual, and that he will at once dismiss his forces if you will do the same. I urgently request that all armed forces on both sides be disbanded, so that the General Assembly may act free from any military pressure or influence. The United States forces will give all necessary protection to the Legislature, and prevent, as far as practicable, all violence and disturbance of the public peace. Answer.

U. S. GRANT.

Baxter replied that he would agree to this proposition upon the conditions expressed in the following:

LITTLE ROCK, ARK., *May* 11, 1874.

To U. S. GRANT, *President, Washington, D. C.:*

There is almost a quorum of both Houses of the Legislature present, and they have power, under the constitution, to adjourn from day to day, until they have a quorum, and they can adjourn no longer than until they have a quorum. I am in favor of their adjourning as long as they please, until every supposed Brooks adherent is present. With this understanding, I will disband my troops in proportion as Brooks disbands his, but for the meeting of the Legislature at the usual place Mr. Brooks must get as far from it west as I am east, and deposit the State arms in the State Armory, and let the State-House and public buildings be turned over at once to J. M. Johnson, the Secretary of State, to whom, under the law, they belong.

ELISHA BAXTER, Governor of Arkansas.

The President considered this a "fair and reasonable" proposition, and in communicating it to Brooks, through Attorney-General Williams, expressed the opinion that his "interests require its immediate acceptance." Mr. Brooks, however, entertained a different opinion, and gave his reasons in the following reply:

EXECUTIVE OFFICE, STATE OF ARKANSAS, BARING CROSS, ARK., *May* 12, 1874.

The Hon. GEORGE H. WILLIAMS, *Attorney-General, Washington, D. C.:*

The members of the General Assembly here, even if there were a quorum, and there is not, do not constitute a Legislature, unless convened by the Governor. If you recognize this assemblage as a Legislature you recognize Baxter as Governor, for no one but the Governor can convene the Legislature in extraordinary session. If it is not a Legislature called by the proper authority, its adjournment is a matter of no consequence. So far as the Secretary of State is concerned, if any of his prerogatives are interfered with, the courts of the State, and not the President, is the proper tribunal before which to redress his grievances. I have answered the President's dispatch at length. I shall not disband any troops under my command until the question of "Who is Governor of Arkansas?" is settled, unless required to do so by the direct command of the President. I have no proposition to submit, and will entertain none on the subject other than that proposed by yourself, sanctioned by the President, and agreed to by the agents and attorneys of Baxter and myself. The case made on the papers requires the President to recognize either Baxter or myself as Governor of Arkansas. The settlement of the question, either before the courts or the Legislature, is one that in my opinion does not require the intercession of the President on Baxter's behalf. He must act on the papers before him and not upon what a Legislature may or may not do in the future. Upon a majority of the votes of the legal voters of this State, and upon the judgments of the Supreme and Circuit Courts, I am willing to stand or fall. But, if these are to be held for naught by the President, until such time as he can ascertain the opinion of the Legislature to guide him in determining who is Governor, and during the pendency of the question to allow the State and citizens to be plundered and robbed by an armed mob, which has already fired on the Federal troops and commenced an indiscriminate slaughter of colored men, to avoid a further sacrifice of life and loss of property, I am impelled by a sense of duty to submit my case as it now stands, and abide the President's determination.

JOSEPH BROOKS, Governor of Arkansas.

The opinion seems to have been general that the refusal of Brooks to act upon the suggestions made by the Government at Washington worked unfavorably for his cause. Moreover, there appeared to be a growing anxiety on the part of President Grant to reach a speedy settlement of the difficulty. The forces on either side were being augmented, collisions between members of the opposing parties were becoming more frequent, and the general aspect of affairs was growing more threatening. On the 13th the Legislature organized, with a quorum of each branch present. On the ensuing day the following joint resolution, invoking the interposition of the Federal Government, was passed and telegraphed to Washington:

Whereas, The Legislature of the State of Arkansas has convened, a quorum of each House being present; and—

Whereas, The capital of our State is occupied by armed and contending forces; and—

Whereas, The State-House is now in possession of armed troops: therefore, be it—

Resolved, By the General Assembly of the State of Arkansas, That the President of the United States be and is hereby requested to put this Legislature in possession of the Legislative Halls, and that the public property on State-House Square be placed

under the supervision and control of this body, the legal custodians thereof while in session, and that he make such order for the disposition of said armed contending forces as will more perfectly protect the State against domestic violence and insure this body protection; and that a duly certified copy of this resolution be at once transmitted to the President of the United States.

Upon receipt of this communication from the Legislature, President Grant issued the following proclamation, recognizing Baxter as the legal Governor of the State, and ordering the forces of Brooks to disband and return home:

Whereas, Certain turbulent and disorderly persons, pretending that Elisha Baxter, the present Executive of Arkansas, was not elected, have combined together with force and arms to resist his authority as such Executive, and other authorities of said State; and—

Whereas, Said Elisha Baxter has been declared duly elected by the General Assembly of said State, as provided in the constitution thereof, and has for a long period been exercising the functions of said office into which he was inducted according to the constitution and laws of said State, and ought by its citizens to be considered the lawful Executive thereof; and—

Whereas, It is provided in the Constitution of the United States that the United States shall protect every State in the Union on application of the Legislature, or of the Executive when the Legislature cannot be convened, against domestic violence; and—

Whereas, The said Elisha Baxter, under section 4 of Article IV. of the Constitution of the United States, and the laws passed in pursuance thereof, has heretofore made application to me to protect said State and the citizens thereof against domestic violence; and—

Whereas, The General Assembly of said State convened in extra session at the Capitol thereof on the 11th instant, pursuant to a call made by said Elisha Baxter, and both Houses thereof have passed a joint resolution applying to me to protect the State against domestic violence; and—

Whereas, It is provided in the laws of the United States that in all cases of insurrection against the laws thereof it shall be lawful for the President of the United States, on application of the Legislature of such State, or of the Executive, when the Legislature cannot be convened, to employ such part of the land and naval forces as shall be judged necessary for the purpose of suppressing such insurrection, so causing the laws to be duly executed; and—

Whereas, It is required that whenever it may be necessary, in the judgment of the President, to use the military force for the purpose aforesaid, he shall forthwith, by proclamation, command such insurgents to disperse and retire peaceably to their respective homes within a limited time: now, therefore—

I, Ulysses S. Grant, President of the United States, do hereby make proclamation and command all turbulent and disorderly persons to disperse and retire peaceably to their respective abodes within ten days from this date, and hereafter submit themselves to the lawful authority, to the said Executive, and the other constituted authorities of said State, and I invoke the aid and coöperation of all good citizens to uphold law and preserve the public peace.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington, this 15th day of May, in the year of our Lord 1874, and of the Independence of the United States the ninety-fifth.

U. S. GRANT.

By the President:
HAMILTON FISH, Secretary of State.

The announcement of this action on the part of the General Government caused the greatest rejoicing in Little Rock. Brooks now disbanded his troops and retired from the State-House, and Baxter took possession. The expenses incurred on account of military operations during these disturbances were reported to Governor Baxter at $250,000, by Adjutant-General McCanary, and $300,000 by T. J. Churchill, major-general commanding.

As the action of the Federal Government in this important controversy was based upon the opinion of Attorney-General Williams, that document is here given in full, not only as being an authoritative exposition of vital questions of constitutional law which are frequently arising, but also as affording a precedent to be followed by the Government hereafter in similar cases.

DEPARTMENT OF JUSTICE,
WASHINGTON, *May* 15, 1874.

The President.

SIR: Elisha Baxter, claiming to be Governor of Arkansas, having made due application for Executive aid to suppress an insurrection in that State, and Joseph Brooks, claiming also to be Governor of said State, having made a similar application, and these applications having been referred by you to me for an opinion as to which of these persons is the lawful Executive of the State, I have the honor to submit: That Baxter and Brooks were candidates for the office of Governor at a general election held in Arkansas on the 5th day of November, 1872.

Section 19, of Article VI. of the constitution of the State provides that the returns of every election for Governor, Lieutenant-Governor, Secretary of State, Treasurer, Auditor, Attorney-General, and Superintendent of Public Instruction, shall be sealed up and transmitted to the seat of government by the returning officers, and directed to the presiding officer of the Senate, who, during the first week of the session, shall open and publish the same in the presence of the members there assembled. The persons having the highest number of votes shall be declared elected, but, if two or more shall have the highest and equal number of votes for the same office, one of them shall be chosen by joint vote of both Houses.

Contested elections shall likewise be determined by both Houses of the General Assembly, in such manner as is or may be prescribed by law.

Pursuant to this section, the votes for Governor at the said election were counted, and Baxter was declared to be duly elected. Said section, as it will be noticed, after providing for a canvass of the votes, specially declares: "Contested elections shall likewise be determined by both Houses of the General Assembly, in such manner as is, or may hereafter be, prescribed by law." When this constitution was adopted, there was a law in the State which continues in force, prescribing the mode in which the contest should be conducted before the General Assembly, the first section of which is as follows:

All contested elections of Governor shall be decided by the joint vote of both Houses of the General Assembly, and in such joint meeting the President of the Senate shall preside.

Brooks accordingly presented to the Lower House of said Assembly his petition for a contest, but by the decisive vote of 65 to 9 it was rejected by that body. Subsequently the Attorney-General, upon the petition of Brooks, applied to the Supreme Court of the State for a *quo warranto* to try the validity of Baxter's title to the office of Governor, in which it was alleged that Baxter was a usurper, etc. That court denied the application, upon the ground that the courts of the State had no right to hear and de-

termine the question presented, because exclusive jurisdiction in such cases had been conferred upon the General Assembly by the constitution and laws of the State.

Brooks then brought a suit against Baxter in the Pulaski Circuit Court, under section 525 of the Civil Code of Arkansas, which reads as follows:

Whenever a person usurps an office or franchise to which he is not entitled by law, an action by proceedings at law may be instituted against him, either by the State or the parties entitled to the office or franchise, to prevent the usurper from exercising the office or franchise.

Brooks states in his petition that he received more than 45,000 votes, and that Baxter received less than 30,000 votes for Governor at the said election, and, after declaring that Baxter has usurped the office, prays that it may be given to him by the judgment of the court, and that he may recover the sum of $2,000, the emoluments of said office withheld from him by Baxter. This presented to the court a simple question of a contest for the office of Governor. Baxter demurred to this petition on the ground that the court had no jurisdiction of the case, and afterward, on the 15th of April, the court, in the absence of the defendant's counsel, overruled the demurrer, and without further pleadings or any evidence in the case, rendered judgment for Brooks in accordance with the prayer of his petition. Brooks, within a few minutes thereafter, without process to enforce the execution of said judgment, and with the aid of armed men, forcibly ejected Baxter, and took possession of the Governor's office. On the next day after the judgment was rendered, Baxter's counsel made a motion to set it aside, alleging, among other things as grounds therefor, that they were absent when the demurrer was submitted to the final judgment thereon rendered; that the judgment of the court upon overruling the demurrer should have been that the defendant answer over, instead of which a final judgment was rendered without giving any time or opportunity to answer the complaint upon its merits; that the court assessed the damages without any jury or evidence; and, finally, that the court had no jurisdiction over the subject-matter of the suit, but the next day this motion was overruled by the Court.

Section 4, Article IV., of the Constitution of the United States, is as follows: "The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and, on application of the Legislature, or of the Executive (when the Legislature cannot be convened), against domestic violence."

When, in pursuance of this provision of the Constitution, the President is called upon by the Executive of a State to protect it from domestic violence, it appears to be his duty to give the required aid, and especially when there is no doubt about the existence of the domestic violence; but where two persons, each claiming to be Governor, make calls respectively upon the President under said clause of the Constitution, it of course becomes necessary for him to determine, in the first place, which of said persons is the constitutional Governor of the State. That section of the constitution of Arkansas heretofore cited, in my opinion, is decisive of this question, as between Baxter and Brooks. According to the constitution and laws of the State, the votes for Governor were counted and Baxter declared elected, and at once was duly inaugurated as Governor of the State. There is great difficulty in holding that he usurped the office into which he was inducted under these circumstances. Assuming that no greater effect is to be given to the counting of the votes in the presence of the General Assembly than ought to be given to a similar action by any board of canvassers, yet when it comes to decide a question of contest, the General Assembly is converted by the constitution into a judicial body, and its judgment is as conclusive and final as is the judgment of the Supreme Court of the State on any matter within its jurisdiction. Parties to such a contest plead and produce evidence according to the practice provided in such cases, and the controversy is invested with the forms and effect of a judicial procedure. When the people of the State declared in their constitution that a contest about State officers shall be determined by the General Assembly, they cannot be understood as meaning it might be determined in any Circuit Court of the State. To say that a contest shall be decided by decision, and then to say, after the decision is made, that such contest is not determined, but is as open as it ever was, is a contradiction in terms. Can it possibly be supposed the framers of this constitution, when they declared contested elections about State officers, including the Governor, should be determined by the General Assembly, intended that any such contest should be just as unsettled after as it was before such determination of it? Manifestly, they intended to create a special tribunal to try claims to the high offices of the State. But the tribunal is not special if the courts have concurrent jurisdiction over the subject. Brooks appears to claim that when a contest for Governor is decided by the General Assembly, the defeated party may treat the decision as a nullity, and proceed *de novo* in the courts. This makes the constitutional provision as to the contest of no effect, and the proceedings under it an empty form. When the House of Representatives dismissed the petition of Brooks for a contest, it must be taken as a decision of that body on questions presented in the petition. But it is not of any consequence whether or not the General Assembly has in fact decided the contest, if the exclusive jurisdiction to do so is vested in that body by the constitution and laws of the State.

Section 14 of Article V. of the constitution of Arkansas, like most other constitutions, declares that each House of the Assembly shall judge of the qualifications, election, and returns of its members, and it has never been denied anywhere that these words confer exclusive jurisdiction. But the terms, if possible, are more comprehensive by which the constitution confers upon the Legislative Assembly jurisdiction to judge of the election of State officers. Doubtless the makers of the constitution considered it unsafe to lodge in the hands of every Circuit Court of the State the power to revolutionize the Executive Department at will, and their wisdom is forcibly illustrated by the case under consideration, in which a person who had been installed as Governor, according to the constitution and laws of the State, after an undisturbed incumbency of more than a year is deposed by a Circuit Judge, and another person put in his place upon the unsupported statement of the latter that he had received a majority of votes at the election.

Looking at the constitution alone, and it appears perfectly clear to my mind that the courts of the State have no right to try a contest about the office of Governor, but that exclusive jurisdiction over that question is vested in the General Assembly. This view is confirmed by judicial authority. Summing up the whole discussion, the Supreme Court of Arkansas say in the case of the Attorney-General against Baxter, above referred to under this constitution, that the "determination of the question, as to whether the person exercising the office of Governor has been duly elected or not, is vested exclusively in the General Assembly of the State, and neither this nor any other State court has jurisdiction to try a suit in relation to such contest, be the mode or form what it may, whether at the suit of the Attorney-General or on the relation of a claimant through him, or by an individual alone claiming a right to the office. Such an issue should be made before the General Assembly; it is their duty to decide, and no other tribunal can determine that question. We are of opinion that this court has no jurisdiction to hear and determine a writ of *quo warranto* for the pur-

pose of rendering a judgment of *ouster* against the chief Executive of this State, and the right to file an information and issue a writ for that purpose is denied." Some effort has been made to distinguish this case from that of Brooks against Baxter, in the Circuit Court, by calling the opinion a *dictum*, but the point presented to and decided by the Supreme Court was that in a contest for the office of Governor the jurisdiction of the General Assembly was exclusive, which of course deprived one court as much as another of the power to try such contest. There is, however, another decision made by the same court upon the precise question presented in the case of Brooks against Baxter. Berry was a candidate for State Auditor on the same ticket with Brooks. Wheeler, his competitor, was declared elected by the General Assembly. Berry then brought a suit under said section 525 in the Pulaski Circuit Court to recover the office. Wheeler applied to the Supreme Court for an order to restrain the proceedings, and that court issued a writ of prohibition forbidding the said court to proceed, on the ground that it had no jurisdiction in the case as to the question of law involved. The cases of Berry and Brooks are exactly alike. That this Circuit Court should have rendered a judgment for Brooks under these circumstances is surprising, and it is not too much to say that it presents a case of judicial insubordination which deserves the reprehension of every one who does not wish to see public confidence in the certainty and good faith of judicial proceedings wholly destroyed. Chief-Justice McClure, who dissented in the case of the Attorney-General against Baxter, delivered the opinion of the court in the Wheeler case, in which he uses the following language: "The majority of the court in the case of the State against Baxter, the decision of the *quo warranto* and a contested election proceeding being convertible remedies having one and the same object, decides that neither this nor any other State court, no matter what the form of action, has jurisdiction to try a suit in relation to a contest for the office of Governor as an abstract proposition of law. I concede the correctness of the rule, and would have assented to it if the question had been before us. The question now before this court is precisely one of contest and nothing else. As to all matters of contested elections for the offices of Governor, Lieutenant-Governor, Secretary of State, Auditor, Treasurer, Attorney-General, and Superintendent of Public Instruction, I am of the opinion that it can only be had before the General Assembly."

He then adds, in conclusion: "I think a writ of prohibition ought to go to prohibit the Circuit Court from entertaining jurisdiction of Berry against Wheeler that has for its object a recovery of the office." All five of the judges heard this case, and there was no dissent from these views as to the question of jurisdiction. To show how the foregoing decisions are understood in the State, I refer to a note by the Hon. H. C. Caldwell, Judge of the District Court of the United States for the Southern District of Arkansas, upon Section 2879 of a digest of the Statutes of the State, lately examined and approved by him, which is as follows:

> By the provisions of Section 19 of Article IV. of the constitution, the jurisdiction of the General Assembly over cases of contested election for the officers, in said section enumerated, is exclusive.—Attorney-General on the relation of Brooks against Baxter, manuscript opinion, 1873; Wheeler against Whylock, manuscript opinion, 1873.

It is assumed in the argument for Brooks that the judgment of the Pulaski Circuit Court is binding as well upon the President as upon Baxter until it is reversed, but where there are conflicting decisions as in this case, the President is to prefer that one which, in his opinion, is warranted by the constitution and laws of the State. The General Assembly has decided that Baxter was elected. The Circuit Court of Pulaski County has decided that Brooks was elected. Taking the provisions of the Constitution which declares that contested elections about certain State officers, including the Governor, shall be determined by the General Assembly, and that provision of the law heretofore cited which says that all contested elections of Governor shall be decided by the Legislature, and the two decisions of the Supreme Court affirming the exclusive jurisdiction of that body over the subject, and the conclusion irresistibly follows that said judgment of the Circuit Court is void. A void judgment binds nobody. Said section 525, under which this judgment was rendered, must be construed with reference to the constitution and other statutes of the State, and is no doubt intended to apply to county and other inferior officers for which no provision elsewhere is made. But the constitution takes the State officers there enumerated out of the purview of this section and establishes a special tribunal to try these contested election cases, to which they are parties. The jurisdiction of this tribunal is exclusive. (Ohio against Grisell and Menlon, 15 Ohio, 114; Attorney-General against Garrugues, 28 Pennsylvania, 9; Commonwealth against Baxter, 35 Id., 263; Commonwealth against Leech, 44 Id., 332.)

Respecting the claim that Brooks received a majority of the votes at the election, it must be said that the President has no way to verify that claim. If he had, it would not, in my opinion, under the circumstances in this case, be a proper subject for his consideration. Perhaps if every thing about the election was in confusion, and there had been no legal count of the votes, the question of majorities might form an element of the discussion; but where, as in this case, there has been a legal count of the votes, and the tribunal organized by the constitution of the State for that purpose has declared the election, the President, in my judgment, ought not to go behind that action to look into the state of the vote. Frauds may have been committed to the prejudice of Brooks; but, unhappily, there are few elections where partisan zeal runs high in which the victorious party, with more or less of truth, is not charged with acts of fraud. There must, however, be an end to the controversy upon the subject. Somebody must be trusted to count votes and declare elections. Unconstitutional methods of filling offices cannot be resorted to because there is some real or imagined unfairness about the election. Ambitious and selfish aspirants for office generally create the disturbance about this matter, for the people are more interested in the preservation of the peace than in the political fortunes of any man. Either of the contestants, with law and order, is better than the other with discord and violence. I think it would be disastrous to allow the proceedings by which Brooks obtained possession of the office to be drawn into a precedent. There is not a State in the Union in which they would not produce a conflict, and probably bloodshed. They cannot be upheld or justified upon any ground, and in my opinion Elisha Baxter should be recognized as the lawful Executive of the State of Arkansas.

Since the foregoing was written I have received a telegraphic copy of what purports to be a decision of the Supreme Court of Arkansas, delivered on the 7th instant, from which it appears that the Auditor of the State, upon a requisition of Brooks, drew his warrant on the Treasurer for the sum of $1,000, payment of which was refused. Brooks then applied to the Supreme Court for a writ of mandamus upon the Treasurer, who set up, by way of defense, that Brooks was not Governor of the State, to which Brooks demurred, and thereupon the court say:

> The only question that we deem it necessary to notice is, did the Circuit Court have jurisdiction to render the judgment in the case of Brooks against Baxter? We feel some delicacy about expressing an opinion upon the question propounded, but under the pleadings it has to be passed upon incidentally, if not absolutely, in de-

termining whether the relator is entitled to the relief asked, for his right to the office, if established at all, is established by the judgment of the Circuit Court of Pulaski County. We are of opinion that the Circuit Court had jurisdiction of the subject-matter, and its judgment appears to be regular and valid. Having arrived at these conclusions, the demurrer is overruled, and the writ of mandamus will be awarded, as prayed for.

To show the value of this decision it is proper that I should make the following statement: On the 20th of April Brooks made a formal application to the President for aid to suppress domestic violence, which was accompanied by a paper signed by Chief-Justice McClure and Justices Searle and Stephenson, in which they stated that they recognized Brooks as Governor, and to this paper, also, is appended the name of Page, the respondent in the above-named proceeding for mandamus. Page, therefore, did not refuse to pay the warrant of the Auditor because he did not recognize Brooks as Governor, but the object of his refusal evidently was to create such facts as were necessary to make a case for the Supreme Court. Accordingly, the pleadings were made up by the parties, both of whom were on the same side in the controversy, and the issue so made was submitted to judges virtually pledged to give the decision wanted, and there, within the military encampment of Brooks, they hurriedly but with delicacy, as they say, decided that he is Governor, a decision in plain contravention of the constitution and laws of the State, and in direct conflict with two other recent decisions of the same court deliberately made. I refrain from comment. More than once the Supreme Court of the United States has decided that it would not hear argument in a case made up in this way, and a decision obtained under such circumstances is not recognized as authority by any respectable tribunal. No doubt this decision will add to the complications and difficulties of the situation, but it does not affect my judgment as to the right of Baxter to the office of Governor until it is otherwise decided upon a contest made by the Legislature of the State.

On the 11th instant the General Assembly of the State was convened in extra session upon the call of Baxter, and both Houses passed a joint resolution pursuant to Section 4, Article IV. of the Constitution of the United States, calling upon the President to protect the State against domestic violence. This call exhausts all the means which the people of the State have under the Constitution to invoke the aid of the Executive of the United States for their protection, and there seems to be, under the circumstances of the case, an imperative necessity for immediate action. I have the honor to be, with great respect,

GEO. H. WILLIAMS, Attorney-General.

The Legislature continued in session until May 28th, when it adjourned. The most important measure passed was a bill providing for the assembling of a Constitutional Convention, on the 14th of July, and the election of delegates, to be held June 30th.

At the election held on the 30th of June, 80,259 votes were cast for, and 8,607 against holding a convention; the majority for the convention being 71,652. At the same time, 91 delegates were chosen. On the 14th of July, the convention assembled in Little Rock. This was the fifth Constitutional Convention which had been convened in the State, the others having been held in 1836, 1861, 1864, and 1868. The new constitution was voted upon by the people on the 13th of October, and was ratified by a majority of 53,890 votes, 78,697 votes having been cast for, and 24,807 against it.

This large majority in favor of the new constitution indicates the dissatisfaction, among the people, in reference to the old one, which was adopted in 1868, before the State had fairly recovered from the effects of the war. One of the most marked defects in the constitution of 1868 was the almost unlimited appointing power vested in the Governor, the extent of which is indicated by the following language of one of the public men of the State: "The Governor of Arkansas has more official patronage than any Governor in the Union; he appoints a chief-justice, sixteen circuit judges, sixteen prosecuting attorneys, one chancellor, six criminal judges, three supervisors in each of the eighty counties of the State, six circuit court clerks, eighty county treasurers, eighty county assessors, eighty coroners, all the justices of the peace, constables and notaries public, a land-commissioner, a commissioner of public works, a State geologist and insurance agent, with perhaps some others, besides having power to fill all vacancies in elective offices." Under the new constitution, the choice of all civil officers is vested in the people, thereby depriving the Executive Department of the power of appointment. With the old constitution, disappear all its disfranchisements. The distinguishing features of the new constitution, as compared with that of 1868, consist in submitting the election of all officers of the government to the popular vote; in diminishing the number of officers to such limit as is necessary to an economical and successful administration of the government; in limiting the rate of taxation by the Legislature on the assessed value of all property; in protecting the public credit, by expressly prohibiting the Legislature from contracting any debt, save for certain specified purposes; and in prohibiting all local and special legislation.

The Bill of Rights declares that no distinction shall be made in the rights of citizens on account of race or color; that the privilege of the writ of *habeas corpus* shall not be suspended except by the General Assembly; that no person shall be imprisoned for debt in any civil action, on mesne or final process, unless in cases of fraud; that monopolies shall not be allowed; and that no distinction shall be made between resident aliens and citizens in regard to property. The power of declaring martial law is taken from the Governor and vested in the Legislature by Section 12 of the Bill of Rights, which says that "no power of suspending or setting aside the law or laws of the State shall ever be exercised, except by the General Assembly."

The right of suffrage is extended to every male citizen of the United States, or male person who has declared his intention of becoming a citizen, of the age of twenty-one years, who has resided in the State twelve months, in the county six months, and in the voting precinct, or ward, one month previous to the election. It is provided that no law shall be en-

acted "whereby the right to vote at any election shall be made to depend upon any previous registration of the elector's name." The general elections shall be held biennially on the first Monday of September; but the General Assembly may fix a different time. The number of Representatives is fixed at not less than 78 nor more than 100, and of Senators at not less than 30 nor more than 35.

Representatives are to be chosen for two and Senators for four years. The sessions of the Legislature are made biennial, and are limited to sixty days, but may be extended by a two-thirds vote of each House. This limitation, however, does not apply to the first session under the new constitution, or when impeachments are pending. No member shall, during the term for which he has been elected, receive any increase of pay for his services, under any law passed during such term. The limitations contained in the following sections of Article V. are placed upon the powers of the Legislature.

SECTION 31. No State tax shall be allowed, or appropriation of money made, except to raise means for the payment of the just debts of the State, for defraying the necessary expenses of government, to sustain common schools, to repel invasion and suppress insurrection, except by a majority of two-thirds of both Houses of the General Assembly.

SEC. 32. No act of the General Assembly shall limit the amount to be recovered for injuries resulting in death, or for injuries to persons or property, and, in case of death from such injuries, the right of action shall survive, and the General Assembly shall prescribe, for whose benefit such action shall be prosecuted.

SEC. 33. No obligation or liability of any railroad, or other corporation, held or owned by this State, shall ever be exchanged, transferred, remitted, postponed, or in any way diminished by the General Assembly; nor shall such liability or obligation be released, except by payment thereof into the State Treasury.

The Executive term of office is reduced from four to two years, and the office of Lieutenant-Governor is abolished, the functions of it devolving upon the President of the Senate. The provisions in Article VI. in regard to the elections of State officers and contested elections—the point upon which the exciting gubernatorial controversy of this year turned—are substantially the same in the new constitution as they were in the old.

All judges are to be elected by the people; those of the Supreme Court for eight years, of the Circuit Courts for four years, and of the county courts and justices of the peace for two years. Sheriffs, assessors, coroners, county treasurers, and surveyors, are also elected by the people for two years. The General Assembly is required to "provide, by general laws, for the support of common schools by taxes, which shall never exceed, in any one year, two mills on the dollar on the taxable property of the State; and by an annual *per capita* tax of one dollar, to be assessed on every male inhabitant of this State over the age of twenty-one years: *Provided*, The General Assembly may, by general law, authorize school districts to levy, by a vote of the qualified electors of such district, a tax not to exceed five mills on the dollar in any one year for school purposes: *Provided further*, That no such tax shall be appropriated to any other purpose, nor for any other district than that for which it was levied." A system of free schools is to be maintained, "whereby all persons in the State, between the ages of six and twenty-one years, may receive gratuitous instruction." The creation of school offices is left to the Legislature, and, until otherwise provided by law, the Secretary of State is required to discharge the duties of Superintendent of Public Instruction.

For the encouragement of manufactures and mining, the General Assembly is authorized to exempt, by general law, from taxation, for the term of seven years from the ratification of the constitution, the capital invested in any or all kinds of mining and manufacturing business in the State.

Railroads and canals are declared public highways and the companies common carriers; the directors are required to make annual reports under oath to the Auditor of Public Accounts; and the rolling-stock and all other movable property are considered personal estate, and liable to execution and sale in the same manner as the personal property of individuals. The General Assembly is required to "prevent by law the granting of free passes by any railroad or transportation company to any officer of this State Legislature, executive or judicial;" and also "to pass laws to correct abuses and prevent unjust discrimination and excessive charges by railroad, canal, and turnpike companies, for transporting freight and passengers, and shall provide for enforcing such laws by adequate penalties and forfeitures."

Executive and judicial officers are prohibited from receiving fees; the amount of their salaries is to be fixed by the General Assembly, but shall not exceed annually the following sums: Governor, $4,000; Secretary of State, $2,500; Treasurer of State, $3,000; Auditor of State, $3,000; Attorney-General, $2,500; Commissioner of State Lands, $2,500; Judges of the Supreme Court, each, $4,000; Judges of the Circuit Courts, and Chancellors, each, $3,000; prosecuting attorneys, $400.

The constitution provided that an election for State officers and members of the Legislature should be held on the same day on which the vote on the constitution was taken, viz., October 13th, and that the Legislature then elected should assemble on the 10th of November. In view of this provision the Democratic Convention assembled in Little Rock, September 9th, to nominate a State ticket. Governor Baxter was twice chosen as the candidate for Governor, but declined the nomination. The following nominations for State officers were then made:

Governor, A. H. Garland; Chief-Justice, E.

H. English; Associate Supreme Justices, David Walker, William M. Harrison; Secretary of State, B. B. Beavers; Auditor, Wm. R. Miller; Treasurer, T. J. Churchill; Attorney-General, S. P. Hughes; Commissioner of State Lands, J. N. Smithee; Chancellor, John R. Eakin.

The platform adopted was as follows:

Whereas, The Constitutional Convention, recently assembled at Little Rock, framed a constitution for the State of Arkansas, and the same has been submitted to the people for ratification on the 13th day of October, A. D. 1874; and—

Whereas, In the opinion of this convention the constitution so submitted is just, liberal, and wise, and will secure to the State peace and prosperity, if properly enforced: therefore be it—

Resolved, That the people be, and they are, earnestly requested and advised to use their best efforts to secure the ratification of such constitution, and to have the same carried into effect and enforced according to its letter, meaning, and spirit.

Resolved, That in this movement all persons within the State desiring her future welfare, regardless of past issues and differences, are cordially invited to secure the equality of all men before the law, honesty and capability in the administration of every public duty, the speedy and just punishment of every crime, the purity and freedom of the ballot, the advancement and perpetuity of public education, economy in every department of the government, and the rightful use of every prerogative of power to the end that the protection of the rights of the whole people shall be complete.

Resolved, That this convention pledges its unabated exertions to secure the adoption of such constitution, as well as the election of the persons nominated by it for the different offices on the State ticket.

A State Convention of the Republican party met in Little Rock, September 15th. There was a strong feeling among the delegates against the course pursued by Baxter and the Constitutional Convention. Resolutions were passed pledging fidelity to the Republican party, denying the authority of Elisha Baxter as Governor, pronouncing in favor of Joseph Brooks, and declaring all the acts of Baxter, subsequent to the decision of the Circuit Court, null and void; and that the Constitutional Convention was a conspiracy of members of the White League, Ku-klux, and leaders of the lost cause, to overthrow the reconstructed government.

The convention further declared "that the late so-called Constitutional Convention recently assembled, having been called by a revolutionary Legislature, without warrant or authority of law, and in violation of the existing constitution of the State, all acts had and done by that convention, as well as those of the Legislature which called it, are revolutionary, null, and void, and it would be both improper and impolitic for the Republican party to place men in nomination as candidates for any of the offices provided for by said so-called convention."

And "that the officers, whose election is provided for in the constitution of 1868, and the laws passed thereunder, be nominated and voted for at the general election to be held on Tuesday, the 3d day of November next."

No nominations, therefore, were made to be voted upon at the election of October 13th. This resulted in the success of the Democratic ticket—Garland, as candidate for Governor, having received 76,453 votes, and the other candidates about the same number.

The congressional election was held on the 3d of November, and resulted in the choice of Democrats in all of the districts, viz.: I. Lucian G. Ganse; II. William F. Slemons; III. William W. Wilshire; IV. Thomas M. Gunter.

On the 10th of November the new Legislature assembled, as provided by the new constitution, and soon after Governor Garland and the other State officers recently elected entered upon their official duties. Another contest now arose for the possession of the Executive office. V. V. Smith, who had been elected Lieutenant-Governor on the ticket with Baxter in 1872, and had since held that office, issued a proclamation to the people of the State on the 13th of November, in which he declared that the recent Constitutional Convention had not been called in accordance with the supreme law of the State; that its proceedings were therefore illegal, and the constitution which it framed null and void; that the election held under such constitution was unlawful, and the officers chosen were usurpers; that the office of Governor had been abandoned by Baxter and usurped by Garland; that in 1872 he himself had been elected Lieutenant-Governor for four years; and that, according to the constitution he was entitled to succeed to the office of Governor, rendered vacant by Baxter. After these declarations, and the assertion that "the attempt to seize and the seizing of the legislative, executive, and judicial offices of the State" was "revolution, and nothing but revolution," the proclamation ended as follows:

Now, therefore, I, V. V. Smith, Lieutenant-Governor of the State of Arkansas, by virtue of the authority vested in the Lieutenant-Governor by the tenth (10th) section of Article VI. (6) of said constitution (Elisha Baxter having abdicated and abandoned the office of Governor), do hereby command all persons claiming to derive political authority under and by virtue of the so-called constitution of October 13, 1874, to desist and refrain from the exercise of all official authority thereunder, and all persons that may have assumed to act under the authority of said pretended constitution, whether executive, legislative, or judicial, are hereby commanded to relinquish and surrender said offices to the persons entitled thereto, under the constitution of 1868, and the laws passed thereunder, within five (5) days from the date hereof, or I shall take such measures as will, in my opinion, result in the observance and enforcement of this command.

In testimony whereof I have hereunto set my hand, and caused the seal of the State to [L. S.] be affixed, at Little Rock, this, the 13th day of November, A. D. 1874.

V. V. SMITH, Governor of Arkansas.

By the Governor:

EDWARD WHEELER, Secretary of State.

On the same day Smith made application to President Grant to guarantee to the State a republican government, and protect it from domestic violence.

Governor Garland at once caused warrants to be issued for the arrest of Smith and Wheeler for conspiring to overthrow the government, but those persons could not be found.

During the excitement caused by the Brooks-Baxter contest, and before the adjournment of Congress, a select committee of five was appointed, with Luke P. Poland as chairman, to investigate the condition of affairs in Arkansas, and "whether said State had now a government republican in form, the officers of which are duly elected, and, as now organized, ought to be recognized by the Government of the United States." This committee proceeded to Little Rock, and took testimony during the summer.

President Grant declined to interfere in behalf of Smith, on the ground that the affairs of the State were under investigation by Congress. Garland, therefore, remained in possession of the executive office unmolested at the close of the year.

On the 18th of December the Senate, in Committee of the Whole, adopted a bill creating a State Board of Finance, with authority to issue $25,000,000 in bonds for the purpose of taking up the floating indebtedness of the State and procuring money to pay the current expenses of the Government during the ensuing year. The State lands are to be mortgaged as security for the payment of the bonds.

The following is a statement of all outstanding bonds of this State, up to October 1, 1874.

State Bank bonds	$340,000
Real Estate Bank bonds	621,000
Arkansas funded bonds	3,050,000
Memphis & Little Rock Railroad bonds	1,200,000
Mississippi, Ouachita & Red River Railroad bonds	600,000
Little Rock, Pine Bluff & New Orleans Railroad bonds	1,200,000
Little Rock & Fort Smith Railroad bonds	1,000,000
Arkansas Central Railroad bonds	1,350,000
Bonds to supply deficits	300,000
Total	$9,561,000

The treasurer is not required, by law, to keep a record of the levee bonds; therefore they do not appear in this list.

ARMY OF THE UNITED STATES. The expenditures and estimates of the War Department, as submitted in the annual report of the Secretary to the President at the close of the year, were as follows.

The actual expenditures of the War Department for the year ending June 30, 1873, including river and harbor improvements, were		$46,335,308 21
The same for the last fiscal year, ending June 30, 1874		43,336,314 71
Showing a reduction of		$2,998,993 50
The estimates for the Military Establishment for the fiscal year ending June 30, 1875, were		$34,410,723 89
Those submitted for the ensuing fiscal year are		32,488,969 50
Showing a reduction of		$1,921,753 39
The estimates of the Chief of Engineers for fortification, river and harbor improvements, and public buildings and grounds, and Washington Aqueduct, for the fiscal year ending June 30, 1875, were		$20,459,396 00
Brought forward		$20,459,396 00
His estimates for the fiscal year ending June 30, 1876, are as follows, viz.:		
Fortifications and other works of defense	$2,108,70 000	
Geographical and military surveys	399,000 00	
Improvement of rivers and harbors	13,285,509 00	
Public build'gs and grounds, and Washington Aqueduct	678,410 50	
		16,471,610 50
Showing a reduction of		$3,987,785 50
The total estimates of the War Department, for all purposes, for the fiscal year ending June 30, 1875, were		$60,180,923 89
The same for the ensuing fiscal year are		53,144,499 00
Showing a reduction in favor of those for the ensuing year of		$7,036,424 89
The estimates for the military establishment for the fiscal year ending June 30, 1876, are		$32,488,960 50
The appropriations for the current fiscal year were		26,582,392 00
Excess of next year's estimates over this year's appropriations		$3,906,577 50

By the operation of the fifth section of the act of June 20, 1874, all unexpended balances of appropriations which had remained on the books of the Treasury for two fiscal years prior to July 1, 1874, excepting such amounts as were required to meet unfulfilled contracts at the time of the passage of the act, were carried to the surplus fund of the Treasury. This necessitated estimates by the War Department for various objects, the appropriations for which have always been available at any time. Therefore, certain items, for which estimates have not been heretofore required, are now included in the aggregate estimates of the department.

The strength of the army, October 15th, was reported at 26,441 enlisted men. In the report of the General of the Army to the Secretary of War, General Sherman says on this point: "I have no doubt that by the 1st of January, 1875, the number of enlisted men will be reduced, by ordinary casualties, discharges, and deaths, to the number limited by law—namely, 25,000, and will venture the expression of opinion that this limit forces the companies to so small a standard that the efficiency of the service is greatly impaired thereby. It is utterly impossible to maintain the companies at remote stations up to the very small legal standard, because months must necessarily elapse after discharges and deaths before recruits can be be sent from the general rendezvous."

In the act making appropriations for the support of the army, approved June 16, 1874, $105,000 was allowed for recruiting purposes, and it was provided that "no money appropriated by this act shall be paid for recruiting the army beyond the number of 25,000 enlisted men, including Indian scouts." In commenting upon this measure, Secretary Belknap says:

This prohibition fell in an unfortunate time and

manner. The demands for the service of United States troops have been increased, and have been imperative for Indian and other service, ever since the adjournment of Congress, and serious consequences might easily have attended the manifest want of any considerable reliable force. There was no margin for emergencies, such as have arisen in connection with Indian affairs and the troubles in the South. I was opposed to the reduction at the time it was made, and have since had no reason to change the opinion then formed. The reduced appropriations for army purposes have been too heavily taxed by the necessity of movement of troops; for, when obliged to be scattered at points on sudden emergencies, they have been moved from other points where their presence was needed, and had to be returned at the earliest possible moment. The reduction proposed and insisted on by Congress would, when it was accomplished, save alone the pay, subsistence, and clothing, of five thousand men; but this amount cannot all be considered as having been saved, for, when troops were needed at points where the force was found, in consequence of the reduction, to be too small for real service, other troops from other points were required to be transported at an expense almost large enough to equal in amount the saving from the sources named. Besides, the number of posts was not reduced; the necessities of the service required that they should be garrisoned, and, although they were occupied by very small forces, yet the expense incident to the retention and operation of the posts existed to almost as great an extent as it would have done had the number on duty been larger. In my judgment, if a reduction of the army is to be made, it can only be made by reducing the number of officers and men; in other words, by reducing the number of regiments. How that can be done in the present interests of the service, with the condition of affairs which requires the retention of the posts now in existence, and indeed the establishment of others, is a problem which must be determined if the reduction is insisted on. Reflection as to the amount necessary to be appropriated for the ensuing fiscal year satisfies me that the appropriation for clothing, pay, and subsistence, should be made for the army upon a basis of 30,000 men. This would most certainly prevent any deficiency, and, should appropriations to that extent be made, whatever surplus might remain on hand would be, under existing laws, turned into the Treasury.

The most important of the military divisions is that of the Missouri, commanded by Lieutenant-General Sheridan, which embraces substantially all the territory east of the Rocky Mountains to the Mississippi River, and includes the States of Illinois and Minnesota. Within this immense area are grouped most of the Indian tribes who are in a transition state from that of savages to a condition of comparative civilization. Here, the contact between the frontier settler and the aboriginal savage has resulted in chronic hostilities. General Sherman reports that "during the past year, by the extraordinary activity of the troops, and the good sense of our military officers, the frontier has been comparatively safe. On the northern line of Texas and southern line of Kansas, the untamed savages—Kiowas, Comanches, Cheyennes, and Arapahoes—began this season their usual raids, and, as the Indian agents confessed their utter inability to manage their respective tribes by the usual humane and Christian treatment, the whole subject was turned over to the War Department, and committed to the management of Lieutenant-General Sheridan, who has laid hold of it with his accustomed energy. He is at this moment down in the Indian country near Fort Sill, giving his personal attention to the subject, and I have no doubt before the winter is over these Indians will learn a lesson which will enable the civil agents to bring them within the sphere of humanization, if not of civilization."

Within the limits of the Military Division of the Missouri are 76 established posts and camps garrisoned by 8 regiments of cavalry, 17 regiments of infantry, and a small detachment of engineer troops, aggregating, at the last official report, 17,819 commissioned officers and enlisted men.

Notwithstanding the occurrence of a few cases of yellow fever at Forts Jefferson and Barrancas during the summer of 1874, the army enjoyed unusually good health during the year. There has, however, been a large death-rate from accidental causes. The ratio of deaths and discharges from wounds, accidents, and injuries, is more than twice as great as in the British Army. Thus, in the past six years, it has averaged about 5 per 1,000 of strength in the American Army, while in the British Army the average has been 2.37 per 1,000 of strength. The mortality statistics of the army during the year are thus reported by the Surgeon-General:

White troops on sick-list	45,911
Average per 1,000 of strength	1,790
Entries per man on sick-list	2
Sick of disease	38,827
Average number of cases per 1,000 of strength	1,514
Sick of wounds, accidents, etc	7,084
Average per 1,000 of strength	276
Average number constantly on sick-list	1,190
Average per 1,000 of strength	46
Constantly under treatment for disease	988
Average per 1,000 of strength	36
Constantly under treatment for wounds, accidents, etc	252
Average per 1,000 of strength	10
Whole number of deaths	341
Average per 1,000 of strength	13
Died of disease	229
Average per 1,000 of strength	9
Died of wounds, accidents, etc	112
Average per 1,000 of strength	4
Proportion of deaths from all causes to cases treated	1 in 135
White soldiers discharged for disability	874
Number of cases among colored troops	4,585
Average per 1,000 of strength	1,616
Cases of disease	3,843
Average per 1,000 of strength	1,539
Cases of accidents, wounds, etc	692
Average per 1,000 of strength	277
Average number constantly on sick-list	130
Average per 1,000 of strength	52
Constantly under treatment for disease	101

Died of wounds, accidents, etc	12
Average per 1,000 of strength	5
Total number of colored soldiers discharged for disability	59
Average per 1,000 of strength	24

Under the act appropriating $1,000,000 for placing head-stones at the graves of soldiers interred in the national military cemeteries, contracts have been made for the whole work, which is now in progress. There are 76 national cemeteries, in which are interred 139,962 unknown, and 162,079 known soldiers.

Under the Chief of Engineers, the works for the defense of the coast have been prosecuted with vigor, and as rapidly as the appropriations would permit; and in several of the important harbors the works are approaching completion. Generally, the works are modifications of existing defenses, constructed for less powerful armaments than those now used. The rapid advances that have been made in power of modern ordnance render it essential, in the opinion of the Secretary of War, that these works should be pushed forward to completion, and properly armed.

The survey of the lakes has been carried on during the year with its accustomed energy and success. The connection of the triangulation of Lakes Superior and Michigan, the inshore and off-shore hydrography and topography, have been finished; the Wisconsin triangulation has been carried southward to the vicinity of Chicago, and the Keweenaw base has been measured. The surveys of the Detroit River and River St. Lawrence, from the forty-fifth parallel, have been completed, and a map of the lower half of the former has been published; the determination of several points in the interior of Michigan has been made in aid of surveys by the State; the survey of Lake Ontario has been commenced, and much of the field-work has been reduced. The preparation of Chart No. 1 of the St. Lawrence, of Sandusky Harbor, and of the mouth of the Detroit River, has been completed, and put into the hands of the engravers. It has been stated that a single survey made last year, viz., the survey of the mouth of the Detroit River, will save from $50,000 to $100,000 to commerce this year.

The geographical surveys and explorations west of the 100th meridian in California, Nevada, Utah, Arizona, Colorado, New Mexico, Wyoming, and Montana, have been carried on successfully. At the commencement of the fiscal year the three main parties engaged in this work had left their rendezvous at Salt Lake, Utah, Denver, Colorado, and Santa Fé, New Mexico. They moved south into Arizona, connecting with the work of former years, and covering during the surveying season about 75,000 square miles of territory. In addition to its topographical work proper, the survey embraced the fixing of many points astronomically, and investigations in geology, mineralogy, natural history, and the natural resources of the country traversed. It is expected that a large part of the results of this survey will be ready for the press during the coming year.

Among the more important results accomplished by the corps of engineers during the year may be mentioned the discovery of a new wagon-route from the line of the Union Pacific Railway to the Yellowstone Park and Montana; a reconnoissance in the country of the Ute tribe of Indians; the construction of a wagon-road from Santa Fé to Taos, New Mexico; and a survey of the Black Hills of Dakota by the engineer officer attached to the military expedition which was sent into that interesting country during the summer of 1874.

The board of ordnance officers appointed to consider the expediency of reducing the number of arsenals and the construction of a grand arsenal on the Atlantic seaboard, have submitted a report, which "strongly recommends the retention of the Springfield Armory and the Frankford Arsenal, and the establishment of a grand arsenal in the vicinity of New York City for manufacturing purposes; retaining also the Indianapolis Arsenal, Indiana; Kennebec Arsenal, Maine; Fortress Monroe Arsenal, Virginia; and Augusta Arsenal, Georgia, as places for storage and repair. It recommends the sale of the Alleghany, Columbus, Detroit, Pikesville, Watervliet, Watertown, and Washington Arsenals, the sales to be made as rapidly as circumstances will permit, the proceeds to be devoted to the purchase of a site and the erection of buildings for the grand arsenal. These seemingly large reductions by sale will, when accomplished, leave thirteen arsenals and the armory; and all this can be effected from the sales of arsenals, and without the expenditure of a dollar out of the national Treasury."

The work done by the Signal-Office has been of the highest value to the agricultural and commercial interests of the country, as well as to the cause of science.

During the year twenty-three stations of observation have been added to those from which reports are deemed necessary to enable proper warnings to be given of the approach and force of storms and of other meteoric changes for the benefit of agricultural and commercial interests. The daily exchange of telegraphic reports with the Dominion of Canada has been maintained, and warnings of threatened danger have been regularly sent, to be displayed at the ports of the Dominion. A series of daily telegraphic reports has been received from stations in the West Indies, extending from Cuba, by Jamaica, to Barbadoes and the Windward Islands. The most eastern station thus established, and in the course of possible cyclones, lies 2,800 miles to the southward and eastward of Washington. The issue of the official deductions had at the office of the Signal-Officer, from the reports there received, has continued during the year. A minute examination of these deductions, and a comparison with the meteoric changes afterward occurring within the time and within the district to which each has had reference, have given the average percentage of 84.4 as verified. With a more scrutinizing form of analysis the percentages have improved upon those of the preceding year. The wide diffusion given these reports may be judged from the fact that they appear in almost every newspaper published daily in the United States.

The display of cautionary day and night signals upon the lakes, and at the great ports of the United States, upon the Atlantic and Gulf coasts, has been made systematically on occasions of supposed especial danger at forty-two different stations, sea and

lake ports, and cities. Of the total number of cautionary signals thus displayed, seventy-five per cent. have been afterward reported as justified. In no case has any great storm swept over the ports of the United States without preannouncement.

By an arrangement with the Post-Office Department, 6,286 printed "farmers' bulletins," on which appear the daily reports of the Signal-Office, have been distributed and displayed in frames, daily at as many different post-offices in different cities, villages, and hamlets, in different States, for the use of the agricultural population of the country, and they have been so displayed, on an average, within ten hours from the time they have left the Signal-Office in Washington.

The river reports, giving the average depth of water in the different great rivers of the interior, and notice of dangerous changes, for the benefit of river commerce and the population in the vicinity, have been regularly made, telegraphed, bulletined in frames, and published by the press at the different river ports and cities, and, in cases of great floods, special river reports have been issued.

By the great diffusion given the reports of this office through the press, the display of the different office bulletins and forms of report, the maps and regular publications, it is estimated that the statements based upon the information gathered upon the files of the office and issued for the public use reach daily at least one-third of all the households in the United States.

The publications of the office, the *Weekly Weather Chronicle* and the *Monthly Weather Review*, have been regularly issued during the year. A number of valuable charts have been prepared. A single atlas condenses into twelve charts results as to the average courses of movements of areas of disturbance in the United States, derived from the studies of the 3,375 charts charted at the Signal-Office in the period from March, 1871, to April, 1874.

As in the preceding years, a very considerable number of observations have, at the request of the Department, been taken on vessels at sea, to complement the synchronous reports of the service, and forwarded. Their utility is evident in the study of storms approaching our coasts, or which endanger vessels sailing from our ports.

At the Congress of persons charged with meteorological duties, assembled at Vienna in 1873, a proposition, to the effect that it is desirable, with a view to their exchange, that at least one uniform observation of such character as to be suitable for the preparation of synoptic charts be taken and recorded daily and simultaneously throughout the world, was adopted.

Special correspondence had by the Signal-Officer, by authority of the department, with scientists and chiefs of meteorological services representing the different countries, has resulted in arrangements by which a record of observations to be taken daily, simultaneously with the observations taken throughout the United States and the adjacent islands, is exchanged semi-monthly. These reports are to cover the territorial extent of Algiers, Austria, Belgium, Great Britain, Denmark, France, Germany, Italy, the Netherlands, Portugal, Russia in Europe and Asia, Sweden and Norway, Spain, Switzerland, and Turkey. Requests for similar coöperation are proffered to other nations as rapidly as practicable. The results had from this report are considered of especial importance, combining a coöperation thus already extending around the northern hemisphere to aid in the solution of questions upon which the United States has entered, and preparing for an exchange of telegraphic reports when that may be deemed advisable. Thus it has been left to the youngest nation to organize, and in a great measure perfect, a system of weather observations and meteorological studies which will soon encircle half the globe.

The sea-coast service of the Signal-Corps, in connection with the life-saving service, has been continued during the year. Telegraphic lines reaching from Barnegat to Cape May and from Norfolk to Cape Hatteras have been constructed, the stations upon them occupied, and the telegraphic lines operated by the officers and enlisted men of the signal-service. The telegraphic wires connect each station directly with the War Department.

The chief Signal-Officer earnestly recommends a more permanent organization of the signal-service, as necessary for the interests of the United States.

In June, 1874, $15,000 was appropriated by Congress "to enable the Secretary of War to begin the publication of the official record of the late war, both of the Union and Confederate armies." This work has been commenced with a determination to spare no pains to make the arrangement of the records simple and complete, and at the same time to omit all irrelevant matter.

One of the most important military changes during the year was, the removal of the headquarters of the commanding general from Washington to St. Louis. This change took place October 1st. "Here," says General Sherman, "I am centrally located, and, should occasion arise, I can personally proceed to any point of this continent where my services are needed."

ARNOTT, Neil, M. D., F. R. S., F. G. S., an eminent British physician, physicist, and philanthropist, born in Arbroath, Scotland, in 1788; died in London, March 4, 1874. He was a member of a family somewhat noted in the annals of Scotland, his family home being at Dysart, near Montrose, Scotland. He was educated at the Aberdeen Grammar-School, and subsequently at Marischal College, in the University of Aberdeen, and, after taking the medical course in the university, went to London in 1806, and became the pupil of Sir Everard Home, Surgeon of St. George's Hospital. After passing his medical examination, he spent some years as a surgeon in the naval service of the East India Company, and in 1811 settled in London as a physician, where he soon attained a very large practice. In 1815 he was appointed physician to the French embassy, and soon afterward to the Spanish embassy. In 1823–'24, Dr. Arnott was induced to deliver a course of lectures on natural philosophy in its applications to medicine, a subject to which he had given great thought. These lectures formed the basis of his valuable and popular work, first published in 1827, "Elements of Physics; or, Natural Philosophy, General and Medical." This work was for forty years the standard work on physics, but the professional duties of the author were so engrossing that it was not until 1864 that he was able to find time to prepare the concluding chapters on electricity and astronomy. In 1836 he was named a member of the Senate of the University of London, and soon afterward a Fellow of the Royal Society, and still later a Fellow

of the Geographical Society. In 1837 he was gazetted physician extraordinary to the Queen. In 1838 he published a treatise on "Warming and Ventilating;" and, in 1855, one on "The Smokeless Fire-place, Chimney-Valves, etc." He was a man of great mechanical genius, and invented the Arnott stove, the Arnott ventilator, a water-bed of great excellence for invalids, and other valuable contrivances to increase human comfort and relieve suffering. With characteristic disinterestedness, he refused to patent any of these, lest the cost of them should be enhanced to the poor. In 1861 he published a "Survey of Human Progress." In 1869 he gave to each of the Universities of Aberdeen, Edinburgh, Glasgow, and St. Andrew's, a donation of £1,000 ($5,000) for the promotion of the study of experimental physics among the medical students. He also placed at the disposal of the Senate of the University of London £2,000 ($10,000) to found a scientific scholarship.

ASHANTEE.* Even before the arrival of Sir Garnet Wolseley, October, 1873, on the Gold Coast, the commanding general of the Ashantees, Amantaquia, had received from the King of the Ashantees the order to retreat. Violent rain-showers and epidemics had carried off many of their warriors. Before retreating, the Ashantee general made an attempt to possess himself of Abrakrampa, the capital of Abra, and formerly the capital of the kingdom of Fantee. The place was defended by Major Baker Russell, at the head of about 600 men, mostly natives, and gallantly withstood the onset of the Ashantees, who, on November 6th, abandoned the siege, and continued their retreat. At the beginning of December they fully evacuated the British territory, after having occupied it for nearly a year, and thoroughly devastated the Denkera and Fantee districts. The Ashantees, in their retreat, did not stop short of their capital, Coomassie. Here, according to their custom, the soldiers were received with military salutes and other honors. Of the 40,000 warriors who had taken the field, only 20,000 returned home. Seventy-nine coffins, containing the remains of the fallen nobles, were carried through the streets. The army was assembled by the King on the large market-place, and treated to roast-lamb and brandy. The general, the princes, and nobles, who had taken part in the expedition, were invited by the King to a council, where it was resolved to continue the war.

As General Wolseley considered the number of troops he had under his command entirely insufficient to finish the war, he soon after his arrival demanded new reënforcements. At the beginning of December the new troops arrived, consisting of the Forty-second Regiment, Royal Highlanders, called the Black Watch, a regiment which in the eighteenth century during the Jacobite disturbances had become famous as coast watch, the Rifle Brigade, the Twenty-third Regiment, Royal Welsh Fusileers, some volunteers of the Seventy-ninth Regiment, a battalion of marine infantry, and the First Regiment of West Indians (negroes). As the preparations for transporting the troops into the interior were far from being finished, they had to remain in their ships for about one month. As a sufficient number of beasts of burden was not at hand, a large corps of carriers had to be organized. As the Fantee generally showed themselves unwilling and untrustworthy, the organization of this branch of the service encountered unexpected difficulties; the West Indian negroes, and even the Highlanders and the riflemen, had for some days to serve as carriers. At last, Lieutenant-Colonel Colley, to whom the task of organizing the transport of the army had been assigned, succeeded in organizing a sufficient number of Fantee women, who were hired at one and a half shilling a day, and had to carry fifty pounds each. In the mean while, Major Home, of the Engineers, had constructed a good military road from Cape-Coast Castle to Prahsu on the Prah. Eight barrack-stations were established on this road, seven of which afforded shelter for half a battalion each; while at Prahsu, accommodations had been prepared for the entire English army. Electric wires connected Cape-Coast Castle with Mansu, and Mansu with Prahsu. These two villages, as well as Donqua, Yankomasi, and the other villages on the road from Cape-Coast Castle to Prahsu, had been destroyed at the time when the Ashantees invaded the territory. At Mansu and Prahsu post and telegraph offices were established, and Mansu and Donqua were fortified by means of intrenchments, palisades, and ditches. Prahsu, which was more strongly fortified than any of the other stations, had the appearance of a city of soldiers' huts. The army was attended by seventy physicians and surgeons.

On December 27th, General Wolseley, with the Naval Brigade under Captain Blake, left for the Prah. The plans of operation provided that the regiments were to begin their march on January 6, 1874, that they were to arrive a week later at Prahsu, and to cross the Prah on January 15th. On the same day, Captain Glover and Captain Butler were to cross the Prah with the native corps they were to raise in Western Assin, and Captain Dalrymple in the west with the Wassaws. This plan was, however, but partly executed; the efforts of Butler and Dalrymple to raise native corps were an entire failure. The Ashantees were first followed by the native troops under command of Wood and Russell, who suffered less than the English troops from want of provisions, and therefore were prepared the first to cross the Prah. This river is considered the frontier of the Ashantees, but Ashantee proper begins at the Adansi

* For a geographical description of the kingdom of Ashantee, see ANNUAL CYCLOPÆDIA for 1873.

Mountains. The country lying between, called Ashantee Assin, is the northern portion of Assin, and was at this time but thinly peopled, as the inhabitants had mostly emigrated into the southern districts, which belong to the English dominions. As the Ashantees did not consider their country invaded so long as the Adansi Mountains were not occupied by the enemy, they did not oppose the crossing of the Prah, and the English army marched the first thirty miles, or about one half of the distance between the frontier and Coomassie, without encountering any serious resistance. All the villages had been abandoned by the inhabitants. They were found to be better built than those in the English dominions, and afforded good shelter to the troops. On the 6th, Lord Gifford, who commanded the scouts, was pushing on as far as the village of Essiaman, twelve miles beyond the Prah. He saw smoke in the village in front of him, let his men load, and advanced hoping to surprise those within; but the men he had sent round to intercept the rear of the few holding the village were fired on, and he was obliged to return the fire. Only eight Ashantee scouts occupied the village. One was killed, the rest escaped, leaving two women prisoners. One of the English scouts was wounded, five slugs being put into or through him. The women said there were no Ashantees nearer than Quisah. The Ashantee scouts had, according to their evidence, been down to the Prah on the 2d of January. They had, in fact, accompanied the envoys, who on that day came to Sir Garnet Wolseley with letters from the King of Ashantee, which were addressed to Colonel Harley. The envoys were kept till the 6th, on which day the bridge over the Prah was completed. On the 4th they were allowed to see the practice with the Gatling guns. That night one of the Ashantee escort shot himself. Afterward it appeared that he had been so frightened by the Gatling shot that he had said if white men had those weapons resistance was useless. The other envoys said they would report him to the King of Ashantee, and the fear of death by torture made him kill himself. He was buried on the farther side of the river, to the great delight of the envoys, who were most anxious to have him buried in his own land. Each man threw dust on the body, as in a Jewish funeral.

At this time the difficulty about the carriers had come to an end. Thanks almost entirely to the vigorous steps taken by Colonel Colley, and to the admirable management of that officer, eight thousand carriers were now working steadily upon the road. Here the concentration of the troops was to take place. The troops were moving by three stages, each about eleven miles long, from Prahsu to Monsi, at the southern foot of the Adansi Hills. First, from Prahsu to Essiaman; second, from Essiaman to Acrowfumu; third, from Acrowfumu to Monsi. The headquarters, with the Naval Brigade, and the First Battalion of the Rifle Brigade, reached Monsi on the 20th. The other battalions followed in succession. The road had been admirably made, and every stream bridged completely to Fommanah, situated a mile and a half on the farther side of the Adansi Hills, by the engineers. The road, with the exception of the three miles nearest the Prah, was better than that between Cape Coast and the Prah, along which the general's carriage, drawn by natives, moved the whole distance. Even the portion for three miles this side of the Prah had been well covered with a sort of bastard, but very bad, corduroy. It was terribly swampy all along the line. At Atobiasi, Essiaman, Acrowfumu, Monsi, Quisah, Fommanah, and at two points between Acrowfumu and Monsi, not marked on home maps, intrenchments had been made to be held by small forces and protect the stores. Storehouses had been also made, and some huts. Those who could not thus obtain shelter had large tents, under which wattle-beds, keeping the men well off the ground, were constructed. The Adansi Hills fell into the hands of the English on the 16th. Lord Gifford pushing up with his scouts found the Ashantees in possession, but succeeded in frightening them into falling back by surrounding them and threatening an attack. On the 8th Major Russell, finding Quisah, half a mile on the farther side of the Adansi Hills, unoccupied, entered it with his regiment, and intrenched it. Wood's regiment and Rait's artillery were pushed up together on the 15th in support. Colonel Colley's vigor and success with the native carriers elicited universal praise. He undertook the task when it had just become a serious difficulty, and by a combination of energy and care for the men succeeded in placing it on a proper footing. The whole matter was put in his hands. He redressed all grievances, chiefly due to the carelessness of native guides, saw that the men had proper food, and intervals of rest. Then he surrounded with West Indian sentries the villages to which deserters resorted, and thus made escape impossible. After the return of his embassadors the King secretly determined to continue the war vigorously; at the same time, however, he sent the captive missionaries to General Wolseley to assure him of his desire to make peace. Missionary Kühne arrived at Prahsu on January 18th to deliver the message of the King. General Wolseley replied that the King must set free all the European captives, pay an indemnity to the amount of £200,000, and sign a treaty of peace in the presence of the British army which would secure the protectorate and its allies against future attacks. On January 24th, the general with the Naval Brigade marched to Fommanah and established his headquarters in the palace of the King of Adansi. Now the King also liberated the missionary Ramseyer, his wife, and the Frenchman Bonnat. Ramseyer delivered to General Wolseley a letter from the King in which he

notified the English general that he had instructed Amanquatia to pay the indemnification, on condition that General Wolseley remained in Fommanah. General Wolseley now believed the war to be at an end, and sent an express steamer to England to notify his government. The captives informed the English, however, that in every house in Coomassie slaves were busy making slugs out of stones. Of the liberated captives, Mr. and Mrs. Ramseyer were sent to Cape-Coast Castle, while Bonnat remained with the expedition. The Ashantee messengers were sent back by General Wolseley on the afternoon of January 26th. During the negotiations for peace, the regiment of Russell had advanced farther, and Lord Gifford, by extensive reconnoissances, had found that the villages on the road were strongly occupied by Ashantee warriors, and that the women and children had been removed from them. Major Russell summoned these garrisons to evacuate the villages, and, when they refused, attacked one of the villages and set it on fire. General Wolseley, still believing in the sincerity of the King's propositions for peace, gave orders to Major Russell hereafter not to burn any village, nor at any future encounter with the Ashantees to open fire. Soon after Lord Gifford intercepted a powder-convoy which was sent from Coomassie to Borborasi; at the same time he learned that the Ashantee general Essamanquatia and the Prince of Adansi were there with a considerable force. Colonel McLeod, who had been appointed brigadier of the native forces, received orders to march to Borborasi, first to open negotiations, and, in case resistance should be made, to attack the enemy, but not to destroy the place. Captain Nicol, who led the van, stopped in front of the village, but, when on the point of beginning negotiations, was treacherously shot through the heart. Colonel McLeod then took the village, but, in accordance with his instructions, did not destroy it. On January 28th, other Ashantee messengers came to Fommanah, but immediately returned. The English soldiers were officially informed that the negotiations had been broken off, and that the war would go on. The Ashantee general Amanquatia had concentrated his new strong army and taken position at Amoaful, twenty miles from Coomassie. The van of the Ashantees occupied the village of Egginasi, half a mile from Amoaful. The latter is a place of about 2,000 inhabitants, and situated on a high hill, while Egginasi lies on a lower hill; between both is a marshy valley crossed by a turbid creek. The slopes of both hills were densely wooded. Here Amanquatia had an army of 20,000 men, while the English only numbered 8,000. The English van, embracing the regiments of Wood and Russell, on January 30th, occupied Quarman, a village situated half a mile south of Egginasi; in the afternoon Major Home widened the road to Egginasi, and during the night Lord Gifford reconnoitred the enemy's position. The bulk of the English army was at Jusarfu, four miles south of Quarman. It consisted of the Forty-second Regiment, the Black Watch, under Major Duncan McPherson; the Rifle Brigade, under Lieutenant-Colonel Warren; and one hundred men of the Twenty-third Regiment, under Lieutenant-Colonel Moslyn. Together, these troops formed the White Brigade, commanded by Brigadier Sir Archibald Alison, son of the English historian; to this were added the Naval Brigade under Captain Grubbe, a company of the Second West Indians, under Lieutenant Jones, and the Houssa with seven-pounders and rockets, under Captain Rait.

As General Wolseley saw that the small English army would be encircled by the overwhelming numbers of the enemy, as soon as it would reach Egginasi, he formed his army into a large square, in order to front the enemy on all sides, and to keep the inclosed ground free from all hidden enemies. Brigadier Alison, with the Forty-second Regiment, Gifford's skirmishers, Home's sappers, and Rait's artillery, was to advance and take Amoaful. Lieutenant-Colonel Moslyn commanded the right flank, and Colonel McLeod the left. General Wolseley, with his staff and Commodore Hewett and a company of the Twenty-third Regiment, took his place behind the front column. Quarman was occupied by Lieutenant Jones and the Second West Indian; the rear was commanded by Lieutenant-Colonel Warren. On January 31st, early in the morning, the Black Watch marched through Quarman and Egginasi into the woods, where, at about eight o'clock, they were most vehemently attacked by the Ashantees. The battle lasted until nearly twelve o'clock, when the end of the wood was reached, the hill taken, the fire of the Ashantees silenced, and Amoaful occupied. The Ashantees had lost a large number of killed and wounded, but the losses of the Black Watch were likewise severe. Nine officers and one hundred and five men were severely wounded; one officer and two men killed. The three other columns of the English army had also encounters with the Ashantees, who even destroyed a part of the baggage; but, at last, the Ashantees had to fall back on all sides. After the battle at Amoaful, there was a comparative lull for one day; though, even on that day, February 1st, some of the troops which had been most hotly engaged in the battle had to attack the village of Becquah, on the left flank of the English position. But on the second day, when the general moved forward as far as Agimmamu, the enemy disputed every mile of ground. Again, on February 2d, the enemy was in great force, opposing the advance of the English, and hanging round their flanks. The King on that day sent to Sir Garnet a characteristic letter, alleging, perhaps with unconscious truth, that "your Excellency's very rapid movements put me into confusion," and offering compliance if he were given time. Sir Garnet, in reply, de-

manded hostages in the persons of the King's mother and brother, and, in the event of their not being sent that day, announced that on the 4th of February he would march on Coomassie. They were not sent; and that evening the British force halted on the banks of the Ordah. A heavy rain fell during the night, and drenched the troops in their bivouac; and early the next morning they crossed the Ordah for their final advance. Here, however, the enemy made their last stand. They did not, according to Sir Garnet, fight with the same courage as at Amoaful. Their fire was wild, and they did not venture to attack the English at such close quarters. But their resistance was none the less most determined, and they maintained a general action for six hours. The village of Ordahsu was soon carried; the Ashantees, nevertheless, maintained the attack all around; but the baggage and ammunition were passed through the troops into the village, and then the force was massed there. At length, after some hours' incessant fighting, a panic seems to have seized the enemy, and they fled to Coomassie in complete rout, leaving behind them the umbrellas and other symbols of their chief's authority. Sir Garnet then called on his troops to make their final effort; and, notwithstanding their two days' work, and their lack of rest the night before, they pushed on upon the very heels of their retreating foe, and, at six o'clock in the evening, they formed up in the main street of Coomassie, and gave three cheers for the Queen. Sir Garnet Wolseley soon found that the King was adopting the same policy of gaining time by promises of negotiating. If Sir Garnet had been able to wait, he would, no doubt, have tried further measures to induce the King to come to terms; but this, he found, would be impossible. The rain which had fallen on the eve of the battle of Ordahsu was but the commencement of a succession of tornadoes, and he knew that with every day's delay the streams would become dangerously swollen, and the swamps more impassable. It was imperative that he should return at once, whether with or without a treaty. In these circumstances Sir Garnet determined, by burning the city, "to leave such a mark of our power as shall deter from future aggression a nation whom treaties do not bind." He accordingly prepared for the return-march with the same skill which had marked his advance. In the morning of the 5th he had sent off, under escort, all the wounded who were unable to march, and he gave orders to be ready for the return of his army on the morning of the 6th. Early on that day the town was set on fire, and the mines in the palace exploded, and as a rearguard of the Forty-second Highlanders left the capital its destruction was complete.

A writer who was present at the entry of the troops into Coomassie gives a description of the interior of the King's palace. He says there was a court-yard of some ten yards square in the inner yard and twenty yards exterior. The court-yard was open. Upon one side was a staircase leading to the upper story, upon the other were open store-rooms, in which the royal umbrellas, the canes used in processions, etc., were kept. The upper rooms were used as store-rooms. Here was an infinite variety of articles, for the most part mere rubbish, but many interesting and valuable. Silver plate, gold masks, gold caps, clocks, glass, china, pillows, guns, cloth, caskets, an *olla-podrida*, which resembled the contents of a sale-room. The rest of the palace was built in the native manner, and exactly resembled that of the King of Fommanah, but multiplied, not magnified, many times. In one were the war-drums, all ornamented either with human skulls, or thigh-bones; others were quite empty, while in two or three was simply a royal chair, upon which his Majesty used to sit to administer justice or decree vengeance. Signs of the latter were not wanting. Several stools were found covered with thick coatings of recently-shed blood, and a horrible smell of gore pervaded the whole palace, and indeed the whole town. That ghastly odor was everywhere perceptible, indeed, we could never get rid of it; occasionally it might have been fancy, but every one was of opinion that a sickly smell of blood was ever present. Part of this was no doubt due to a charnel-place, some twenty yards from one of the fetich-trees, hidden from sight of all who walked, by a fringe of rushes. Here were the bodies of some of the victims of fetich. Five or six were only two or three days old, while of others nothing but the skulls remained, and there were scores of others in various stages of putrefaction. The palace was full of fetich-objects. The King's private sitting-room was, like the rest, an open court, with a tree growing in it. This tree was covered with fetich-objects, and hung with spiders'-webs. At each end was a small, but deep alcove, with a royal chair, so that the monarch could always sit upon the shady side. Along each side of the little court ran a sort of veranda, beneath which was an immense assortment of little idols and fetiches of all kinds. From one of these a door opened into the King's bedroom, a room about ten feet by eight. At one end was the royal couch, a raised bedstead with curtains, and upon a ledge by the near side—that is to say, the King had to step over the ledge to get into bed—were a variety of weapons, together with an English general's sword, bearing the inscription, "From Queen Victoria to the King of Ashantee." Upon the floor, at the end opposite the bed, was a couch upon which the King could sit and talk with his wives. The room was very dark, being lighted only by a small window, about a foot square, opening into the women's apartments. In this part of the palace all sorts of stuffs, some of European, some of native manufacture, were found scattered about in wild confusion.

General Wolseley, after burning Coomassie

on the 6th of February, prosecuted his return-march with the utmost practical speed. On the 8th he reached Amoaful, the scene of his first difficult struggle with his enemy nine days before. On the 9th he dispatched a telegram from Detchiasu, a little way to the north of the Adansi Hills, saying that messengers had just arrived from the King, requesting peace, and that he intended halting with the troops north of the hills until the 13th or 14th, to allow time for negotiations. It was at first feared that the King's old policy of treacherous procrastination was being revived; soon, however, it was ascertained that it was the approach of a second English force which prompted the King to tender his submission in earnest.

This English force was under command of Captain Glover, formerly administrator of Lagos, who, being in England at the outbreak of the Ashantee War, had asked for and received permission to organize, in the eastern districts of the Gold Coast, with the aid of a well-disciplined regiment of Yoruba and Houssa, on which he could rely, a native army of from 10,000 to 15,000 men, which was to coöperate with Wolseley. Lord Kimberley, the Colonial Minister, provided Glover with money, arms, and provisions, and obtained for him from the Minister of War and the Admiralty the permission to choose his own officers. Having arrived on the Volta, Captain Glover succeeded, by means of liberal distributions of money, muskets, and rum, in collecting a considerable army of Accras, Kroboes, and Krippies. But, as soon as they saw themselves in possession of these things, they declared that Captain Glover, before they would follow him against Coomassie, must first destroy the Awoonahs and Aquamoo, otherwise these enemies during their absence would cross the Volta and plunder their country. Captain Glover considered it necessary to accede to the demand, and to march first against these two tribes which lived outside of the protectorate, and were at peace with the English. He went to Adda, on the Volta, where he established a camp, and had to wait several weeks for the Accra, who were not yet ready. On December 23d, 24th, and 25th, he at length crossed the Volta with 800 Houssa and Yorubas and 20,000 native allies, consisting of Aquapims, Accras, Addahs, Kroboes, Krippies, etc., to attack the Awoonahs on the east bank of the Volta. The passage was effected by means of the Lady of the Lake, three steam-launches, and a number of canoes. The loss of the English was small, and the enemy was driven from all his positions. On Christmas-night Captain Glover received urgent dispatches from Sir Garnet Wolseley directing him to proceed without a day's delay to the Prah, with all his disciplined forces, leaving the native allies to settle the Awoonah and Aquamoo affairs. Consequently, on the 26th, the Houssas and Yorubas were taken back across the river, and Mr. Goldsworthy (the deputy commissioner), with Lieutenant Mooro, Royal Navy, was left with the native allies, with orders to finish off the work to the east of the Volta, and to follow Captain Glover to the Prah with as many of the levies as he could bring, with as little delay as possible. Meanwhile, the Houssas and Yorubas were pushed on as rapidly as possible for Akim, Captain Glover's instructions being to cross the Prah on the 16th of January, on which date Sir Garnet Wolseley would cross with the European regiments, and Captain Butler, between Sir Garnet and Captain Glover, with the western Akims. By the greatest exertions, the Houssas and Yorubas, with a certain amount of provisions and ammunition, were moved from the Volta to the Prah, by way of Akapong and Kebbe, over six or seven mountain-ranges, and through dense forests with only small bush-paths, and on the night of the 14th the main body of the English force bivouacked within a few miles of the Prah. The Houssas and Yorubas marched admirably, doing long twenty-mile marches over precipitous mountain-passes, and reaching the Prah fresh and in the best possible spirits. The percentage of sick was wonderfully small. On the morning of the 15th of January the advanced guard crossed the Prah at half-past ten o'clock, without any signs of an enemy. The Prah is a very rapid stream, with the bed of the river exceedingly rocky, the banks being steep and thickly wooded. Captain Glover crossed with the main body about noon. In the afternoon reconnoissances were made, but nothing was seen of the enemy. On the 16th, Obogoo, a large village, about fifteen miles distant in a northwesterly direction, was occupied. After waiting several days at Obogoo for ammunition and receiving reënforcements of Akims and Kroboes, he continued his advance on Coomassie, and finally reached a point fourteen miles northeast of it. He there heard of its occupation by Sir Garnet, and he dispatched to join his superior officer a little force which deserves the credit of one of the most gallant actions during the war. Captain Sartorius, with no more than twenty men, marched to Coomassie. He found the ruins still smoking. He passed through them without seeing a human being, and on the 12th of February he reached Sir Garnet at Fommanah after having marched with his twenty men through the enemy's land over a distance of fifty-one miles. King Koffee having sent 1,000 ounces of gold as a first installment of indemnity with the request of peace, General Wolseley received his envoy at Fommanah on February 18th, and through him sent a draft of peace to Coomassie for signature. The following are the particulars of the terms of peace agreed upon:

1. The King of Ashantee is to pay an indemnity of 50,000 ounces of gold.

2. He renounces all claim to Adansi, Assin, Akim, Denkera, and Wassaw.

3. He binds himself to withdraw his forces

from Apollonia, Dix Cove, and all other parts of the coast belonging to Great Britain.

4. He undertakes the responsibility of keeping a road, fifteen feet wide, clear of bush, from Coomassie to the Prah.

5. He engages also to protect goods and merchandise in transit between the Prah and Coomassie.

6. The King is to prohibit human sacrifices.

7. Finally, he promises to be at peace with England forever.

Captain Glover followed Sartorius to Coomassie and Fommanah. General Wolseley, on February 16th, recrossed the Prah, and on February 19th made his triumphal entry into Cape Coast Castle, where the European merchants and the natives had erected grand triumphal arches. The Ashantee women, painted black and white, swung green branches, and sang triumphant hymns as each regiment entered. Prahsu, which had been strongly fortified, received a garrison of West-Indians, and remained in telegraphic communication with Cape Coast Castle. The English regiments soon after embarked, and were at the beginning of March welcomed in England by grand ovations. According to a return, issued in July, the total strength of the force (exclusive of native levies and West-Indian regiments) engaged in the prosecution of the war in Ashantee was 2,507 of all ranks: 297 officers, and 2,290 non-commissioned officers and men. The casualties from disease numbered 511, and from engagements with the enemy 202, and after arrival at home, up to the 31st of May last, there were ten deaths from wounds or diseases contracted in Africa. The total number who died was eighteen officers and fifty-three non-commissioned officers and men.

The native allies with whom Captain Glover had to deal are thus described by him:

Sakety, chief of the eastern Kroboes, was the only chief of the whole eastern protectorate whom I found always ready, willing, and able to carry out the orders he received, and I trust her Majesty's Government may be pleased to mark its sense of his most exceptional conduct. The chief of Abude, in Aquapim, marched with me to Coomassie, and rendered great assistance in providing carriers. His conduct is exceptional also, and should be noticed. The King of Eastern Akim, one or two chiefs, and perhaps some hundred of his men, are the exception that I am about to report, viz., that the eastern Akims are the most abject cowards it is possible to conceive. They would neither scout, patrol, reconnoitre, carry, nor fight. At Conomo I threatened to burn their camp and drive them back to their women across the Prah, and only spared them for the sake of their king, a young man of twenty-one or twenty-two years. Among the cowards of the protectorate I should consider them preëminent. The natives of the different tribes of the eastern district of the protectorate I must report as truculent, disobedient, and unreliable. That they can be got to fight on some occasions I have seen; but, where there is neither pride nor shame, you have no sense of feeling to work upon, save one—their fear. There has been one bright exception to this distressing report of the eastern tribe of the protectorate. Two companies of Christians, one of Akropong and the other of Christiansburg, numbering about one hundred each, under their two captains, accompanied by Bible-readers of the Basle Mission, attend a morning and evening service of their own daily, a bell ringing them regularly to prayers. In action with the enemy at Adidumé, on Christmas-day, they were in advance, and behaved admirably, since which they have garrisoned the depot at Blappah. Their conduct has been orderly and soldier-like, and they have proved themselves the only reliable men of the large native force recently assembled on the Volta.

The success of the English expedition proved a powerful blow to the rule and influence of the Ashantee King. To understand the events which followed the English expedition, it must be remembered that, about two hundred years ago, the Ashantees were a small tribe, vassals of Denkera, then a powerful state, now part of the English protectorate. The Ashantees being ill-treated, rebelled, gained their independence, and founded Coomassie. They were surrounded by small kingdoms—Becqua, Kokofo, Mampon, Adansi, and Djuabin—all of which they conquered; but these states still remained under their own kings, who paid tribute to the King of Ashantee, contributed soldiers when he went to war, attended the capital at certain festivals, and were summoned, as occasion arose, to councils, at which each chief or king spoke in turn, according to his rank. Thus the Ashantee nation was not homogeneous, but composed of various kingdoms, which cherished the traditions of their independent sovereignty, which were held together merely by the fear of punishment, and which were prepared at any time to secede from tyranny and taxation should any misfortune befall the imperial tribe. This seceding or separating process commenced before the English troops were out of Ashantee. The chief of Adansi and his people had been much oppressed by Ashantee. He resisted the white men, but, as soon as Coomassie had been taken and the struggle decided, he determined to throw off his ancient yoke and place himself in the hands of the stronger and also more merciful power. He met Sir Garnet Wolseley in the ruins of Fommanah, his own capital, and there made arrangements for migrating into the protectorate. At the same time a rumor reached the general that the chief or King of Becqua desired to follow the example of Adansi. Becqua is a powerful state, and its capital, which the English troops destroyed, was not much smaller than Coomassie. Finally, the King of Djuabin sent in his submission to Glover, and afterward began negotiations with the King of Eastern Akim, with a view to migration to that country. Subsequently Becqua and Djuabin determined to hold their own territory, to cast off their allegiance, and to resist any attempt that Cal-Calli might make to subdue them. Becqua was supported by Denkera, and Djuabin by Akim. Coomassie and its territory lie just between the rebellious states, and if Kokofo and Mampon refused to assist the Ashantees, the latter kingdom would be likely to be reduced to its former elements, viz., a

small tribes, the city of Coomassie, and a few plantation villages.

On July 10th a messenger arrived from the King of Ashantee to the administrator of the protectorate, to inform him that the Kings of Djuabin and Becqua were in revolt, and refused to attend Cal-Calli's summons to view his return to the capital, and further, that they threatened to attack him if he attempted to use force. The King of Ashantee therefore sent down to the administrator, asking for his interference, as peace was what he wanted, and the attack, if carried out, would possibly lead to a lengthy war, and effectually destroy trade. The administrator questioned the embassadors, and, after a good deal of fencing on their part, drew from them that which led him to think the King of Ashantee had been endeavoring to put some pressure on Djuabin and Becqua, thus bringing about the present crisis. The administrator at once sent Captain Lees to Coomassie to act as peace-maker between the tribes, and so prevent the threatened outbreak.

Shortly before being sent to Coomassie, Captain Lees had convoked a very important "palaver" to induce the Awoonahs to sign a treaty of peace with the Accras and Addahs. The former had been the allies of the Ashantees in the late war, but it was now thought desirable to establish cordial relations between all the tribes of the coast. A meeting having taken place between the hostile parties for this purpose, the interpreter standing forth delivered the administrator's message to the Awoonahs, and said: "You have not now the Ashantees to protect you, and we want you to be our allies. If such does not please you, there is no need to conceal the fact that we think it necessary for us to take an active part in protecting our interests, and showing that we intend to maintain our rights and enforce our power. Do you doubt there are Ashantees present? for I will call them, and you will hear what they have to say." Then there stood in the open space an Ashantee messenger, bearing his emblematic two-handed sword, who told the Awoonahs his people were at peace with the English, and to be their friends forever. After some trouble, "fetich" was eaten by those who had lately been foes, and a binding peace was effected between them.

Interesting information, on the introduction of slaves by Ashantee traders to the British protectorate on the Gold Coast, is contained in dispatches published by the English Government in August, 1874. The first is dated as far back as the beginning of 1866, and is from Mr. Cardwell to Governor Blackall, then recently appointed. In it the Secretary for the Colonies notifies the disallowance of the colonial ordinances which recognized the existence of slavery within the British colony at Lagos and the towns of Badagry, Palma, and Leckie; suggests the prescription of a punishment for subsequent violence on compulsory detention, and gives instructions [illegible] boring chiefs against [illegible] enter British territory [illegible] ested or harassed [illegible] ond dispatch was sent by [illegible] lay, in the beginning of [illegible] of the West-African [illegible] indicated the difficulty of [illegible] protectorate with [illegible] subjects; but at the same [illegible] means should be taken to [illegible] to desist from their [illegible] the same time it was suggested [illegible] course would be to [illegible] understanding with the chiefs [illegible] tribes to forbid the slave [illegible] separate districts, and to [illegible] ter into agreements with the [illegible] ernment to this effect, [illegible] would be in a position to enforce [illegible] treaty agreements. The [illegible] specially called attention to the [illegible] slave imported into what was [illegible] territory must at once be set [illegible] ed the West-African governor [illegible] ideas as to the best mode of [illegible] the propositions which he had [illegible] stated that no reply was received [illegible] patch.

During the presence of Captain [illegible] massie, the King of the Ashantees [illegible] utmost efforts to obtain the [illegible] English for the reunion of the [illegible] since his defeat had rebelled [illegible] Captain Lees, however, refused [illegible] and it was, therefore, believed [illegible] the kingdom of the Ashantees [illegible] pieces.

On November 3d an important [illegible] all the kings and chiefs of the [illegible] central positions of the Gold Coast [illegible] at the Castle of Cape Coast, in [illegible] hall. Governor Strahan, made [illegible] them, in which he reviewed at [illegible] mer relations of their districts [illegible] tees, the wrongs which had been [illegible] them by the Ashantee kings, and [illegible] benefits they had received from [illegible] then announced to them, that [illegible] ernment of England, in return for [illegible] fits, requested their aid in putting [illegible] thing the Queen and her people [illegible]

Governor Strahan said: "[illegible] against a law which no King or C[illegible] land can ever change. I have [illegible] some of you that the English [illegible] fowls, and other live-stock, but [illegible] en, and children. The Queen is [illegible] put a stop at once to the buying [illegible] of slaves, either within or without [illegible] totorate, in any shape, degree, or fo[illegible] will allow no person to be taken [illegible] for debt." (This last passage was [illegible] considerable emphasis.) "The Q[illegible] to make you as happy as her own [illegible] buying, selling, and pawning of slaves, [illegible]

en, and children, is wrong, and no country where it exists can be happy. The Queen does not desire to take any of your people from you; those of them who like to work for, and with, and to assist you, can remain with you. If they are happy, and continue to live with you on the same terms as now, no change will be forced upon you; but any person who does not desire to live with you on those terms can leave, and will not be compelled by any court, British or native, to return to you. The Queen hopes to make you happy in many ways, as happy as those in her other dominions. It is right that I should tell you distinctly that, if you desire her protection, you must do as she wishes—as she orders. This is the Queen's message. When the Queen speaks in this way, it is not a matter for palaver, question, hesitation, or doubt, but she expects obedience and assent. I will only say that, without the Queen's money and troops, you would have been slaves of a blood-thirsty people. The Queen has paid a great price for your freedom. You and those near and dear to you would have been dragged hence to form a portion of the thousands who are decapitated and sacrificed by this savage race for their customs. Your homes would have been homes full of misery. I see you to-day enjoying peace, and I call on you all to join with me in the prayer, 'God save the Queen.' My message is delivered."

When the governor ceased speaking, the chiefs for a short time consulted among themselves what answer to give. At last King Edoo, of Mankessim, solicited permission from the governor to retire till the next day, so that they, the kings, might consult together as to what answer they could give. This, however, the governor refused, and referred them to that portion of his speech or message wherein he had stated that when the Queen expressed her wishes it remained only for them to obey; but, if they wished it, he would retire for a short time, and leave them to their deliberations. The governor then left the Palaver-hall, and, upon his return, in about one hour, the kings and chiefs informed him that they were willing to cease from buying or selling slaves, but raised objection to the slaves being permitted to go free if they chose, without there being any cause shown, and likewise to pawns not being allowed. After some discussion, it was decided that no slave could leave his or her master or mistress, unless there was proof of cruelty or maltreatment, when such slave would be entitled to his or her freedom. And the question of pawns was settled by the debtor being held liable for the amount that the pawn had been given as security for, and that the amount should be recovered on the pawn leaving. This concluded the meeting in the castle, but the governor invited all the kings and chiefs to go over to Government House to drink long life to her Majesty.

Reports from Coomassie, received at Cape Coast Castle, in November, confirmed the rumor that King Koffee had been deposed, and had retired to the villages beyond Coomassie. Guacoo Duah had been proposed as his successor. A palaver had taken place at Accra about the household-slave question, and the natives had agreed that their slaves should be under British protection, in accordance with the governor's proclamation. At Cape Coast Castle the different chiefs were willing to open trade further into the interior than had yet been done. (*See* H. Brackenbury, Captain Royal Artillery, Assistant Military Secretary to Sir Garnet Wolseley, "The Ashanti War: a Narrative prepared from Official Documents, by permission of Major-General Sir Garnet Wolseley." Edinburgh, 1874.)

ASIA. While the Russian Government, by the treaty concluded near the end of the year 1873, with the Khan of Bokhara, ceded a part of the territory obtained from the conquered Khan of Khiva, to Bokhara, it regulated, early in 1874, the permanent organization of that part of its new acquisitions which it intends to retain, under the name of trans-Caspian territory. The dependence of the khanates of Bokhara, Khiva, and Khokand, upon Russia, becomes every year more complete, and, though they remain nominally independent countries, they are virtually governed by the Russian authorities of the neighboring provinces. (*See* RUSSIA and KHOKAND.)

In Afghanistan, the Ameer Shere Ali announced the son of his favorite wife, young Abdullah Jan, as his heir, to the exclusion of his eldest son, Yakoob Khan, the Governor of Herat. As Yakoob Khan did not conceal his intention to vindicate his claims to the throne by force of arms, a new civil war was regarded as imminent. Toward the close of the year, Yakoob Khan, while visiting his father at Cabul, was suddenly imprisoned, a measure which it was thought would precipitate rather than retard the outbreak of hostilities. England and Russia are well known to counteract each other's influence in Afghan affairs, but both are working as much as possible in secret, and much that belongs to the current history of these countries will only be cleared up in the future. (*See* AFGHANISTAN.)

In Kashgar, the country ruled by Yakoob Kushbegee, the influence of Russia and England is likewise at conflict. An English embassy, in February, 1874, succeeded in concluding a new treaty with the Ameer of Kashgar, which it was hoped would open for the trade of British India new markets in Central Asia, and enable the English to compete with the Russians, who had previously established treaty relations with Kashgar, and were already driving a thriving trade with the Kashgarees. The rumored intentions of the Chinese Government to send out an expedition for the reconquest of Kashgar, which was formerly a Chinese dependency, may lead to new complications. (*See* KASHGAR.)

The disposition of the Chinese Government toward foreign nations remained wavering and doubtful. Among the mass of the people the hatred of every thing foreign seemed far from being on the decline, and the degradation of Prince Kung, the chief representative of a friendly foreign policy, was looked upon as a victory of the anti-foreign party. An expedition of Japan against the pirates of Formosa, an island which China claims as a dependency, for a time interrupted the friendly relations between the two great eastern Asiatic countries, and even threatened a war. Toward the close of the year the difficulty was, however, peaceably adjusted. (*See* CHINA.)

Japan, on the contrary, continues to advance resolutely on the road of progress. Several insurrectionary movements were promptly put down, and the outrages committed by the pirates of Formosa against shipwrecked Japanese led to an expedition of Japan against Formosa, which, notwithstanding the protest of the Chinese Government, proved an entire success. The results of the first census were published by the government, and great reforms were introduced into the department of Public Instruction. (*See* JAPAN.)

British India, as was expected at the close of the year 1873, was again visited by an extensive famine, and for several months the number of persons assisted by the government was estimated at 3,000,000. The energetic and timely preparations made by the government carried the population of the suffering districts safely through the great ordeal, and about October this famine was declared to be at an end. Toward the close of the year, a resolution was issued by the Viceroy in council, announcing that a campaign against the Duffla had become unavoidable for the rescue of captives carried off by this tribe from British territory. (*See* BRITISH INDIA.)

Persia is agitated by severe conflicts between the liberal lay party, represented by Mirza Husseïn, and the ecclesiastical party of the Mohammedan priests; and the vacillation of the Shah makes it doubtful whether the reform party will command sufficient influence to improve the wretched condition of the country. New difficulties sprang up between Persia and Turkey, which were, however, peaceably adjusted. (*See* PERSIA.)

The war of the Dutch against the sultanate of Acheen, on the island of Sumatra, was continued throughout the year 1874. Though not a complete failure like the first expedition in 1873, it was marked by slow progress and severe losses. The Dutch announced their intention to annex Acheen to their dominions, and to extend their rule over the entire island of Sumatra. (*See* NETHERLANDS.)

The complications between France and the Emperor of Anam, arising out of the bloody persecutions of the native Christians in the latter country, were terminated by a new treaty, which promised to the Christians of Anam entire religious liberty, and conceded to France a greater influence than she had ever had before. (*See* FRANCE.)

The grand project of a Central Asian railway, which, if realized, could not fail to exercise an extraordinary influence upon the destiny of the interior of Asia, is declared by M. Victor de Lesseps to be feasible. With respect to the material obstacles in carrying a railway over the mountains, De Lesseps is of opinion that neither the Karokaram Passes nor the Bolan Pass need terrify modern engineers. The Karokaram Mountains are much higher than any yet surmounted, but the gradients are much easier than others that have been successfully crossed by railways. There are several alternative routes. The traffic expected would, in his opinion, suffice to pay interest on the capital required for the construction of the railway.

ASTRONOMICAL PHENOMENA AND PROGRESS. *Minute Structure of the Solar Photosphere.*—Prof. S. P. Langley, of the Alleghany Observatory, communicates to the *American Journal of Science* the results of his repeated and careful examinations of the sun's surface. In exceptionally favorable atmospheric conditions the so-called "rice-grains" of the photosphere have been resolved into very minute points of light, which Prof. Langley calls *granules*. These intensely bright, circular bodies, which are less than three-tenths of a second in diameter, are irregularly distributed, and tend evidently to collect in clusters. They constitute the properly luminous area, or, in other words, are the chief source of solar light. Those results of Mr. Langley's telescopic studies which seem to have escaped the notice of other observers, are thus briefly recapitulated:

The ultimate visible constituents of the solar photosphere being, not the rice-grains, but smaller bodies which compose them, and the size of these latter being valuable at not over 0″.8: from a comparison of the total area covered by them with that of the whole sun, we are entitled to say that the greater part of the solar light comes from an area of not over one-fifth of its visible surface, and which may be indefinitely less.

We must then greatly increase our received estimates of the intensity of the action to which solar light (and presumptively its heat and actinism) are due, on whatever theory we form them. (There is a presumption from observation that there is a drift of all the photosphere in a direction approximately parallel to its equator, while the evidence as to this point is not yet conclusive.)

In the penumbræ there are not only numerous small cyclones, and even right- and left-handed whirls in the same spot, but probably currents ascending nearly vertically, while the action of superposed approximately horizontal currents is so general that they must be considered a prominent feature in our study of solar meteorology.

A study of the outer penumbral edge leads to the conclusion that it is formed by rupture.

The Transit of Venus.—Some account of the arrangements made by different governments for observing the transit of Venus, on the 8th of December, 1874, has been given in previous volumes. Complete reports from all the expeditions sent out to observe the phenomenon have not yet been received, and hence the resulting value of the solar parallax remains undetermined. It can only be stated that the observations were successful at Tschita, latitude 52° north; at Hobart Town, latitude 43° south; at Wladiwostok, Peking, Teheran, Thebes, Sydney, and more than twenty other intermediate stations. It is obvious, however, that considerable time will be required for an exhaustive discussion of all the observations.

Asteroids.—Six minor planets were discovered during the year, bringing the known number up to 140. Hertha, the 135th of the group, was discovered by Dr. Peters, of Clinton, N. Y., on the 18th of February. This is the twentieth asteroid first seen by the Director of the Litchfield Observatory. No. 136 was detected by Palisa, at Pola, on the 19th of March, and No. 137 by the same observer on the 21st of April. M. Perrotin, of Toulouse, discovered No. 138 on the 19th of May. The 139th of the cluster was found by Prof. Watson, at Peking, China, on the 10th of October. This being the first planet discovered in that empire, it was named Ne-Wha, from a Chinese goddess. It is the seventeenth asteroid first detected by Prof. Watson. M. Palisa, of Pola, discovered No. 140 on the 13th of October. Of these asteroids, No. 137 is of the twelfth magnitude, No. 138 between the eleventh and twelfth, and the remaining four of the eleventh.

The minor planet Æthra, No. 132, was discovered in 1873, but trustworthy elements of its orbit were first published in the *Astronomische Nachrichten* of August 11, 1874. This asteroid is distinguished by the great eccentricity of its orbit, as shown by the following comparison with the orbits of other bodies:

NAME.	Eccentricity.
Mercury	0.2056
Polyhymnia	0.3397
Æthra	0.3819
Second comet of 1867	0.5075
Faye's comet	0.5560

There is thus seen to be less difference in form between the orbits of Æthra and the second comet of 1867 than between the former and the orbit of Mercury. It is noteworthy, moreover, that the aphelion of Mars differs in longitude but one degree from the perihelion of Æthra, and that the greatest distance of the former exceeds the least of the latter. These facts indicate the possibility of so near an approach of the two bodies that the disturbing influence of Mars on the asteroid may materially modify the elements of its orbit.

Comets.—Dr. Winnecke, of Strasburg, discovered the first comet of 1874 on the 20th of February, and the second on the 12th of April. Neither became visible to the naked eye, and their elements had no special resemblance to those of any comet previously known. The third was first observed by M. Coggia, at Marseilles, on the 17th of April. It was first seen by the naked eye about two months after the date of its discovery, and early in July it had become a conspicuous object in the northern heavens. It passed its perihelion on the 9th of July; its least distance from the sun being 62,000,000 miles. About the 20th of July its tail was sixty-eight or seventy degrees in length. The period of this comet, according to Geelmuyden, is 10,445 years.

Spectroscopic observations of Coggia's comet indicated the presence of carbon. Dr. Huggins inferred from numerous examinations that the nucleus was solid, heated by the sun, and throwing out matter which formed the coma and tail. Part of this was in a gaseous form, giving the spectra of bright lines. The other portion existed probably in small incandescent particles; the polariscope showing that certainly not more than one-fifth of the whole light was reflected solar light.

The fourth comet of the year was discovered by M. Borelly, of Marseilles, on the 26th of July. Its perihelion passage occurred on the 27th of August, its least distance from the sun being 91,000,000 miles. The fifth was detected by M. Coggia, of Marseilles, on the morning of August 20th, and the sixth by M. Borelly, of the same observatory, on the 7th of December.

Meteors.—The display of August meteors was observed by Prof. Daniel Kirkwood, at Bloomington, Ind. The night of the 9th—when the maximum generally occurs—was so cloudy as to prevent observations. The evening of the 10th, however, was perfectly clear. Two observers counted sixty-four meteors from $11^h\ 16^m$ to $12^h\ 16^m$. As one person can notice but a fifth part of the whole number, the observations indicated a fall of 160 meteors per hour. The usual characteristics of the *Perseids* were distinctly noticed. Their apparent brightness, for instance, generally increased from their first appearance till the moment before extinction.

In the *Astronomische Nachrichten*, No. 2,014, Herr Nicolaus von Konkoly gives some highly interesting spectroscopic observations of the August meteors. From the 7th to the 11th of the month he observed the spectra of 130. The nucleus gave, in every instance, a continuous spectrum. The trains of *all* gave sodium lines; those of the red meteors gave also strontium or lithium; and those of the green magnesium. The spectrum of some of the largest also indicated iron. The observations of the November swarm entirely failed, not only in this country but also in Europe. No return of this shower, in considerable numbers, can now be expected till near the close of the century.

On the 27th of July—a well-known meteoric epoch—Prof. Tacchini, of Italy, observed four fire-balls which entered our atmosphere

at the same time, and passed through it in parallel lines. They continued visible about forty seconds. A meteorite composed in part of iron, nickel, and sulphur, fell in Turkey on the 20th of May.

The Zodiacal Light.—Prof. Arthur W. Wright, of Yale College, communicates to the *American Journal of Science and Arts* (May and July, 1874) some interesting researches in regard to the nature of the zodiacal light. The results of the investigation are briefly stated as follows:

1. The zodiacal light is polarized in a plane passing through the sun.
2. The amount of polarization is, with a high degree of probability, as much as 15 per cent., but can hardly be as much as 20 per cent.
3. The spectrum of the light is not perceptibly different from that of sunlight, except in intensity.
4. The light is derived from the sun, and is reflected from solid matter.
5. This solid matter consists of small bodies (meteoroids) revolving about the sun in orbits crowded together toward the ecliptic.

The *theory* that the zodiacal light is produced by the reflection of the sun's rays from innumerable asteroids interior to the earth's orbit, and too small to be separately observed, was proposed by Cassini two hundred years since. Its *demonstration*, however, was first announced in the memoirs above quoted. Prof. Wright, in a third paper, which was read before the American Association for the Advancement of Science, in August, 1874, gives reasons for regarding the orbits of the reflecting bodies as very eccentric.

The Inner Satellites of Uranus.—The question of priority in the discovery of the inner satellites of Uranus has been recently examined by Prof. Edward S. Holden, of the Washington Observatory. After discussing the original observations, together with those of Lamont, Struve, and Lassell, Mr. Holden concludes that not only Titania and Oberon, but also the inner satellites, Ariel and Umbriel, were really discovered by Sir William Herschel, and that the observations of Lassell in 1847 were but rediscoveries of the same bodies. The justice of this conclusion is called in question by Mr. Lassell, who ably vindicates his own exclusive claim to the original discovery. "From a less distinguished authority," he remarks, "than that of an astronomer writing from the Washington Observatory, the assertion might have passed unnoticed, from a conviction that it would not obtain credence; but Prof. Holden's conclusions will probably be held to have an importance or prestige, which compels me at some length to prove how perfectly erroneous they are. I myself claim to be the original and only discoverer of these inner satellites, Ariel and Umbriel, single-handed and unassisted, without coadjutor, rival, or competitor."

Among the reasons assigned by Mr. Lassell for concluding that none of the stars noticed by Sir William Herschel in the vicinity of Uranus could have been Ariel and Umbriel, is the fact that the means at his disposal "did not suffice to reveal to him the existence of these most minute bodies."

Stellar Parallaxes.—Dr. Brunnow, the Astronomer Royal for Ireland, has devoted special attention for several years to the determination of the parallaxes of certain fixed stars. The star known as No. 1,830 of Groombridge's catalogue was supposed, from the fact of its having a large proper motion, to be comparatively near us. The observations of Prof. Brunnow, however, have shown its annual parallax to be only nine-hundredths of a second—a parallax which corresponds to a distance ten times greater than that of Alpha Centauri. From a series of observations on Sigma Draconis, the same distinguished astronomer obtains a parallax of one-fourth of a second; for No. 3,077 of Bradley's catalogue, seven-hundredths of a second; and for the double star No. 68, Pegasi, five-hundredths of a second. The distance corresponding to the last would not be traveled by light in less than sixty years.

Periods of Binary Stars.—M. Flammarion, of Paris, has redetermined the periods of the following double stars:

Zeta Herculis	34.57 years.
Eta Coronæ Borealis	40.17 "
Xi Ursæ Majoris	60.60 "
Gamma Virginis	175.00 "

The first of these periods, it will be observed, is somewhat greater than that of Saturn, while the last is a little greater than the period of Neptune. M. Flammarion remarks that the large number of observations used in the calculation renders his conclusions entirely trustworthy.

Distribution of the Bright Fixed Stars.—A paper on "The Number and Distribution of the Bright Fixed Stars" was read before the American Association for the Advancement of Science, in August, 1874, by Dr. B. A. Gould, Director of the Cordoba Observatory. In this memoir the existence of a zone or great circle of very bright stars, intersecting the Milky-Way at an angle about equal to that between the equator and the ecliptic, is, for the first time, distinctly recognized. Dr. Gould remarks:

It has been generally assumed that the number of visible stars of any given magnitude, whether brighter or fainter, diminishes as their distance from the Milky-Way increases. In the elevated position and pure atmosphere of Cordoba, this nebulous circle is seen with a vividness far surpassing that to which we are accustomed here; and, moreover, most of that portion which lies in the Southern Hemisphere is intrinsically brighter than the northern half; so that its position is far more clearly defined than I have ever seen it elsewhere. And few celestial phenomena are more palpable there than the existence of a stream or belt of bright stars, including *Canopus*, *Sirius*, and *Aldebaran*, together with the most brilliant ones in *Carina*, *Puppis*, *Columba*, *Canis Major*, *Orion*, etc., and skirting the Milky-Way on its preceding side. When the opposite half of the Galaxy came into view, it was equally manifest that the same is true there also, the bright stars likewise fringing it on the preceding side, and forming a

stream which, diverging from the Milky-Way at the stars *Alpha* and *Beta Centauri*, comprises the constellation *Lupus* and a great part of *Scorpio*, and extends onward through *Ophiucus* toward *Lyra*. Thus a great circle or zone of bright stars seems to gird the sky, intersecting with the Milky-Way at the Southern Cross, and manifest at all seasons, although far more conspicuous upon the Orion side than on the other. Upon my return to the North, I sought immediately for the northern place of intersection; and, although the phenomenon is by far less clearly perceptible in this hemisphere, I found no difficulty in recognizing the node in the constellation *Cassiopeia*, which is diametrically opposite to *Crux*. Indeed, it is easy to fix the right ascension of the northern node at about 0^h 50^m, and that of the southern one at 12^h 50^m; the declination being in each case about 60°, so that these nodes are very close to the points at which the Milky-Way approaches most nearly to the poles. The inclination of this stream to the Milky-Way is about 25°, the Pleiades occupying a position midway between the nodes.

Dr. Gould, after noticing this remarkable circle and commencing the preparation of data in statistical form to demonstrate its existence, found that he had been partially anticipated by Sir John Herschel. The British astronomer, however, "does not appear to have recognized the fact that this zone of bright stars may be traced with tolerable distinctness through the entire circuit of the heavens, forming a great circle as well defined as that of the Galaxy itself." These interesting researches, a detailed account of which is given in the paper referred to, may have an important bearing on the great problems of determining the position of our sun in the cluster to which it belongs, the form of the cluster itself, and the relative distances between the stars of which it is composed.

The Companion of Procyon.—It is well known that the star Procyon has manifested considerable irregularity in its motion, and that the celebrated Bessel ascribed the phenomenon to the disturbing influence of an undiscovered companion. In 1851 Prof. O. Struve commenced a series of observations on this star with the view of obtaining, if possible, materials for the confirmation of Bessel's theory. These researches were without any positive result till the 19th of March, 1873, when, under exceptionally favorable atmospheric conditions, a faint point of light was detected at a distance of about twelve seconds from Procyon. Prof. Struve immediately concluded that the newly-discovered star was a satellite, whose orbital motion had but recently brought it so far out of the rays of the bright star as to render it separately visible. Unfortunately, however, before any definite conclusion could be reached, the apparent relative positions of the sun and Procyon had so far changed as to render further observations of the small star impossible.

The beginning of the year 1874 was singularly unfavorable for telescopic researches, and it was not till the 21st of March that Struve succeeded in rediscovering the point of light which he had detected in March of the previous year. In April he obtained a number of satisfactory observations; the distance of the companion, as well as the position-angle, being carefully measured. The interesting results are thus stated by Struve himself:

It is well known that Prof. Auwers, as soon as he had received my observations of last year, repeated his investigations into the variable proper motion of *Procyon*, availing himself of the observations of this star which have been made since 1862. From this he concluded that it was doubtful whether the object observed by me was really the sole body disturbing the proper motion of *Procyon*, but that the doubt would be removed if it appeared this spring that the position-angle had undergone an increase of from 9° to 10°. And this increase has really shown itself in the most remarkable manner. I consider it, therefore, to be decisively established that the object I have observed is actually the companion whose existence has been theoretically proved by the calculations of Auwers; and hope that the astronomical world will rejoice with me in the triumph thus obtained for the labors of my honored friend, and through them for our common science. In order to remove any exception that might be taken, that the wished-for result had in any degree been itself the cause of the recognition, and affected the measurement of the place of so difficult an object, I will just remark that I had not looked again at the paper of Auwers in question since its first receipt last summer, and had totally forgotten the data of its criterion, and the mutual relation of the two stars. I did not again take it up until after I had succeeded in making the first observation; and the results of that paper were even less present to the mind of my assistant, Herr Lindemann, whose younger eye appears generally to have seen the companion even better than mine.

According to Prof. Auwers, Procyon completes a revolution in forty years. Its orbit is nearly circular, and its plane perpendicular to the line of sight. Taking its parallax at one-fourth of a second, he finds the mass of the principal star to be eighty times that of the sun, or more than eleven times that of Struve's satellite.

The Nebula near Eta Argûs.—The results of further observations on the star *Eta Argûs* and its adjacent nebula were reported by Mr. R. J. Ellery, of the Melbourne Observatory, under date of January 28, 1874. Marked changes had been noticed during the six months preceding that date. The great bay of the lemniscate had nearly filled up with dense nebula, leaving a dark sigmoid inlet. Nebula apparently less dense had also formed from side to side of the opening in which Eta is situated —threatening to completely involve the star. These rapid variations, where it was supposed until recently that cycles of immense duration would be required for any sensible change, are regarded by astronomers with no ordinary interest.

Mr. Burnham's Catalogue of New Double Stars.—S. W. Burnham, Esq., of Chicago, has communicated to the Royal Astronomical Society of London five catalogues of new double stars, amounting in all to 300. A number of these are naked-eye stars which have been frequently examined by other observers. In some cases the components of binary stars have themselves been found double. *Alpha Delphini*, which had been known as a triple star, is

found by Mr. Burnham to be sextuple. The double star No. 263 of South and Herschel's Catalogue has five very minute stars in the immediate vicinity of the two bright components. The system consists, therefore, of seven known members.

The Extended Nebulæ of Sir John Herschel's General Catalogue.—In a paper read by Cleveland Abbe, Esq., before the Philosophical Society of Washington, June 4, 1874, the author, after referring to his previous researches on the distribution of the nebulæ in space, proceeds to inquire whether any definite relation exists between the planes of rotation of the elongated or extremely elliptical nebulous masses. He states the problem as follows:

We have thus far studied the distribution in space of the centres of the nebulæ—are there not planes that have a definite relation to these bodies? Among the stars we have the Milky-Way and the orbits of binary stars; among the planets we have their orbits and equators, and the orbits of their satellites; among the nebulæ we may expect to find analogous planes, whose relations to each other and to those already known cannot but be highly instructive. As yet, we have but very few double nebulæ, nor can we for a long time hope to determine the planes of the orbits of any binary nebulæ, if such exist; on the other hand, in regard to the axes of rotation of nebulæ or the planes of their equators, there is more room for study. It is a plausible hypothesis, that some nebulæ are in rotation about their respective axes, and only in the case of an irregular nebula do we find presumptive evidence of numerous centres of aggregation and rotation; this latter class will not now further claim our attention. Those nebulæ whose whole mass is rotating about a single axis must appear to us either circular or elliptical, according to our position in relation to that axis; we might then at once assume that every well-defined circular nebula has its axis of rotation directed toward us, and might thus determine the position of the plane of its equator; this, however, would be hazardous, since not only do we thus assume the fact of a rotation, but also assume that the average rotation of all nebulæ is so rapid that, when viewed from any other direction, they would present a sensibly elliptical outline; moreover, often globular clusters of stars are recorded as circular or globular nebulæ. I have, therefore, for the present, passed by the circular and the ordinary elliptical nebulæ, and have confined myself to those described in Herschel's Catalogue as exceedingly or very much extended. In regard to them it may be remarked that, if these nebulæ are gaseous and without rotation, we can only explain their apparent shape by supposing them to be endowed with a motion of translation—to be, in fact, wisps, like comets' tails; if, on the other hand, they be in a state of rotation, they must be flat rings or disks, or extended flattened ellipsoids, and we are authorized to consider that the planes of their equators do sensibly pass through the position of the observer; similarly, if the nebulous appearance be due to the presence of lenticular or ring-shaped clouds of asteroids, or of meteoric dust, we shall be able to make a determination of the plane of the orbits of these bodies.

Having computed the right ascensions and declinations of the south-poles of the fifty-nine nebulæ in question, I have also plotted them upon equal surface charts similar to those used by Messrs. Proctor and Waters, on which also have been drawn the limits of the Milky-Way as given by those same gentlemen, according to Heis and Herschel. Owing to the fact that the unresolved nebulæ are, as a rule, far more numerous near the poles of the Milky-Way than elsewhere, it follows at once that the greater number of the nebulæ now under consideration are near these poles, and therefore our poles of rotation, if we may presume to use that term, lie near the Milky-Way itself; but a careful enumeration shows us that in the Northern Hemisphere these poles lie to the southward of the central portion of the Milky Way, while in the Southern Hemisphere the reverse holds good; in fact, there exists a medial plane about which the poles of these nebulæ cluster, and which is itself inclined to the plane of the Milky-Way at an angle of about 30°, so that if the north-pole of the Milky-Way be in right ascension $12^h\ 45^m$ and declination 30°, the pole of the plane near which the rotation axes of the nebulæ lie will have about the same right ascension, but a declination of about 60°. Numerically expressed, this latter plane is so situated that of fifty-nine nebulæ twenty-nine have their axes inclined to it by less than 10°, and forty-two have their axes inclined less than 20°.

It is, I conceive, quite desirable that we should, on the one hand, have more accurate determinations of the position-angles of these extended and ray-like nebulæ, and that, on the other hand, the reversion spectroscope of Zöllner should be applied to determine whether or not they be really in a state of rotation.

Mr. Abbe concludes:

It may then in general be stated that, so far as we are able to determine the position of planes of rotation among the nebulæ, they do not show any such tendency to agree with each other as is shown in the orbits and equators of the major planets of the solar system; that, on the contrary, they are inclined at all possible angles to each other, but have this remarkable feature, that their mutual nodes cluster about a point in right ascension $12^h\ 45^m$, and north inclination 60°.

Results of Spectroscopic Observations.—1. Dr. Huggins's observations of different nebulæ have shown conclusively that these bodies are not moving with the same velocity as some of the fixed stars. 2. The observations of Mr. Lockyer have added zinc and aluminium to the list of known solar metals. 3. The researches of Secchi and Rutherfurd have shown that there are three classes of stars: the spectra of the first giving only hydrogen lines very thick, and metallic lines exceedingly thin. This class includes Sirius. The spectra of the second class (which includes our sun) differ only in degree from those of the first; having medium brightness and many lines. The third class is distinguished by banded spectra, indicating the existence of compounds.

The Gold Medal of the Royal Astronomical Society.—At the annual meeting of the Royal Astronomical Society on the 13th of February, 1874, their gold medal was awarded by the Council to Prof. Simon Newcomb, of the Washington Observatory, for his researches on the orbits of Neptune and Uranus, and other contributions to mathematical astronomy. The president, Prof. Cayley, in his address before the Society explaining the grounds of the Council's decision, reviewed in brief the principal works of Prof. Newcomb, particularly those on the orbits of the two outer planets. He concludes as follows:

In what precedes I have endeavored to give you an account of Prof. Newcomb's writings: they exhibit all of them a combination, on the one hand,

of mathematical skill and power, and on the other hand of good hard work—devoted to the furtherance of astronomical science. The "Memoir on the Lunar Theory" contains the successful development of a highly-original idea, and cannot but be regarded as a great step in advance in the method of the variation of the elements and in theoretical dynamics generally; the two sets of planetary tables are works of immense labor, embodying results only attainable by the exercise of such labor under the guidance of profound mathematical skill—and which are needs in the present state of astronomy. I trust that, imperfectly as my task is accomplished, I shall have satisfied you that we have done well in the award of our medal.

The President then, delivering the medal to the foreign secretary, addressed him in the following terms:

MR. HUGGINS: I request that you will have the goodness to transmit to Prof. Newcomb this medal, as an expression of the opinion of the Society of the excellence and importance of what he has accomplished; and to assure him at the same time of our best wishes for his health and happiness, and for the long and successful continuation of his career as a worker in our science.

The Planetary Researches of Leverrier.—The *Comptes Rendus* of December 21, 1874, contains an interesting account of Leverrier's researches on the theories of the eight principal planets, Mercury, Venus, the Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. When these investigations were commenced, more than thirty years since, none of the tables intended to represent the planetary motions accorded rigorously with the observations. To discover the unknown causes of these systematic errors was the principal object of Leverrier's researches. His theory of Uranus was published in 1846, and led to the discovery of Neptune. This work has been recently revised and extended, and the final results were communicated to the Academy of Sciences on the 15th of November, 1874. The theory of Neptune was given in December; those of Jupiter and Saturn had been previously presented.

In the case of Mercury M. Leverrier has shown that all the anomalies are included under a simple law, and that it "is sufficient to increase the motion of perihelion by thirty-one seconds in the century, to bring every thing into order. The displacement of the perihelion thus acquires in the planetary theories an exceptional importance. It is the surest index, when it has to be increased, of the existence of cosmic matter as yet unknown, and circulating, like other bodies, round the sun. The consequence is very clear. There exists in the neighborhood of Mercury, doubtless between the planet and the sun, a matter as yet unknown. Does it consist in one or more small planets, or in more minute asteroids, or even in cosmic dust? The theory tells us nothing on this point. On numerous occasions trustworthy observers have declared that they have witnessed the passage of a small planet over the sun, but nothing has been established on the subject."

M. Leverrier continues: "The discussion of the observations of the sun led us at once to an important result connected with the great question which agitates at this moment the scientific world, a result which surprised us ourselves, so great was the false confidence inspired by the determination of the parallax of the sun deduced by the Director of the Berlin Observatory from the transits of Venus in 1761 and 1769. I arrived at the conclusion that the parallax of the sun, then estimated at 8."57, should be increased by the twenty-fifth part of its value.

"Soon afterward the comparison of the theory of Venus with the observations led to the same result, the necessity of augmenting by $\frac{1}{25}$ the parallax of the sun.

"Again, the theory of Mars led in its turn to an equally precise conclusion. It was established that it was impossible to satisfy the totality of the observations of Mars except by increasing the motion of its perihelion by about one-eighth.

"This was the reproduction of the same fact as for Mercury, and the consequence to be derived was the same, viz., that the planet Mars must be subjected to the action of a quantity of matter as yet neglected, and which had to be estimated at about one-eighth of the mass of the earth.

"But then two hypotheses were possible: either the hitherto neglected matter resided in the totality of the ring of the small planets, or else it had to be added to the earth itself. In the second case, and as a consequence, the parallax of the sun had to be increased by about one twenty-fourth part of its received value; that is to say, we are led to the result already obtained from the theories of the sun and Venus.

"Jupiter and Saturn have given rise to a theoretical work, the extent of which has been considerable, on account of the very large mutual perturbations of the two planets. The comparison of the theory of Jupiter with the observations has presented, after suitable modifications of the elements, a complete accordance."

Recent Changes in the Form and Position of Nebulæ.—The *Monthly Notices* of the Royal Astronomical Society for December, 1874, contains a letter from R. J. Ellery, Esq., Director of the Melbourne Observatory, in which he states that he is engaged in a systematic series of observations of Sir John Herschel's figured nebulæ. Many of these objects appear to have greatly changed since Herschel's drawings were made at the Cape of Good Hope, between 1834 and 1838. These changes are found, according to the observer, not only in the form and character of the nebulæ, but also in their position with respect to the adjacent fixed stars as figured by Herschel. Whether such transformations are real, or merely apparent, can only be decided by further observations.

AUSTRALIA AND NEW ZEALAND.—The area and population of the British colonies in Australia and of New Zealand were, according to the latest official accounts, as follows:

COLONIES.	Area.	Population.	Year.
New South Wales.....	308,560	539,190	Dec., 1872
Victoria.....	88,451	790,488	Dec., 1873
South Australia.....	890,602	198,257	Dec., 1873
Queensland.....	668,259	133,553	Dec., 1872
Western Australia.....	975,824	25,734	Dec., 1873
Northern Territory....	526,531	201	.....
Tasmania	26,215	104,217	Dec., 1873
New Zealand.....	106,259	279,560	Dec., 1872
Total.....	3,077,701	2,070,819	

Not included in the figures given above for the population of the several colonies are the natives, whose number is rapidly decreasing. In Victoria they numbered about 5,000 when the colony was first settled; in 1851, their number was reported as 2,693; in 1863, as 1,908; in 1873, as 859—516 males and 343 females. In South Australia they numbered, in 1871, 3,369; in Tasmania, one; in Queensland, 2,235. The natives of New Zealand, or Maories, consist of 18 tribes, numbering about 36,359. By the census of 1864, they numbered 55,970—31,667 males, 24,303 females. They are represented in the Legislature of New Zealand by four members. The colonial "Blue-Book," issued in 1874, contains a dispatch from the Governor of New Zealand, Sir J. Ferguson, addressed to the Earl of Carnarvon, in which the author states that of late there had been decided indications of a desire on the part of the "Hau-hau" party among the Maories to put an end to their estrangement from the Government, and that they and their people may share in the advantages which the loyal tribes enjoy. A loyal chief of the Waikato has twice waited upon the Governor and declared his belief in the willingness of the separated tribes to come under subjection, provided they are permitted to manage their own affairs under their own chiefs; upon which basis they would be ready to permit communications through their districts, and provide for the surrender of criminals. It remained to be seen whether the "Hau-hau" chiefs are really disposed to surrender their independence, a step which would be distasteful to many of their followers. The Governor goes on to say: "With the exception of the danger of incursions of some turbulent members across the boundary, against which due precautions are taken, there is no disturbing element in connection with the native population. Europeans are constantly becoming more intermixed with them, and they are more habituated to, and dependent upon, the comforts of European products, and the money derived by the sale or lease of their land. There is, however, much cause for regret in the demoralizing influences which invariably accompany the influx of Europeans. Few natives of any class can resist the temptation to drink habitually and to excess while they have the means of indulging in it. There are chiefs who set an example of sobriety or total abstinence, but it cannot be doubted that the frequent excess in ardent and often bad spirits by both sexes, and their inordinate use of tobacco from a very early age, are prominent causes of the rapid and almost general diminution of the numbers of this fine and capable race, which is presented alike by the paucity of the births and the mortality among the children, rather than among the infants. At the same time there is reason to hope that a remnant will be saved, and that the considerable number of children receiving instruction upon the English system in our schools may raise up a certain number so educated as to resist the temptations which have proved fatal to so many. The full capacity both of Maories and half-castes to acquire and employ all branches of knowledge induces the belief that there will long survive in New Zealand representatives of the Maori race." The Governor adds: "I wish that some systematic effort were made to fit the children of chiefs, by higher education, for their proper work among their people, and even for taking a part in the future government and business of the country. In spite of the comparative failure of some former attempts, I hope, through private association, if not by the action of the Government, to set on foot some definite organization for this purpose."

The colonies, being independent of each other, each colony has its own educational system. That of *New South Wales* consists of primary schools, the grammar-school, and the university. The former exist all over the colony. The grammar-school is intended partly as a preparatory step to the university. It has ten teachers, 237 pupils, and several scholarships of the yearly value of £20, open to all pupils below twelve. Th University of Sydney employs five tutors to forty-five students. The course of instruction is somewhat similar to that of English colleges. Affiliated with it are two colleges, St. Paul's, Anglican, one tutor and five students; and St. John's, Roman Catholic, two teachers to one and nine to the other. In connection with it there are also several public and "In Memoriam" scholarships of the annual value of £50, which are awarded to successful candidates. The University is presided over by a chancellor, the government being in the hands of a senate. The total number of schools, in 1872, was reported as 1,464, with 106,691 pupils. Of these schools, 878 were under the Council of Education; the number of denominational schools, under the board, was 223, of which 104 belong to the Church of England, 86 to the Roman Catholics, 18 to the Presbyterians, 14 to the Wesleyans, and one to the Jews. The Government, in 1871, contributed to the support of the educational institutions £143,198, and £56,019 was received in the shape of fees and voluntary contributions.

In *Victoria*, the number of day-schools, including state schools, private educational establishments, colleges, and grammar-schools, was

2,050, with an average attendance of 165,276 scholars, who were instructed by 4,429 teachers. Of these schools, 988 were common-schools, with 2,317 teachers and 71,247 boys and 59,898 girls upon the rolls. The local receipts for the maintenance of these schools, arising from school fees and other sources, were £107,190; this amount was supplemented by a Government grant of £167,194, making a total of £274,384. There were seven colleges and grammar-schools, two in connection with the Church of England, three with the Presbyterian Church, one with the Wesleyans, and one with the Roman Catholic Church. They had an aggregate number of 74 masters and 1,142 students. The Melbourne University, during the year 1871, was attended by 122 students, of whom 116 were matriculated. The total number of students matriculated since the establishment of the university, up to 1871, was 526. During the year ending May, 1873, 428 candidates presented themselves for the matriculation examination, of whom 229 passed, 13 passing with credit, among whom were two ladies. The library of the university contained 9,000 volumes. Under the New Education Act, the instruction in the state schools is free, secular, and compulsory. The governing power is in the hands of a Minister of Education, assisted by a secretary. Each school is under periodical inspection. The teachers, who are required to pass an examination, are paid by fixed salaries; they also receive the fees of the scholars, and have a further allowance according to the progress made by the scholars under their charge.

In *South Australia*, the educational system, as far as relates to the schools receiving aid from the Government, is under the control of a Central Board of Education, consisting of seven members. The principal officers are a chief and a second inspector and secretary. The total number of licensed schools open, at the close of 1872, was 307, which had 299 teachers and 15,123 scholars. The annual average cost of each scholar was about £1 18*s.*; the annual stipend of each teacher, £97 18*s.* The schools held in trust by the board numbered 98; they have been commenced by private subscription, supplemented by the state funds. Recent efforts have been made for the establishment of an Adelaide University.

In *West Australia*, the Legislative Council, during the session of 1870, passed an Education Act, based upon the principle of Foster's act, now in operation in England. Schools are divided into elementary and assisted. The former are maintained wholly at the cost of the colony; the latter are private, but can receive a capitation grant on condition of submitting to Government inspection for secular results, and to the observance of a strict conscience clause during the four hours of secular instruction insisted upon by the act. The elementary schools are under the control and supervision of a central board and local district boards. The central board, consisting of five members, is appointed by the Governor, and the local district boards are chosen by the general body of electors. Compulsory attendance of children can be enforced by the local boards. In the elementary schools four hours a day are devoted to secular instruction, and one hour, under the provisions of a conscience clause, to reading the Bible, or other religious books approved of by the board; but no catechism or religious formulary of any kind may be used; and the Bible, if read, may be read without note or comment. The average annual attendance of scholars was 2,338, an excess over 1871 of more than 600. A Government inspector makes periodical visits to the schools, and the salaries of teachers are dependent upon their report of regularity of attendance and proficiency on the part of scholars. In Perth there is a Church of England collegiate school, under the patronage of the bishop.

The educational system of *Queensland* is under the control of the Board of Education, which consists of six members, appointed by the Government, one of the ministry being chairman. It has been assimilated to the national system, as in operation in Ireland. Fees have been abolished, and education is free. The property of the schools, and the land granted for school purposes, are vested in this board, which has the control of the money voted for education, and the power to make by-laws and regulations in connection with these schools, which must be in accordance with the national system of education as established here, and approved by the Governor. Aid is granted to schools not established by the board, on their complying with certain regulations; these are known as non-vested schools. The Government also aids in the establishment of a grammar-school whenever the inhabitants of a district raise by subscription the sum of £100, and supplements this sum by double the amount for the erection of the necessary buildings; and if the sum of £250 per annum be guaranteed for three years as school-fees by responsible parties, the Government gives £500 per annum for the salaries of masters and current expenses. As yet only Brisbane and Ipswich have availed themselves of this grant. For 1872, the school statistics were as follows: schools in operation, 150; schools opened, 17; schools closed, 3; increase in number of schools, 14; vested schools, 95; non-vested schools, 38; provisional schools, 20; number of teachers and pupil-teachers, 373; aggregate attendance of children, 21,482; average attendance of children, 10,779. The parliamentary vote for educational purposes was £40,000; the local subscriptions being £1,753. The total expenditure for all purposes was £39,315, the value of property vested in the board, £52,562.

In *New Zealand* each province has its own school acts and regulations. In some cases state aid is given to both national and denomi-

national schools; in others, it is limited to the national schools. There is a university at Dunedin. The number of schools is 397; of these 24 are for boys, 13 for girls, and 360 are mixed schools. The teachers number 602; 379 males, 223 females. The average attendance of pupils is 16,510; on register, 21,034.

Tasmania has a school board, under whose supervision is the distribution of all moneys voted by the Parliament for the purpose of public education. In 1872, 139 schools were in operation; the average attendance was 5,224; number of scholars on the roll, 9,979; number of male teachers, 105; of female, 111; of pupil-teachers and paid monitors, 31; average cost of each scholar, £2 6*s*. There are four superior schools, Horton College, High School, Hutchinson's School, and the Church Grammar-School. The attendance of children at school is compulsory, under a fine of £2, unless it can be shown that the child is privately educated, or is prevented by sickness or other valid cause from being present. In the census of 1870 the state of education among the population was as follows: persons able to read and write, 56.32 per cent.; persons able to read only, 14.04 per cent.; persons not able to read, 29.64 per cent. At the date of the previous census, in 1861, it was found that only 42.62 per cent. could read and write, that 14.60 per cent. could read only, and that 31.75 per cent. were totally uneducated.

The population connected with the leading religious denominations of Australia and New Zealand was, in 1874, estimated as follows:

Episcopalians.....	750,000	Methodists.....	225,000
Roman Catholics...	460,000	Independents.....	50,000
Presbyterians.....	260,000	Baptists.....	40,000

The Episcopal Church, at the beginning of 1874, had ten bishops in Australia—Sydney, Newcastle, Bathurst, Goulburn, Grafton and Armidale, Melbourne, Perth, Brisbane, Adelaide, Tasmania—the Bishop of Sydney bearing the title of Metropolitan; and six bishops in New Zealand—Auckland, Christ Church, Nelson, Wellington, Waiapu, Dunedin—one of whom (in 1874, the Bishop of Christ Church) holds the title of Primate. In 1874 an assembly of the Diocese of Melbourne resolved to make the church in the colony of Victoria an independent province, with the Bishop of Melbourne as Metropolitan. An Episcopal See was established at Ballarat, and others will soon be established at other places.

The Catholic Church in Australia, from the foundation of the ecclesiastical province of Australia in 1842, until 1874, had only one archbishop, at Sydney. In May, 1874, the Pope divided it into two provinces, the Bishop of Melbourne being raised to the dignity of an archbishop. At the same time two new bishoprics were established at Ballarat and Sandhurst. Besides the bishops of these two new dioceses, those of Adelaide, of South Australia, Perth, of West Australia, and Hobart Town, of Tasmania, will be suffragans of the new Archbishop of Melbourne; while six bishops, namely, those of Bathurst, Maitland, Goulbourn, and Armidale, in New South Wales, Brisbane in Queensland, and Port Victoria in North Australia, will continue to be under the Archbishop of Sydney. The foundation of the Catholic Church in Australia was laid in 1820, when two priests settled in the colonies, the one in Tasmania, the other in New South Wales. In 1832 the Vicar Apostolic of Mauritius, to whose diocese Australia belonged, sent his Vicar-General, Ullathorne, into the colonies, who found there three priests, one unfinished church, two unfinished chapels, and four free schools. In 1835, the connection of Australia with the Vicariate Apostolic of Mauritius was abolished, and Dr. Polding, an English Benedictine, appointed Vicar-Apostolic of Australia. In consequence of the immigration from Ireland, the Church made rapid progress, and in 1842 Pope Gregory XVI. appointed Dr. Polding Archbishop of Sydney, and erected the two Dioceses of Adelaide and Hobart Town. In 1845 the Church numbered fifty-six priests, twenty-five churches and chapels, and thirty-one schools. New dioceses were established in 1845 at Perth; in 1847, at Melbourne; in 1849, at Port Victoria, or Port Effington; in 1859, at Brisbane; in 1865, at Bathurst and Maitland; in 1866, at Goulbourn; in 1869, at Armidale. The bishops of Australia have thus far held two Provincial Councils. The first took place at Sydney in September, 1844, and was attended by the Archbishop of Sydney, two bishops, and thirty-three missionaries; the second was held in 1869 at Melbourne, and was attended by nine bishops and a large number of priests.

The revenue, expenditure, and public debt of the colonies were, in 1872, as follows:

COLONIES.	Revenue.	Expenditure.	Debt.
New South Wales.....	£2,794,274	£2,362,482	£10,606,030
Victoria (1873-'74).....	3,883,650	4,171,698	12,134,800
South Australia (1873)..	1 38.000	733,000	2,167,700
West Australia.....	105,300	98,246	85,000
Tasmania.....	294,608	241,100	1,455,900
Queensland.....	635,000	809,051	5,253,826
New Zealand (1873-'74.)	1,100,500	1,128,000	8,900,991

The following table exhibits the imports and exports in 1872:

COLONIES.	Imports.	Exports.
New South Wales.....	£9,609,508	£11,945,032
Victoria.....	13,689,629	13,871,194
South Australia...	2,801,780	3,524,075
West Australia.....	226,656	209,196
Tasmania.....	807,182	866,131
Queensland.....	2,434,486	2,560,383
New Zealand.....	4,078,193	5,190,665

The latest data concerning railroads and telegraphs are as follows:

COLONIES.	Railroads.	Telegraph-Wires.
New South Wales....	405	6,114
Victoria.....	440	3,473
South Australia.....	190	3,723
West Australia.....	16	600
Tasmania.....	45	291 (lines).
Queensland.....	218	1,811
New Zealand.....	105	4,011

The latest statistics of live-stock are as follows:

COLONIES.	Horses.	Horned Cattle.	Sheep.	Hogs.
New South Wales	304,100	2,014,398	16,278,697	213,198
Victoria	181,643	931,673	10,002,381	177,447
South Australia	82,215	169,154	4,900,687	98,436
West Australia	25,263	44,550	688,290	19,749
Tasmania	24,244	104,594	1,895,263	58,927
Queensland	93,910	1,168,235	7,403,334	32,707
New Zealand	81,026	436,592	2,700,629	151,460

AUSTRO-HUNGARIAN MONARCHY, an empire in Central Europe. Emperor, Francis Joseph I., born August 18, 1830; succeeded his uncle, the Emperor Ferdinand I., on December 2, 1848. Heir-apparent to the throne, Archduke Rudolphus, born August 21, 1858. Area of the monarchy, 240,848 square miles; population, according to the census of 1869, 35,901,435. The area of cis-Leithan Austria (the lands represented in the Reichsrath) is 115,908 square miles; population at the end of 1874, officially estimated at 21,169,341. The estimate is based upon the census of December 31, 1869, by adding the average percentage of increase, as it results from the census of 1869 and that of 1857. It was distributed among the different crown-lands as follows:

Countries.	Inhabitants in 1874.
Austria below the Enns	2,067,990
Austria above the Enns	741,918
Salzburg	158,336
Styria	1,164,512
Carinthia	333,045
Carniola	466,065
Trieste	133,274
Görtz and Gradisca	212,349
Istria	366,308
Tyrol	797,494
Vorarlberg	103,341
Bohemia	5,397,944
Moravia	2,056,061
Silesia	544,459
Galicia	5,8.7,798
Bukowina	567,815
Dalmatia	460,327
Total	21,169,341

Of the total population, 10,303,487 were of the male, and 10,865,904 of the female sex. The number of marriages in 1873 was 193,886, of births 829,947 (429,324 males, 400,623 females). Of the children born alive, 712,109 were legitimate, and 98,727 illegitimate; of those still-born, 15,420 were legitimate, and 3,691 illegitimate. The number of twins was 18,530. The number of deaths was 679,396 (354,333 male, and 325,063 female).

The ministry for the common affairs of the empire consisted, at the beginning of the year, of Count Andrassy, Minister of Foreign Affairs and of the Imperial House (appointed 1871); Baron von Holzgethan, Minister of the Finances of the Empire (appointed January, 1872); and Baron Kuhn von Kuhnenfeld, Minister of War (appointed January, 1868).

The ministry of cis-Leithan Austria was composed of Prince Adolf von Auersperg, President; J. Lasser Baron von Bollheim, Interior; C. von Stremayr, Public Works and Instruction; Glaser, Justice; Banhans, Commerce and Political Economy; J. Ritter von Chlumecky, Agriculture (all appointed November, 1871); Baron von Pretis-Cagnodo, Finances (January, 1872); Colonel Horst, Defense of the Country (appointed *pro tem.* November, 1871; definitely, March, 1872); J. Unger (November, 1871), and Fl. Ziemialkovski (April, 1873), ministers without portfolio.

According to the common budget of the whole empire for the year 1874, the amount required for the ordinary branches of administration was 116,364,502 florins; the receipts for the same branches were estimated at 5,-815,125 fl.; the receipts from customs at 17,-500,000 fl.; leaving 93,049,378 to be distributed among Austria Proper and Hungary (the former contributing 70 per cent. and the latter 30 per cent.). The cis-Leithan budget for 1873 estimates the revenue at 393,677,697 fl., and the expenditures at 389,929,292 fl. The common debt in 1872 amounted to 412,001,964 fl.; the debt of cis-Leithan Austria at 2,693,-495,790 fl. The army on the peace-footing numbered, in August, 1873, 283,125, and on the war-footing 1,093,979 men. The navy numbered 68 vessels; tonnage, 107,470.

The total number of savings-banks, at the end of the year 1873, was 259 (against 211 in 1871); the number of depositors, 1,207,688; ditto of deposits, 482,763,132. They are very unequally distributed among the several provinces, and, in some of them, are barely known, as appears from the following table:

PROVINCES.	Savings Banks.	Depositors.	Deposits.
Lower Austria	49	366,848	168,669,604
Upper Austria	25	100,758	34,901,635
Salzburg	2	13,368	4,306,184
Styria	40	170,781	58,273,439
Carinthia	6	26,374	9,046,395
Carniola	2	25,266	9,055,683
Trieste, Görtz, Gradisca, and Istria	2	7,568	2,502,512
Tyrol and Vorarlberg	12	60,588	12,292,383
Bohemia	67	311,453	147,089,827
Moravia	27	62,713	21,187,573
Silesia	12	20,785	4,182,840
Galicia	12	38,710	10,188,197
Bukowina	1	2,130	1,018,248
Dalmatia	2	351	148,612
Total	219	1,207,688	482,763,132

The universities of Austria had, during the summer of 1873, the following number of professors and students:

UNIVERSITIES.	Professors.	Students.
Vienna	253	3,440
Grätz	83	925
Innspruck	73	640
Prague	154	1,811
Lemberg	46	962
Cracow	69	570
Total	678	8,318

Of the students, 7,637 were Austrians, and 681 were foreigners. With regard to their nationality, 3,599 were Germans, 1,656 Czechs, 1,219 Poles, 489 Ruthenes, 513 Slovens, Croats, and Serbians; 389 Italians, Ladinians, and

Friulians; 51 Roumanians, 313 Magyars, and 89 others. The number of technical high-schools is eight, which, in 1873, had the following number of professors and students:

HIGH-SCHOOLS.	Professors.	Students.
Vienna	86	1,076
Grätz	44	315
Prague (German)	39	451
" (Czechic)	45	713
Brünn	26	156
Lemberg	23	353
Cracow	26	357
Total	291	3,421

Among the other special high-schools there were 2 for agriculture, 2 for mining, and 4 commercial academies. Of special theological schools, exclusive of the theological faculties of the universities, the Roman Catholic Church had 40, with 189 professors and 1,449 students; the Greek Catholic Church, 1, with 8 professors and 21 students; the Armenian Catholic, 1, with 2 professors and 5 students; the Oriental Greek Church, 2, with 8 professsors and 55 students; the Evangelical Church, 1, with 25 professors and 1,530 students. The number of gymnasia was 93, with 1,635 professors and 22,669 students; that of Real-gymnasia, 53, with 658 professors and 8,182 students; that of Realschulen, 67, with 1,210 professors and 21,187 students.

The total number of periodicals published in cis-Leithan Austria, in 1872, was 835, of which 259 were devoted to politics, 97 to political economy, 53 to agriculture and forestry, 43 to industry, 34 to medicine and natural science, 14 to law, 52 to pedagogy (including 12 devoted to stenography), 22 to theology and religion, 8 to history, 8 to military affairs, 13 to literature, 53 to belles-lettres, 33 to humor, 22 to the theatre, music, and art; 12 to fashion, 10 to the entertainment of children, 9 to sport, hunting, gymnastics, rifle associations, and fire-companies; 51 were local non-political newspapers, and 42 commercial and advertising sheets. More than two-thirds of all the papers were published in the German language, 189 in Slavic dialects (110 in Czechic, 50 in Polish, 14 in Slavonic, 11 in Ruthenian, and 4 in Illyrian); 43 in Italian, 5 in French, 2 in Greek, 1 each in English, Hungarian, and Roumanian; 10 in Hebrew, some of which, however, were printed in German letters. Ninety-eight papers were issued daily (14 twice a day), 274 weekly, 52 twice a week, 28 three times a week, 45 three times a month, 172 twice a month, 152 once a month, 2 from six to ten times a year, and 12 four times a year. The largest number of periodicals is published in the crown-land of Lower Austria (370, of which 357 belong to the city of Vienna), the smallest in the Bukowina (2).

The agricultural produce in 1872 was estimated at 1,484,860,248 florins. The chief products were wheat, 11,226,189 hectolitres, valued at 108,149,467 florins; rye, 23,490,765 hectolitres, valued at 146,361,414 florins; barley, 17,367,828 hectolitres, valued at 102,648,327 florins; oats, 34,934,608 hectolitres, valued at 107,502,277 florins; potatoes, 75,227,410 hectolitres, valued at 135,376,420 florins; hay, 7,437,676,111 kilogrammes, valued at 188,533,868 florins. The money value of the mining produce was estimated, in the same year, at 41,693,087 florins, and the number of persons employed in the mining industry was 86,728; the money value of the produce of the smelting-houses was 30,994,464 florins, and the number of persons employed was 12,173. The number of beet-sugar manufactories, in 1872, was 233, and the number of beets used 31,865,287 zollcentner. Of the 2,337 breweries, the largest number (956) was in Bohemia; Upper Austria had 269; Moravia, 249; Galicia, 245; Carinthia, 137; Tyrol and Vorarlberg, 133; Lower Austria, 112. The number of distilleries was 44,047, of which 11,613 were in Tyrol and Vorarlberg, 9,790 in Styria, 5,614 in Lower Austria, 4,359 in the Littoral, 3,705 in Salzburg, 3,543 in Carinthia, and 3,017 in Carniola.

The commerce of the Austro-Hungarian monarchy, in 1872, was as follows:

	Imports.	Exports.
	Florins.	Florins.
Austro-Hungarian Customs Union without precious metals	613,726,857	387,963,537
Austro-Hungarian Customs Union—precious metals	86,500,769	66,143,669
Customs Territory of Dalmatia	9,246,931	6,879,921

The First Danube Steam Navigation Company had, in 1872, 156 steamers and 574 towing-boats: income, 13,261,918 florins; expenditures, 12,697,746 florins; surplus, 564,172 florins. The Steam Navigation Company of the Austrian Lloyds had, in 1872, 69 steamers: income, 10,551,014 florins; expenditures, 9,287,579 florins; surplus, 1,263,417 florins.

The commercial navy, at the end of the year 1872, was composed as follows:

NAVY.	Vessels.	Tonnage.	Men.
Trieste and Territory	461	88,999	4,135
Görtz and Gradisca	135	1,007	419
Istria	1,522	92,588	6,096
Dalmatia	4,505	94,346	14,384
Total	6,623	276,930	25,034

The number of new vessels built, in 1872, was 479, tonnage, 12,138; of vessels repaired, 214, tonnage, 7,986.

The movement of shipping in the Austrian ports, during the year 1872, was as follows:

No. of Ports.	PROVINCES.	ENTERED.		CLEARED.	
		Vessels.	Tons.	Vessels.	Tons.
2	Trieste and Territory.	9,208	1,001,739	9,090	986,840
4	Görtz and Gradisca.	1,179	22,993	1,199	19,409
38	Istria	18,905	1,628,467	19,186	1,618,016
56	Dalmatia	12,963	1,125,195	12,984	1,124,232

The number of post-offices, at the end of the year 1872, was 3,824; the number of private letters forwarded to places in Austria, 122,397,073; of official letters, 18,082,190; of newspapers sent, 55,758,688; number of private letters sent abroad, 32,445,099; of official letters, 2,014,341; of postal cards, 15,549,700.

The Austrian Government is beginning to bestow close attention upon the development of the Landwehr. Regimental schools of instruction already exist for the improvement of non-commissioned officers of the various battalions during their eight weeks of annual training; but to extend the period for these would, of course, involve heavy expense, and the chief object of the new measures introduced is, therefore, to improve the instruction of the better class who are to officer the force. For this purpose a central school is established at the headquarters of each of the seven great Landwehr districts, with a staff of instructors chosen by the commandant, who is to give the preference to officers of the regular army, should such present themselves, who have been employed already in instruction. He is also to do his utmost to make the objects of the school and its advantages known to the proper classes of his district. At each there is to be a regular daily course of theoretical study, chiefly in military subjects, and lasting from the 1st of January to the 31st of July, followed by two months of practical instruction. But, in addition, there are to be regular evening classes for those candidates who have occupations of their own in the daytime, who may then go through the whole course without interfering with their civil pursuits. Young men who have been under training in the Landwehr, and are specially reported on as apt soldiers, are eligible as candidates, as are those who have been made non-commissioned officers, and done well in the regimental school. But others who have not been out for training, and desire to qualify for Landwehr commissions, are also to be admitted, a moderate educational test being in all cases provided by proper school certificates where they can be produced, or by direct qualifying examination where none such are forthcoming. There is no limit fixed to the number of pupils; but those who have not served in training can only be admitted entirely at their own expense, which is also the rule for any Landwehr officer who may attend on his own application for the purpose of self-improvement. These last, of course, are subject to no examination at the close of the course; but the others have then to appear before a jury composed in part of Landwehr officers of standing and in part of professors. According to the result of the final examination, the pupils are to be either rejected altogether, recommended to come up again for another annual course, or noted to receive a commission in the order in which they stand on the successful list.

The provincial Diets of Austria which were in session at the opening of the year 1874 finished their labors on January 17th, with the exception of that of Trieste. Several of the Diets were occupied with a new regulation of school affairs, and the Conservatives and Liberal parties, as might be expected, had severe conflicts, the general result of which was not to the satisfaction of the Liberal party. In the Moravian Diet, the Government was vehemently attacked by several Czechic deputies, but supported by the majority.

The Reichsrath reassembled in Vienna on January 23d. The Catholic party entered the year with the hope that the influence of the Church upon the court was still sufficiently strong to defeat the four liberal church laws, which the ministry, in compliance with the request of the Liberal majority of the Reichsrath, was known to have prepared. The hope was strengthened by the fact that the Emperor, when the ministry submitted to him the first draft of the laws, referred it to Bishop Kutscher, who holds an appointment in the Ministry of Instruction, for an elaborate report, and that the bishop strongly advised the Emperor not to sanction the ministerial draft. The ministerial Council, at a meeting held under the presidency of the Emperor on January 18th, prevailed, however, upon the Emperor to allow the laws to be laid before the Reichsrath. The four laws were: 1. A law for the regulation of the external legal relations of the Catholic Church, embracing the formal abolition of the Concordat of 1855, and the co-operation of the Government in the appointments made by the bishops for ecclesiastical benefices, defining the limits of ecclesiastical jurisdiction, regulating the right of the state with regard to the faculties of Catholic theology at the universities, regulating the ecclesiastical corporations, the ecclesiastical patronage, the superintendence of the state over the administration of the Church; 2. A law for regulating the external legal relations of monastic communities, and vindicating for the state the right to allow or to forbid the establishment of monasteries, and to inspect them, and for all the members of such communities to leave them at any time after notifying the civil magistrate of their intention; 3. A law for taxing ecclesiastical property for the purpose of improving the revenue of the lower clergy; 4. A law regulating the legal recognition of religious denominations. The Reichsrath, on February 6th, referred the four laws to a subcommittee of seven members, and appointed another committee of five members to draft a law for reforms in the state laws concerning marriage. The discussion of the laws in the Reichsrath began on March 5th. The opponents of the laws, Count Hohenwart, Greuter, Prince Czartoryski, who spoke in the name of most of the Poles, Weiss von Starkenfels, and many others, warned against arousing an opposition of the Church against the Government, which was already endangered by political and na-

tional conflicts. The new laws, they urged, would only redound to the honor and the glory of Prussia, and were of an illiberal and despotic character. The chief speakers in support of the proposed laws were Prof. Suess, of Vienna, the Minister of Public Worship, Dr. Stremayr, and the prime-minister, Prince Auersperg. Prof. Suess announced an amendment which demands that the bishops of Austria must take an oath of loyalty to the constitution. Dr. Stremayr denied any intention on the part of the Government to carry on a war against the Church, but insisted that no well-regulated Government could allow religion to be made the pretext for dangerous schemes against the state. He called the laws the result of legislative necessity for guarding the freedom of religion and averting dangers, which from the zeal of misguided ecclesiastics might arise for the state. The prime-minister declared emphatically, in view of threats that the law could never be enforced, that the Government would possess sufficient energy to see the law respected. The Emperor, by telegraph, declared his approval of the speeches made by the two ministers, and at the close of the general discussion the Reichsrath, by 224 against 71, received the ministerial draft, which on March 18th, after a discussion on the several articles, was adopted without any change. In the Herrenhaus the discussion of the new laws began on April 10th. The cardinal-archbishops, Rauscher, of Vienna, Tarnoczy, of Salzburg, and Prince Schwarzenberg, spoke against them, and declared, in a memorial which they handed in, that they adhered to the conviction which they expressed in the year 1868 relative to the existing legality of the Concordat, while, besides several ministers, Count Anton Auersperg, better known under the *nom de plume* of Anastasius Grün, as one of the greatest German poets, warmly defended them. After a motion of the Catholic party to pass over the laws to the order of the day had been negatived, by 77 against 48 votes, all the archbishops and bishops left the House, and the law was adopted in the form in which it had come from the Lower House. The Pope, in an Encyclical Letter, addressed to the Austrian bishops, and dated March 7th, had denounced the laws as being of the same stamp and character as the new Church laws of Prussia, and and as involving the same danger for the Church. The prime-minister, Count Andrassy, in his reply to the circular, said that it exaggerated facts, and that the Holy See might rest assured that the laws in question were not intended as an act of hostility toward it, or as a curtailment of its rights in questions of religion, their object being solely to regulate material questions, and more especially to remove stipulations which were obstacles to imperial legislation. The Government did not publish the reply of Count Andrassy, but in the great meeting of the Austrian and Hungarian delegations held at Pesth, Count Andrassy, in reply to a question [illegible] his note. He stated that [illegible] question the Pope's right to [illegible] opinion to the bishops on [illegible] ters, but expresses regret [illegible] should have pronounced a [illegible] things which are in no [illegible] character, but belong to the [illegible] of state legislation. The [illegible] Government will, nevertheless, [illegible] avoid a conflict with the Church, [illegible] do so if, in contradiction [illegible] Letter, the bishops are [illegible] laws of the state. In [illegible] says that if the clergy do [illegible] which have been enacted [illegible] Government will consider [illegible] tect the rights of the state, [illegible] convinced that it will be [illegible] for the law. Count Andrassy [illegible] ply had been received, but [illegible] tain appeasement appeared [illegible]

The Reichsrath adjourned [illegible] three weeks, and, immediately [illegible] its sessions on April 14th, [illegible] 15th) a motion, introduced by [illegible] tive to the expulsion of the [illegible] affiliated orders from Austria, [illegible] tee on the new Church laws. [illegible] Church laws were all adopted [illegible] rath, which also adopted [illegible] to the law on the monastic [illegible] the ministry refused to accept [illegible] the Herrenhaus had not yet [illegible] when on May 7th the eighth [illegible] Reichsrath was adjourned. [illegible] 5, 1873, the day of opening, [illegible] House of Deputies had held [illegible] the House of Lords twenty-one [illegible] after, the first two of the [illegible] ceived the sanction of the Emperor [illegible] promulgated as laws of the [illegible]

At the beginning of the year [illegible] the Minister of Justice, in a [illegible] dressed to all officials connected [illegible] the complete introduction of [illegible] trial by jury, as about to [illegible] accordance with last year's [illegible] are reminded in this circular [illegible] the new legislation is that they [illegible] equal importance to the vindication [illegible] to the protection of the innocent [illegible] be prosecuted in the interests [illegible] nity with all the more energy, [illegible] iar powers of public prosecutors [illegible] proceedings as hitherto practised [illegible] will no longer exist. Confidence [illegible] ated in the readiness of the [illegible] the states to follow up the [illegible] vidual persons against those who [illegible] them, irrespective of rank or [illegible] ticular the minister finds it [illegible] those he addresses, that the [illegible] nary detention for purposes of [illegible] must be exercised in future with [illegible] circumspection.

It appears from this table that about four-fifths of the Baptist associations, their churches, ministers, and members, are in the United States. The total number of baptisms reported in 1873, in all countries, was 77,767.

I. REGULAR BAPTISTS IN AMERICA.—The *American Baptist Year-Book*, for 1874, gives the following statistics of the Baptist churches in the United States: Number of associations, 890; of churches, 20,520; of ministers, 12,598; of members, 1,633,939.

The number of baptisms reported during 1873 was 70,162. The number of Sunday-schools was 9,222. The total amount of benevolent contributions of the churches and Sunday-schools, reported in 1873, was $3,988,909.31. Ten theological seminaries reported for 1873: instructors, 45; students, 441; value of property, $1,125,000; amount of endowments, $1,001,000; volumes in libraries, 43,000. Thirty-five colleges and universities reported: instructors, 291; students, 5,056; total value of property, $5,519,688; amount of endowments, $3,012,000; volumes in libraries, 149,634. Sixty academies, seminaries, institutes, and female colleges, reported: instructors, 339; students, 5,478; total value of property, $2,029,000; amount of endowments, $262,135.

According to the *American Baptist Year-Book* for 1875, the statistics of associations, churches, ministers, and members, were in the preceding year as follows:

STATES AND TERRITORIES.	Associations.	Churches.	Ordained Ministers.	Total Membership.

The anniversaries of the Northern Baptist societies of the United States were held at Washington, D. C., beginning with that of the *Bible and Publication Society*, on May 22d. The occasion was the completion of the fiftieth year of the society's existence, and was marked by the observance of special jubilee services. The Hon. James L. Howard, of Connecticut, presided. The report of the board

reviewed the history and work of the society for the preceding fifty years. The receipts during the period of its existence had been: in the business department, $3,162,088.85; in the missionary department, $799,224.86; making a total of $3,961,263.71. Its annual receipts had grown from $372.80 in its first year to $430,854.98 in the year just completed. For the first sixteen years the society had limited itself to the printing and circulation of tracts. In 1840 its constitution was so amended as to make its work embrace also volumes, particularly Sunday-school books. It had now on its list 1,186 publications of all kinds. It published also five periodicals. The number of pages embraced in the publications of fifty years was 3,824,104,466. The receipts of the society for the last year were reported to have been: in the business department, $360,696.10; in the benevolent department, $71,240.15; total, $431,936.25. Its disbursements had been $414,246.39. At the request of the board, a committee of seven persons was appointed to report at the next annual meeting of the society whether any improved method can be adopted in the management of its affairs.

The anniversary of the *American Baptist Home Mission Society* was held at Washington, May 23d. The total receipts of the society for the year were reported to have been $257,257.86, and its expenditures, $247,427.74. Of these amounts $50,874.86 had been received, and $43,228.17 expended on account of the Church-Edifice fund. Contributions had been received from forty-six States and Territories. It was shown in the report that, in 1859–'60, only nineteen, and in 1868–'69 only thirty-two States and Territories had contributed to the treasury of the society. Three hundred and eighty-five missionaries had been employed, under whose labors one hundred and thirteen new Baptist churches had been organized, and 2,264 persons had been baptized. The churches under their care had contributed $18,500 to the cause of home missions. The reports from the freedmen's schools were favorable. Applications had been received in the church-building department, for aid in building houses of worship, from one hundred and twenty churches, and had been granted in the cases of sixty of them. The whole amount appropriated in these instances was nearly $50,000. A resolution was passed by the society favoring coöperation with the Baptist Historical Society. A resolution was also unanimously adopted, expressing the wish that the remembrances of the recent civil conflict in the United States might be blotted out, and that the exchange of correspondence and of fraternal delegates with the Southern Baptist Convention might be continued.

The thirteenth anniversary of the *American Baptist Historical Society* was held in Washington, May 27th. The report of the corresponding secretary showed that 447 books, 739 pamphlets, and 62 manuscripts, had been added to the library of the society during the year. The library now contained 6,302 volumes, and about 14,000 unbound pamphlets. The society had received bequests amounting to $14,000, and an annuity of $500. The monetary receipts for the year had been about $400. The Rev. Howard Malcolm, D. D., was re-elected president of the society.

The annual meeting of the Board of Councilors of the *American Baptist Educational Commission* was held at Washington, May 23d. The Rev. Alvah Hovey, D. D., presided. The commission had made appeals to the public in behalf of the Southern Baptist Theological Seminary, and William Jewell College, Missouri. During the year the Rochester Theological Seminary and Dennison University had been endowed. An appeal was made to the commission in behalf of Snake Forest College, N. C., whose endowment of $100,000 had been swept away by the war, and of the Columbian University. Addresses were made on the proposed movement to enlarge the endowments of all the Baptist educational institutions in the United States as a centennial celebration, to be completed in 1876.

The fiftieth anniversary of the *American Baptist Missionary Union* was held at Washington, May 26th. The receipts of the Union for the year ending March 31, 1874, were reported to have been: from regular donations of churches and individuals, $165,313.46; from special "thank-offerings," $20,243.84; from legacies, $28,754.77; from woman's societies, $33,378.27; from miscellaneous sources, $13,840.57; making a total of $261,530.91. This amount was larger than that of the preceding, or of any previous year, by $45,480.21. The year had begun with a balance against the treasury of $42,069.64. The appropriations for the expenses of the year were $247,240.07, making in all $289,309.71 to be provided for. A special effort was made in June to meet the deficit by what were called "thank-offerings." By the close of the year the balance against the treasury had been reduced to $27,778.80. Sixteen new missionaries had been sent out during the year, four of whom were under the auspices of the Woman's Baptist Missionary societies, and eight missionaries had returned to their fields after visits to the United States. The report of the board raised a question whether the progress of the work in some parts of the field would not be advanced by adopting a policy of appointing unmarried men as missionaries. The subject was referred to a committee, who reported: 1. That the question was one to be determined by circumstances; 2. That, in general, the chief personal interests to be relied upon in the missionary work were the married man and his household; 3. That, when special circumstances seemed to call for such action, the board should be free to employ unmarried men.

Two women's missionary societies work in coöperation with the American Baptist Mis-

sionary Union: the *Woman's Baptist Missionary Society*, whose chief support comes from New England and New York, and the *Woman's Missionary Society of the West*. The receipts of the Eastern society for the year were $26,061, and those of the Western society were $8,154. The Eastern society had supported eleven woman missionaries, thirteen Bible-women, and one native preacher, had paid the expenses of four other missionaries, and had aided in the support of twenty-two schools, with 1,151 pupils.

The last session of the *Burmah Baptist Missionary Convention* was attended by fourteen male missionaries, five female missionaries, thirteen ordained native ministers, twenty-five unordained ministers, and eighty other persons. The sessions occupied five days, including Sunday. The proceedings were conducted in three languages—the Burmese, the Karen, and the English. Favorable reports were received from nearly all the stations. The work had been pushed with vigor at most of them, and encouraging progress had been made. The summary of the returns gave a total of 375 churches, 88 ordained and 338 unordained preachers, 19,307 members, with 1,044 baptisms during the year, and 144 schools with 6,179 pupils. The contributions of the churches had amounted to 52,639 rupees, or about $25,000.

The thirty-seventh anniversary of the *American and Foreign Bible Society* was held in the city of New York, May 14th. The report of the treasurer showed the receipts for the year to have been $8,282, and the expenditures $8,194.77. The society had received about $1,500,000 since its beginning, and had sent out nearly 5,000,000 copies of the Scriptures, most of them entire, in many languages. During the past year it had given to the destitute in the United States 2,665 Bibles and Testaments, and had sold 872 Bibles and Testaments. A committee, appointed to confer with a similar committee of the American Bible Union with a view to the consolidation of the two societies, reported that a plan of union had been approved by the boards of both societies. The society voted to authorize the plan to be carried out. The new society is to be called the "American and Foreign Bible Union."

The twenty-fifth anniversary of the *American Bible Union* was held in New York City, October 14th. The Rev. Thomas Armitage, D. D., presided. The report of the treasurer showed the receipts of the Union for the year to have been $64,217, and its expenditures $69,509. The entire receipts since the society was organized were shown to have been $872,928. The proposition and plan of the board for a consolidation with the American and Foreign Bible Society were accepted, and committees were appointed to coöperate with similar committees from the other body to complete the union. It was expected that the consolidation would be perfected in May, 1875.

The *Southern Baptist Convention* met at Jefferson, Texas, May 7th. The Rev. James P. Boyce, D. D., of South Carolina, was re-elected president. The Foreign Mission Board reported that, in all, the sum of $32,770.13 had been received into the treasury for general missionary purposes, or about $4,000 more than had been received during the previous year, and $10,000 more than the average annual receipts of the preceding six years. Practically, the board was free from debt. Applications for appointment to missionary work had been received from eight States. Lack of means, however, had made the board unable to employ all those who offered themselves. The work on the African missions had been temporarily suspended. The convention favored its resumption, and decided that an effort should be made to raise for it during the year the sum of $5,000. The appointment of colored missionaries in preference to white, but with a white superintendent, was recommended. Thirty missionaries and three native assistants had been employed in China. The need of suitable residences for the missionaries was set forth. The prospects of the mission in Italy were regarded as hopeful. One American missionary, the Rev. George B. Taylor, D. D., and five Italian evangelists, were at work in this field. A plan was adopted for the future support of the Foreign Mission Board. It contemplates the submission of careful annual estimates by the board; the apportionment of the amount to be raised among the States; the appointment of an executive committee in each State; the distribution of "mite-boxes" to every Baptist family; the presentation of the mission-work by the pastors to the attention of the churches; the payment of the missionaries quarterly in advance, the money to be borrowed on the credit of the board if it is not on hand. The estimates for carrying on the Foreign Mission work during the ensuing year were fixed at $50,602.

The receipts of the Domestic and Indian Mission and Sunday-school Board during the year had been $32,465, but had been exceeded by the expenses $11,400. Fifty-five missionaries had been employed, twenty-five of whom, however, had been dismissed before the end of the year for the lack of funds. Nineteen other missionaries had been in service among the Indians. The Sunday-school department was $8,374 in debt. One hundred and sixty-six new Sunday-schools had been organized, in which were 5,001 scholars and teachers. Two colored students had been aided. The debt of the Domestic and Indian Mission department remained the same as it was the year before, viz., $11,411.24. The name of the board was changed to the Home Mission Board, and it was relieved from all Sunday-school work as a specialty, and directed henceforth to limit its operations to the support of ministers of the gospel. The convention ordered all receipts

for Sunday-school work to be applied to the liquidation of debts, and all other available funds to be applied for the same purpose as fast as consistent. It was estimated that it would require $75,000 to be raised during the year to sustain the work of the board and pay its debts. The trustees of the Southern Baptist Theological Seminary were seeking to raise the sum of $75,000 for the support of the seminary pending the completion of its endowment and its removal to its permanent seat at Louisville, Ky. Forty thousand dollars had already been pledged to this purpose. Upon the presentation of the case to the convention, $20,000 more were contributed.

The *Eastern Conference of German Baptist Churches* and ministers met at Tavistock, Ontario, September 10th. Reports from the churches reported the whole number of their members to be 3,792. Four hundred and seventy-eight baptisms had been made. The *Western Conference* met at Green Garden, Hill County, Ill., September 10th. The several churches reported a total membership of 3,493 souls, with 453 Sunday-schools and 3,192 scholars. The total amount of money raised for the expenses of the churches and for benevolent causes and other enterprises was $40,051. The Sunday-schools had also contributed the sum of $2,285. The dividing line between the two conferences corresponds with the eastern boundary-line of the State of Ohio. The *German Baptist Union Association*, or "Bundes Conference," is composed of messengers of all the churches included in the Eastern and Western conferences, and meets every three years. Its fourth meeting was held in Chicago, Ill., September 16th to 23d. Delegates were present from Canada West, and the States of Connecticut, New York, Pennsylvania, Ohio, Indiana, Kentucky, Missouri, Iowa, Wisconsin, and Minnesota. The Rev. G. Schulte, of New York, was elected moderator; Prof. A. Rauschenbusch spoke in behalf of the German department of Rochester Theological Seminary. Twenty-two young men had received instruction in this department, and a large number were expected the next year. The receipts of the German Baptist Publication Society for the year ending January 1, 1874, were reported to have been $19,973.15. It was publishing three periodicals: the *Sendbote*, weekly, with 4,300 subscribers; a child's paper, with 8,500 subscribers; and the *Sunday-school Lessons*, with two thousand subscribers. This society is established at Cleveland, Ohio. It was organized in 1865. From its beginning to the 1st of January, 1874, it had published 79,500 copies of sixty-eight distinct works.

The Baptist Convention of *Nova Scotia, New Brunswick, and Prince Edward Island*, held its twenty-ninth annual meeting at St. John, N. B., beginning August 22d. Judge M. Culley was chosen president. The statistical reports furnished by the minutes of the associations gave the following results:

The net increase for the year had been nearly eight per cent., a higher rate than had been attained in any year since the formation of the convention. The number of baptisms also exceeded that of any previous year. Twelve ministers had been ordained during the year. The educational interest of the convention is confined chiefly to Acadia College. The endowment fund of this institution amounted to $43,357.22 paid and invested, and $21,854.25 of notes. The college had thirty-seven students. The following resolutions were recommended by the Committee on Education, and were unanimously adopted by the convention:

Resolved, That the convention tender its hearty congratulations to the friends of free education in New Brunswick, on the success which has crowned their zealous and united efforts, whereby the designs of the advocates of sectarian education at the public expense have been defeated.

Resolved, That in view of the avowed determination of certain organs of ultramontane opinions, in defiance of the will of the people, to effect the overthrow of the non-sectarian school systems of the maritime provinces, as well as in view of the alleged fact that in some parts of Nova Scotia the school law of that province is openly disobeyed, a committee be appointed, to watch the proceedings of the opponents of free education, and to take such steps as may tend to the exposure and removal of abuses.

A meeting in the interest of foreign missions was held August 25th. The total receipts for the mission funds for the year were reported by the treasurer to have been $7,771.27. The societies had three missionaries at Bangkok, Siam, two at Rangoon, and three at Tavoy, Burmah.

The anniversary of the *Nova Scotia Baptist Home Missionary Union* was held at Parrsborough, July 10th and 11th. The total receipts for the year were reported by the general agent to have been $6,251.22, and the payments $5,292.27. Fifty-six missionaries had been employed for longer or shorter periods during the year. Application was made from the association of Prince Edward Island to be received into the Union Home Missionary work.

The annual meeting of the *Baptist Home Missionary Convention East, of Canada*, was held in Montreal in September. The jurisdiction of the convention extends from Belleville to Quebec. It comprises twenty-six churches. The treasurer submitted a report showing his annual expenditures since 1870 to have been

as follows: 1870, $800; 1871, $1,062; 1872, $1,912; 1873, $2,670; 1874, $4,098.94. His receipts for 1874 had been $3,783.24, leaving a balance due him of $213.70. The convention urged the churches to increased interest in the department of missionary work recently established in Calcutta, India, by the Rev. J. McLaurin and his wife.

II. FREE-WILL BAPTISTS.—The following are the statistics of the Free-will Baptist Church, as given in the *Free-will Baptist Register* for 1874:

YEARLY MEETINGS.	Number of Churches.	Ordained Preachers.	Number of Communicants.
New Hampshire	124	125	8,659
Maine Western	67	61	4,469
Maine Central	105	97	6,395

Nine quarterly meetings not connected with any yearly meeting	26	25	639
Churches not connected	11	2	306
Total, 36 yearly meetings	1,471	1,173	70,629

The number of quarterly meetings given in the tables of the *Register* is 163, and the number of licensed preachers 121. The tables show an increase from 1873 of two quarterly meetings, twenty-five ministers, and fifty-three members, and a decrease of thirty-three churches. The *Register* gives a list of twenty-one colleges, academies, and other literary institutions under the care or patronage of the Free-will Baptists. There are a number of associations of Baptists in America, which, in doctrine and polity, are in general agreement with the Free-will Baptists. From the best information received respecting them, they are supposed to number in the aggregate not less than twenty-five thousand members.

The twenty-second triennial General Conference of the Free-will Baptists in the United States met at Providence, R. I., October 7th. The Rev. D. W. C. Durzin, of New Hampshire, was chosen moderator. The Committee on Doctrine and Church Polity made a report, on certain questions which had been submitted to them, of which such parts were adopted as expressed the views of the Conference, to the following effect: To the question, "What course should be pursued by our churches with those who join other churches without asking a letter from us?" answer was returned: "Such a course is contrary to our church covenant;" in answer to the question, "When members are received from Pedo-Baptist Churches by letter, and ask for baptism and receive it, how are they to be returned—as received by baptism or by letter?" the direction was given that they be returned as received by baptism. It was decided not to be a violation of the usages of the denomination to send women as delegates to quarterly and yearly meetings, and to the General Conference. It was declared that "whereas the rite of communion is by the New Testament left wholly to the discretion of the applicant," therefore "the Church may not presume to pass upon the fitness of any Christian to participate in the sacrament of the Lord's Supper." In answer to various resolves and queries, relative to the reception of members by letter from Pedo-Baptist Churches, it was resolved: "That we believe Christian baptism to be a personal act of public consecration to Christ, and not the door into the Christian Church; that believers' baptism, and immersion only as baptism, is a fundamental doctrine of our church;" and that, as a general principle, it is not consistent with the doctrine and polity of the Free-will Baptist denomination to admit persons to full membership who have not been baptized (immersed), but merely sprinkled, or poured, but that "persons presenting letters from other evangelical churches may be received by assenting and conforming to the doctrines and usages of our Church in the future." It was declared destructive of all order to receive and accredit a properly-expelled minister without a full conference with the body expelling him, and not in accordance with the policy of the church, "for a ministerial council, however called or organized, to assume to expel a minister from the denomination, who is a member in good standing in one of our churches." It was also decided that a person may be a delegate to the General Conference who is not a member of the yearly meeting he represents, provided he be chosen by the body he represents.

The Rev. A. H. Merrill made a report of his action as a corresponding messenger to the Church of God in Pennsylvania. He had attended the East Pennsylvania Elderships, the principal body of this denomination, and had been well received. There seemed to be a general feeling, among those whom he saw, that the two denominations were essentially

one in principle, and should be more closely identified. The members of the Church of God were, however, tenacious in regard to the name of their denomination. Fraternal greetings were exchanged with the American Christian Conference, which was in session at the same time at Stanfordville, N. Y., and a committee was appointed to confer with a committee of that body as to the propriety and means of uniting the two bodies into one conference. The fact was observed that the Free-will Baptists had no representative at the meeting of the Evangelical Alliance held in New York, in October, 1873. That such an omission might not again occur, a resolution was passed directing "the consummation of the ordinary denominational relationship" between the Conference and the Evangelical Alliance, and the Rev. G. T. Day was appointed a delegate to attend the next session of the Alliance; delegates were also received from the General Missionary Convention of the Disciples of Christ, and from other religious bodies. Resolutions were passed pledging the denomination to the principle of total abstinence from the use, manufacture, and sale of intoxicating liquors, favoring the policy of prohibitory laws and the support of friends of temperance for office, and expressing sympathy with the efforts of the women in behalf of temperance.

The report of the *Sunday-School Union* to the General Conference showed its work to have been conducted with great vigor. Detailed reports were given from 887 out of 1,504 churches, representing 56 out of 161 quarterly meetings, which showed the number of scholars in schools connected with reporting churches to be 29,950, and the number of teachers 2,646. The report of the treasurer of the *Education Society*, made at its annual meeting held during the session of the General Conference, showed his receipts for the year to have been $7,703.62, and his expenditures $6,752.29. The total receipts of the *Printing Establishment* at Dover, N. H., for the preceding three years, were reported to the General Conference to have been $137,065.42. The assets of the establishment were valued at $74,082.72, and its liabilities were reported to be $3,489.26. The receipts of the *Home Mission Society* for the year were reported at the annual meeting, held October 9th, to have been $9,110.82, and its expenditures $8,290.81. The permanent fund amounted to $4,594.97. The liabilities of the society were $7,336.30, and its assets $6,261.80, leaving a balance against it of $1,074.50. More than 2,800 members had been added to the Church through the agency of the society in the South, during the preceding year.

The report of the *Foreign Missionary Society*, made at the anniversary held during the meeting of the General Conference, showed the balance in the treasury, August 30, 1873, to have been $4,201.33; that the receipts during the year had been $14,968.65, and the expenditures $16,055.24, and that a balance remained in the treasury, August 30, 1874, of $3,112.74. The year's receipts for the Bible and Tract cause had been $39.27, and the expenditures $35.27. One hundred dollars had been added to the permanent fund, and that fund now amounted to $7,303.02. The society had the charge of five missionary churches, with 371 members and 643 Sunday-school scholars. Two quarterly meetings had been formed in India (those of Balason and Midnapore), and they had united in a yearly meeting known as the Orissa Yearly Meeting. Five male and eight female missionaries, three ordained and three licensed preachers, twelve native lay preachers, and several girls employed as teachers, were engaged in the work of the at society. A printing-office was in operation at Midnapore.

The General Conference of the *Free Baptists in New Brunswick* met October 12th. The number of churches was reported to be 188, of which 43 had regular pastoral oversight; the number of ordained ministers was 41, of whom only 28 were regularly engaged with churches. Five hundred and thirty-three additions by baptism had been made during the year.

The *Free Baptist Conference in Nova Scotia* numbers thirty churches, fourteen ordained ministers, of whom thirteen are reported as in active service, and 3,000 communicants. One hundred and fifty persons were added to the churches by baptism in the last ecclesiastical year.

III. Seventh-Day Baptists.—At the meeting of the General Conference of this body, September 23d, the clerk reported that there were 83 churches on the roll, from 62 of which reports had been received. Including the statistics of the other churches as given in the minutes of the year before, the whole number of members in the denomination appeared to be 8,237. The net increase of membership reported during the year was 298. Contributions of $3,217.10 to benevolent enterprises were reported from thirty churches.

The receipts of the *Seventh-Day Baptist Educational Society* were reported at its anniversary, September 25th, to have been $1,755. The policy of organizing and conducting schools on a denominational basis was insisted upon.

The receipts of the *Seventh-Day Baptist Tract Society*, for the three years ending with its anniversary in 1874, were $9,577.44, and its expenditures $7,257.80, leaving a balance in its treasury of $2,319.64.

The receipts of the *Seventh-Day Baptist Missionary Society* were reported at its anniversary, September 24th, to have been $4,080.99. A balance of $811.48 over the expenditures was carried to a new account. The receipts of the society for the meeting-house fund had been $32.53, and those for the special fund $3,849.28. The foreign mission of the

society was at Shanghai, China, where two missionaries and three native preachers had been employed. Seventeen missionaries had been employed in the home-field.

The sixtieth session of the *Seventh-Day Baptist General Conference* was held at De Ruyter, N. Y., beginning September 23d. The Rev. George E. Tomlinson, of Westerly, R. I., was chosen moderator. A report from the reorganization of the conference was presented, and was adopted. It provided that the body should be called the "Seventh Day-Baptist General Conference;" that representation in it should be fixed on the basis of two delegates from each church, and one additional delegate for each twenty-five members of the church; churches to be allowed to appoint as delegates members of other churches. The General Conference was declared to possess powers and prerogatives as follows: "1. The prerogative in appeal, of an ordinary council, in all matters appertaining to doctrine or discipline, faith and practice, as between the churches, and between the churches and their respective members; and the power of exclusion of churches from membership in the conference, for the want of harmony either of faith or practice with the denomination. 2. It shall have power to receive such trusts as either societies or individuals may, from time to time, confide to its keeping, and to make all necessary provision for the same; to promote the cause of missions, Sabbath-schools, Sabbath observances, academic, collegiate, and theological education, and all the interests of religion as embodied and expressed in the denomination, by such measures as may be deemed best by the denomination in conference assembled."

The following resolution was adopted: "*Whereas*, Several years have passed since an *exposé* of Christian doctrine has been publicly announced by this conference; and whereas, many of the younger church-members would thus be much assisted in apprehending the full, explicit, and orthodox system of Christian doctrine: therefore *resolved*, That this conference now convened appoint a committee of seven of the most aged Seventh-Day Baptist ministers present, and five of the most aged Seventh-Day Baptist deacons present, twelve in all, to draft such an *exposé* and present the same to this conference at its next anniversary." Such a committee was accordingly appointed.

Resolutions were also adopted, declaring, "that copartnerships in which we allow our capital to be used on the Sabbath are a violation of the spirit of the fourth commandment;" condemning the use of liquors and tobacco, and expressing sympathy with the woman's temperance movement; and reaffirming the former expressions, by the General Conference, of disapproval of secret societies, and urging ministers to present the subject before the people and churches, to consider what is their duty in reference to it.

A communication was received from the Seventh-Day Baptist Church of Mill Yard, London, relating to the progress of the Sabbath cause in Great Britain, and was suitably acknowledged. A petition was adopted to be presented to Congress against the proposed so-called religious amendment to the Constitution of the United States. A petition was adopted for presentation to the Legislature of Pennsylvania, asking for a modification of the Sunday laws of that State, so that keepers of the seventh day might be exempted from the penalties imposed for the infraction of Sunday.

An account was given to the conference by the Rev. N. V. Hull of an informal meeting, called a biennial meeting, which was held in the old meeting-house at Newport, R. I., on the 16th of September, 1873. About one hundred and fifty "Sabbath-keepers" visited this church, which was regarded as the birthplace of the Seventh-Day Baptist denomination in America, and observed the occasion with appropriate addresses, the relation of reminiscences, and the pledging of subscriptions to the missionary and tract causes of the Church. The conference adopted a resolution in favor of repairing the old church at Newport. A committee was appointed to consider upon the organization of a Woman's Missionary Society.

IV. TUNKERS. — The National Convention of Tunkers met at Girard, Ill., May 24th. It was described as the largest meeting of believers, who are popularly called by that name, ever held in the United States. It was estimated that 10,000 persons were present, of whom about 2,000 were delegates. The conference resolved to send out ministers on missionary work. A special committee was appointed to have the minutes of previous conferences compiled and published. A question arose as to the proper manner of wearing the beard. It was decided, that while it had ever been the rule of the Church to wear the full beard, the wearing of mustaches alone was not permitted. The voice of the conference was given against allowing members to engage in banking, as it was liable to lead to covetousness, litigation, and usury. The sending of children to college was discountenanced, and it was determined that the name of the Church should not be used in the establishment of high-schools. The question, whether colored brethren should be saluted with the holy kiss, was left to be settled by each church making its own rules on the subject. It was decided to be inconsistent with the religion of the sect for members to join farmers' clubs; and, that the keeping and use of "the ungodly piano," and other musical instruments, was improper, although it could not be prohibited.

V. PARTICULAR BAPTISTS IN ENGLAND.— The anniversary meeting of the English Baptist Union was held in London, April 27th. The reports of the Union showed that during the year there had been a clear increase in the membership of the churches, of 2,652

souls. The increase in five years had been only 9,444 souls, or less than one per cent. a year.

The autumnal meetings of the Union were held at Newcastle-on-Tyne. They were opened on the evening of October 5th, with a sermon by the Rev. A. Mursel, on "The Lamp of Faith," in which a reply was made to some of the views advanced by Prof. John Tyndall, in his address delivered a few days previously before the British Association. The formal session of the Union was opened October 7th, with an address by the Rev. C. Stovel, president. Reports were received from several societies. That of the *Education Board* returned the receipts for the year at £842 19*s.* 8*d.*, of which £234 10*s.* 7*d.* were still on hand. Forty-four children were under the patronage of the board. The receipts of the *Pastors' Income Augmentation Fund* had been £2,340 19*s.* 6*d.* The amount of income and the number of churches receiving the advantages of the fund had multiplied fivefold since 1870.

VI. General Baptists in England.—The Association of General Baptists in England met at Loughborough, June 23d. The Rev. Thomas Barrass, of Peterborough, presided, and delivered an opening address. He spoke particularly of the unveiling of the statue of John Bunyan, at Bedford, which had taken place a short time before, and of the circumstance that on this occasion a duke and a dignitary of the Church of England had attended to do honor to the memory of a man whom nobles and clergy of the time of the Restoration had acquiesced in imprisoning. The statistical returns showed the number of members in the churches to be 22,086. The work of the *Foreign Missionary Society* was described as presenting an unusually hopeful aspect. Numerous additions had been made at the Orissa Mission. Canon Grassé, a convert from the Roman Catholic Church, had been enrolled as an agent for the society in Italy.

VII. Baptists in Russia.—For a period of about twenty years, by means of the preaching of the Rev. Mr. Oncken, of Hamburg, Baptist principles have been extended through Prussia, and into parts of Poland and Southern Russia. The Russian Government offered no interference with their spread within its territory, so long as the conversions were confined to foreigners, and to persons not considered members of the Orthodox Church. So soon, however, as it was found that native Russians, and persons claimed as members by the Church, had joined the Baptists, the law against proselytism was put in force. In the course of 1872, thirteen persons, inhabitants of the district of Tarashavsky, government of Kiev, were arrested and imprisoned for apostatizing from the faith. As the imprisoned converts were Russian subjects, no notice of the case could be taken through diplomatic channels of communication. The subject was brought to the attention of the World's Conference of the Evangelical Alliance, which met in the city of New York in October, 1873. A committee was appointed by the American branch of the Alliance, with the Rev. Dr. Sampson as chairman, who presented a memorial to the Russian minister, and an argument on the subject. These papers were politely returned. A gentleman, a member of the Baptist Church, who was in St. Petersburg, afterward brought the subject to the attention of several members of the imperial court, among whom was the Baron de Rosen. This nobleman interested himself actively in behalf of the imprisoned religionists. He advocated their cause before Count Sievers, and secured his promise to make the necessary inquiries about the legal proceedings to be observed in the case. He also wrote to Prince Dondonkoff-Korsakoff, Governor-General of Kiev, claiming his good offices for the liberation of the prisoners. The prince replied, April 9th, that the prisoners had all been released but one, who was at Odessa, beyond the jurisdiction of the government, and that they had all been acquitted by the civil courts of Kiev. He added a pledge that he could guarantee to the Baptists safety and peace so long as they did not try to make proselytes, in opposition to the present laws of the empire, and so long as they did not by action or manner attack the Orthodox Church in their unauthorized public meetings, "which," he remarked, "they have, however, done repeatedly." He repeated this pledge, promising again that, so long as they observed the conditions named above, "they will have positively nothing to fear from the local administration which is intrusted to me for this country."

The following memorandum, embodying an official report of the action of the court in the case, was attached to the letter of Governor-General Prince Dondonkoff-Korsakoff:

From the correspondence of the bureau of the governor-general relative to the Stundists, it appears that the indictment for belonging to that sect embraced fifty-three persons, of whom twelve were put under arrest—the prosecution calling for other persons as accessories. Further investigation of the civil court at Kiev demonstrated that, although they were implicated in following a heresy, to such a heresy cannot be applied the provisions of the section 203 of the code "Penalties and Fines." Consequently the following of such a heresy cannot be made punishable. Accordingly, then, the chamber court at Kiev acknowledged the said persons cannot be considered guilty of disseminating a heresy among the people.

At present none of the accused is under arrest except a leader of the Stundists in the district of Taraska, by the name of Jerome Balaban, who was exiled to the government of Cherson, as he was considered guilty of disseminating a false doctrine.

With Balaban's expulsion from the district of Taraska, the Stundists became more calm, and less vehemently opposed to the Orthodox Greco-Russian creed. They now even bring their children to be baptized by the Orthodox priests.

BEKE, Charles Tilstone, Ph. D., F. S. A., F. R. G. S., etc., an English traveler, geologist,

geographer, and ethnologist, born in London, October 10, 1800; died in London, September 2, 1874. He was from an ancient family long settled in Bekesburne, East Kent. He received a commercial education, and afterward studied law in Lincoln's Inn; but eventually resumed mercantile pursuits, residing for a short time in Saxony, whence he returned to London, and eventually sailed for the Mauritius, where he remained for several years. Having devoted much attention to ancient history, geography, philology, and ethnography, he published the results in "Origines Biblicæ; or, Researches in Primeval History," London, 1834, a work of great labor and study, which brought him, from the University of Tübingen, the diploma of Ph. D. His historical and geographical studies of the East led him to consider the great importance of Abyssinia for commercial and other intercourse with Central Africa; but his proposals to undertake an exploring journey were declined by the Government. Supported by private individuals, he proceeded to Shoa, in Southern Abyssinia, which country he reached in the beginning of 1851, several months before the party under Major Harris. Shortly after the arrival of the latter, Dr. Beke quitted Shoa, and went alone into the interior, where he explored Godjam and the countries lying to the west and south, previously almost entirely unknown in Europe. The results of these researches appeared partly in several journals, and in "A Statement of Facts," etc. (first edition, London, 1845; second edition, 1846). Having returned to Europe, he excited the attention of geographers by his publications: "An Essay on the Nile and its Tributaries" (London, 1847); "On the Sources of the Nile in the Mountains of the Moon" (1848); "On the Sources of the Nile" (1849); and by his "Mémoire Justificatif en Réhabilitation des Pères Paez et Lobo," Paris (1848). He became involved in a controversy with M. d'Abbadie; and in a "Letter to M. Daussy" (1849), and "An Inquiry into A. d'Abbadie's Journey to Kaffa" (1850), he declared this journey for the alleged discovery of the sources of the Nile (1843–'44) to be a mere fiction. In addition to many essays on ethnography and geography, Dr. Beke has published a treatise "On the Geographical Distribution of Languages in Abyssinia" (Edinburgh, 1849); and while in Mauritius he wrote "The Sources of the Nile, with the History of Nilotic Discovery" (London, 1860), in which work he has incorporated the results of his previous labors on that particular subject. On his return from his Abyssinian travels, the Geographical Societies of London and Paris gave him their gold medals. From 1836 to 1838, being then resident at Leipsic, Dr. Beke was acting British consul in Saxony, and from 1849 to 1853, in London, acted as secretary of the National Association for the Protection of British Industry and Capital. In 1861 Dr. and Mrs. Beke undertook a journey to Harran, near Damascus, which place he had identified, in his "Origines Biblicæ," with the residence of the patriarch Abraham, as mentioned in the books of Genesis and Acts; and they thence traveled over Mount Gilead into the Holy Land, in the footsteps of the patriarch Jacob. In 1865, Mrs. Beke, with the coöperation of her husband, published a narrative of this journey, under the title of "Jacob's Flight, or a Pilgrimage to Harran." Dr. and Mrs. Beke again left England November 4, 1865, on a fruitless mission to obtain the release of the Abyssinian captives, and, on his return, he published a second edition of "The British Captives in Abyssinia," London, 1867. In 1870 Dr. Beke received a civil-list pension of £100 ($500), in consideration of his geographical researches, and especially of the value of his explorations in Abyssinia. But, though he had passed the limit of threescore and ten, his zeal for geographical exploration did not cease. Several months, in 1871 and 1872, were passed in a careful reëxploration of the Sinaitic Peninsula, especially with reference to the true site of Mount Sinai; and, in 1873, he followed this investigation with the startling announcement, in an elaborate memoir, that Jebel Musa was not the true Sinai, but that "the Mount of God" lay at a considerable distance from it, and was the only mountain which fulfilled all the required conditions. He maintained this position by plausible and perhaps conclusive arguments, but it involved him in a protracted controversy, which only terminated at his death.

BELGIUM,* a kingdom of Europe. Leopold II., King of the Belgians, son of King Leopold I., former Duke of Saxe-Coburg, was born April 9, 1835, ascended the throne at the death of his father, December 10, 1865; was married August 22, 1853, to Marie Henriette, daughter of the late Archduke Joseph of Austria, born August 23, 1836. Offspring of this union are three daughters. Heir-apparent to the throne is the brother of the King, Philipp, Count of Flanders, born March 24, 1837, Lieutenant-General in the service of Belgium; married April 26, 1867, to Princess Marie of Hohenzollern-Sigmaringen, born November 17, 1845; offspring of the union is a son, Baldwin, born July 3, 1869.

The area of the kingdom is 11,373 square miles; population, according to the last census, taken in 1866, 4,727,833; according to an official calculation of December, 1872, 5,175,037. Of this population, 54 per cent. belong to the Flemish and 44 to the Walloon-French nationality. The following table exhibits the population of each province of the kingdom on December 31, 1872, as well as the number of arrondissements and communes into which each province is divided:

* *See* ANNUAL CYCLOPÆDIA of 1873 for latest information on the army, navy, commerce, and movement of shipping.

PROVINCES.	Number of Arrondissements.	Number of Communes.	Population, Dec. 31, 1870.
Antwerp	3	150	503,599
Brabant	3	340	908,381
Flanders, East	6	250	674,912
" West	8	205	846,043
Hainault	6	435	914,756
Liége	4	335	611,723
Limburg	3	206	201,337
Luxemburg	5	205	204,568
Namur	3	351	314,718
Total	41	2,567	5,175,037

The number of births, in 1872, was 85,750 males and 81,627 females; the number of legitimate births was 155,528; of illegitimate, 11,848; the number of deaths, 40,084; the number of still-born children, 7,558; the number of deaths, 62,041 males, and 58,088 females. The number of marriages in 1871 was 37,538; the number of divorces, 75.

The following table shows the immigration into and the emigration from Belgium from 1841 to 1871:

	From 1841 to 1850.	From 1851 to 1860.	From 1861 to 1870 (about).	1871.
Immigration	33,466	60,306	107,490	16,708
Emigration	45,470	88,607	103,490	13,170

Excess of emigration over immigration, 1841–1850 .. 12,004
" " " " " 1851–1860 .. 28,401
" " immigration over emigration, 1861–1870 (about) .. 4,000
" " immigration over emigration, 1871 .. 3,537

The following cities had, on December 31, 1871, a population of upward of 20,000 inhabitants:

1. Cities with 100,000 inhabitants and more.

Brussels	175,634	Ghent	125,070
Antwerp	133,883	Liége	109,086

2. Cities with from 25,000 to 100,000 inhabitants:

Bruges	48,087	Molenbeck St.-Jean	30,974
Malines	26,965	Jaclles	26,786
Verviers	35,558	Schaerbeck	26,714
Louvain	31,716	Namur	25,600
Tournay	31,313	Courtrai	25,426

3. Cities with from 20,000 to 25,000 inhabitants:

Saint-Nicolas	24,081	Mons	23,251
St.-Josse-Ten-Noode	24,080	Séraing	23,758

The Legislature consists of two Chambers, a Senate and a Chamber of Representatives, both of which are elected by the people. The Chamber of Representatives had, from 1831 to 1839, 102 members; from 1839 to 1847, 95; from 1847 to 1859, 108; from 1859 to 1866, 116; since 1866, 124. The Senate always consists of one-half the number of members composing the Chamber of Representatives. The members of both Chambers are elected by the same class of citizens; those of the Chamber of Representatives for a term of eight and those of the Senate for a term of eight years. The former must have attained the twenty-fifth, the latter the fortieth year of their age: the latter have also to pay direct taxes to the amount of 2,116 francs 40 centimes. The electors must have completed their twenty-first year of age, and pay direct taxes to the amount of 42 francs 81 centimes. The number of electors was, in 1840, 46,894 (1.15 per cent. of the population); in 1850, 78,228 (1.76 per cent.); in 1860, 97,311 (2.05 per cent.); in 1865, 104,362 (2.09 per cent.); in 1870, 110,589 (2.17 per cent.); in 1872, 106,928 (2.06 per cent). The number of voters who availed themselves of their right of suffrage varied, from 1843 to 1872, from 86 per cent. in 1843, to 62 in 1868. The number of persons eligible for the Senate was, in 1873, 49 in the province of Antwerp, 96 in Brabant, 84 in East Flanders, 56 in West Flanders, 66 in Hainault, 37 in Liége, 12 in Limburg, 4 in Luxemburg, and 47 in Namur: total in the whole kingdom, 451, or 0.0087 per cent. of the population. The number of persons entitled to take part in the election of members of the Provincial Councils was, in 1872, 211,708. According to the law of 1872, the Provincial Councils of the several provinces consisted of the following number of members: Antwerp, 58; Brabant, 73; East Flanders, 80; West Flanders, 69; Hainault, 76; Liége, 67; Limburg, 40; Luxemburg, 41; Namur, 55: total, 559. The aggregate receipts of the provincial administrations, in 1871, were 11,164,386 fr.; the expenditures, 9,864,355 fr.: surplus, 1,300,034.

Of the four universities of Belgium, the free Catholic University of Louvain had, in 1872, the largest number of students (901); the free (Liberal) University of Brussels had 583, the State University of Liége 486, and the State University of Ghent 210; the Royal Academy of Fine Arts at Antwerp, 1,576 students. There were, besides the Antwerp Academy, 72 other academies of design, and drawing schools, with 9,447 pupils; a Conservatory of Music at Brussels, with 675, and another at Liége with 789 pupils.

Nearly the entire population of Belgium is nominally connected with the Roman Catholic Church, at the head of which is the Archbishop of Malines, and five bishops. The other ecclesiastical benefices consisted, December 31, 1872, of 156 deaneries, 233 *cures* (parishes of the first class), 2,772 *succursales* (parishes of the second class), 180 chapels, 1,780 vicariates, 110 coadjutors, 29 annexes, 706 oratories and chapels of hospitals, colleges, etc. The number of religious communities of men, in 1866, was 178, with 2,991 inmates; that of religious communities of women, 1,144, with 15,205 inmates. The number of mutual aid societies recognized by the state was 98; their aggregate revenue, 207,203 fr.; expenditures, 180,447 fr.; capital, December 31, 1871, 475,895 fr.; number of mutual aid societies not recognized by the state, 466,806 fr.; capital, December, 1871, 511,692 fr.

In the budget for 1873, the receipts were estimated at 205,985,000 francs; the expenditures at 201,412,211; the public debt on May 1, 1873, amounted to 760,114,664 fr.

In January, in the Chamber of Representa-

tives, M. Bergé, addressed an interpellation to the Minister of Foreign Affairs concerning a note which the Belgian Government was reported to have received from the Government of Germany on account of the anti-German spirit of the ultramontane press of Belgium and the attitude of the Catholic priesthood. M. Bergé deplored the violent language used by some papers against Germany, but insisted that the Belgian constitution guaranteed freedom of the press, and that the Government could not be held responsible for the language of newspapers. The minister, in reply, stated that no note on the subject under discussion had been received from Germany, but took occasion to recommend to the Belgian papers to observe a moderate and impartial attitude with regard to foreign affairs, in order that the friendly relations now existing between Belgium and all foreign powers might be strengthened.

Toward the close of the session, in May, the Liberal members, especially the former minister, Frère-Orban, made a violent attack upon the Minister of Finance, M. Malou. He endeavored to prove that the financial administration of the ultramontane ministers had always been injurious to the country, and in support of his assertion gave the following official figures: from 1841 to 1847 (ultramontane ministry), excess of expenditure, 36,584,000 fr.; from 1848 to 1854 (liberal ministry), excess of revenue, 38,584,000 fr.; from 1855 to 1857 (ultramontane ministry), excess of expenditure, 3,059,000 fr.; from 1858 to 1869 (liberal ministry), excess of revenue, 84,803,000 fr. From 1870 to 1873 (ultramontane ministry), probable excess of expenditure, 29,292,000 fr. Besides, the public debt had been increased since 1870 by 338,000,000 fr. The minister, in defense of his administration, stated, that the ordinary budget from 1871 to 1873 showed an excess of expenditure; and that the excess of expenditure over revenue in the extraordinary budget, as well as the increase of the public debt, was solely caused by the large number of public works undertaken by the Government.

The results of the elections held in June for the two Chambers of the Belgian Legislature were in so far favorable to the Liberals, that the Catholic party lost a few seats in the Senate as well as in the House of Representatives. The loss was, however, not sufficiently large to change the complexion of either of the Chambers, or to endanger the continuance of the Catholic ministry. The new Senate had a Catholic majority of four, and the Chamber of Representatives of fourteen. The defeat most keenly felt was that of the Minister of Public Works, Beernaarts, who, in Soignies, had to give way to a Liberal candidate. (He was subsequently chosen at a supplementary election.) Other places, where the Liberals defeated the candidates of the Catholic party, were Verviers, Thuin, and Charleroi. On the other hand, however, the Catholic party defeated the Liberals in one of the largest cities of the kingdom, Ghent, where the excitement ran very high, and as many as ninety-five per cent. of the inscribed voters took part in the election. As in former years, the Liberal party maintained its ascendency in the Walloon, and the Catholic party in the Flemish districts.

In compliance with an invitation from the Russian Government, an International Congress, composed of representatives of all the governments of Europe, met at Brussels on July 27th, to discuss a number of questions relating to warfare. On the proposal of one of the members, the Congress decided that absolute secrecy should be observed respecting its proceedings. The presidency of the Congress was offered to the Belgian Minister of Foreign Affairs, and, on his declining to accept it, Baron Jomini, the Russian delegate, was nominated president. M. Borchgrave, of the ministry of Foreign Affairs, was appointed secretary to the Congress. The Congress was closed on August 28th, when the protocols were signed by all the delegates except those sent by England and Turkey. It appears from the protocols, that most of the sections were agreed to with but slight modifications. At the second sitting, Baron Lambermont declared that, if Belgium were invaded, she would resist to the last extremity, and thus, he said, he would vote for no resolution which might tend to diminish the means of national defense, or restrain the citizens in their duty toward their country. Subsequently, Sir A. Horsford, the British delegate, read an abstract from his instructions, ordering him to abstain from discussing any point that would concern such general principles of international law as are not yet universally recognized and accepted; and Baron Jomini, on the part of Russia, said he would not consent to restrain in any way the right of self-defense. With regard to the military authority on an enemy's territory, the Russian scheme proposed that an army occupying an enemy's country might insist on the public officials continuing to exercise their functions under its control, and also on their taking an oath. This proposal was considered by the committee on August 12th, and, finding no support, was superseded by a clause providing that functionaries invited and consenting to continue in office should enjoy the protection of an invader, and should not be removed unless they violated the obligations they had undertaken. The scheme also proposed, that the army of occupation should have the right of collecting taxes already existing. General Voigts-Rhetz, one of the German delegates, suggested that, in case of inability to collect existing taxes, equivalent imposts might be raised, and that the army might suspend some taxes and impose others. After some discussion, the committee adopted, subject to further consideration of its terms, a clause empowering the levy of existing taxes and the

imposition, in the event of this being impossible, of new taxes as far as possible conformable to existing customs and forms, such taxes to be applied to the expenses of administration to the extent to which the native Government was bound to apply them. At the sitting of the 13th, the Portuguese delegate adhered to the reservation of Belgium, Spain, Holland, and Switzerland, as to any proposal impairing its means of defense. On the clause authorizing the invader to seize the Government funds, arms, and provisions, a question was raised as to the meaning of funds, and, on the suggestion of General Voigts Rhetz, it was agreed that all property belonging to individuals or corporations, though in the public treasury, should be respected. As to the seizure of railway plant and private armories, it was resolved that railway material, telegraphs, arms, and vessels not belonging to the state, should be restored, and compensation given on the conclusion of peace. It was likewise agreed that public buildings, real property, forests, and lands belonging to the state, should be guarded from permanent injury, and that ecclesiastical, corporate, and charitable property, as also that of artistic or scientific institutions, should be treated as private property. On the proposal of General Voigts Rhetz, it was agreed that civil contracts concluded during the occupation should remain valid on its termination, and that the Governments should lend their assistance to securing justice by the competent tribunals for those having rights dating from the occupation. There were strong protests against this last decision, as designed to legitimatize bargains between the invader and natives; in other words, acts of treason.

The new session of the Belgian Chambers was opened on November 10th. The Senate by 48 against one vote elected the Prince de Ligne President, and De Tornaco and D'Anethan Vice-Presidents. In the Chamber of Deputies, Thibaut was elected President, and Tack and Schollaert Vice-Presidents. While the Catholic party retained control of both Chambers, the differences between the Old Liberals and Young Liberals became wider than ever. The questions which widened the breach already existing were chiefly the immediate reform of the primary instruction and the extension of the suffrage. The Association Liberale of Ghent split on these questions as those of Brussels, Liége, Mons, and Verviers, had done before.

Brussels is being rapidly transformed into one of the finest and healthiest capitals of Europe. The new boulevard, which traverses the city in about the same way as the Boulevard de Sevastopol de Paris, was nearly completed during the year 1874. The principal building on it, the New Exchange, was opened on December 27, 1873. Another fine building on the new boulevard, the new Central Market, was opened on September, 1874, by an exhibition of productions of Belgian industrial art. The King and the entire royal family took an active part in the opening exercises. The exhibition was quite successful and attracted a large number of visitors to Brussels. The transept of the building was decorated with specimens of Belgian carpet-manufacture, remarkable for good design and warmth of color. The whole breadth of the end of the building north of the transept was occupied by an immense artificial stalactite grotto. Belgian skill in this respect has evidently been stimulated by the many remarkable caves, such as those of Rochefort, to be found in the country. The making of these grottoes for ornamental purposes is now carried on on a large scale at Brussels. In the building were to be found specimens of Belgian coach-making and architectural work of all kinds in stone, marble, and iron. Belgian wood-carving was represented by a magnificent church pulpit, terminating in a spire, and by minor work. All varieties of musical instruments, collections of garden furniture and flower-stands, arms, highly-finished locksmiths' work for iron safes, mosaic-work, stationery and book-binding, and saddlery, testified to the comprehensiveness of Belgian art-industry. The famed Belgian lace-manufacture was worthily represented. The bronze objects, of which there was a large collection, were not inferior to the best manufactured elsewhere; and the exhibition of glass of all kinds and of marble chimney-pieces was worthy the reputation enjoyed by Belgium in these branches of manufactures.

In point of municipal organization, Brussels, alone among the large capitals in Europe, resembles London. The town itself comprises only one-half of the inhabitants of what, in administrative language, is called the Brussels agglomeration. The suburbs, some of them very large and important, have their own municipal administrations, totally independent of that of Brussels. As such a state of things creates many inconveniences, the burgomaster of Brussels invited the burgomasters of the suburban communes to a conference, and proposed to them, as the annexation of their communes to Brussels is impossible, to form with Brussels a municipal federation so as to secure a better and more expeditious execution of all affairs of common interest. The proposal has been favorably received. A new Protestant church, erected for the sole use of the English and American communities, was opened in 1874. The total cost of the building is about £6,000.

BENEDICT, Rev. DAVID, D. D., an eminent Baptist clergyman, historian, and author, born in Norwalk, Conn., October 10, 1779; died at Pawtucket, R. I., December 5, 1874. He had learned the shoemaker's trade, and entered into business in Stratford, Conn., when he became interested in religion, and, having united with the Baptist Church in that place, he prepared for college, entered the junior class of Brown University in 1804, and graduated with high

honors in 1806. While in college he preached in Pawtucket, R. I., and, soon after his graduation, was ordained pastor of the First Baptist Church in that town, which relation he sustained for twenty-five years with great success; but his tastes for historical study and research were so strong that much of his time was spent in this class of studies. In 1813 he published his "History of the Baptists," in two volumes, 8vo; in 1817, an "Abridgment of Robinson's History of Baptism;" in 1820, an abridgment of his own "History of the Baptists," comprising, however, considerable new matter. In 1824 his "History of all Religions," a thick 12mo, appeared; in 1848, a new and enlarged "History of the Baptist Denominations in America and all Parts of the World," in two thick volumes, 8vo, was published. In 1860, at the age of eighty-two, he issued his "Fifty Years among the Baptists." He had been engaged for the past twenty years in collecting the materials for a new and greatly enlarged edition of his "History of the Baptists." He had also prepared "A Compendium of Ecclesiastical History," and "A History of the Donatists," both of which were left ready for the press at his death. Among his earlier works were a humorous poem entitled "The Watery War;" another poem delivered at Trenton, July 4, 1807, and published by the town authorities; and a "Conference Hymn-Book," which had a very large circulation. During the greater part of the sixty-nine years of his ministerial life, he had been engaged in preaching regularly, though not at all times a pastor; and he retained his faculties in nearly their full vigor till within a few months of his death. A sermon preached on his ninety-second birthday, October 16, 1870, is said to have been remarkable for its ability and clearness, and the force and vigor with which it was delivered. He received the degree of D. D. from Shurtleff College in 1851. Dr. Benedict, though not in general a graceful or brilliant writer, was remarkable for his painstaking accuracy, and his zeal in the collection of historic material; and, in private life, was a man of great social powers, and of a most genial and sunny temper.

BLACK, ADAM, M. P., a distinguished publisher and political leader of Edinburgh, born in that city in 1784, died there, January 25, 1874. He was the son of a wealthy builder, and received his education at the university of his native city. After serving his apprenticeship, he went into business as a bookseller and publisher, and, among other important books, brought out two editions of the "Encyclopædia Britannica," one of which was begun in 1830, and the other in 1853. He was also the proprietor by purchase of the copyright of the "Waverley Novels," and, after the failure of his rivals, Constable & Co., he became publisher of the *Edinburgh Review*, and was thus brought into close relations with many eminent men of the Whig party. He held and avowed liberal opinions at a time when they were unpopular, and aided in securing parliamentary and municipal reform. He was Lord Provost of Edinburgh from 1843 to 1848, and in February, 1856, succeeded Mr. Macaulay as member for that city in the House of Commons. He continued in Parliament until 1865, and was a consistent supporter of the leading Liberal measures. He declined, while Lord Provost of Edinburgh, the honor of knighthood offered him by Queen Victoria at the suggestion of Lord Russell.

BOLIVIA (REPÚBLICA DE BOLIVIA), an independent state of South America, lying between latitude 10° and 24° south, and longitude 57° 25′ and 70° 30′ west. It is bounded north and northeast by Brazil, south by the Argentine Republic and Chili, and west by the Pacific Ocean and Peru. (The territorial divisions, area, and population of the republic, are given at length in the ANNUAL CYCLOPÆDIA for 1872.)

The President of Bolivia is Dr. Tomás Frias, installed on February 14, 1874.

The new cabinet is composed of the following ministers: Interior and Foreign Affairs, Señor Don M. Baptista; Finance and Public Works, Señor Don Pantaleon Daleuce; Justice and Public Worship, Señor Don D. Calvo; and War, General Hilarion Daza.

The metropolitan archbishop is Dr. P. J. Puch y Solona, elevated in 1861; with the following bishops: La Paz, Dr. Juan de Dios Bosque (1874); Santa Cruz de la Sierra, F. X. Rodriguez (1870); and Cochabamba, F. M. del Granado, titular Bishop of Troy *in part*.

The Bolivian consul-general in New York is Señor Don T. Pol.

The standing army is composed of eight generals; 359 superior and 654 subaltern officers; and, at most, 2,000 soldiers.

The annual expenditure of the armed force amounts to about $2,000,000.

The following tables exhibit the details of the estimated budget for 1873–'74.

REVENUE.

Customs Duties:	
At Arica, $405,000; at Cobija, $250,000....	=$655,000
Export duty on silver	193,696
Guano-sales	300,000
Stamped paper	27,268
Duty on cattle from the Argentine Republic	20,880
Church (Colonel) loan	650,000
Contributions from Indians	686,307
Departments	396,423
Total	$2,929,574

EXPENDITURE.

Ministry of the Interior	$597,458
Ministry of Foreign Affairs	158,940
Ministry of Finance (includ'g the home debt)	2,072,018
Ministry of Justice, etc	299,167
Ministry of War	1,126,916
Expenses extraordinary	156,010
Total	$4,505,504

By comparing the sums of these two tables, there appears a deficit of no less than $1,575,930, or rather more than one-half of the entire revenue—a deficit which it was pronounced advisable to cover, as usual, by borrowing.

It is, however, objected that in the table of the revenue certain items do not figure, which would tend to reduce the deficit very materially. Among these items are enumerated the interest on $1,250,000, advanced by the present lessee of the Caracoles silver-mines, and the export duty on silver at the custom-houses of Arica and Cobija.

An official report, the accuracy of which has been questioned, showed the national debt to amount, in June, 1873, to $16,428,329, including Colonel Church's loan of £1,700,000, negotiated in London in 1871, at 68, and at the rate of six per cent. interest, the whole of which was to be applied for the construction of railways.

The balance-sheet presented to Congress in December, 1873, represented the national debt at $24,757,072.88, of which $20,115,898.24 formed the foreign debt.

Financial agents of the republic submitted to the bond-holders a statement of the financial situation, in which they set down the revenue at $3,142,429, and the expenditure at $1,464,794. The surplus which would result here is said to be applied upon the payment of the interest on the national debt, as follows:

To the loan of 1872 (1871 ?), with sinking-fund..	$680,000
To the loan of Valdeavellano.....	90,000
To the Bolivian Bank (loan to the Government)	283,000
To the Chilian Bank of Guarantees.....	234,408
To Meiggs.....	205,129
To Mejillones Railway.....	118,125
Balance.....	66,910
Total.....	$1,677,635

In the foregoing report, it is affirmed that the Mejillones Railway is in course of construction (that is to say, that the works have not been suspended), and will be completed by March, 1876.

It is difficult to obtain positive information concerning the foreign trade. The chief staples of export are guano, silver coin and bullion, Peruvian bark, tin, and hides. The value of the imports through Tacna and Arica is estimated at $5,500,000; and that through Cobija at $2,000,000.

Notwithstanding the loans effected for the purpose of carrying on the works on the Madeira & Mamoré Railway, and the great benefits to be derived from that line, opening up as it would an easy route for the transport of Bolivian products to the Atlantic, and bringing the republic into contact with the great marts of the Eastern world, the enterprise appears to be almost completely abandoned. The only signs of life or decision in this matter of such vital importance are the intermittent harangues in the Assembly upon the necessity of completing the road. As for the line from Mejillones to Caracoles, the works were suspended for want of funds to prosecute them, and they are likely to remain so indefinitely. Not so, however, the Antofagasta Railway, leading to Salar del Cármen, which was to be completed by July, 1874.

It may here be remarked that advantages from the Madeira Railway would not accrue solely to Bolivia; they would be largely shared in by the neighboring empire of Brazil, to which country the line would be of considerable importance as well in a strategic as in an economic point of view. If the eastern regions of the republic would be enabled to pour their products through the Amazon into the great mercantile circulation, and to receive their supplies from Brazil and the outer world, the empire will thereby be brought into closer commercial and political alliance with Bolivia, and be placed in possession of elements of development and security for the vast regions of Western Brazil, now virtually and practically inaccessible and indefensible. The Madeira Railway once completed, but a few hundreds of miles of iron way would be necessary to bring the line, and consequently the whole Amazonian Valley, into connection with the littoral region of the Pacific, and render Bolivia independent of her powerful neighbor, Peru, to whom she is now indebted for a port on the Pacific, and over whose territory merchandise, inward or outward bound, has to be transported. Those whose commercial interests are centred in the Pacific-coast region, foreseeing that the turning the tide of Bolivian foreign trade through Brazilian channels, will materially enhance the prestige of the empire among South American nations, have determined to use all their financial power to prevent the construction of the Madeira & Mamoré line of railway. A concession has been granted for a railway from Tacna to the Bolivian frontier, to Messrs. Hainsworth & Co., of that port, and Messrs. Emile Erlanger & Co., of Paris. The line will be 108 miles in length, and is to cost 18,000,000 of soles, or about $16,200,000, gold. This line will be advantageous to Bolivia, inasmuch as it will facilitate the transport of her productions to the coast, but the advantage will cease as soon as she can build a railway of her own, over her own territory, and the political and economic ends of the Tacna road will remain virtually defeated.

In the mean time, the Mollendo & Puno Railway is finished, and will shortly be extended to La Paz, which will then be but a short distance from the Pacific. A complementary branch of the Puno line is also to be constructed, connecting La Paz and Yungas.

A contract has been made with Messrs. Montero Brothers for a railway from Neria to Oruro, a rich mining district, where the mines cannot, however, be efficiently worked for want of powerful machinery, and this it is impossible to introduce with the existing means of transport.

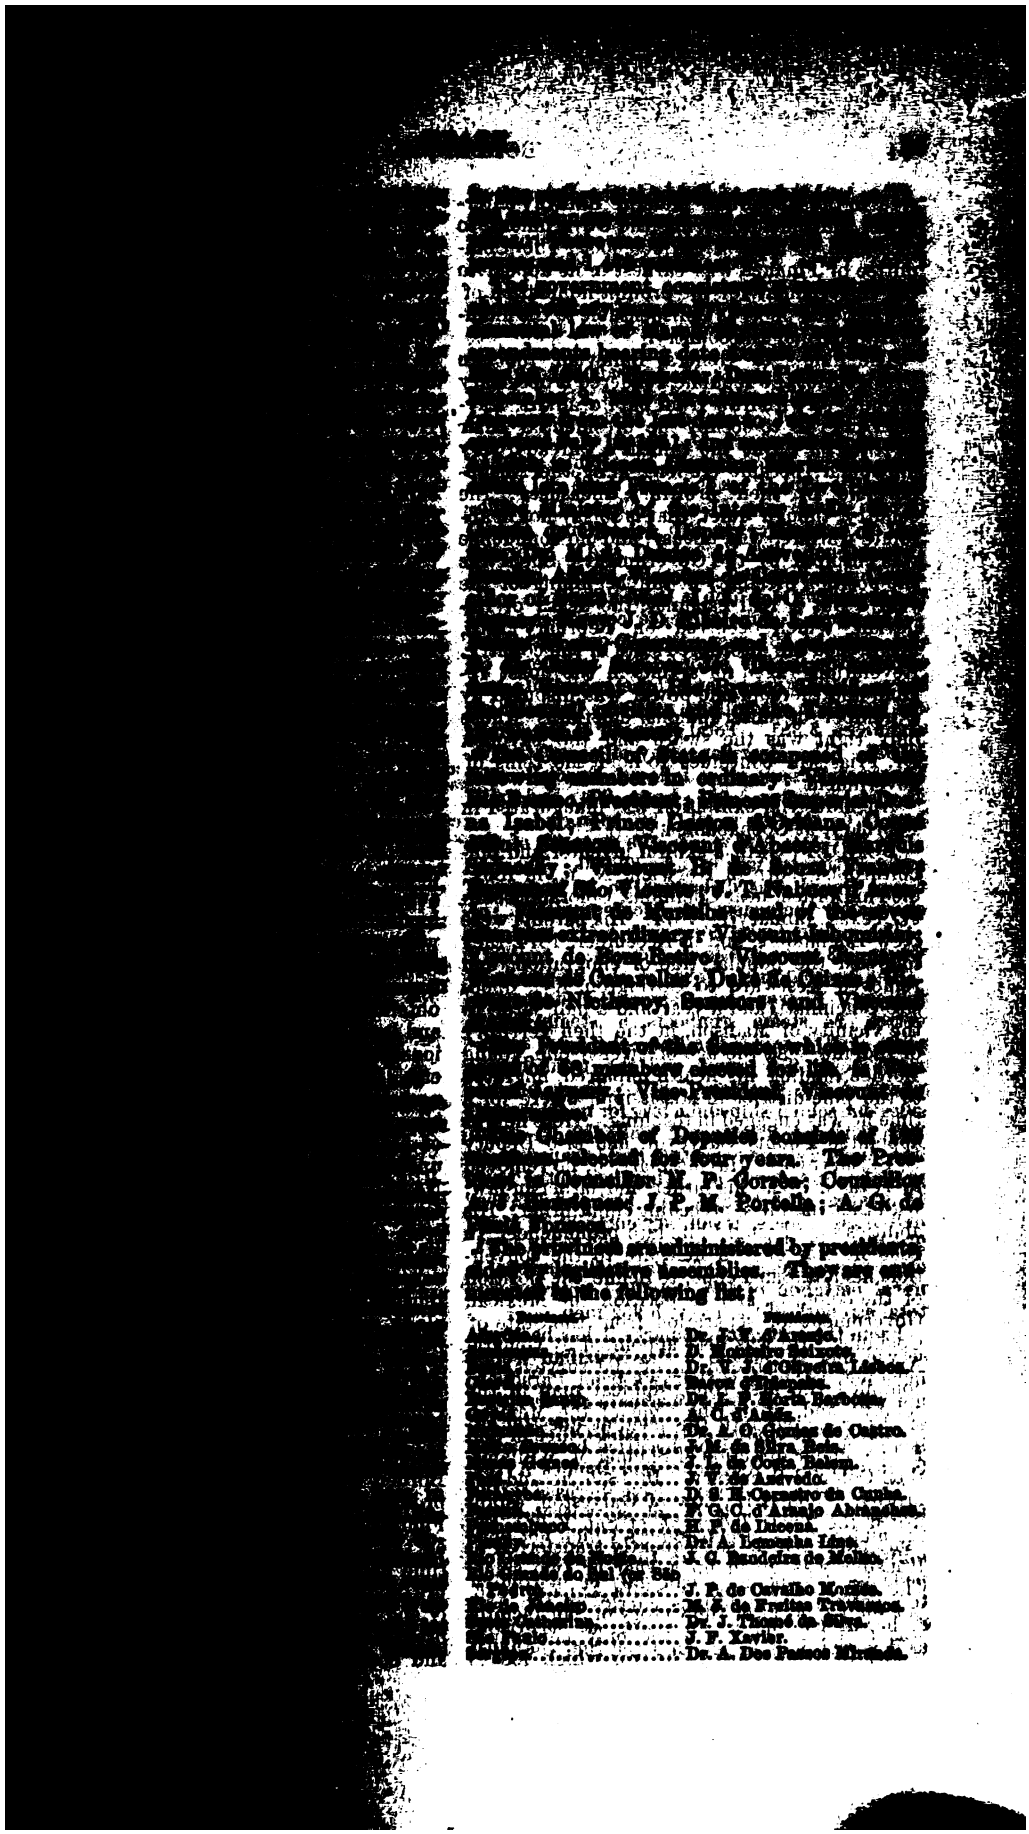
In the Assembly extraordinary, whose sessions closed on December 7, 1873, some important measures were resolved upon. Among these may be mentioned a still further increase of imposts, the reduction of the salaries of government officials, the decision to carry out in every respect Colonel Church's plans rela-

tive to the Madeira & Mamoré Railway enterprise, and the authorizing the Government to negotiate a loan of £1,000,000. The Committee of Finance was earnest in its appeal to the Government for the prompt liquidation of the national debt, as indispensable to the financial welfare of the country.

The illness of General Ballevian, the late President of the republic, rendered it necessary for him to withdraw from public affairs, leaving Dr. Frias to occupy the presidential chair *ad interim*. But the ministry, already very unpopular, became ere long altogether insupportable by their arbitrary measures; the country, though quiet, that is to say not in absolute warfare, was uneasy, and no confidence was inspired by the Government. Such was the position of affairs at the beginning of the year. But a real calamity, the death of Ballevian, which occurred on February 14th, heightened the disordered state of the country. Revolutions raged for a time in the coast region, and the supreme power was disputed by a number of unscrupulous chieftains whose only right was the sword and the bayonet. Dr. Frias still continues to hold the reins of government.

An industrial exhibition was inaugurated in February, at Cochabamba.

BORDEN, Gail, a skillful inventor and philanthropist, born in Norwich, N. Y., in 1801; died in Borden, near Columbus, Colorado County, Texas, January 11, 1874. His parents were New-Englanders, and in December, 1814, they followed the popular tide of emigration, and removed westward to Covington, Ky., opposite Cincinnati, and a year and a half later to the vicinity of Madison, in the then Territory of Indiana. At the age of twenty-one, young Borden, finding his health impaired, migrated to the pine-district in Mississippi, where for a time he was engaged in teaching. Here he was appointed County Surveyor, and also Deputy U. S. Surveyor. Having married, he removed to Texas in 1829, his father and father-in-law, with their families, preceding him thither. His abilities soon brought him into prominence. In 1833 he was elected delegate to the convention held at San Felipe, to define the position of the colonists, and to petition the Mexican Government for separation from the State of Coahuila. He was also appointed by General Austin to superintend the official surveys, and compiled the first topographical map of the colony; and, up to the time of the Mexican invasion, had charge of the Land-Office of San Felipe, under direction of Samuel M. Williams, then Colonial Secretary. In 1835 he and his brother, Thomas H., now of Galveston, established the *Texas Telegraph* at San Felipe, the same paper which, subsequently transferred to Houston, was given up a year or two since. The office was burned by Santa Anna in 1836, but the paper, after the victory of San Jacinto, was revived. This was the only newspaper issued in Texas during the war which led to the separation of Texas from Mexico. The Republic of Texas being founded, Mr. Borden was appointed by President Houston first collector of the port of Galveston, which city, up to 1837, had not been laid out. Mr. Borden made the first surveys of the city, prior to taking charge of the customs, in June of that year. In 1839 he was appointed agent of the Galveston City Company, a corporation holding several thousand acres, on which the city is built. He held this position for over twelve years. Toward the close of this period his attention was drawn to the need of more suitable food-supplies for emigrants crossing the Plains, and, experimenting with this end in view, he produced the "pemmican," which Dr. Kane made use of in his polar expeditions. He next produced a "meat-biscuit," which was exhibited at the London World's Fair, in 1851, and gained for him the "Great Council Medal," and led to his election as an honorary member of the London Society of Arts, in 1852. He manufactured this "meat-biscuit" extensively in Texas, with the view of supplying good and portable food for emigrants crossing the plains; but, meeting with the opposition of army-contractors, he lost heavily, and emerged penniless from the unequal contest he had maintained. Coming North, he turned his attention to the preservation of milk, and in 1853 claimed a patent for "producing concentrated sweet milk by evaporation *in vacuo*, the same having no sugar or other foreign matter mixed with it." Commissioner Mason was not convinced that this process had any special merits, contending that the same results might be obtained by evaporating milk in the open air; and it was not till reënforced by scientific opinions that Mr. Borden, in 1856, received a patent. The development of the invention was now a source of fresh embarrassments. The inventor had parted with all but three-eighths of his interest in the patent, when, after two unsuccessful attempts to establish works, the New York Condensed Milk Company was formed, and began business on an extensive scale at Wassaic, Dutchess County, N. Y. This was in 1860, soon after which the civil war caused the product to become quickly and extensively known, as it became an essential article in military and naval supplies. The business of milk-condensing rapidly expanded, and works were built at Brewster's Station on the Harlem line, and at Elgin, forty-two miles from Chicago, in both of which Mr. Borden owned one-half. During the war, when the soldiers needed meat-juices in a condensed form, Mr. Borden resumed his experimental labors, and produced an extract of beef of superior quality. Finding, during late years, that its cost retarded the sale of this article, he devoted much time and money to establishing its manufacture in Texas, where it could be made cheaply and well. Mr. Borden also made excellent preparations, in a condensed form, of tea, coffee, and cocoa, prepared pemmican for use upon



The Archbishop of Bahia is the Primate of Brazil, and there are 11 bishops: those of Pará, São Luiz, Olinda, Rio de Janeiro, São Paulo, Porto Alegre, Marianna, Diamantina, Goyaz, and Cuyabá.

The Supreme Court of Justice (at Rio de Janeiro) is composed of a president, a councillor, and 17 members.

The eleven Courts of Appeals throughout the empire have each a president; that of Rio de Janeiro has 17 members; that of Bahia, 11; that of Pernambuco, 15; those of Maranhão, Pará, Ceará, Minas Geraes, São Paulo, and São Pedro do Sul, 7 each; and those of Matto Grosso and Goyaz, 5 each. There is a Tribunal of Commerce at Rio de Janeiro, Bahia, Pernambuco, and Maranhão; and a Supreme Tribunal of War and Justice at Rio de Janeiro, the president of which is the Emperor.

The army in time of peace comprises a special corps of 401 men; twenty-one battalions of infantry, 10,259 strong; five regiments of horse, 2,495 strong; and three regiments and one battalion of artillery, with one battalion of engineers, 3,381. Total strength of the army, 16,536. The Brazilian army of occupation in Paraguay is made up as follows: Special corps, 21 men; infantry, 1,326; horse, 274; and artillery, 776; making in all, 2,397 men.

By virtue of a new law, the strength of the army in time of war is to be 32,000. The National Guard was disbanded, to be organized anew after the census has been completed.

The police force comprises 6,476 men, of whom 483 were in Rio de Janeiro.

The present naval force of the empire is as follows: 17 iron-clad steamers, 9 steam corvettes, 24 steam gunboats, 6 steam transports, and 4 sail-of-the-line—the total armament being 218 guns, and the total horse-power of the steamers, 7,217. There are besides one school-ship and a brig for midshipmen, both without armament; and also 2 steam iron-clads, 2 steam corvettes, and 1 transport, in process of construction. There are in the navy 15 general staff-officers, 418 first and 152 second class officers, a sanitary corps of 67 men, 27 almoners, 215 accountants, 223 cabin boys, etc., 42 engineers, 2,397 imperial marines, a naval battalion of 945, and 961 apprentices: total strength of the navy, 5,962 men.

From the foregoing remarks it has been observed that the whole of the Brazilian troops have not yet been withdrawn from Paraguay, nor will they completely evacuate the territory of that republic until the pending question of boundaries shall have been settled between the Governments of Ascencion and Buenos Ayres.

The constant and progressive increase in the foreign commerce of Brazil, notwithstanding the multifarious circumstances which not only militate against, but seem to threaten to impede its development, can only be attributed to a patient and ambitious energy on the part of her agriculturists—an energy as surprising as it is real, if it be remembered that the most productive portions of the empire are almost entirely comprised within the tropics.

The value of the coffee-exports alone for the year 1872–'73 surpassed by more than twenty-five per cent. that of the entire exports from the Argentine Republic in the same period. Of the whole coffee-crop nothing need be said, nor could any remarks thereupon enhance the eloquence of the figures just given.

Cotton statistics are no less surprising than those of coffee, the exports of that article having been so prodigiously extended since 1860 as to rank, at the present time, second only to those of the United States.

In the following table are exhibited the total exports from Brazil during the triennium 1870–'73, and the value of each of the principal commodities:

COMMODITIES.	Value, 1870–'71.	Value, 1871–'72.	Value, 1872–'73.
Coffee	$41,397,584	$35,111,309	$37,642,733
Cotton	11,965,149	23,822,804	12,412,189
Sugar	8,938,567	13,961,574	13,862,836
Hides	5,495,718	6,295,066	7,449,043
India-rubber	5,086,535	5,945,429	5,023,662
Tobacco	3,264,502	3,402,117	3,417,402
Mate	1,870,305	2,013,702	1,668,802
Diamonds	1,470,226	567,992	795,757
Rum	541,190	465,960	263,243
Timber	421,689	671,196	561,856
Wool	255,858	269,571	154,663
Hair	226,906	311,942	260,401
Brazil-nuts	161,514	162,423	221,864
Gold	154,055	416,824	219,631
Sundries	2,061,856	3,112,305	2,353,744
Total	$83,234,906	$95,261,368	$107,310,868

The general increase resulting from the foregoing figures may be summarized as follows:

Increase in 1871–'72, as compared with 1870–'71,			$12,026,275
" " 1872–'73,	"	" 1871–'72,	12,049,500
" " 1872–'73,	"	" 1870–'71,	24,075,875
Mean annual increase			$16,050,583 50

The subjoined table shows the value of the exports from the different provinces in the three years above referred to:

PROVINCES.	1870–'71.	1871–'72.	1872–'73.
Rio de Janeiro	$39,083,346	$33,088,884	$51,044,391
Pernambuco	7,542,179	14,174,598	12,730,878
Bahia	9,090,880	11,265,955	8,961,818
Rio Grande do Sul	4,744,753	5,496,671	5,916,950
Pará	6,018,175	6,329,630	6,290,600
Maranhão	2,199,966	2,678,604	1,917,173
São Paulo	6,408,208	8,941,225	10,738,056
Parahyba	409,363	1,574,308	1,292,981
Ceará	2,6.5,563	2,897,333	2,517,234
Alagôas	1,909,537	4,593,799	2,317,130
Sergipe	369,980	1,089,300	1,080,434
Paraná	1,803,390	1,994,268	1,592,397
Santa Catharina	118,480	251,631	141,759
Rio G'de do Norte	575,673	844,314	564,937
Espirito Santo	.....	.....	.....
Piauhy	255,709	233	434,810
Amazonas	.....	.....	.....
Matto Grosso	.....	.....	.....
Total	$83,234,903	$95,261,368	$107,310,868

A fact worthy of remark is, that Rio de Janeiro, though the smallest of all the provinces save four, and though about two-thirds of the commodities shipped therefrom proceed from other provinces, has still by far the largest exports, these being on an average

fifty per cent. larger than those of Pernambuco, and double those of Bahia.

The great Brazilian staple of export, as is seen by the first table, is coffee, of which 276,835,873 lbs. were shipped in 1870–'71; 301,347,796 lbs. in 1871–'72; and 461,510,836 lbs. in 1872–'73. Of the quantity shipped in 1872–'73, no less than 379,389,553 lbs. were from Rio de Janeiro, or about one-third more than the total exports for the whole empire in 1870–'71.

After coffee the two most important commodities of export are cotton and sugar, both of which are most extensively shipped from Pernambuco, although the province of Bahia likewise sends large quantities of sugar to foreign countries.

The total shipments of these two articles from all the ports of the empire in the three years already referred to were as follows:

ARTICLES.	1870–'71.	1871–'72.	1872–'73.	Total.
	Pounds.	Pounds.	Pounds.	Pounds.
Cotton.....	102,342,781	133,795,297	96,159,742	333,297,810
Sugar.....	257,363,366	379,556,806	404,765,292	1,041,687,364

The average price of the cotton of the foregoing table was rather less than 13 cents per lb., and that of the sugar somewhat over 3½ cents per lb.

Next in importance are hides, the value of the exports of which in 1872–'73 was $7,443,023, the province of Rio Grande do Sul alone standing for $5,037,316.

Immediately after, and almost coördinate with, hides is India-rubber, of the total value of the exports of which—$5,032,883—the province of Pará furnished rather more than nine-tenths, or $4,864,023.

Foremost among the tobacco-producing provinces stands Bahia, the value of the quantity shipped therefrom in the triennium 1870–'73 having averaged $2,500,000, while the total exports from all the provinces in the same period did not reach a mean value of $3,500,000.

The value of the imports for the year 1872–'73 reached $75,500,000.

The shipping movements at the various ports of the empire, in the year 1872–'73, were as follows.

ENTERED	Sea-going vessels.	Foreign	9,403	9,818, with an aggregate of 5,254,000 tons.
		Brazilian	415	
	Coasting-vessels			19,985, with an aggregate of 4,350,000 tons.
CLEARED	Sea-going vessels.	Foreign	8,573	8,971, with an aggregate of 5,254,000 tons.
		Brazilian	398	
	Coasting-vessels			19,535, with an aggregate of 4,241,000 tons.

At the end of 1873, there were in Brazil 715 miles of railway in operation,* and 3,319 miles of telegraph.

The submarine telegraph from Pará to Rio de Janeiro, touching at Pernambuco and Bahia, was successfully laid, and was opened to the public service on December 23, 1873.

The completion of this line extends telegraphic communication over an extent of 2,300 miles on the Brazilian coast.

The submarine cable between Lisbon, Madeira, St. Vincent, and Brazil, was opened for service in June, and the cable between Rio Grande do Sul and Montevideo was inaugurated on August 7, thus placing Brazil, the Plate Provinces, and Chili, in telegraphic communication with the Eastern Hemisphere.

The number of letters which passed through the post-office in 1872–'74 was 12,059,681, of which 6,502,684 by way of Rio de Janeiro.

The growth of the national revenue is prodigious. On the accession of the present Emperor in 1832, the entire income of the empire did not exceed $5,500,000; by 1864 it had more than quintupled; and in 1871, though comparatively low—$48,994,892—as compared with the year preceding—$49,708,46—still showed an increase almost tenfold.

The chief source of the revenue is the import and export duties, especially the former, which usually amount to more than one-half of the total income.

The following tables show the items of the national finances for the year 1871–'72:

REVENUE.

Import duties	$29,299,792
Shipping duties	250,230
Export duties	8,614,676
Interest on railway shares	58,073
Receipts—the Dom Pedro II. Railway	2,443,303
Post-Office	393,346
Telegraphs	58,580
Stamp-duties	1,745,404
Mutation duties	1,900,388
Taxes on industries, trades, etc.	1,525,855
Lottery taxes	721,551
Mines	19,737
Receipts extraordinary	1,203,436
Deposits	1,399,569
Slave liberation fund	525,093
Income-tax	252,916
Real-estate tax	1,066,059
Sundries	1,093,144
Total	$52,570,157
From the provinces	10,174,908
Municipal receipts	2,141,261
Total revenue	$64,886,326
Amount of estimated revenue for same year*	52,324,920
Surplus	$12,561,406

EXPENDITURE.

Ministry of the Interior:		
Civil list	$400,000	
Princes, etc	267,500	
Legislative Chambers	368,780	
Public worship	471,427	
Public instruction	449,959	
Sundries	572,434	
		$2,513,100
Ministry of Justice		1,890,284
Ministry of Foreign Affairs		417,996
Ministry of Navy		7,589,985
Ministry of War		7,765,609
Ministry of Finance		19,701,355
Ministry of Commerce		10,912,107
		$50,790,386
Estimated expenditure for same year†		59,952,181
		$9,161,795

* For the names and particulars of the lines, *see* the ANNUAL CYCLOPÆDIA for 1873 and 1873.

* *See* ANNUAL CYCLOPÆDIA for 1873. † Ibid.

Thus it is observed that the revenue exceeded the estimate by $12,561,406; and that the expenditure was likewise inferior to the estimated sum by $9,161,795. But a more prosperous state of things is observable in the excess of $14,095,940 in the revenue over the expenditure.

The estimated budget for 1873–'74 was: revenue, $51,064,940; expenditure, $45,331,370; leaving a surplus of $5,733,570.

That for 1875–'76 stands as follows:

REVENUE.

Receipts ordinary and extraordinary	$53,000,000
Slave liberation fund	566,535
	$53,566,535

EXPENDITURE.

Ministry of the Interior	$3,777,769
Ministry of Justice	2,861,495
Ministry of Foreign Affairs	596,780
Ministry of the Navy	5,799,903
Ministry of War	7,862,297
Ministry of Finance	21,561,206
Ministry of Commerce	8,847,589
	$51,307,025
Surplus	$2,259,510

During the decade, 1864–'73, the revenue has been uniformly in advance of the sums estimated for the respective years.

The paper-money in circulation at the beginning of the year was as follows:

National (March 31, 1874)	$74,773,315
Bank-notes (January 31, February 28, and March 31)	16,774,062
	$91,547,377

These notes are of the following banks and issues:

Bank of Brazil (March 30)	$15,960,000
Bank of Bahia (February 28)	695,587
Bank of Maranhão (January 31)	118,475
Total, at 5 per cent. interest	$16,774,062

The customs receipts for the whole empire in 1872–'73 amounted to $40,705,708, being an increase of $1,567,962, as compared with the years 1871–'72.

The custom-house of Rio de Janeiro alone yielded no less than $19,358,792, against $17,448,679 in the previous year.

All kinds of machinery going into the empire are now free of duty, as are, likewise, the following articles: live trees, shrubs, and plants, of whatever species they may be; sods, roots, bulbs, and in general every thing useful in horticulture and agriculture.

Mr. Partridge, the United States minister to Brazil, had several conferences with the Minister of Foreign Affairs on the subject of duties on American products, representing how desirable it would be to have these relieved of all imposts, as was Brazilian coffee at American ports. But when the new tariff was published (March 31st), the only article on which the duty had been even lightened was found to be kerosene, which is extensively imported. Flour is subject to a duty of 54 cents per barrel; lumber, to about $7 per 1,000 feet; turpentine pays some 9½ cents per gallon; rosin, $1.15 per barrel; and the impost on lard was positively advanced rather more than ¼ cent per pound, the duty on that article being now 4⅝ cents.

The foreign debt on December 31, 1872, stood at	$68,723,111
The installments paid thereon in 1873 amounted to	1,820,000
Amount of the foreign debt on Dec. 31, 1873.	$66,903,111

The following table exhibits the state of the home debt:

Debt at four, five, and six per cent.	$143,954,200
Debt prior to 1827	171,446
Orphans' fund and deposits	15,589,538
Treasury notes (two, four, and six months)	8,053,000
Paper-money	74,773,315
	$241,540,799
Total amount of the national debt	$308,443,910

A new loan was contracted in October for £5,000,000, issued at 98, with five per cent. interest.

The debt of the Argentine Republic to the empire, reduced to $10,308 in December, 1873, was paid off in June; while that of Uruguay amounted, with interest, to £1,245,092.

The chief banks in the empire, eighteen in number, are, with their capitals, etc., in 1872, enumerated in the following table:

BANKS.	Capital.	Remarks.
Bank of Brazil	$16,500,000	Emission, $20,000,000.
London & Brazilian	7,500,000	Branches at Bahia, etc.
English	5,000,000	Branches at Bahia, etc.
Rural	4,000,000	Deposits, $10,000,000.
Commercial	6,000,000	One-sixth paid up.
Campos	500,000	11 per cent. dividend.
Bahia	4,000,000	Emission $900,000.
Bahia Reserve	2,000,000	Half paid up.
Bahia Mortgage	600,000	7 per cent. dividend.
Bahia Savings	1,500,000	7 per cent. dividend.
Bahia Commercial	2,800,000	7½ per cent. dividend.
Bahia Economy	310,000	7½ per cent. dividend.
Pernambuco	.....	In liquidation.
Alagôas	150,000	12 per cent. dividend.
Maranhão	500,000	13½ per cent. dividend.
Maranhão Commerc'l	1,000,000	Half paid up.
Pará Commercial	400,000	Deposits, $1,000,000.
Rio Grande do Sul	500,000	11 per cent. dividend.

The postal treaty, provisionally concluded with the Argentine Republic in 1870, was ratified in December, 1873.

The Bishop of Olinda, whose arrest was ordered on January 2, 1874, was conducted to Rio de Janeiro and arraigned for trial before the Supreme Tribunal of Justice on a charge of contempt and usurpation of the imperial authority. Having been convicted, he was sentenced to four years' imprisonment with labor, and to pay the costs of the legal proceedings. The sentence was afterward (March 12th) commuted to simple imprisonment for four years in the fortress of Santa Cruz. On being informed that the order for his arrrest emanated from the Supreme Tribunal of Justice, he denied the competency of that or any other civil court to take cognizance of acts asserted by him to be of a purely spiritual character, and consequently amenable to the pontifical authority only.

The rumor that a hostile alliance of South American powers was a subject of debate in a secret session of the Argentine Congress, was contradicted by the Argentine Minister of Foreign Affairs in a note addressed to the Brazilian envoy, declaring that the government would enter into no alliance importing a war with the empire, and that, while differing with the Rio de Janeiro Government in the Paraguay question, it would confine itself to the execution of the remainder of the agreement of November 19, 1872, leaving the boundary question to the action of time.

On July 1, 1874, Secretary Fish handed to Senhor R. F. Torreão de Barros, of the Brazilian legation at Washington, the sum of $96,406.73, in refundment of the payment made by Brazil on September 30, 1867, upon the reclamation of the United States Government, as an indemnity in the matter of the brig Caroline. This spontaneous act of justice elicited the encomiums of the Petropolis Court and of all the diplomatic agents at Rio de Janeiro.

The sanitary state of many portions of the country was very unsatisfactory; yellow fever, small-pox, and typhoid fever, raged, now simultaneously, now alternately, especially at Rio de Janeiro, where the mortality reached an alarming proportion; but the sufferings of the people were materially alleviated by the prompt and efficacious assistance procured by public and private benevolence.

The terms of a consular convention with Great Britain, and of a treaty of extradition with Belgium, were ratified; but the all-absorbing topic in political circles during the year was the organization of the military force, and of the police, to which subject attention was particularly called by the Emperor in his speech at the opening of the Legislative Chambers in May.

BRISTED, Charles Astor, an American author and man of letters, born in New York City in 1820; died in Washington, D. C., January 15, 1874. He was the only son of an Episcopal clergyman of New York City, but of English birth, and his mother was the eldest daughter of the late John Jacob Astor. He graduated from Yale College with high honors in 1839, and soon after sailed for Europe, and spent five years in Trinity College, Cambridge, whence he graduated in 1845, taking numerous prizes, and being made foundation scholar of the college. He married in 1847, and, possessing an ample fortune, traveled extensively in Europe, amusing himself by writing for newspapers, periodicals, and magazines, on social and ephemeral topics, generally over the *nom de plume* of "Carl Benson." In this way he was a frequent and welcome contributor to *Fraser's Magazine*, the *Knickerbocker*, the *Whig Review*, New York *Spirit of the Times*, *Clipper*, *Galaxy*, and *New York Evening Post*. There was, nevertheless, a cynical tone to his writings, which increased as he grew older. He did not hesitate to discuss any topic, great or small, which struck his fancy, and his wide culture and profound scholarship made his essays always attractive to readers of light literature. At times he essayed the severer labor of book-making. His published works comprise an edition of "Selections from Catullus" by an Eton assistant master, which he revised, adding notes of his own; a "Letter to the Hon. Horace Mann," a reply to his tract entitled "Thoughts for a Young Man;" a series of sketches of New York society life, first printed in *Fraser's Magazine*, which appeared in book-form in 1852, under the title of "The Upper Ten Thousand;" and what was probably the most useful as well as the most extended of his works, "Five Years in an English University," which told the story of university-life in an entertaining and instructive way. To this last volume were added, in an appendix, his college orations and essays, together with specimen examination papers, the whole making a work of considerable interest to scholars, as the interior movement of an English university was then even more novel to American readers than now. A new edition of this work was published, with considerable additions, in 1873. Mr. Bristed was one of the trustees of the Astor Library from its origin. After spending many years in Europe, at its gayest capitals and resorts, where he was the associate of many of the most eminent men of the time, he returned, a few years since, to this country, and latterly made his home in Washington, where he was constantly in society. He suffered much from *ennui* during the latter years of his life.

BROWN, John Carter, a wealthy and benevolent citizen of Providence, R. I., a liberal patron of education, born in Providence, in 1797; died there June 10, 1874. He was a descendant of Rev. Chadd Brown, a Baptist minister, who fled from persecution in Massachusetts in 1636, and was the son of the late Nicholas Brown, the liberal benefactor of Brown University, and the grandson of the first Nicholas, who aided in its organization. Mr. Brown graduated from Brown University in 1816 in the same class with Mr. Robert H. Ives (subsequently his partner), Bishop Smith, of Kentucky, Dr. J. Mauran, Rev. Dr. Solomon Peck, and others. The year of his graduation he entered his father's counting-house, and in 1832 became a partner in the firm, which has continued to bear the same title—Brown & Ives—for more than eighty years. But, though an active business-man, and deeply interested in great enterprises of commerce and manufactures, Mr. Brown never relinquished his scholarly habits. He was a man of remarkable intellectual culture, and kept himself constantly informed on all scientific topics of the time. He early commenced the collection of a library, at first of the Aldine and other rare editions of the classics, and early copies of the Bible in all languages; but soon drifted into the specialty of American history, general and

local, and of the early voyages of discovery to this continent. With ample resources and a most commendable zeal he prosecuted this work for more than forty years, and had accumulated nearly all the publications extant in any language relating to America, his collection being, in the opinion of those best qualified to judge, by far the most complete in the world. This magnificent library was freely placed at the service of scholars, and in at least three instances he sent to eminent historians across the Atlantic books which, if they had been lost, could not have been replaced. One of these, Sir Arthur Helps, has in one of the volumes of his "Spanish Conquest in America" made a graceful and glowing acknowledgment of this unexampled courtesy. But Mr. Brown was also liberal in his gifts to educational purposes. To Brown University he gave during his life and by his will $160,000; to the Redwood Library at Newport, $5,000; considerable sums to the Providence Athenæum; large sums during his life to the Insane Asylum, and $5,000 at his death; and $25,000 to the Rhode Island Hospital.

BURT, NATHANIEL C., D. D., an eminent Presbyterian clergyman, author and scholar, born in 1825; died in Rome, Italy, March 4, 1874. We have no knowledge of Dr. Burt's early life, but he graduated from Princeton College in 1846, and from Princeton Theological Seminary in 1849. He was ordained at Springfield, Ohio, June 1, 1850, and, after a pastorate of five years there, was called to the Franklin Street Presbyterian Church in Baltimore in 1855, and in 1860 to the Seventh Presbyterian Church in Cincinnati. The condition of his health was such that he was compelled to spend a year or more abroad, and he accordingly visited Europe in the summer of 1866, and, after spending some months in the south of Europe, in the winter of 1866–'67 made the tour of Egypt, and in the spring and early summer of 1867 went over every portion of the Holy Land. He had carefully prepared himself for this exploration by a critical study of every thing extant on the geography and history of Palestine; but his investigations added much to our knowledge of the localities and sites of places mentioned in the Scriptures. The results of this tour were given to the public in 1868 and 1869 in his "The Far East;" "Hours among the Gospels;" and his ablest and most valuable work, "The Land and its Story." Compelled by continued ill-health to relinquish the pastorate in 1869, he was for a short time President of the Ohio Female College, a position for which his extensive and varied culture eminently fitted him. Finding, however, that he could only enjoy tolerable health in the mild climate of Southern Europe, he undertook the care of young ladies, who desired to finish their education in Europe, and enjoy a sight of its leading capitals. He spent his winters with his family in Rome, Dresden, or Nice, and made excursions with his pupils, of whom he usually had ten or twelve under his charge, to the principal cities of the Continent, keeping up their instruction meantime. It was on one of these excursions from Nice to Rome that he was suddenly attacked with hæmorrhage from the lungs, and died in a few minutes. In addition to his works already mentioned and some manuals for his pupils, Dr. Burt had written much for the religious periodicals and reviews.

C

CALIFORNIA. Public affairs in this State during the past year have been unusually quiet. No general election was held, and there was consequently no political campaign. The Legislature, which assembled on the first day of December, 1873, continued in session till March 30, 1874. Much legislation was accomplished during this time, but it was chiefly of local interest. In respect to the important measures which consumed much time, the session is perhaps more marked for what was not accomplished than for the bills that became laws. One of the most important subjects considered by the Legislature had reference to the railroads of the State. Early in the session the "Freeman bill," intended to regulate the rates for passengers and freight on those railroads, and to prevent unjust discrimination, was introduced in the Assembly, where it met with much favor, and was passed. It was not passed by the Senate, however, and failed, therefore, to become a law. A bill having the same object in view as that of the "Freeman bill" was passed by the Senate only a day or two before the final adjournment of the Legislature; but this also failed to become a law. During the session acts of incorporation were passed for constructing railroads from Colfax to Nevada City, Los Angeles to Independence, Marysville to Knight's Landing, and San Luis Obispo Bay to Santa María. In each act of incorporation there are limitations and regulations as to fares and freights. There is also a prohibition as to freight or passenger discriminations, and as to granting free passes. The nature of this prohibition will be seen from the following provision contained in the act incorporating the Colfax & Nevada City Railroad:

> No discrimination shall be made between persons, parties, or localities, as to fares and freights, or the transportation of goods; and no free passes shall be issued or given to any person or party to travel the road, except those who are actually engaged in the business of the road: any violation of this section shall be deemed a misdemeanor.

Numerous amendments to the constitution—

so numerous as to present an almost new constitution—were agreed upon by the General Assembly, and referred to the Legislature next to be chosen. The Legislature also published a recommendation to the people of the State to vote, at the next general election for members of the Legislature, "for or against calling a convention to revise and change the constitution of this State." Among other measures of some importance were acts reapportioning the senatorial districts, and fixing the number of Senators and members of the Assembly from each; providing for a system of irrigation in Los Angeles County; regulating the sale of mineral lands belonging to the State, and fixing the price at $2.50 per acre; appropriating $175,000 for the construction of a branch State-prison near the town of Folsom, in Sacramento County; and $600,000 for the completion of the Napa State Asylum for the Insane.

An important work done by the Legislature was the revision of the school laws. Under the amended school system, the State Superintendent of Instruction is elected by the people for four years. He is required, among other duties, to collect and compile the school statistics of the State, report annually to the Controller, before the 10th of August, the number of children in the State between five and seventeen years of age, and to apportion the school-fund. The State Board of Education comprises the Governor, Superintendent of Public Instruction, Principal of the State Normal School, and the School Superintendents of San Francisco, Sacramento, Santa Clara, Alameda, Sonoma, and San Joaquin Counties. Boards of education are elected in cities under the provisions of special statutes. County superintendents are elected for two years, and, besides other duties, apportion the school moneys of each district, and make annual reports to the State Superintendent. There is a State Board of Examination, composed of the State Superintendent and four teachers appointed by him, which grants life-diplomas, State-diplomas for six years, and State-certificates respectively for four, three, and two years; also a County Board of Examination, comprising the County Superintendent, and not less than three teachers appointed by him, which grants certificates of three grades. County or City Boards of Examination grant certificates only upon actual examination. The law requires all schools to be classified into first, second, and third grades, unless otherwise provided by special statute. Separate schools must be provided for children of African or Indian descent; otherwise, such children must be admitted into the schools for whites. The statute contains this important provision concerning female teachers: "Females employed as teachers in the public schools of this State shall in all cases receive the same compensation as is allowed male teachers for like services when holding the same grade-certificate." Women over twenty-one years of age, and citizens of the United States and of California, are eligible to all educational offices within the State, except those from which they are excluded by the constitution.

The school-fund amounts to $1,417,500. The amount in the State Treasury in March, subject to apportionment, was $316,680, of which $33,244 was derived from interest on school-lands; $44,280 from bonds held in trust; and $239,631 from property-tax. In addition to this, a school-tax is levied by the counties. The "Tuttle bill," which became a law in 1874, provides for an expenditure for school purposes of $1,000,000, or nearly four times as much as the schools received during 1872 or 1873. The compulsory-education law of 1874 requires all children between eight and fourteen years of age to be sent to school two-thirds of the time during which a public school may be taught, under a penalty of not more than $20 for the first, or $50 for each subsequent violation.

The total receipts for school purposes in 1873–'74 amounted to $2,551,799; total expenditures, $2,113,356; total teachers' salaries, $1,434,867; school libraries and apparatus, $29,245. There were 1,462 school districts, and 1,868 schools; 882 male and 1,454 female teachers; 97,681 pupils in the public schools, with an average attendance of 72,972, and 12,507 in private schools.

The "local-option" law passed by the Legislature at this session led to an important decision in the Supreme Court, which held the statute to be unconstitutional. The act had been passed "to permit the voters of every township or incorporated city to vote on the question of granting licenses to sell intoxicating liquors." Pursuant thereto an election was held in the fourth township of Contra Costa County, at which a majority of the votes were cast against license. The petitioner was afterward convicted of an alleged violation of the law, as declared by the statute, and sentenced to imprisonment in the county jail. The opinion of the court, written by Mr. Justice McKinstry, and concurred in by Chief-Justice Wallace and Mr. Justice Niles, held:

1. This statute is void, because it did not become a law when it left the hands of the Legislature; but was to take effect only when it should be approved by a majority of the people of a township, and then only in the township where thus approved.
2. That this statute is not a law conferring upon towns any governmental or police powers.

Justices Rhodes and Crockett dissented. The grounds upon which this decision was based were, that the power to make laws, conferred by the constitution on the Legislature, cannot be delegated by the Legislature to the people of the State, or to any portion of the people. Our Government being a representative republic, and not a simple democracy, an act, in order to become a law, "must be passed through both Houses of the Legislature, be signed by the Speaker of the Assembly, and

be approved by the Governor; or, if vetoed by the Executive, must again be passed by the constitutional majority. Thus, and thus only, can a general statute be enacted." It being argued that it was not a delegation of the law-making power when the Legislature enacted that a law should take effect provided the people of the State or of a district should ratify it, the court remarked that this position had been upheld by courts of high character, but thought that the decisions in which it had been denied were sustained by better reasons. The court admitted that a statute might be conditional, its taking effect being sometimes made to depend upon a subsequent event. This last proposition was illustrated by the case of The Cargo of the Brig Aurora *v.* The United States (7 Cranch, 382), in which the validity of a provision of the "non-intercourse law" was upheld. The provision was to the effect that in case Great Britain or France should revoke or modify its edicts previously issued—so that they should cease to violate the neutral commerce of the United States—the trade suspended by the law should be renewed. It will be observed that in this instance the members of Congress exercised their own judgment, and simply determined that trade should be suspended while the Orders in Council or edicts should continue in operation.

In drawing the distinction between a statute being made dependent upon a condition of this kind and the one at bar, the court said:

> But it does not follow that a statute may be made to take effect upon the happening of any subsequent event which may be named in it. The event must be one which shall produce such a change of circumstances as that the law-makers—in the exercise of their own judgment—can declare it to be wise and expedient that the law shall take effect when the event shall occur. The Legislature cannot transfer to others the responsibility of deciding what legislation is expedient and proper, with reference either to present conditions or future contingencies. To say that the legislature may deem a law to be expedient, provided the people shall deem it expedient, is to suggest an abandonment of the legislative function by those to whom wisdom and patriotism the constitution has intrusted the prerogative of determining *whether a law is or is not expedient*. Can it be said in such a case that any member of the Legislature declares the prohibition or enactment to be expedient?
>
> A statute to take effect upon a subsequent event, when it comes from the hands of the Legislature, must be a law *in presenti* to take effect *in futuro*. On the question of the expediency of the law, the Legislature must exercise its own judgment definitely and finally. If it can be made to take effect on the occurrence of an event, the Legislature must declare the law expedient if the event shall happen, but inexpedient if the event shall not happen. They can appeal to no other man or men to judge for them in relation to the present or future propriety or necessity; they must exercise that power themselves, and there perform the duty imposed upon them by the constitution. But in case of a law to take effect, if it shall be approved by a popular vote, no event affecting the expediency of the law is expected to happen. The expediency or wisdom of the law, absolutely considered, does not depend on the vote of the people. If it is unwise before the vote is taken, it is equally unwise afterward. The Legislature has no more right to refer [illegible] people, that is to [illegible] are sovereign, but [illegible] erciser in the made [illegible] tion. (Santo *vs.* Elmore, 4 Cal., 81; Locke *vs.* Hays, 7 Id.)

In support of the validity [illegible] urged that the general [illegible] the sale of intoxicating [illegible] and the "local-option" [illegible] as one law, and that as [illegible] not left to the people [illegible] to the law, but only [illegible] licenses should be [illegible] tain this position, [illegible] Court of New Jersey [illegible] distinction seems to have [illegible] that State a statute [illegible] itself, contained a prohibition [illegible] license, and then left to [illegible] *meeting* to say whether [illegible] granted. The court, however, [illegible] tioned the soundness of this [illegible] pointed out an essential [illegible] circumstances of that case [illegible] consideration. For in the [illegible] the determination of the [illegible] by the Legislature to the town [illegible] in the California case, it was [illegible] the voters of a town, but to [illegible] torial subdivision of a county. [illegible] pointed out that a wide distinction [illegible] tween the system of town government [illegible] of a city, county, or subdivision [illegible] "The marked and characteristic [illegible] in the language of Chief Justice [illegible] sachusetts, "between a town [illegible] that of a city, in that in the [illegible] qualified voters meet, deliberate [illegible] whereas, under a city government [illegible] done by their representatives." [illegible] out the fact that, although the [illegible] made it imperative for the Legislature [illegible] tablish a system of county [illegible] ments," such a system of "[illegible] had, nevertheless, never been [illegible] court says:

> The Legislature of California [illegible] lished a "system of town [illegible] "town" is nowhere used in the [illegible] in which it is employed in the [illegible] supervisors are authorized [illegible] divide the counties into "[illegible] authorized to divide them into [illegible] and supervisorial districts; but the [illegible] in any one of the districts [illegible] same as that included within the [illegible] ship. No township government [illegible] lished. The only officers mentioned [illegible] laws as township officers are [illegible] and constables. The township has [illegible] given personality nor any other of the [illegible] corporation; no official has been [illegible] to call the inhabitants or voters together [illegible] pose of consultation and joint action [illegible] been passed providing for any [illegible] regulating the mode of conducting [illegible] declaring the result of the action of [illegible] or voters when assembled; and [illegible] themselves, nor any boards of officers [illegible] voters, have ever been constituted in the

sembly for the purpose of adopting prudential rules or regulations in respect to matters placed under the control of the town governments.

The exercise by the town governments, when they shall be established, of the power to make local rules will coexist with the power of the State Legislature to make general laws, and will apparently (but apparently only) constitute an exception to the rule, that the power to make laws, placed by the constitution in the Senate and Assembly, cannot be delegated. When the mandate of the constitution shall have been obeyed, and a "system of town governments" shall have been established, and when local legislatures shall have been organized under that system, the State Legislature may confide to members of such local legislatures the task of deliberating and acting upon matters purely local in their nature. The Legislature may give to the town governments, when formed, the right to make local rules; but the Legislature has no more right to delegate to the people living within certain territorial limits, but who have no distinctive political character or governmental organization, the power to make laws, than it can delegate the same power to all the people of the State.

The statute of March 18, 1874, under the provisions of which the prisoner was convicted, does not itself establish any system of town government. The only officers who are directed to perform any acts are county officers; the election is to be ordered by, and the returns made to, the supervisors. There is no provision for an assemblage of the people of the town for deliberation; the vote to be taken can in no way be said to express the result of such deliberation. The constitution intended that the opinion of a majority should govern as to town matters, but that it should be an "organically expressed" opinion. The power to enact laws must be employed by the State Legislature; that to make by-laws for a town by the local legislature; to become law or by-law it must first be considered by the appropriate deliberative body. The statute under consideration simply permits a species of *plebiscitum* with reference to a particular subject, in which the only option of the people of a township is to say "yes" or "no" to a complicated project. After the spasmodic effort at the polls, the "town government" (if this can be called one) subsides into inaction, without any form or power of self-vitalization, until again aroused to the exertion of its single function by the supervisor of the county. The statute furnishes neither a system nor a government.

When M. de Tocqueville, and other writers, who have studied our institutions in a philosophical spirit, have expressed their admiration for the system of town governments existing in New England, as affording an excellent school of preparation for the discharge by the citizen of his duties to the State, it was in view of the public discussions in reference to affairs of local, but sometimes absorbing interest, at which all the qualified inhabitants of the town could be present, and in which all were authorized to take part. To substitute for such local legislation, where measures receive the sanction of the law only after public interchange of opinions, the machinery of a "primary election" would be to degrade the whole system. That cannot be called a system of town government in which no deliberative assemblage is provided for, and in which a local law is adopted by the ballots of perhaps a bare majority, who vote secretly, and without consultation with the rest of the voters; who are actuated by motives which need not be publicly avowed, or controlled by reasons the weakness of which would be exposed by a public discussion.

On the 19th of November a State Temperance Convention was held in San Francisco, the object of which was the formation of a political temperance party. The convention was largely attended. The views of the delegates were expressed in the following resolutions:

Resolved, That no liquor shall be sold where other merchandise is sold, and no merchandise shall be sold where liquor is sold; and that all those who sell liquor shall be held responsible for its effects upon the individuals purchasing it.

Resolved, That the local option law has been indorsed by the popular sentiment of California, and therefore that this convention desire the embodiment of some form of legislative enactment of the principle of that law, *in presenti* and not *in futuro*.

Resolved, That the education of the masses is the safeguard of American freedom; therefore we are in favor of mingling labor with our common-school system, so as to train the mind of the youth to appreciate industry and ingenuity.

Resolved, That the national and State laws creating an agricultural, mechanical, and mining college in the University of California, are necessary for the development of the resources of the country, and we insist upon their theoretical and practical introduction into the university, with all the rights and privileges accorded to the other departments in the college of letters.

Resolved, That we approve of the eight-hour system of labor as a social and national blessing, and regard the eight-hour law of the State and nation as a progressive step in civilization, whereby we shall secure a more intelligent and patriotic citizenship, and more energetic and ingenious mechanics.

Resolved, That it is wrong in principle to so employ convict-labor as to come in competition with the occupations of honest men and women; therefore we demand reform in the management of the penitentiary of this State, so as to give prisoners employment that will not in any way injure the producing population.

Resolved, That we are decidedly in favor of the immigration of the Caucasian race, but look upon the introduction of the Chinese into this country as injurious to those of our people who work for a living, and nationally unsafe and socially demoralizing to the present and coming generations.

Resolved, That associations having influences in favor of the masses have our decided approval, and we look upon the Trades Unions and Grangers as common educators of the mechanics and farmers, whereby we shall have a greater degree of social progress and equality among the working-classes.

A resolution was also adopted recognizing the coöperation of women in the cause of temperance, and calling upon the women of the State to unite in the work.

Also, a resolution providing for the formation of a State Central Committee to work with a quorum of fifteen members.

The territory between the Gulf of California and the southern boundary of the State has been recently explored by private enterprise, and valuable facts acquired. This is the region of the Great Desert. The Cocopah Mountains extend over this desert for about 50 miles, and are about 1,000 feet high. They are supposed to be rich in gold, silver, and copper. On the northwesterly side of this range is Lake Maquata, a considerable body of salt-water, which is fed sometimes by the high tides from the gulf, and at other times by the overflow of the Colorado River. On the southerly side of the Cocopah Mountains is a large body of land, having an alluvial soil, and is every way suitable for agricultural purposes. In this district are a great number of mineral

springs and volcanoes, and a lake of fresh water (Lake Chapman), whose waters flow northward down New River. North of what is known as the Colorado Desert is the Mohave Desert, and, farther on, the Amargosa or Death Valley. The two latter are below the level of the sea, and both are really connected with the greater one, and constitute one desert.

The engineer making the survey found that New River, a branch of the Colorado, could be turned into the desert so that all the lower levels, embracing the barren and worthless part, would be covered with water, leaving the mountains and the fertile districts above water.

The theory is that this great desert furnace can be cooled by covering a large and now worthless area with water, at comparatively small expense. This theory is indorsed by the engineer, who holds that were the desert a sea it would send up a column of atmosphere charged with moisture, which, meeting the colder currents from the ocean, would precipitate frequent showers, and thus change large tracts of country from barrenness to fertility. The rain-currents moving from the southeast toward the northwest, cross the desert, the moisture falling to the upper edge, at which point the rain disappears, it having been absorbed by the heated air of the plains. The engineer observed this phenomenon for nearly a month, including parts of July and August of the present year.

Death Valley, in California, has also been explored recently by the United States Government Survey, sent out to explore the Western Territories. From reports made by officers of this expedition, it appears that Death Valley, in California, is a detrital sink of unique physical characteristics. This whole region presents a series of valleys or detrital plains, each entirely inclosed by the ridges of Cordilleras that are more or less distinct as a series of mountain-masses. The "Death Valley" proper is one of the most remarkable of all known interior continental depressions, and has portions near the centre of its axial line below the level of the sea, although far inland, and lying much to the north of the lower border of the great Interior Basin. It is the sink of the Amargosa River, which has its source in the areas of drainage formed to the south and east of Belmont, Nevada, and traverses the desert of that name while passing southward, until, reaching latitude 35° 41′ 5″, it makes an abrupt angle to the west, and thence, at right angles to the north, reaches the point of greatest depression, a little less than three hundred feet below sea-level, in the heart of Death Valley proper. This valley, of the ordinary oval form, is fully seventy miles in length, varying from five to fifteen miles in width, surrounded by frowning mountains of volcanic and sedimentary origin, the Telescope Range, rising higher than 10,000 feet. The line crossing this dismal area from the mouth of Death Valley Cañon to the thermal springs in Furnace Creek, presenting a labyrinthine maze of efflorescent saline forms, creates at the level of vision a miniature ocean, the vibration of whose contorted waves has a sickening effect upon the senses. The lurid glare, horizoned by the bluish haze radiated from the mountain-sides, appears focused to this pit, though broad in expanse. It seems, coupled with the extreme heat, to call for the utmost powers of mental and physical endurance.

The journey through the Valley of Death occasioned the utmost apprehension evinced through the entire season. To this were added the effect of the fearful cloud-burst experienced while among the Telescope Mountains, to the west, and the absence of the guide, who had ventured toward the northwestern arm of the valley, it was feared, to return no more. The transit of forty-eight hours in a temperature that remained at 117° Fahr. at midnight, so exhausted both men and animals, that further travel was rendered precarious.

The coinage at the United States Mint in San Francisco for the years ending June 30, 1873 and 1874, is shown in the following statement:

GOLD COINAGE.	1872-'73.	1873-'74.
Double eagles	$16,612,000	$21,960,000
Eagles	140,000	120,000
Half-eagles	200,000	155,000
Quarter-eagles	15,000	67,500
Total gold	$16,967,000	$22,302,500
SILVER COINAGE.		
Trade-dollars	$9,700	$2,122,000
Half-dollars	18,500	241,000
Quarter-dollars	16,000	129,000
Dimes	16,000	59,500
Half-dimes	34,300	.....
Total silver	$94,500	$2,550,500
Add gold	16,967,000	22,302,500
Total gold and silver	$17,061,500	$24,853,000

The coinage of trade-dollars is comparatively a new feature. Notwithstanding the large amount of coin turned out, the mint had to close for the annual settlement with orders unfilled. During the fiscal year of 1871-'72 the total coinage at the mint was $18,745,500, of which $955,500 was in silver, and the remainder in gold, against $18,616,775 for the year 1870-'71, including $751,775 in silver.

CARLTON, Rev. THOMAS, D. D., a Methodist clergyman, long connected with the publishing interests of his denomination, born in New Hampshire in 1808; died in Elizabeth, N. J., April 16, 1874. In early childhood his parents removed to Lockport, Niagara County, N. Y., where he enjoyed good educational advantages. He united with the Methodist Episcopal Church in early youth, and in 1829 was received on trial as a preacher by the Genesee Conference, in which he continued to labor for the next twenty-three years. Of these, thirteen were spent in the pastorate, seven as presiding elder, and three as agent for the Genesee Wesleyan Seminary. In this time he developed remarkable business and financial abilities in

church matters, as well as in the more direct labors of the ministry. In 1848 he was a member of the Quadrennial Conference, and was then made a member of the book committee at New York. In 1852, he was elected by the General Conference principal or senior book agent of the Book Concern, and by repeated reëlections was retained in that position for about twenty years. During the years of his administration, the Concern grew steadily in all its financial interests, enlarging its operations, and nearly doubling its capital, besides paying for objects entirely outside of itself not less than $800,000. During all the time of his book agency Dr. Carlton was also the treasurer of the Methodist Missionary Society; and while in that office more than $8,000,000 passed through his hands, for all of which service he received no compensation. Nor was there ever a note or other paper of the Society dishonored at maturity, though to preserve its honor it sometimes became necessary to borrow large amounts, for which not infrequently his own personal securities were pledged. His accounts, though carefully audited at each year's end, never showed any discrepancies; and at his retirement, a little more than a year before his death, the Missionary Board bore a hearty testimony to his ability and conscientious fidelity in their service. He was much honored and esteemed in Elizabeth, where he had been active in building up a strong Methodist interest, had been twice a member of the City Council, and had been elected, a few months before his death, city treasurer. He was also a member of the Board of Managers of the Methodist Missionary Society, a director in the Shoe and Leather Bank, and in the Home Life-Insurance Company. To high abilities he joined rare social powers. He received the degree of D. D. from Wesleyan University.

CHANG and ENG, the well-known Siamese twins, born at Bangesau, Siam, April 15, 1811; died near Mount Airy, N. C., January 17, 1874. Their father was Chinese, and their mother Chino-Siamese. The connection of the two was by a fleshy and partly cartilaginous band extending from the ensiform cartilages of the breast-bones down to a point below the umbilicus, or navel, of each. There had been but a single umbilical cord attached to the middle of the under side of this band, and while the band (which was eight or nine inches in length, about eight in circumference, and two and a half in diameter—its upper or outer surface being convex, and the under or inner concave) was cartilaginous and nearly insensible except at its median point, there was evidently some intercommunication through it to the viscera of both. The breast-bones were so nearly joined that they were naturally face to face, and could never have occupied the position of back to back. What this connection was was a disputed point, which could not be settled until a careful *post-mortem* examination was made. It was then found that there were no direct blood-vessels or nerves connecting either the circulation of the blood or the nervous fluid through both bodies, but that the peritonæum or membrane covering the bowels was extended in *two* pouches from the abdomen of Chang passing through the band into the abdomen of Eng, and that *one* similar pouch from the peritonæum of Eng passed through the band lying between the two from Chang, into the abdomen of Chang. These pouches contained small blood-vessels coming from the livers of each (which were in both close to the cord), and these blood-vessels were covered with a thin layer of genuine liver-tissue. A separation or division of the cord would therefore have been almost certainly fatal to both. The twins differed considerably in size and strength as well as in disposition, Chang being considerably the larger and stronger, but also the more irritable and intemperate, while Eng was smaller, but sober and patient. They came to this country in 1829, and were publicly exhibited in America and Europe for nearly twenty-five years. Having accumulated a joint fortune of about $80,000, they settled down as farmers in North Carolina, and at the age of forty-four or forty-five married two sisters, by whom they had a number of children (Chang six, and Eng five), of whom eight with the two widows survive them. Two of the children were deaf and dumb; the rest had no malformation or infirmity. They lost a part of their property, which consisted partially of slaves, by the war, and were very bitter in their denunciation of the Government in consequence. After the war they again resorted to public exhibitions to regain their lost wealth, but were not very successful. Their lives were embittered by their own quarrels, and the bickering of their wives; and they returned home, after a decision by the most eminent European surgeons that the severing of the band (which both desired) would prove fatal, with their tempers much soured, and their spirits depressed. It should be said, however, that they had always maintained a high character for integrity and fairness in dealing, and were much esteemed by their neighbors. In 1870 Chang had a paralytic stroke, and was subsequently weak and ill, while Eng's health was much improved. Chang died first, probably from acute laryngitis, or congestion of the lungs, the result of a ride in extreme cold weather, and Eng, about two and a half hours later, probably from nervous shock at his brother's death, and perhaps, also, from some mysterious influence resulting from their connection. The bodies were brought to Philadelphia and carefully examined by a corps of eminent physicians. There are but five or six cases of these "double monsters" on record; none of them united just as these were, and none who had attained such an age.

CHEMISTRY. *Influence of Color on Reduction by Light.*—This subject has been investigated with great thoroughness by Mr. M.

Carey Lea, of Philadelphia, and the results published in the *American Journal of Science and Arts*. In those metallic salts which suffer reduction under the action of light, the nature of the acid has much to do with the facility of reduction; thus ferric oxalate and citrate are much more easily reduced than ferric sulphate. Further, the reducibility of a salt is, as a rule, influenced by the substances in contact with it: thus silver chloride, when alone, changes rather slowly to violet; more rapidly, and to a deeper violet, when in contact with silver nitrate; on certain sorts of organic matter being added, the change is still more rapid, and the color produced may be intense black. It is affirmed by Dr. Hermann Vogel that in the case of silver bromide such contact not only affects its general sensitiveness to light, but also modifies its impressibility to rays of different refrangibilities. According to Vogel, this change follows a definite law, viz.: the colored substances, absorbing certain rays, increase the impressibility of the bromide to those rays which they absorb. Thus a colored substance which absorbs the yellow rays and radiates the rest of the spectrum, increases the sensitiveness of silver bromide to the yellow rays. The existence of this law Mr. Lea was unable to verify. Below is an abridged account of his experiments.

1. *Ferric Salts.*—Strips of paper were first strongly colored with aurine, with aniline blue, and with aniline green, and then impregnated with *ammonia ferric oxalate* and exposed, side by side with ordinary white paper similarly impregnated, to a spectrum (an artificial spectrum made by coating strips of glass with suitable transparent pigments). After exposure both papers were plunged into a solution of ferridcyanide of potassium, which produced Turnbull's blue in the reduced portions, the remainder continuing white. The result of three experiments was to show the aniline blue to be without influence. The aniline green slightly diminished the impressibility, but not more in one part than in another. The aurine produced this effect more strongly. Neither coloring matter exerted any specific influence on the impressibility by any particular portion of the spectrum.

2. *Potassium Bichromate.*—In contact with *aurine* this salt showed no change of action in its behavior to white, blue, or violet light, nor in the orange or the red. In the yellow it was less impressed than the bichromate strip of paper without aurine. Papers colored with aniline blue and green acted like the plain bichromate, but were perhaps a trifle less sensitive to the whole spectrum.

3. *Potassium Ferridcyanide.*—Papers colored with aurine, coralline, aniline red, blue, and green, and mauveine, were exposed, the reduction being brought about with ferric ammonia oxalate. All these six colors diminished the impressibility of the ferridcyanide throughout the whole range of the spectrum, and no relation could be traced between the color used and the impression of particular rays.

4. *Uranic Nitrate.*—The same coloring-matters used. With short exposures to violet and white light only the mauveine appeared to give a slight increase of sensitiveness; but as the increase extended equally to white and violet, no conclusion could be drawn as to influence on specific rays. The coralline diminished the general sensitiveness a good deal, the aurine nearly destroyed it, and the three aniline colors diminished it a little.

5. *Silver Chloride.*—Here coralline, rosaniline, and red litmus-paper, increased the sensitiveness to blue and violet; mauveine and aniline green were without effect, and aurine diminished sensitiveness to all six.

6. *Silver Iodide.*—Here a violet-blue aniline color increased the sensitiveness to yellow and green rays; but also had a similar effect upon the violet. Aniline green increased the sensitiveness to violet, blue, green, and yellow rays, but not to the orange and red (the colors approximating to its own color), while, on the contrary, coralline increased the sensitiveness to the rays most different from its own color. Hence no definite law appears.

7. *Silver Bromide.*—Here colorless substances as well as those possessing color were placed in contact with the salt to be reduced. The result was that none of the many substances used exerted a more discriminating action on the sensitiveness to individual rays than salicine, a perfectly colorless substance: it rendered the silver bromide as sensitive to the red ray as to the green. The author's conclusion is, that "there is no general law connecting the color of a substance with the greater or less sensitiveness which it brings to any silver haloid for any particular ray."

The Centennial of Chemistry.—The celebration of the hundredth anniversary of the discovery of oxygen gas was one of the notable events of the year 1874. The idea of this centennial originated with Prof. H. C. Bolton, of Columbia College, New York, who, in a communication to the *American Chemist*, enumerated the many important discoveries in chemistry which signalized the year 1774, and which mark that period as the starting-point of modern chemical science. The project was favorably received, and, at the suggestion of Prof. Rachel L. Bodley, Northumberland, Pa., where Priestley lived after coming to this country, and where he is buried, was selected as the place of meeting. In answer to the call, nearly one hundred chemists assembled at Northumberland on July 31st. Dr. C. F. Chandler was chosen president of the meeting, and was conducted to the chair by Priestley's grandson, Dr. Joseph Priestley. The more prominent features of this interesting celebration were, an address on the "Life and Labors of Dr. Priestley," by Prof. Henry H. Croft, of University College, Toronto; the reading of several of Priestley's letters written while residing in this country; an address, "A Century's Progress in Theoretic Chemistry," by Prof. T. Sterry Hunt; a memorial tribute at the grave of Priestley, delivered by President Coppee, of Lehigh University; a "Review of the Century's Progress in Industrial Chemistry," by Prof. J. Lawrence Smith, of Louisville, Ky.; and an address of Prof. Benjamin Silliman, on "American Contributions to Chemistry." A visit to the house which Priestley built, and in which he died; an inspection of his "shed," or laboratory, in which he did his scientific work; and the exhibition of apparatus, manuscripts, and pictures, relating to Priestley, contributed in large measure to the interest of the proceedings.

Composition of the Water of Great Salt Lake.—In the *Chemical News*, H. Bassett gives an analysis of the water of the Great Salt Lake. He finds the total solid residue in

100 parts by weight to amount to 13.42, distributed as follows, viz.:

Chlorine	7.86
SO_4	0.88
Sodium	3.88
Potassium	0.99
Calcium	0.06
Magnesium	0.30

The water has a slight alkaline reaction, and a specific gravity of 1.102 at 17° Centigrade.

Agricultural Chemistry.—In a report to the Connecticut State Board of Agriculture on the value of brewers' refuse barley-grains as manure, and as food for milch-cows, Prof. S. W. Johnson states that—

As a *fertilizer*, these grains most nearly compare to stable-manure. Like the latter, they are a refuse product, or residue of a kind of digestive process. I give here the comparative composition of the two substances:

SUBSTANCES.	Brewers' Grains, fresh.	Stable-Manure, fresh.
Moisture	78.5	71.0
Organic matter	20.4	24.6
Ash	1.1	4.4
Nitrogen	0.75	0.45

The analysis of stable-manure is an average of several analyses. It is seen that the grains contain 7½ per cent. more water, 4 per cent. less organic matter, more than 3 per cent. less ash. Nitrogen is ½ more in the grains, but it exists exclusively as gluten or similar albuminoid, and not at all as ammonia compound. The less activity of the nitrogen in the grains is compensated by its greater quantity. The ash consists chiefly of phosphates of lime and magnesia, as is to be inferred from the treatment the grains have received, and as Scheven found in analyses of the ash of similar grains. In fact, the phosphate of these grains is about the same as that of stable-dung, or one-third of one per cent. The soluble ash ingredients of stable-manure, especially potash, must be nearly lacking in the grains.

Considering their low price, the grains must be regarded as a cheap manure, but they are deficient in alkalies and sulphates, as compared with stable-dung.

As *cattle-food*, these grains have a higher value than for manure. This will be evident from the following analyses and remarks:

SUBSTANCES.	Brewers' Grains.	Meadow-Grass before Bloom.	Maize-Fodder in August.
Moisture	78.50	75.0	82.2
Ash	1.07	2.1	1.1
Cellulose (crude fibre)	3.11	7.0	4.7
Albuminoid	4.68	3.0	1.1
Starch, sugar, fat, etc. (by difference)	12.64	12.0	10.9

The grains are seen to surpass corn-fodder in every respect, and to contain four times the percentage of albuminoid, or flesh-forming matters, of the green maize-stalks. They compare also well with grass before blossom, and have but one deficiency, viz., that of potash and sulphates. The proportion of albuminoids in brewers' grains exceeds that of any kind of green fodder grown in this country, young clover not excepted.

The condition of the nutritive matters in these grains is doubtless adapted for rapid digestion, and they must be regarded as an excellent adjunct to the farmer's resources.

Estimation of Phosphoric Acid in Superphosphates.—In a series of valuable papers, published in the *Moniteur Scientifique*, on the "Estimation of Phosphoric Acid in Superphosphates," the author, H. J. Joulie, reaches the following conclusions:

1. The superphosphates are not, as was at first supposed, mixtures of acid phosphate and of sulphate of lime, but they also contain free phosphoric acid, acid phosphate of lime, bicalcic phosphate, and unattacked tribasic phosphate.

2. The retrogradation they undergo in ageing is due to a slow formation of bicalcic phosphate at the expense of the free phosphoric acid, which seizes on the unattacked carbonate and phosphate of lime, and of acid phosphate, which breaks up into free phosphoric acid and bicalcic phosphate.

3. As the assimilability of the superphosphates depends on the sum of the phosphoric acid which they contain under the first three forms, it is increased rather than lessened by drying and by age.

4. The determination of the phosphoric acid soluble in water gives only a very inadequate idea of the assimilability of the superphosphates, as it does not take account of the phosphoric acid which they contain in the shape of bicalcic phosphate, which is at least as assimilable as the soluble phosphoric acid.

5. The determination of the phosphoric acid soluble in the alkaline citrate of ammonia, under the conditions here described, is a precise measure of the positive assimilability of the phosphates contained in manures and superphosphates.

6. The adoption by analysts of this method will bring about an improvement in the manufacture of superphosphates, will develop the precipitated phosphate industry, and improve the production of compound manures, wherein the assimilable phosphates will of necessity be substituted for the fossil phosphates so soon as the analysts have ceased to confound the two.

Nitre-producing Plants.—Upward of a year ago a communication from A. Boutin to the French Academy of Sciences called attention to the large amount of nitre found in the ash of the plant *Amaranthus blitum.* During the past year M. Boutin analyzed two other plants of the same genus, viz., *Amaranthus atropurpureus* and *A. melancholicus ruber*, both of them exotics, cultivated in gardens for the sake of their beautiful foliage. The author finds that the *A. ruber*, desiccated at 100° C., contains 16 per cent. nitrate of potash—equal to 22 grammes of nitrogen per kilogramme of the dried plant, and 72 grammes of potash. The *A. atropurpureus* contains, in the dry state, 22.77 per cent. nitrate of potash; consequently 1 kilogramme contains 81 grammes nitrogen and 103.5 grammes of potash. Having been dried for some time in the open air, the stems of the plant are covered with an efflorescence of nitrate of potash, in fine, needle-shaped crystals. The author thinks that sooner or later this family of plants will be cultivated for the sake of the nitrogenous fertilizing materials they produce.

The Nitrogen of the Soil.—Prof. Armsby, of Millbury, Mass., read, in the chemical section of the American Association, a paper on this subject, detailing a series of experiments which he had made to determine the loss and gain of nitrogen in the soil. His method was to allow organic matter containing a known

amount of nitrogen to decay, under circumstances in which all the nitrogen given off or accumulated could be measured. The organic matter consisted of dried and sifted barn-yard manure, mixed with one-fourth its weight of dried and pulverized flesh. The experiments marked I. in the following tables were conducted in purified air; those marked II., in purified nitrogen. The exposure to air in the first set of experiments was kept up for more than two months; the exposure to nitrogen was for a shorter period; the temperature varied from 50° to 80°, averaging 70° Fahr. The apparatus was exposed to diffused daylight.

QUANTITIES AND MATERIALS USED.

No. of Experiment.	Organic Matter: grammes.	Gypsum: grammes.	Potash (KOH): grammes.	Water: c.c.	Total Nitrogen: grammes.
I. 1.....	15	..	.....	6	0.456
I. 2.....	15	..	0.798	6	0.456
I. 3.....	15	15	.....	6	0.456
I. 4.....	15	15	0.798	6	0.456
II. 1.....	15	..	.....	6	0.453
II. 2.....	15	..	0.798	6	0.453
II. 3.....	15	15	.....	6	0.453
II. 4.....	15	15	0.798	6	0.453

NITROGEN AFTER DECOMPOSITION (IN GRAMMES).

No. of Experiment.	Substances.	Gain of Ammonia expressed as Nitrogen.	TOTAL GAIN OF NITROGEN.		TOTAL LOSS OF NITROGEN.	
			Weight.	Per cent.	Weight.	Per cent.
I. 1.....	Organic matter.....	0.0118	.....	.....	0.054	11.11
I. 2.....	Organic matter and potash.....	0.0301	0.074	15.22	.....	.....
I. 3.....	Organic matter and gypsum.....	0.1651	.....	.....	0.0302	6.21
I. 4.....	Organic matter, potash, and gypsum.....	0.0907	.....	.....	0.0686	13.09
II. 1.....	Organic matter.....	0.0614	0.0067	1.48	.....	.....
II. 2.....	Organic matter and potash.....	0.0255	0.0876	19.34	.....	.....
II. 3.....	Organic matter and gypsum.....	0.0784	.....	.....	0.0052	1.14
II. 4.....	Organic matter, potash, and gypsum.....	0.0479	.....	.....	0.0088	1.94

These results show a loss of nitrogen in all cases except I_2 and II_2; the small gain of II_1 being within the errors of experiment. The loss is very much less in the second than in the first series of experiments. This cannot be attributed to shorter duration, since the gain of II_2 is greater than that of I_2. It confirms the deductions of Lawes, Gilbert, and Pugh, that the loss of nitrogen is caused by a process of oxidation. Gypsum seems to prevent in part the loss of nitrogen. The relation of the formation of ammonia to the experiments is not obvious. A considerable gain of nitrogen is effected in the experiments where potash alone is mixed with organic matter. No trace of nitric acid was found, and there is no reason to suppose it was formed during the experiments. The gain of nitrogen cannot be ascribed to nitrification. The fact of the fixation of nitrogen is demonstrated; the method is as yet open to question. The following conclusions sum up our present knowledge. 1. The loss of free nitrogen during the decomposition of nitrogenous organic matter is generally due to oxidizing action. 2. An increase of combined nitrogen in soil may take place by oxidation of free nitrogen to nitric acid. 3. Some organic substances in the presence of caustic alkali are able to fix free nitrogen without the agency of oxygen or the formation of nitric acid.

Estimation of Nitrates in Potable Water.—A method for the estimation of nitrates in potable waters, presented by Mr. W. F. Donkin, of the British Chemical Society, is worthy of note, as affording a ready means of ascertaining the purity of water. A nitrate, in the presence of chlorides, when treated with phenol and sulphuric acid, gives a reddish solution which, on the addition of an excess of ammonia, changes to a more or less decided blue. On this reaction the process depends. The water under examination is compared with a standard solution of potassium nitrate containing a known quantity of the salt; these are treated in a precisely similar manner. The process is capable of accurately determining the amount of nitrates present to within one part in four million parts of water.

Proportion of Carbonic Acid in the Air.—The amount of carbonic acid in the atmosphere has been newly investigated by Truchot. In a communication to the Paris Académie des Sciences he says that his method of analysis consisted in passing a known volume of air through a graduated solution of barium hydrate, allowing the barium carbonate to be precipitated, and then re-titrating the solution. His results are as follows: 1. At Clermont-Ferrand (where he made his experiments) the amount of carbonic acid in the air is greater at night than during the day. 2. The proportion is not sensibly greater in the city than in the country. 3. In the vicinity of green-leaved plants the proportion of carbonic acid varies considerably, according as the green parts of the plants are exposed to the direct solar rays or to diffused light, or exist in the shade, the amounts for these cases respectively being 3.54, 4.15, and 6.49 per 10,000 parts of air. 4. The mean amount of carbonic acid in the air is 4.09 parts per 10,000. 5. This proportion of carbonic acid bears an inverse ratio to the altitude; thus at Clermont-Ferrand (altitude 395 metres) it is 3.13; on the Puy-de-Dôme (altitude 1,446 metres), 2.03; on the Pic de Sancy (altitude 1,881 metres), 1.72 per 10,000 volumes of air.

Composition of Cosmic Dust.—The Norwegian explorer Nordenskiöld on many occasions discovered on the snow in high northern latitudes minute particles of a black substance to which he gave the name of cryoconite. Since his return from the polar regions he has analyzed this dust, comparing it with a substance of the same nature found by his brother

on the snow in remote regions of Norway. In neither case was it possible that these particles could have had a terrestrial origin, and hence Nordenskiöld regards them as associated with meteors. The substance is a silicate having the formula $2RSi + AlSi_3 + (H)$. It also contains metallic particles (iron, nickel, and cobalt), and about two per cent. of organic matter.

An Improved Cement.—A very slow-setting stucco or cement, which becomes extremely hard, is prepared by the addition of a small quantity of alum to plaster of Paris. A still finer cement—one which sets with equal slowness and acquires the same hardness—is obtained by simply plunging the dehydrated gypsum for a few minutes into water containing slightly more sulphuric acid than suffices to transform into sulphate all the carbonate of calcium which may be present in the gypsum. After the liquid has been drained off, the plaster is submitted to a heat approaching redness for two or three hours.

Solvent Action of Water on Lead.—The discussion in the French Académie des Sciences on the action of water on lead (a summary of which was given in the volume for 1874) was the occasion of Sir Robert Christison making a very thorough investigation of the subject. His results agree in the main with those attained by the majority of the French *savants*. They may be summed up as follows: 1. The purest waters act the most powerfully on lead, corroding it, and forming a carbonate of peculiar and uniform composition. 2. All salts impede this action, and may prevent it altogether, some of them when in extremely minute proportions. 3. The proportion of each salt required to prevent action is nearly in the inverse ratio of the solubility of the compound which its acid forms with the oxide of lead. The first of these three propositions is often called in question, but all the experiments made by the author invariably confirmed it. A sample of very pure spring-water was sent to him, with the assurance that it had been found incapable of attacking lead; but on trial it was found to corrode the lead with as much energy as distilled water. An interesting fact, first observed by Dr. Nevins, is confirmed by the author's researches, viz., that some salts seem to allow of a certain action going on when they are largely present in water, though when they exist in very small quantities they prevent action.

This curious circumstance might well excite alarm in the minds of those who receive their water-supply through leaden pipes: according to Sir Robert Christison, however, "there is reason to suppose that the proportion required to *permit* action is greater than is ever likely to occur in waters applicable to household use." Doubtless this excess of salts is found in some mineral waters, and the passage of such waters through leaden pipes may have the effect of corroding the latter. Oftentimes the corrosive action of *water* has been confounded with the corrosive action of other agents; for example, when a lead pipe has been surrounded with fresh mortar, which is frequently or permanently moistened, or when lumps of fresh mortar have fallen upon the bottom of a lead cistern. Again, the effect of galvanic action has been mistaken for the effect of corrosion by water. If a lead pipe be soldered with pewter solder and not with lead, erosion takes place near the line of junction of the solder with the lead. The same is to be said of the contact of the pipe with bars of other metals, or bits of such metals lying on it; and some facts seem to indicate the existence of the same property in certain stony and earthy substances. Other investigations of this general subject by Fordos, Robierre and Champouillon, Maralo, Mayençon and Bergeret, and Dumas Belgrand and LeBlanc, have been published during the year.

Ozone.—The statement of Schönbein, that ozone is produced by the action of light upon oil of turpentine, is negatived by the later researches of Kingsett. He first endeavored to ascertain the rate of absorption of oxygen by a given amount of turpentine and similar bodies, and found that the former, in sunshine, absorbed 36.6 cubic centimetres of oxygen daily, but in the shade only 0.6 c.c. Oil of caraway absorbed 3 c.c. daily; oil of bergamot, 3 c.c.; oil of juniper, 2.5 c.c.; oil of cubebs 2 c.c.; oil of lemon, 1.2 c.c.; naphtha, 0.7 c.c.; ether, 0.19 c.c; benzole showed no absorption during forty days. On agitation then with potassium iodide and starch solution, the well-known blue coloration was more or less quickly developed, though the color did not appear at once, and, in the case of the bergamot, required several minutes. On testing the substance formed for ozone, neither lead nor manganese paper was affected, nor were their solutions changed by actual contact with the oil; a mixture of sulphuric and chromic acids, however, became violet. Further experiments were made with the oil of turpentine. Thus a quantity of this substance was placed in a bottle with an equal volume of water, air was slowly drawn through it for many hours, and it was allowed to stand several days in a shallow dish exposed to the air. The water on examination colored starch-paper blue, precipitated manganese dioxide from potassium permanganate and gave a violet color with chromic and sulphuric acids, but caused no change either in lead acetate or manganese sulphate. The oil, even after washing, gave both the starch and the chromic-acid tests. Hence it appears that, even after washing, oxidized oil of turpentine contains a body with the reactions of hydrogen dioxide. Still it cannot be either ozone or hydrogen dioxide, but a body derived from the turpentine by the action of air and water upon it. If it be the hydrate of terpene oxide, $C_{10}H_{16}O.H_2O$, zinc chloride must destroy it. Active turpentine was therefore distilled with zinc chloride,

and the active properties were entirely destroyed. The conclusion that the active agent in turpentine exposed to light is hydrate of terpene oxide receives confirmation from sundry other of its reactions.

Do Plants liberate Ozone?—The supposed liberation of ozone by plants was tested by J. Belluci in a series of experiments which are given in detail in the *Comptes Rendus*. M. Belluci passed air containing $\frac{1}{100}$ of its volume of carbonic anhydride for six hours, in the daytime, through a glass tube, part of which was covered with black paper, into a receiver inclosing living plants, whence it issued by a second tube. In each of the tubes were placed two ozonoscopic papers. Now, it appears that the papers in the dark parts of both tubes were quite unaltered; and the change in the others could only be produced by ozone existing in the air which traversed the apparatus. The intensity of coloration of the paper exposed to light in the second tube almost exactly corresponded to that of the paper in the illuminated part of the first tube; thus excluding the supposition that the chemical activity of the air was due to ozone produced by the plants. The author thinks M. Cloëz's view confirmed, according to which the combined action of humid oxygen and solar light accounts for the coloration of iodized starch-paper, independent of ozone.

Experiments made by Emanuel Schöne, of the Berlin Chemical Society, on the relations of ozone to water, gave the following results: 1. Ozone is partially destroyed by passing through water. If dry, ozonized oxygen is simply collected over water, the ozone present is diminished by about 25 per cent. If passed through water for a longer time the loss of ozone is greater. The loss is the more considerable the longer the gas is in contact with the water, and the greater the surface exposed. 2. Ozone is absorbed by water in a considerable degree, even at the ordinary temperature of the atmosphere. 3. On passing dry ozonized oxygen through water much more ozone disappears than is absorbed by the water. The decrease of the proportion of ozone is, therefore, only very slightly determined by absorption, but must be considered as a consequence of the destructive action of water. 4. Ozone does not convert water into peroxide of hydrogen. As regards the loss of ozone in ozonized oxygen gas on standing for a longer or shorter time in contact with water, the author concludes: 1. If ozonized oxygen is left in contact with water, the ozone is gradually converted into ordinary oxygen. In three days the original proportion of ozone is reduced to one-half, and in fifteen days mere traces of ozone remain. 2. The transformation of ozone into oxygen in contact with water, and at common temperatures, is attended with an increase of bulk.

Regarding the production of ozone by the agency of phosphorus, R. Lamont states that when phosphorus oxidizes in air, forming the pentoxides, it combines with 1 molecule of oxygen and part of another, splitting up the latter so that 1 of its atoms combines with a molecule (0-0) forming ozone (0-0-0).

Improved Process in Calico-Printing.—Owing to the expense attending the use of specially prepared back-cloths in calico-printing, a cheap substitute in the shape of unbleached pieces of cloth, rejected for printing after the singeing process, is now commonly employed. But with the introduction of aniline black it was found that these could be used but once, the color soiling the piece so as to prevent its being completely cleansed by the subsequent bleaching operation, and also injuring the strength of the cloth. To meet these difficulties, A. Kielmeyer resorts to the following course of procedure:

I have used now for some time with advantage the aluminate of soda, which is to be obtained easily and cheaply, and I use it thickened to a pap with dark-burnt starch to print aniline black. The alkaline portion of this print-color acts with aniline black as an etching-ground, for, with the alkaline reaction, a development of the black is impossible: at the same time, where the black and aluminate of soda come in contact, solid hydrate of alumina separates out and acts thus as a preservative by cutting off any direct contact of the black with the cotton-fibres. It is evident that this preservative with aniline black, under proper combination and treatment, may perform a third function—that of a red mordant. But I confine myself now to pointing out how the above considerations on aluminate of soda may be utilized on a large scale for preparing the unbleached calico to serve as back-cloth for imprinting aniline black; while I add, at the same time, that experiments for printing such goods with carbonate or acetate of soda have not served the purpose. Both salts act by their alkalinity as a check upon the development of aniline black, but they cannot act also as preservatives; they cannot prevent a portion of the color which penetrates through the print from being deposited on the cotton-fibres of the underlayer, and developing to a full black.

The unbleached goods destined to serve as backing for aniline black, after the singeing process, are passed twice through a cold solution of aluminate of soda at 4° to 5° Baumé. The goods are allowed to lie unrolled for two hours, so that the aluminate of soda may be spread as uniformly as possible through the texture, and then dried on the cylinder. A piece of 50 metres consumes 5 kilos. of aluminate of soda, and, for such as shirt-patterns, may serve two or three times as underlayer. Then it is washed with the remaining unbleached pieces which have served as backing for other print-colors before the actual bleaching, placed in muriatic acid at 2° Baumé, and once more washed. After this procedure, for the remainder has been for a long while adopted in manufactories, only the operation of priming still remains to be estimated, and this should certainly not amount to more than the various manipulations of cleaning the old expressly woven. For heavy patterns, such as stripes, the prepared cloth can only serve once as backing, and for very heavy goods, such as cloths with aniline black ground, the priming liquid should be taken at 10° Baumé.

After bleaching these pieces, not the slightest mark of the black pattern is seen, to which they served as underlayer, not even on the borders; the white is as clear as on other bleached pieces, and my first fear, that hydrate of alumina might remain behind on the texture, and afterward produce some color-

ing, has by no means been confirmed. On the contrary, the goods may be used for any desired article of manufacture. I have also made another observation, that aniline black with white goods, printed on backing thus prepared, was much less developed on the under-side of the texture, than when printed with unprepared underlayers, while at the same time the black was fully developed on the upper side. Every aniline black, even when prepared from the best instructions, must affect the strength of the thread, and all the more so in proportion as it can act upon it on all sides; but here the damp underside of the print comes into close contact with the aluminate of soda of the underlayer, and takes up a portion of the latter, by which this side of the thread is guarded against any perilous exposure to chemical reaction. At the same time, also, a guarantee is obtained for the relative strength of the whole texture.

Alizarin as a Test.—Prof. A. R. Leeds gives, in the *American Chemist*, an account of his experiments on the value of alizarin as a reagent. By digesting for a short time with alcohol of 95 per cent., a solution was obtained holding in one cubic centimetre 0.00425 gramme alizarin. One cubic centimetre of this solution imparted a bright-yellow color to a litre of water. By the addition of 2.25 cubic centimetres of a solution containing 0.000198 gramme potash per cubic centimetre, the yellow changed to a distinct rose-color, indicating the presence of one part of potash in more than 2,000,000 parts of water. A similar change of tint was produced by 0.00082 gramme soda dissolved in a litre of water, or one part in more than 3,000,000. The addition of 6 milligrammes of potash and 4 milligrammes of soda, to a litre of water containing 0.00425 gramme alizarin, changed the yellow into a rose-color so dark that any further deepening of the color was too inappreciable to be used as a means of detecting an increase in the percentage of alkali. On instituting a comparison between litmus and alizarin, it was found that a litre of water containing 0.0066 gramme of the latter with 0.0008 gramme of the acid H_2SO_4 underwent the same change of color as a litre of water containing 0.02 gramme litmus and 0.0024 gramme H_2SO_4.

A number of samples of drinking-waters gave a strongly alkaline reaction with alizarin, those of Hoboken and New York changing the color to a dark red. A litre of Croton water, drawn from a hydrant in the lower part of New York, January 24, gave a bright cherry-color with 0.0066 gramme alizarin, and acquired the same tint as that imparted by 0.0016 gramme soda to a litre of distilled water containing 0.0066 gramme alizarin. The yellow color was restored to the latter by 0.004 gramme H_2SO_4, to the former by 0.03 gramme H_2SO_4. In this way the alkalinity of a number of samples of drinking-water may be rapidly compared, and the total amount of acid required to neutralize the bases may be determined without previous condensation.

In all the above cases extremely dilute solutions were employed, and no change of tint and no precipitation of the coloring-matter was observed even after standing a number of hours. But, when larger amounts of coloring-matter and an excess of acid were present, the alizarin was partly precipitated and rendered the liquid turbid.

The distilled water in common use at the Stevens Institute, condensed in a worm of block-tin and collected in stone-ware jugs, was invariably alkaline: collected in bottles of white glass, it had a neutral reaction. Snow-water measuring 50 c.c., obtained by melting the snow which fell on December 27th, of last year, and titrated at the temperature of the room, was neutral. Some precautions are necessary for the preparation of test-paper with this reagent. Thin unsized white paper, which had been customarily employed in the preparation of litmus-paper, was turned red by the alizarin solution, and it was necessary to have recourse to fine Swedish filtering-paper. The commoner Swedish paper turned the yellow to a brownish-yellow color. Even the best French gelatin could not be employed to size the paper used for testing, since it manifested a slightly alkaline reaction. Alizarin test-paper, as above prepared, when moistened with a drop of saliva, is strongly reddened, and should be employed by physicians in place of litmus. I have likewise employed white silk and silk thread dyed with alizarin, and this mode of applying the test may in some cases be found useful.

New Method of assaying Lead-Ores.—According to the method proposed by A. Mascazzini, the ore or other substance is oxidized, and its metals converted into sulphates before reduction. The best agent for this purpose is sulphate of ammonia. The ore is mixed with an equal or double weight of the sulphate, according as it supposed to be poorer or richer, and the mixture is ignited in a small porcelain crucible, covered to prevent spirting. When cold, the mass is treated with boiling water, acidulated with sulphuric and muriatic acid; thus the sulphates and oxides of iron, copper, etc., are dissolved, the lead and silver remaining insoluble.

This portion is washed by decantation, the washings being passed through a filter. This filter is next dried and its ashes added to the dried insoluble portion. It is then mixed with muriatic acid and powdered zinc, in order to reduce the sulphate of lead and the chloride of silver. The metallic deposit is washed with water which has been boiled, or acidulated with sulphuric acid, and is then pressed into a compact mass.

This is dried and heated with from 1½ to 2 parts its own weight of a flux composed of 18 grammes of carbonate of potassa, 10 grammes carbonate of soda, 5 grammes of melted borax, and 5 grammes of farina. The whole is covered over with dried chloride of sodium, and the heat is raised by degrees to redness. When the whole is in a state of quiet fusion, it is submitted for a moment to a higher temperature. This process serves for determining lead and silver in white-lead, red-lead, ores rich in gold and silver, also antimony, tin, and copper. If, in the assay of ores of gold and silver, the amount of lead is insufficient, pure oxide of lead is added.

Extraction of Vanadium.—R. Boettger has found vanadium in variable proportions in pisolithic iron in larger quantities than it was hitherto supposed to exist. The ore, well-powdered, is heated for a long time to redness with nitre and soda. It is extracted with boiling water, and neutralized with nitric acid free from

nitrous vapors, the reaction being left feebly alkaline. The bulk of the alumina and silica is thrown down. The filtrate yields, on the addition of nitrate of baryta, a precipitate, vanadiate of baryta, from which the vanadic acid is easily separated. To make fine vanadic ink, one part of pyrogallol is ground very fine with three parts of gum-arabic and three parts vanadiate of ammonia, with the addition of rain-water.

Preservation of Wine.—M. Paul Bert has discovered that wines may be kept for an indefinite length of time without becoming sour, if they be subjected to the action of compressed air, or, what is the same thing, so far as the prevention of acetification is concerned, to super-oxygenated air. He put some spores of *Mycoderma vini* and of *M. aceti* in new wine which had been subjected to the action of air super-oxygenated to a degree equal to a pressure of thirty atmospheres. The bottle containing the wine was then carefully sealed. Later, when the cork was drawn, the wine was found to be perfectly free from acidity; it had preserved all its bouquet; was but slightly bitter, and was flatter, less alcoholic, than wine not treated with oxygenized air. There was no trace left of the *Mycoderma*. Thus these ferments had been killed by the excess of oxygen. At the same time the organic matters had been slowly oxidized, and the wine resembled wines that have grown too old. Possibly, by the use of oxygen, new wine might acquire some of the qualities of wines that have remained in cellars for a number of years.

Experiments on the Cultivation of the Sugar-Beet.—Prof. C. Anthony Goessmann, of the Massachusetts Agricultural College, communicates to the *American Chemist* the following notes of his experiments on the cultivation of the sugar-beet. A piece of land, 287 feet long and 150 feet wide, running from north to south, and consisting of a brown, sandy loam, which had been well manured with stable-manure two seasons previous, was divided into six plats of equal size. These plats ran from east to west across the main field; from two to three feet of space was left between adjoining lots. Each lot was separately manured; all manures were applied at the same time, about two weeks before planting the seeds. The various kinds of sugar-beets were planted in rows running from north to south, passing thus through all the plats treated with different fertilizers.

Plat No. 1 received no fertilizer.

No. 2 received crude potassium sulphate from Stassfurt, at the rate of 300 lbs. per acre. This potash fertilizer contained 54 per cent. of potassium sulphate, or 29.3 potassium oxide.

No. 3 was treated with kainite and superphosphate of bone-meal, at the rate of 300 lbs. each per acre. The former contained 28 per cent. of sulphate of potassa (equal to 15.2 potassium oxide), and the latter from 10 to 11 per cent. of soluble phosphoric acid.

No. 4 was manured with a blood-guano containing potash at the rate of 1,200 lbs. per acre.

No. 5 received at the rate of 1,200 lbs. of blood-guano (per acre) without potash.

No. 6, which represented the most northern portion of the experimental field, was manured on the 7th of May, 1873, with fresh horse-manure at the rate of 14 tons per acre.

All the seeds were planted on the 16th of May, 1873. Four kinds of seed were turned to account; they consisted of the two kinds of seeds—Vilmorin and Electoral—raised during the previous year upon the College farm; a white sugar-beet received from Freeport, Illinois; and Sutton's improved English sugar-beet. The examination of the roots was begun on the 6th of October, 1873, and carried on for two successive weeks. The roots selected for testing were of a corresponding size, and their weight from twelve ounces to two pounds apiece.

Percentage of Cane-Sugar found in the Juice of the Roots raised from the following Seeds:

THE KIND OF FERTILIZER.	Freeport, Illinois.	Sutton's English.	Electoral, College Farm.	Vilmorin, College Farm.
Fresh horse-manure	11.96	9.71	9.42	7.8
Blood-guano without potash	10.99	9.17	10.10	10.20
Blood-guano with potash	12.55	10.01	13.24	10.50
Kainite and superphosphate of bone-meal	13.15	10.91	12.16	10.50
Sulphate of potassa	14.53	12.42	14.32	12.78
No manure; second year after stable-manure	13.49	.....	12.78	12.19

The influence of fresh stable manure in the first year is too striking to be passed over without recognising its decidedly injurious character. Even a light sandy loam cannot entirely destroy its peculiar reaction on the composition of the roots.

New Process for measuring the Alcohol in Wines.—If, to a known volume of water, larger and larger quantities of alcohol are added, the density and the superficial tension of the mixtures obtained are simultaneously diminished, and consequently there is an increase in the number of drops which they form if allowed to flow slowly from a given aperture. If this aperture has constant dimensions, the number of drops corresponding to each alcoholic mixture is constant also. The difference between the numbers thus found is large enough to furnish a basis for a very sensitive alcoholometric method. The instrument proposed is a pipette holding 5 c.c. It is filled with the alcoholic liquid under examination, and the number of drops escaping is counted. From this number the proportion of alcohol is calculated by the aid of tables which the author has drawn up. Slight traces of liquids more diffusible than alcohol, such as acetic ether, greatly increase the number of drops.

Spontaneous Combustion of Charcoal.—When the charcoal intended for use in the manufacture of gunpowder is taken from the iron cylinders in which it is prepared, it is first placed in iron coolers provided with tight-fitting lids, and allowed to stand for twenty-four hours before it is put into the store-bins. But if, says A. F. Hargreaves, of the London Chemical Society, the charcoal is ground twenty-four hours after burning, and is placed in iron coolers with the lids off, the temperature gradually rises, and in less than thirty-six hours after-

ward it takes fire. If ground, however, after an interval of three days, there is no perceptible rise of temperature. From a series of experiments made by Mr. Hargreaves, it would appear that charcoal continues to absorb oxygen for thirty-six hours after it has been burnt, and the full amount of hygroscopic moisture is only attained after exposure to the air for about two weeks.

Poisons in Colored Tapers.—The presence of poisonous coloring-matters in green and red wax-tapers has been proved by Mr. James McFarlane. Green tapers owe their color to arsenite of copper (Scheele's green). The alliaceous odor evolved during the combustion of these tapers left no doubt as to the presence of arsenic. The quantity was estimated to be 0.60 per cent., equal to 0.35 gramme of arsenious acid in each 2-gramme taper—quite enough to poison two people if taken directly in the solid form. The red tapers weighed, on the average, 8.94 grammes, and the ash, weighing 3 milligrammes, was totally devoid of metallic appearance. Mercury, existing as vermilion, was found by Reinsch's process, and its quantity was carefully determined. The amount of mercuric sulphide ultimately collected, washed, and dried, was 1.66 per cent. White, yellow, and blue tapers were found to be harmless, the blue being colored with ultramarine, and the yellow with chromate of lead.

Silicon in Pig-Iron.—Having observed that silica, instead of silicon, is obtained in the insoluble residue when pig-iron containing a large quantity of silicon is dissolved by dilute sulphuric acid, E. Handfield Morton, of the London Chemical Society, was led to call in question the received theory of the silicon being *intimately mixed* with the pig-iron.

To determine this point he made a number of experiments with a No. 1 Bessemer iron, containing 4.612 per cent. of silicon. Weighed quantities of this pig-iron were placed in sealed tubes with Nordhausen sulphuric acid, in atmospheres of carbon dioxide and hydrogen, and also *in vacuo;* the tubes were then heated in an air-bath by two Bunsen burners for twenty-four hours, but in every case the silicon contained in the pig-iron had been converted into silica, and a small quantity of sulphur dioxide found in the tube, which occasioned sufficient pressure to blow the top off the tube when cracked with a file. On examining the insoluble residue from these experiments, under the microscope, perfectly transparent crystals of silica were observed, interspersed with opaque pieces of the same substance. When these insoluble residues were treated with hydrofluoric acid, complete solution was effected. The next attempt to isolate the silicon in this pig-iron was made by heating weighed quantities of the latter with an excess of pure iodine in sealed tubes, all air being first displaced by carbon dioxide; the same heating arrangement being used as in the sulphuric-acid experiments. At the end of twenty-four hours, all iodine-vapor having disappeared, one of the tubes was opened and the contents analyzed, with the following results:

Iodine	76.432 per cent.
Iron	20.013 " "
Silica	1.709 " "
Carbon	0.759 " "
Total	98.913

Directly the tube was cracked, the pressure of gas blew the top off. The contents consisted of dull-red lumps, the whole of the iron having been converted into the ferrous iodide, as the above figures correspond to the formula, FeI_2. There can be little doubt but that the silica which was formed in this experiment was due to a slight decomposition of the carbon dioxide, with which the tube was filled; the greatest part of the silicon having been converted, in all probability, into an iodine compound; for, although iodine-vapor is without action upon silicon under ordinary conditions, it is highly probable that, when silicon in the nascent state is presented to iodine-vapor, a compound of iodine and silicon may be formed. These results were confirmed by several other similar experiments. This pig-iron was also carefully tested for graphitoidal silicon, by treating the iron with hydrofluoric acid: the insoluble residue was filtered off, and ignited to get rid of the carbon, when a mere trace of a dark powder remained, which proved to be iron.

From these results it may fairly be concluded that the silicon contained in pig-iron does not exist in a state of mechanical mixture, but exists combined with a portion of the iron as a silicide of iron, in the same manner that carbon exists as a carbide of iron, only differing from carbon in so far that it does not exist in a graphitoidal form in pig-iron. If the pig-iron used had contained any uncombined silicon, it would have been found in the insoluble residue from the experiments with Nordhausen sulphuric acid and hydrofluoric acid, as it is insoluble in even the latter acid after having been strongly heated; and, as any uncombined silicon must have been heated intensely in the blast-furnace, there can be little doubt that, as a rule, pig-iron does not contain any uncombined silicon.

The author then experimented to ascertain whether or no the supposition of the combination of the silicon with the iron was correct, and the result proved a confirmation of his hypothesis. Experiments with white pig-iron gave identical results.

New Method of separating Calcium from Magnesium.—For the complete separation of these two substances, which, by the ordinary method, is a very difficult operation, E. Sonstadt proposes the following process:

In the course of recent experiments on the iodates, I have found that iodate of calcium is not sensibly soluble in a saturated solution of iodate of potassium, whereas iodate of magnesium is not precipitated from solution in any degree by iodate of potassium. If to 10 or 12 c.c. of a saturated solution of iodate of potassium a few drops are added of solution of sulphate of calcium, and after two hours the liquid is filtered, and oxalate of ammonium added to the filtrate, a slight opalescence appears after a while, due to the presence of a trace of calcium. But if the iodate of potassium solution to which the calcium salt was added is allowed to stand twenty hours, and is then filtered, and oxalate of ammonium added to the filtrate, not the slightest opalescence appears even after many hours. A slight crystallization takes place, owing to a diminution of the solubility of the iodate of potassium by the presence of oxalate of ammonium, but the crystals entirely disappear, leaving the solution perfectly limpid, on addition of a very small proportion of water. The precipitation of calcium by saturation of the solution with iodate of potassium does not appear to be affected by the presence of alkali and magnesium salts, in whatever proportion these may be present. If, for instance, a small quantity, as a decigramme, of ordinary Epsom salts is dissolved in the least possible quantity of water, and four or five times its bulk of a saturated solution of iodate of potassium

is added, after a few hours a crystalline precipitate forms, which may be collected on a filter, washed with solution of iodate of potassium, dissolved off the filter with dilute hydrochloric acid, and, minute as the quantity of calcium present is, it may be shown immediately by the precipitate falling on addition of ammonia and oxalate of ammonium to the strongly acid filtrate.

In separating calcium from magnesium, by precipitation of the former by iodate of potassium, it is obviously important, in view of the subsequent determination of the magnesium, to know if the presence of iodate of potassium hinders the precipitation of magnesium as magnesium-ammonium phosphate. So far from this being the case, I find that the double phosphate is even less soluble in a saturated solution of iodate of potassium containing some free ammonia than it is in a mixture of two parts ordinary "liquor ammoniæ" with one part of water. Thus, the addition of solution of iodate of potassium to the ordinary liquid containing phosphate of an alkali and much free ammonia, over precipitated magnesium-ammonium phosphate, renders the fluid at once opalescent, and occasions an additional precipitation of magnesium salt.

I may mention here that I have never met with a specimen of any magnesia or magnesium salt in commerce, although sold as chemically pure, that did not contain a very sensible proportion of calcium. I believe the only available source of a magnesium salt that shall be free from calcium is distilled magnesium; in this, I have never found any trace of calcium.

Colophthaline and Coloph-Alumina.—Under the above names Mr. Paul Curie describes a solid hydrocarbon and a new organic base which he has obtained from common resin (colophony). By a process of distillation at high temperatures, he obtains from this source a much larger proportion of colophthaline than by the ordinary method, and in a form which admits of easy purification. *Colophthaline* is easily soluble at the ordinary temperature in benzol, naphtha, spirits of turpentine, carbon bisulphide, and ether; it is dissolved by alcohol and glacial acetic acid at their boiling-point only, and is deposited again on cooling. The liquid products with which colophthaline is mixed being much more easily soluble in alcohol, this substance can by this means be completely freed from them. Thus purified, colophthaline is a flocculent white body, possessing a slight balsamic odor. Its melting-point is at 70° C., and, when melted, its color becomes brown; it boils at about 400° C. It is composed of carbon, 93; hydrogen, 7—total, 100, which numbers correspond to the formula $C_{33}H_{10}$.

Oxidizing agents, chlorine, and nitric acid, attack colophthaline with the greatest facility, forming compounds that undergo a most remarkable reaction when fused with hydrate of potassium. They are transformed into a white amorphous body of decided basic properties, having so nearly exactly the appearance of alumina that it might be easily mistaken for that metallic oxide. For this reason I claim for this new substance the name of *Coloph-alumina*, and I will now proceed to enumerate some of its extraordinary characteristics.

Coloph-alumina having been prepared in the manner above described, the fused alkaline mass is dissolved in dilute hydrochloric acid, in which solution ammonia forms a voluminous precipitate of hydrate of coloph-alumina; this white gelatinous precipitate being washed, and left to dry spontaneously, loses the greater part of its water, and shrinks gradually into a compact, hard, stony-looking mass, which still retains 1 equivalent of water, and only loses it at a high temperature. Coloph-alumina is insoluble in all neutral liquids—water, spirits, ether, etc.; it is infusible and non-volatile; it resists the action of all oxidizing agents, though at a high temperature, and *is not decomposed even at* 1000° C. by chlorate or nitrate of potassa! Owing to the difficulty of decomposing coloph-alumina, it has been found impracticable to effect its analysis by any direct method; its chemical composition, however, as deducted from the mode of its formation, appears to be represented by $C_{28}H_6O_4$.

The basic properties of coloph-alumina are not very energetic. Nevertheless hydrochloric, nitric, acetic, and oxalic acids dissolve the base with ease, but the salts thus formed have not been obtained otherwise than in solutions, as by concentrating the liquor the base and the acid are too easily dissociated.

Concentrated sulphuric acid does not merely *dissolve* coloph-alumina; heated to about 200° C., it substitutes SO_3 to H, and forms a compound which is amorphous and nearly insoluble in water—*Sulpho-coloph-alumina*, probably $C_{28}H_4(SO_3)_2O_{42}(HO)$; a red heat merely regenerates coloph-alumina from this.

Artificial Vanillin.—The following is a condensed description of the process by which vanillin is obtained from the sap of pine or other coniferous trees: Take, 1. Coniferin; or, 2. The sap of plants mentioned above which has been purified or liberated from albumina or other impurities; or, 3. An extract of all those parts of the just-mentioned plants containing coniferin; or, 4. The products obtained from coniferin by means of fermentation, putrefaction, or similar action; and treat one or other with oxidizing agents, or such agents of similar action, such as bichromate of potassium and sulphuric acid, or any other peroxide, oxide, or acid, or salt, which produce the same effect. The product of the reaction in all these cases is artificial vanillin, which has been proved to be identical in all physical and chemical properties with the aromatic principle obtained by the extraction, etc., of the natural vanilla-beans.

A New Synthesis of Glycocoll.—A new synthesis of glycocoll, that is of interest as illustrating certain fundamental points in chemical theory, has been effected by Emmerling. Hydrogen iodide exerts upon organic bodies a double action; it not only reduces them to the saturated hydrocarbon from which they are derived, but also causes them, by assimilating water, to break up into two or more molecules.

It is from this fact that Emmerling advances to his synthesis. His method is to pass cyanogen gas through a concentrated solution of hydrogen iodide. One of the cyanogen atoms in the molecule, by hydrogenation, becomes the methylamine residue CH_2NH_2; while the other, by exchanging its nitrogen for the elements of water, gives rise to a carboxyl group COOH. Therefore the formation of glycocoll takes place according to the following equation:

$$\begin{matrix} CN \\ | \\ CN \end{matrix} + (HI)_8 + (H_2O)_8 = \begin{matrix} CH_2NH_2 \\ | \\ COOH \end{matrix} + NH_4I + I_4$$

The yield is considerable, and the properties of the glycocoll are identical with those of glycocoll of organic origin. According to the author, this result goes far to prove that the reason why uric acid yields glycocoll by treatment with HI is, because it contains a cyanogen molecule.

Formation of Black Phosphorus.—It has been discovered by Ritter that black phosphorus can be uniformly obtained when the melted phosphorus, from which it is prepared, contains arsenic. Hence, the property of becoming black may be communicated to phosphorus by placing it for a short time in an arsenical solution, preferably acidified with hydrochloric acid. The quantity of arsenic phosphide necessary to produce this effect is very small—one-half of one per cent., or even less.

Properties of Eucalyptol.—The hydrocarbon called by Cloëz eucalyptol, and constituting the chief portion of the ethereal oil of *Eucalyptus globulus*, has been critically examined by Faust and Homeyer. It was prepared by fractional distillation from this oil, 8 kilogrammes yielding 600 grammes, boiling between 174° and 180° Cent. In general behavior, as in odor, it resembles a terpene. It is turned brown and dissolved by sulphuric acid, and water again sets it free. Nitric acid of specific gravity 1.4, diluted with two parts of water, converts it into paratoluic and terephthalic acids. Elementary analysis gave 88.74 of carbon and 11.48 of hydrogen. Suspecting an associated hydrocarbon poorer in hydrogen, the eucalyptol was polymerized and distilled after dilution. An oil was obtained boiling constantly at 173°–174° Cent., and having the composition of cymol; and conversion into the barium salt of the sulpho-acid confirmed this conjecture. Hence, Cloëz's eucalyptol is a mixture of cymol with a terpene, which may be called eucalyptene.

Relation of the Alkalies to Putrefactive Changes.—According to experiments made by Dr. Dougall, of Glasgow, the alkalies and alkaline earths and their salts—with a few exceptions—hasten decomposition when present in small proportion in fluids containing organic matter. This is the case with domestic soapsuds, spent lye, and all more or less alkaline liquids. Ammonia, permanganate of potash, biborate of sodium, among chemical waste-substances, do not accelerate putrefaction, but at the same time they do not retard it. Soda, potash, nitrate, and chlorate of potassium, and lime, are especially vigorous as purifiers. In regard to the antiseptic powers of different volatile bodies, the chloride of lime appears to be efficient in nearly all cases.

Chrysenine.—Under this name Phipson publishes an account of a new base which he has obtained from chrysene. It is a solid, of a bright-yellow color, strongly alkaline, has a hot, acrid, pungent taste, like piperine, is soluble in alcohol, and is affected by the action of light. It may be volatilized, yielding a vapor that is irritating to the eyes, and that forms dense fumes with vapor of hydrochloric acid.

New Method of obtaining Nitric Oxide.—Berthelot gives the following improved process for readily obtaining nitric oxide: Monohydrated nitric acid, cooled by a freezing mixture, is mixed with pulverulent phosphoric oxide in small portions at a time, taking care to avoid any elevation of temperature; the temperature of the mass should never exceed 0° C. When a little more than its weight of phosphoric oxide has been added to the nitric acid, the mass assumes the consistence of jelly; it is then placed in a roomy tubulated retort and distilled very slowly, the products being condensed in receivers with ground stoppers, immersed in ice. Perfectly pure nitric oxide in very large, brilliant crystals is thus obtained. It is non-explosive, either as a solid or a vapor, but decomposes very readily at common temperatures with nitrogen, tetroxide, and oxygen. It should not be preserved in hermetically-sealed vessels. It keeps well in good glass-stoppered bottles placed under a bell-glass with sulphuric acid.

Restoration of Deteriorated Chloroform.—According to Mr. E. B. Shuttleworth, chlorine and hydrochloric acid are by far the most general and injurious products of the decomposition of chloroform. Traces of sulphuric acid quickly induce this change. When sulphuric acid is employed as the purifying agent, and is not completely removed by repeated washing and rectification, the product very soon gives clear indications of chlorine, or some of its acid compounds. For the restoration of spoiled chloroform, Mr. Shuttleworth recommends that it be agitated with a dilute solution of hyposulphite of soda. It should then be separated by means of a glass funnel from the supernatant liquid, and again washed; this time with simple water. After being separated, the chloroform should be passed through filtering-paper, to free it from traces of moisture, when it will be found much improved and comparatively sweet; at least, good enough for external use. In the manufacture of chloroform, one washing with hyposulphite of soda is more effectual than three with simple water. The quantity of hyposulphite used may be so small as to be of no injury to the succeeding charges of chloroform. Of course, there are

other impurities which the hyposulphite will not remove; these are of a more stable character, and, as they possess a higher boiling-point than chloroform, they may be separated by distillation, or by treatment with sulphuric acid in the usual manner.

Etching on Copper.—A new process for engraving on copper consists of the following steps: 1. The copper-plate is covered with a layer of adherent silver, on which a colored varnish is spread. 2. The design is sketched upon this with a dry paint. 3. Perchloride of iron is then applied, which bites in the lines of the design.

Formation of Urea in the Organism.—Though it has been supposed by many chemists that urea is a direct product of the gradual oxidation of albumin, all attempts at its artificial production have hitherto failed. The products obtained by the use of oxidizing agents have been ammonia, benzoic acid, and aldehydes of the fatty series, while those obtained by the use of acids and alkalies have been ammonia and amido-acids of the fatty and aromatic series (glycocine, leusine, and tyrosine). In the living organism, whenever albumin is decomposed and oxidation is hindered by the absence of hæmoglobin, as in the case of pus, much leusine and tyrosine are found, but little or no urea. So, too, when the oxidizing power of the organism is diminished these principles appear in the urine, but hardly any urea. Two German chemists, Messrs. Schultzen and Nencki, reasoning from these facts, were led to believe that the amido-acids of the fatty series, and perhaps tyrosine, are the intermediate links between albumin and urea. To test this hypothesis, they fed dogs on a diet containing a constant but small amount of nitrogen, and thus got a constant and small amount of nitrogen in the urine. Then they administered a quantity of leusine and glycocine, the result being a large increase of urea, the nitrogen in this additional urea corresponding with that of the glycocine and leusine. Thus it was proved that these bodies are converted into urea. Tyrosine also increased the urea, though not to so great an extent, and part of it remained unchanged in the urine and fæces. Acetamide was excreted unchanged. As amido-compounds analogous to acetamide are not excreted normally, they probably are not formed during the decomposition of albumin in the body. Since amido-acids contain only one atom of nitrogen and urea contains two, it must be formed from them by synthesis, and the authors think it likely that bodies from the cyanogen group form the intermediate links. It is supposed that the albuminous substances contained in food take up water under the influence of the digestive ferments, and are split up, partly in the alimentary canal but chiefly in the circulation, into amido-acids and non-nitrogenous bodies. The latter undergo combustion, yielding carbonic acid and water, while the amido-acids form urea. The authors think it not improbable that ammonia is liberated from albumin simultaneously with cyanic acid and unites with it to form urea, or with cyanogen to form cyanamide, which is then transformed into urea.

Tempering Steel.—An improvement in this process, suggested by H. Caron, consists in heating the water into which the steel is plunged. A temperature of about 55° C. is sufficient to give to the spiral springs of the needle-gun an elasticity and resistance corresponding to the best ordinary tempering followed by the usual drawing. Steel containing from .002 to .004 of carbon, tempered in boiling water, has its tenacity and elasticity greatly increased, without sensibly altering its softness. For regenerating burned iron, Caron employs a boiling solution of chloride of sodium. A bar of burned iron, which, before this tempering, broke without bending, was, after the bath, capable of being bent double in the cold.

New Coloring-Matters.—A process for converting certain organic bodies into coloring-matters has been patented in France by Messrs. Croissant and Bretonnière. The substances employed are mostly of little intrinsic value, such as sawdust, humus from old trees, mosses, cellulose, horn, etc. Starch, horn, tannin, and aloes, are also among the substances which are converted into coloring-matters. The principle involved is the dehydrogenation of the bodies by the action of sulphur at a high temperature, the sulphur being supposed to replace the hydrogen. If, for instance, it be required to convert bran into coloring-matter, it is placed in a small sheet-iron tank fitted with a lid. Caustic soda and flowers of sulphur are added in certain proportions, and the whole is made up into an homogeneous paste. The vessel is then placed in a furnace where it can be heated to from 256° to 300° C. Sulphuretted hydrogen is given off in abundance. When the mixture is dry, we find in the boiler, after cooling, a black, friable matter, perfectly soluble in water, to which it imparts a fine sap-green. The solution has a strong affinity for fibres, which it dyes without mordant. One and the same body gives various tones of color, according to the temperature and the proportions of the mixture. Certain substances, such as extracts of dye-woods, aloes, etc., are converted at boiling-point; while lignine, bran, etc., require a higher temperature. The following examples are added:

(1.) Aloes..... 3 kilogrammes.
Caustic-soda lye at 40° Beaumé. 10 litres.
Water..... 10 "
Flowers of sulphur..... 3 kilogrammes.

The mixture is boiled, and yields a lilac-gray. At higher temperatures a deep brown is produced.

(2.) Humus..... 20 kilogrammes.
Normal sulphide..... 40 litres.

This "normal sulphide" contains 70 litres soda-lye at 40° Beaumé, 65 litres of water, and 30 kilogrammes of sulphur. To dye cotton, a

sufficient quantity of the product is dissolved in water at 60° C., and the goods are worked in this in the usual manner. They are then passed through boiling bichromate of potash, which fixes the color. The following additional particulars are taken from a pamphlet issued by the "Patent-Farben-Fabrik" of Gottingen—an establishment devoted to the manufacture of the new colors:

The Société Industrielle of Mühlhausen has found that these colors attach themselves permanently to the fibre, by the mere evaporation of the water in which they are dissolved—a circumstance of great importance in calico-printing. All the colors are soluble in water, and are precipitable by mineral as well as organic acids and metallic salts. The colors have a remarkable affinity for both animal and vegetable fibres, upon which they have no injurious action.

The new colors dye wool, silk, linen, and cotton, equally well. Hence mixed goods can be dyed in one operation without appearing checkered, the color producing one and the same tone of equal intensity, both upon the weft and the warp. In dyeing, after the color and the chrome baths, the goods are passed through a boiling soda-bath, and washed in abundance of water. Animal fibre may require the addition of a little acetic acid to remove the last traces of alkali. Other metallic salts may be used instead of chrome, according to the particular effect desired.

Cyanogen in Bromine.—Dr. T. L. Phipson states that he has found in what purported to be pure bromine, prepared for medicinal use, a notable amount of cyanogen. It has been known for many years that, in the manufacture of iodine, a certain quantity of that dangerous compound, iodide of cyanogen, sometimes finds its way into one of the glass condensers; and a similar compound with bromine may occur in this liquid element—a more serious case than the other, since it is dissolved and masked in the liquid. Its presence in bromine, says Dr. Phipson, may be detected in the following manner: Take an equal weight of iron-filings (say half an ounce) to that of the bromine, and add to the iron-filings four or five times their weight of water; mix in the bromine very gradually, and stir all the time, filter rapidly while warm from the reaction, place the filtered liquid in a partially-closed bottle, and in the course of some hours a deposit of ferricyanide of iron (Berlin blue) will have formed, and may be collected on a filter. In the course of two days (with the above quantity) the whole of the cyanogen is thus eliminated.

Soluble Starch.—According to Musculus, the best mode of preparing soluble starch is as follows: Put 400 grammes of starch in a flask containing two litres of a solution of sulphuric acid of $\frac{1}{10}$. Heat until the solution is effected. Then add chalk to arrest the action of the acid, filter, and evaporate to a syrupy consistence; filter again to separate the calcic sulphate, and set aside in a cool place. After twenty-four hours have elapsed, the solution begins to cloud, and finally gives a bulky, white deposit of soluble starch, which may be separated and washed. If left for some time in contact with water, it slowly dissolves, a little sugar being produced. Its rotatory power is nearly four times that of anhydrous glucose. Alcohol precipitates it from its solution in an insoluble state.

Value of Chloralum as a Disinfectant.—In the (German) *Quarterly Journal of Practical Pharmacy*, Prof. D. N. Fleck discusses very fully the value of the various chloralum preparations—chloralum liquid, chloralum powder, chloralum wool and wadding. A translation of this paper appeared in the *American Chemist* for July. To determine the value of chloralum as a disinfectant, equal volumes of liquid sewage were treated with that and five other disinfecting agents, and the clear supernatant liquid tested with alkaline silver solution for its percentage of putrefying matter. It was thus found that—

Chloride of lime	disinfects	100.0	%	putrefying	matter.
Caustic lime	"	84.6	"	"	"
Alum	"	80.4	"	"	"
Sulphate of iron	"	76.7	"	"	"
Chloralum	"	74.0	"	"	"
Chloride of magnesium	"	57.1	"	"	"

From the data set forth in this paper, the author concludes that—

1. Chloralum preparations are chiefly mixtures of chloride of aluminum.
2. They contain chlorides of lead, copper, and arsenic, which render them dangerous, especially as internal medicaments, or as astringents for fresh and suppurating wounds.
3. The price of chloralum preparations is exorbitant, considering their composition and efficacy. Where, as in case of the liquid chloralum, a net profit of at least 700 per cent., or, as in the case of the wadding, a clear profit of at least 4,000 per cent., can be easily calculated, the limits of sound and solid business are transgressed.
4. Chloralum and the preparations thereof belong to that class of unworthy secret preparations which the public should be warned decidedly against buying.

Effect of Acid on Iron Wire.—At a meeting of the Massachusetts Philosophical Society, some iron and steel wire was exhibited, on which certain curious effects had been produced by the action of sulphuric acid. The soft charcoal wire had become short and brittle, and its weight increased. More remarkable still, when the wire was broken, and the face of the fracture wetted, it frothed as though the moisture acted as a powerful acid. Exposure to the air for a few days, or to radiant heat of a fire for a few hours, caused these effects to disappear. Prof. Osborne Reynolds having undertaken the investigation of these phenomena, soon observed that, on breaking off a short piece from the end of the wire, the two fresh surfaces behaved very differently: that of the long piece, on being wetted, frothed for some seconds, while that of the short piece was nearly inactive. This seemed to imply that the gas was not generated on the fresh surface, but that it came from a considerable depth beneath it. Prof. Reynolds hence concluded that the effect was due to hydrogen having entered into combination with the iron during its immersion in the acid; when the iron was exposed, the hydrogen gradually passed off.

To test this conclusion, a piece of wrought-iron pipe six inches long and ⅛ inch external diameter, and rather over ⅛ inch thick, was used; this was cleaned in a lathe both outside and inside. Over one end was soldered a piece of copper, so as to stop it, and the other end was connected with a glass tube by means of a tube of India-rubber. The glass and iron tubes were then filled with olive-oil, and the iron tube immersed in cold dilute sulphuric acid. After five minutes bubbles began to pass up the glass tube, which were caught at the top, and subsequently burnt, proving to be hydrogen. But the evolution of gas was extremely slow. Warm, freshly-diluted acid, however, caused the hydrogen to come off much more quickly. A lamp was then placed under the bath, and when the dilute acid was on the point of boiling, as much hydrogen was given off in five seconds as had previously come off in ten minutes. After having been in acid for some time, the tube was taken out, well washed with cold water and soap, so as to remove all trace of the acid; it was then plunged into a bath of hot water, upon which gas came off so rapidly from both the outside and inside of the tube as to give the appearance of the action of strong acid. This action lasted for some time, but gradually diminished. It could be stopped at any time by the substitution of cold water in place of the hot, and it was renewed again after several hours by again putting the tube in hot water. The volume of hydrogen which was thus given off by the tube after it had been taken out of hot acid was about equal to the volume of the iron. With regard to the frothing of the wire when broken and wetted, this was due to warmth caused in the wire by the act of breaking. This was proved by the fact that the froth appeared on the sides of the wire in the immediate neighborhood of the fracture, when these were wetted, as well as the end; and by simply bending the wire it could be made to froth at the point where it was bent. If, as is probable, the saturation of iron with hydrogen takes place whenever oxidation goes on in water, then the iron of boilers and ships may at times be changed in character and rendered brittle in the same manner as Mr. Johnson's wire; and this, whether it can be prevented or not, is at least an important point to know, and would repay a further investigation of the subject.

CHILI (República de Chile), an independent state of South America, comprised between the 24th and 56th parallels of south latitude, and longitude 70° and 74° west; and bounded north by Bolivia, east by the Argentine Republic and Patagonia, with which the great chain of the Andes serves as boundary, south by Cape Horn, and west by the Pacific Ocean. The vexed question of title to Patagonia is still the subject of angry discussion between this republic and the Argentine; but here the arbitrary policy of Chili elicited little sympathy, and, should war have followed, public opinion would have regarded the Santiago Government as chiefly to blame. Report represented Chili as about to take formal possession of the entire territory from Santa Cruz River southward to the Straits of Magellan, which would seem to be a breach of the compact between the two countries—that neither should exercise jurisdiction over any portion of the territory until a mutually satisfactory solution should be reached; but Chili is said to have alleged, in its own defense, that the Argentines were the first to violate the agreement by erecting a fort on the southern bank of the river alluded to. It would, however, appear that the Argentine Government proposed to leave the matter to arbitration, as in the case of previous treaties.

The territory, which comprises an area of 188,223 square miles, or 248,813 including the 115,590 square miles of Patagonian territory to which Chili urges a claim, is divided into sixteen provinces (that of Linares having been formed by a law promulgated on December 11, 1873, from a portion of the province of Maule). The provinces, as they now stand, with their population in 1872, are as follows:

Provinces.	Population.
Aconcagua	135,223
Arauco	90,158
Atacama	84,074
Chiloé	64,148
Colchagua	155,778
Concepcion	157,860
Coquimbo	160,701
Curicó	102,281
Llanquihue	44,339
Maule	214,823
Linares	
Ñuble	128,189
Santiago	380,419
Talca	109,344
Valdivia	28,938
Valparaiso	146,729
Magellan Colony	749
Total	2,033,046

Hence it would appear that the population has increased by nearly 81,000 from 1870 to 1872. The foreign population in Chili amounts to some 20,000, chiefly English, Germans, and French.

The President of the Republic is Señor F. Errázuriz, inaugurated on September 18, 1871.

The Minister of the Interior is E. Altamirano (September 18, 1871); Foreign Affairs and Colonization, A. Ibañez (December 9, 1871); Justice, Public Worship, and Public Instruction, J. A. Barceló; Finance, R. Barros Luco; and War and the Navy, A. Pinto (September 16, 1871).

The Council of State, the president of which is the President of the Republic, is composed of two members from each of the courts of justice, one church dignitary, one general, the director-in-chief of one of the Departments of Finance, two ex-ministers, and two ex-intendants.

The President of the Supreme Court of Santiago is Señor Montt. There is a Court of Appeals at Santiago, Concepcion, and La Serena. The Postmaster-General is Señor J. M. Riesco.

The present Archbishop of Santiago is the Rt. Rev. R. N. Valdivieso; the Bishop of La Serena is M. Orrego; of Concepcion, J. H. Salas; and of San Cárlos de Chiloé, Señor de Paule Solar.

The Chilian *chargé d'affaires ad interim* at Washington is Señor F. G. Errázuriz; and the consul at New York, Mr. Rogers.

The regular army is composed of nine generals, 10 colonels, 34 lieutenant-colonels, 57 majors, 188 captains, 266 lieutenants, 2,000 infantry, 712 horse, and 804 artillery; total 3,516 men. Of the 514 officers, 41 field and 125 subaltern belong to the National Guard.

The National Guard is made up as follows:

NATIONAL GUARD.	Horse.	Infantry.	Artillery.	Total.
Commanding officers.	12	47	11	70
Subaltern "	147	1,084	121	1,302
Men	4,137	28,296	2,659	35,092
Total	4,296	29,377	2,791	36,464

The navy is composed of nine vessels, with an aggregate of 1,400 horse-power, 84 guns, and 661 sailors. Two corvettes, built in England, were to arrive at Valparaiso by the end of 1874.

There are in the navy two rear-admirals, three first-class and 10 second-class captains, 44 lieutenants, 21 midshipmen, and 15 cadets; one battalion of marine artillery, with 600 men, commanded by one colonel, one lieutenant-colonel, four captains, and 18 lieutenants. There is, besides, at Valparaiso, a battalion of marine artillery, forming a part of the *guardia civil* (police force), under the command of one colonel, one lieutenant-colonel, six captains, and 25 lieutenants, and comprising 794 men.

The total value of the exports in 1872 and 1873, and of those to the countries which usually take Chilian products, is shown by the following table:

COUNTRIES.	1872.	1873.
France	$4,755,371	$1,194,469
England	18,864,179	19,398,280
Germany	196,086	488,807
Belgium	158,787	80,887
Italy	33,733	.....
Australia	9,917	.....
Portugal	650	.....
Cape of Good Hope	36,836	67,756
Polynesia	36,539	38,571
United States	580,981	1,887,140
Falkland Isles	86,073	111,713
Central America	111,460	20,703
Colombia	111,460	126,216
Ecuador	308,100	165,650
Peru	7,516,657	7,498,399
Bolivia	345,808	5,850,683
Brazil	112,969	187,612
Uruguay	189,756	190,418
Argentine Republic	48,735	87,094
Ship-stores	618,434	152,835
Total	$37,122,460	$38,810,271

From the foregoing table it is observed that the value of the exports was greater by more than $1,500,000 in 1873 than in 1872. The subjoined table sets forth the value of each of the principal commodities exported in the same biennial period:

COMMODITIES.	1872.	1873.
Agricultural products	$14,946,407	$14,277,318
Home manufactures	724,184	466,396
Mining produce	17,320,993	16,291,038
Gold and silver coin	445,147	1,849,952
Bank-notes	589,545	4,019,246
Total	$34,545,276	$36,903,937
Foreign goods reëxported	2,577,184	1,906,334
Total exports	$37,122,460	$38,810,271

Here it is seen that the increase in 1873 was owing to larger shipments of coin and bank-notes, for in almost all the other articles there was a marked falling off in that year. The extensive circulation of Chilian money abroad dates from the establishment of the National Bank of Bolivia.

The principal native manufactures sent out of the country are lamp-oil, boots and shoes, ox and horse carts, flour, matting, furniture, launches, sailcloth, etc.; boots and shoes being sometimes exported to the extent of $10,000 per annum, and carts to about the same amount.

The growth of the imports is still more striking than that of the exports, as will be seen in the annexed table, in which is also expressed the value of the imports from various countries in 1872 and 1873:

COUNTRIES.	1872.	1873.
France	$7,851,014	$6,743,790
England	15,452,466	18,475,116
Germany	2,815,188	4,167,926
Belgium	818,247	758,555
Holland	11,391	8,350
Spain	192,498	290,382
Portugal	2,298	9,425
Italy	209,409	268,957
China	19,845	127,644
Australia	22,996	.....
Polynesia	111,495	67,561
United States	1,573,645	2,094,248
Central America	171,687	148,489
Colombia	1,792	21,199
Ecuador	85,005	84,716
Peru	3,088,040	216,244
Bolivia	62,725	221,346
Brazil	297,063	777,543
Uruguay	59,995	4,043
Paraguay	47,246	36,419
Argentine Republic	1,193,910	1,396,892
Fisheries	31,108	64,439
Total	$34,657,928	$37,928,427

The imports for the two years above referred to may be classified as follows, with the value of each class:

ARTICLES.	1872.	1873.
Fancy goods, includ'g wearing apparel, manufactured goods, etc., etc	$4,765,789	$5,811,013
Raw material, and articles, machinery, etc., for industrial purposes	6,467,740	7,910,636
Articles used for food	6,053,426	6,585,607
Other articles, not included in either of the foregoing categories	17,373,033	18,171,173
Total	$34,657,928	$37,928,427

In 1873 the increase in the commodities more extensively imported was about 12 per cent., while in others it was only 10 per cent.

The figures of the preceding tables indicate an improvement of rather more than 7 per cent. in the imports for 1873, and of a fraction less than 5 per cent. in the exports. But a noticeable fact is, that the annual increase of exports has been in about the same ratio (5 per cent.) during the thirty years 1844–'73; and while they not only did not begin to preponderate until the middle of that period, but were, in the mean, fully one per cent. less than the imports, they have, since 1859, in which year they were considerably greater than the imports, steadily and progressively kept the lead, and their relative increase as compared to these has been as 7 to 5, approximately, viz.:

YEARS.	Imports.	Exports.	Total.
1844.....	$8,596,674	$6,087,023	$14,683,697
1845.....	9,104,764	7,601,523	16,706,287
1846..... ...	10,149,136	8,115,288	18,264,424
1847.....	10,068,049	8,442,085	18,510,934
1848.....	8,601,357	8,253,605	16,954,962
1849.....	10,722,840	10,603,447	21,326,287
1850.....	11,788,193	12,426,269	24,214,462
1851.....	15,884,973	12,146,391	28,031,363
1852..... ..	15,347,332	14,087,556	29,434,888
1853.....	11,553,096	12,138,779	23,692,475
1854.....	17,425,199	14,527,156	31,955,455
1855.....	18,433,387	19,180,489	37,613,876
1856.....	19,804,041	18,159,522	37,963,563
1857.....	20,196,968	19,778,150	39,975,118
1858.....	18,186,392	18,335,449	36,521,784
1859.....	18,395,654	19,559,354	37,954,908
1860.....	22,171,506	25,451,279	47,622,785
1861.....	16,676,314	20,349,634	37,025,948
1862.....	17,226,655	21,994,432	39,221,087
1863.....	20,487,517	20,118,852	40,606,369
1864.....	18,867,365	27,242,853	46,110,218
1865.....	21,240,976	25,712,623	46,953,599
1866.....	18,757,345	26,680,510	45,437,855
1867.....	24,863,473	30,686,930	55,550,403
1868.	25,839,801	29,518,817	55,358,618
1869.....	27,232,218	27,725,778	54,957,996
1870.....	28,224,139	26,975,519	55,199,958
1871.....	26,631,880	31,981,693	58,613,573
1872.....	34,657,928	37,122,460	71,780,388
1873.....	37,928,427	38,810,271	76,738,698
Total.....	$565,067,898	$599,914,020	$1,164,981,918

A review of this last table likewise shows the increase of the entire foreign trade of the republic in the first fifteen years to have been in the ratio of $2\frac{1}{2}$ to 1, and of about $2\frac{1}{15}$ to 1 in the other fifteen years; and that the mean annual increase during the latter half was nearly 8 per cent.

It is, however, to be kept in view that the great excess of the exports over the imports is due to the immense quantities of money—gold and silver coin, and bank-notes, especialy the last—sent out of the country. The value of the coin exported in 1844 was $155,370; in 1854, $945,317; in 1864, $936,844; and in 1873, $1,849,956; and, in the thirty years 1844–'73, $19,883,992, or an average of $666,356 per annum. The total value of the mining produce of every description exported during the same thirty years, reached $369,440,092, of which $135,983,641 was for copper in bars.

The decline in the exportation of agricultural produce in 1873 is not attributable to any dwindling in the productiveness of the country, but to a decreased demand in the markets hitherto chiefly dependent on Chili, and now drawing their supplies from other foreign sources or from home industry. For instance, in 1868, the Argentine Republic and Uruguay took Chilian wheat to the amount of $235,695, and flour to $649,734; while in 1873 they imported but $33,443 worth of the former, and $119,153 of the latter article. Both of those Plate republics now export wheat, Uruguay having sent wheat and flour to Brazil of the value of $151,200 in 1872.

Besides the causes of depression just referred to, there were others of a different character, such as the financial crisis, which proved so disastrous in the United States in 1873, and whose effects were sensibly felt in every mercantile community on the globe.

Notwithstanding the abundant yield of the coal-mines of Coronel and Lota, which in 1872 reached 3,087,000 metrical quintals, prodigious quantities of that article are still brought from England to Chili. The imports, in 1872, amounted to $418,483, and to $1,006,529 in 1873, spite of the enhanced price of coal in that year—23, 33, and even 45 shillings per ton. What more convincing proof could be adduced of the industrial prosperity of the republic, of the development (unprecedented in South America) of her manufactures, founderies, and railways, and of steam navigation on her coasts?

Respecting exports, the following changes are to be noted: Those to France decreased 2.18 per cent.; to Belgium, 10 per cent.; to Ecuador, 86 per cent.; and others too unimportant to be mentioned. Those to Great Britain increased 8 per cent.; to Germany, 1.57 per cent.; to the United States, 2.25 per cent.; to the Argentine Republic, 79 per cent.; to Bolivia, 70 per cent.; to Brazil, 66 per cent.; and to the Cape of Good Hope, 87 per cent. Peru, Polynesia, Colombia, and Uruguay, received, with but slight difference, the same amounts as in 1872.

Interior maritime commerce is still increasing rapidly, the excess of last year over 1872—$7,010,598, an increase of 20 per cent.—being superior to all its predecessors. During the first quinquennium, 1864–'68, the total value of the coasting-trade amounted to $149,150,720; and during 1869–'73 to $183,628,799, an increase of 23 per cent. This trade amounted, in the decade 1864–'73, to $332,779,519.

Here follows a statement of the shipping movements at all the Chilian ports:

FLAGS.	ENTERED.		CLEARED.	
	No. of Vessels.	Tons.	No. of Vessels.	Tons.
British.....	2,625	2,811,673	2,599	2,800,290

Total.....	5,937	4,059,809	5,860	4,018,976

The movement of the port of Valparaiso may be thus stated:

		Vessels.		Tons.
Entered	Sailing-vessels...	999,	aggregating...	432,945
	Steamers.....	595	"	541,561
Cleared	Sailing-vessels...	980	"	421,494
	Steamers.....	596	"	540,349
Total.....		3,160		1,536,318

The Chilian merchant navy comprised, in

1873, 52 sailing-vessels of all rigs, 28 steamers, and 2 steam-tugs; total tonnage, 19,164.

The sources and amount of the national revenue for 1872, about one-half of which is commonly derived from customs, are shown in the following table:

REVENUE.	
Customs	$7,375,768
State railways	1,975,677
Monopolies (tobacco, playing-cards, etc.)	1,594,857
Tax on the sale of real estate	663,463
Real-estate tax	648,035
Patent-rights	375,855
Sale of guano	300,000
Post-office	88,846
Telegraphs	25,473
Sundries	643,986
	$13,594,410

Here follow the items of the national

EXPENDITURE.	
Ministry of the Interior	$4,895,069
Ministry of Foreign Affairs, etc	305,893
Ministry of Justice, etc	2,123,193
Ministry of Finance	6,080,561
Ministry of War	2,171,310
Ministry of the Navy	1,033,187
	$16,609,183

The deficit of $3,014,773 is to be accounted for probably by an increased outlay for railways. The estimated budgets for 1873 and 1874 were respectively:

Revenue.....For 1873, $14,000,000; for 1874, $14,260,310
Expenditure..For 1873, $13,364,450; for 1874, $16,009,183

The following table exhibits the state of the public debt on January 1, 1873:

DEBTS.	Capital.	Interest.	Appropriation, 1871.
HOME DEBT.			
Three per cent., 1865	$3,150,775	$94,523	$34,600
Eight per cent., 1865	2,323,000	196,784	135,900
Meiggs loan, at 6 pr. ct.	1,472,000	93,840	92,000
Garland loan, at 6 pr. ct.	1,288,000	78,540	21,000
On real estate, 3@6 p. c.	7,925,247	345,219	.....
Other debts	757,000	.....	.....
Total	$16,916,022	$808,906	$283,500
FOREIGN DEBT.			
Loan of 1842, at 3 pr. ct.	1,704,000	54,360	108,000
Loan of 1848, at 4½ "	6,122,000	275,535	165,500
Loan of 1870, at 5 "	4,797,500	245,400	110,500

Loan of 1866, at 7 "	4,785,000	346,220	161,000
Total	$26,281,000	$1,469,015	759,500
Loan of 1873, at 3 pr. ct.	10,700,000	.....	.....
Total public debt	$53,897,022	$2,277,921	$1,061,000

The following is a comparative statement of the receipts of the custom-house at Valparaiso during the first ten months of 1872 and 1873:

MONTHS.	1872.	1873.
January	$398,573 06	$353,417 17
February	506,000 89	467,674 78
March	545,960 39	684,085 56
April	594,472 27	737,134 89
May	514,361 10	605,911 72
June	498,501 17	601,464 28
July	522,859 52	538,158 37
August	244,875 19	848,886 25
September	496,677 06	542,346 37
October	460,427 85	559,608 55
Total	$5,112,697 51	$5,981,982 94
Increase in favor of 1873	.....	$876,285 43

The Senate refused to grant a subsidy of $100,000 for the Transandine Telegraph.

The lines of railway in operation at the beginning of 1874 were the same as those enumerated in the ANNUAL CYCLOPÆDIA for 1873, page 112. (For details of the projected Transandine railway from Valparaiso to Buenos Ayres, *see* page 84 of this volume.)

There are 3,177 miles of telegraph open in the republic, of which 1,951 miles, with 52 offices, belong to the state.

The post-office returns for 1871 and 1872 show the following statistics:

MAIL MATTER.	1871.	1872.
Letters	4,367,218	4,807,889
Samples	10,398	9,677
Printed matter	7,171,559	5,614,858
Total	11,549,175	10,432,424

A new penal code, submitted to Congress for approval toward the end of 1873, was reported to be of a nature to completely revolutionize the criminal law of the republic. One important feature therein, providing for the peaceful exercise of religious worship by all sects, and deciding the clergy to be amenable to the civil authority, greatly alarmed the clerical party, and a petition against the sanctioning the law, signed by the archbishop and two of his bishops, was presented to the Senate. Indeed, the spirit of discord caused by the Ultramontane party in Europe, followed by the attempt to override the supremacy of the law in Brazil, has extended itself to Chili. Public feeling, however, appears to be too strong for the clerical party, and it is expected the bill will pass, after which there will probably be more peace and quietness in the community. Chili has long suffered from this infliction, being in every other respect liberally and quietly governed. It was only after the achievement of independence that the right of sepulture was allowed to foreigners.

An archiepiscopal pastoral was issued in October, excommunicating *latæ sententiæ* the voters for the amendments in the denounced code, and extending to all magistrates who might enforce the new law.

The President's message to Congress was exceedingly brief, being merely the announcement that peace reigned undisturbed in all parts of the republic, and the expression of the hope that the question of separation of Church and state might soon be disposed of, to the interest of the country.

Few states in South America more quietly pursue the even tenor of their way than Chili; and yet it is proverbial for its steady progress in all industrial enterprises, for the absence of political perturbation, and for its punctuality in meeting its financial engagements. Its securities rank among the foremost on the London Stock Exchange, being usually held for investment; it builds its own railways and its own telegraphs without much foreign help;

and the money it borrows for such purposes is secured by national and private bonds.

An excellent sign of the times for Chili is the general tendency manifested by the people to abandon mining, and devote their attention to agriculture.

Spite of very unfavorable weather, the crops were, in most of the provinces, very abundant; but the general health has been unusually bad. A treaty of limits has been entered into by the representatives of Chili and Bolivia, by the terms of which the boundary fixed between the two states is the 24th parallel of south latitude; with an understanding that, should any question arise as to the exact position of Caracoles, or any other mining region, it shall be determined by a commission of surveyors appointed by both Governments. It is further stipulated that Chili shall receive indemnification for any loss sustained by this arrangement, the amount of which to be determined by arbitration. As respects the interest of Chili, jointly with Bolivia, in the customs up to the date of the contract, it is to be determined in the same manner, the arbitrator being the Emperor of Brazil. Bolivia renounces, for its part, all claims to the possession of mines lying to the south of latitude 24°, and undertakes not to increase its export duties, but to allow the free entry of Chilian products. Chili will, further, be entitled to half of the proceeds derived from the sale of Mejillones guano.

These are, briefly, the principal stipulations of the treaty, and it will be seen that they are clearly of the nature of a compromise. Neither party has insisted on theoretical rights, but has sensibly arrived at a settlement in view of substantial and practical considerations, an example worthy of imitation by the other republics, in the solution of similar boundary difficulties, and it may reasonably be hoped that, in the case of Chili and the Argentine Republic, the same spirit of cordiality will be manifested with reference to the conflicting claims to sovereign jurisdiction in Patagonia.

The railway had worked a wonderful change in the city of Concepcion. New buildings were springing up in all directions, and a new face was being put upon old ones. Extraordinary activity, in comparison to that of pre-railway times, was everywhere observable.

CHINA, an empire in Asia; reigning Emperor, T'oung-chê, formerly called Ki-tsiang, "High Prosperity," born April 27, 1856, the eldest son of the Emperor Hieng-fun, "Perfect Bliss;" succeeded to the throne at the death of his father, August 21, 1861; became of age, and assumed the government in 1873. He was married on October 16, 1872, to Alootay, daughter of the Vice-rector of the Peking Academy, Chungchi.

The area and the population of China cannot at present be accurately stated, as parts of the western dependencies have successfully established their independence, while other portions, especially the district of Kooltsha, have been incorporated with Russia. Although the new frontiers cannot, as yet, be accurately defined, it is assumed that at least 500,000 square miles of the former possessions of China were, in 1873, entirely lost to the imperial Government. Another large tract of land, in the southwestern part of China proper, which for many years had been in the hands of the Mohammedan Panthays, was, in the latter months of the year 1872, and in the beginning of 1873, entirely recovered. The total area of China is now roughly estimated at 3,970,000 square miles, of which 1,553,000 belong to China proper, and the remainder to the several dependencies. China proper is very densely peopled, the population amounting in 1812, according to an official census, to 367,000,000; in 1842, to 414,000,000; and in 1852, to 450,000,000, or 847 inhabitants per square mile. Since 1852, the population is believed to have somewhat decreased in consequence of the bloody civil wars and famines; and in 1874 it was estimated (Behm and Wagner, "Bevölkerung der Erde," II., 1874) at 404,000,000. The dependencies of China, embracing Mantchooria, Mongolia, Thibet, and Corea, though their area largely exceeds that of China proper, have a population of only about 20,200,000.

The population of the ports which, in virtue of the treaties concluded with foreign nations, were opened to the foreign trade, were, according to the latest dates, as follows:

CITIES.	Population.	Foreigners.
Peking	1,648,814	....
Canton	1,000,000	306
Tien-tsin	950,000	127
Hankow	800,000	130
Foochow	600,000	206
Ningpo	400,000	140
Shanghai	276,640	2,074
Takao	220,000	....
Amoy	200,000	157
Chinkiang	180,000	....
Newchuang	70,000	....
Tamsui	50,000	....
Kiukiang	50,000	....
Swatow	45,000	128
Cheefoo	.....	157

According to the official reports of the Chinese Government in 1872, the number of foreigners in the several treaty-ports was as follows:

British	1,771	Swedes	34
Americans	541	Italians	21
Germans	481	Austrians	22
French	239	Belgians	5
Spaniards	59	States without a treaty	346
Dutch	56		
Russians	48		3,661
Danes	35		

The two highest boards of state officers are the Board of Secretaries of State, and the Council of State. The former has six members, four of whom have the title of Actual Secretaries of State, and two of Under-Secretaries. One-half of each class are Mantchoos and one-half Chinese. It is the duty of this board to consult on the administration of the country, to proclaim the imperial will, to reg-

uate the laws of the state, and, in general, to assist the Emperor in the administration of the country. Of late, this board has lost much of its former influence, and the administration of the empire is chiefly conducted by the Council of State. This board is composed of the imperial princes, the Secretaries of State, the Presidents of the Ministries, and the chiefs of other branches of administration. It has the duty of drawing up the imperial decrees and decisions, and adopting such resolutions as are necessary for an effective and well-regulated administration. Subordinate to the Secretaries of State, and the Council of the Empire, are six ministries or executive departments, at the head of each of which are two presidents and four vice-presidents (one-half Mantchoos and one-half Chinese). Some departments, like those of War, of Justice, and of Public Works, have, moreover, a chief president. Other boards, dependent upon the Secretaries of State and the Imperial Council, are, the Colonial Ministry, the Board of Censors, and the Peking or Imperial Academy. The Colonial Ministry is charged with the administration of Mongolia and other Chinese dependencies. The Board of Censors consists of two chief censors, of four assistants, and from forty to fifty censors. It is a kind of Court of Revision and Appeal. Its members have the right to bring to the knowledge of the Emperor any remonstrances against administrative measures, and even to criticise imperial decrees. A department of Foreign Affairs was established in 1860, and consists of the Presidents of the Executive Departments.

The public revenue is mostly derived from three sources, namely, customs, licenses, and a tax upon land. The aggregate revenue of the Government is estimated at $200,000,000 taels (1 tael = $1.61). The receipts from the customs of the treaty-ports have been regularly published since 1861. The customs duties fall more upon exports than imports; their total produce at the treaty-ports amounted, in 1871, to 11,216,000 Haikuan taels; in 1872, to 11,678,636; in 1873, to 10,977,082. China has, as yet, no foreign debt; it is not known whether the Government has raised or is responsible for loans contracted at home.

The foreign commerce of China, from 1870 to 1873, was as follows (value expressed in taels):

YEAR.	Imports.	Exports.
1870	71,000,278	61,990,225
1871	78,190,093	74,860,550
1872	74,826,130	88,719,887
1873	73,992,908	77,540,919

The foreign commerce of the year 1872 was thus divided among the several foreign countries (value expressed in taels):

COUNTRIES.	Imports.	Exports.
Great Britain	29,186,000	43,022,000
Hong-Kong	23,264,000	13,441,000
East Indies	18,489,000	456,000
United States	410,000	13,280,000
Japan	3,148,000	1,461,000
European Continent	390,000	4,849,000
Australia	496,000	2,387,000
Singapore	808,000	459,000
Siam	455,000	165,000
Philippines	225,000	267,000
Java	239,000	382,000
Cochin-China	510,000	127,000
Amoor Territory	214,000	44,000
Siberia	15,000	1,899,000
Russia Codessa	39,000	1,017,000
Other countries	178,000	463,000
Total	78,066,000	83,720,000
Reëxported	3,940,000	
	74,836,000	

The principal articles of imports and exports were, in 1872 and 1873, as follows (value expressed in taels):

IMPORTS.	1872.	1873.
Opium	27,658,000	29,030,000
Cotton goods	25,407,000	21,540,000
Woolen goods	4,795,000	5,950,000
Raw cotton	2,339,000	.....
Metals	3,611,000	3,100,000
Coal	1,229,000	.....
Rice	1,093,000	.....
Sea-grass	1,084,000	.....
Black tea	33,504,000	32,500,000
Green tea	10,276,000	.....
Silk, raw	27,719,000	27,780,000
Silk goods	2,607,000	.....
Sugar	1,505,000	.....

The movement of shipping in the Chinese ports, from 1871 to 1873, was as follows (entrances and clearances combined):

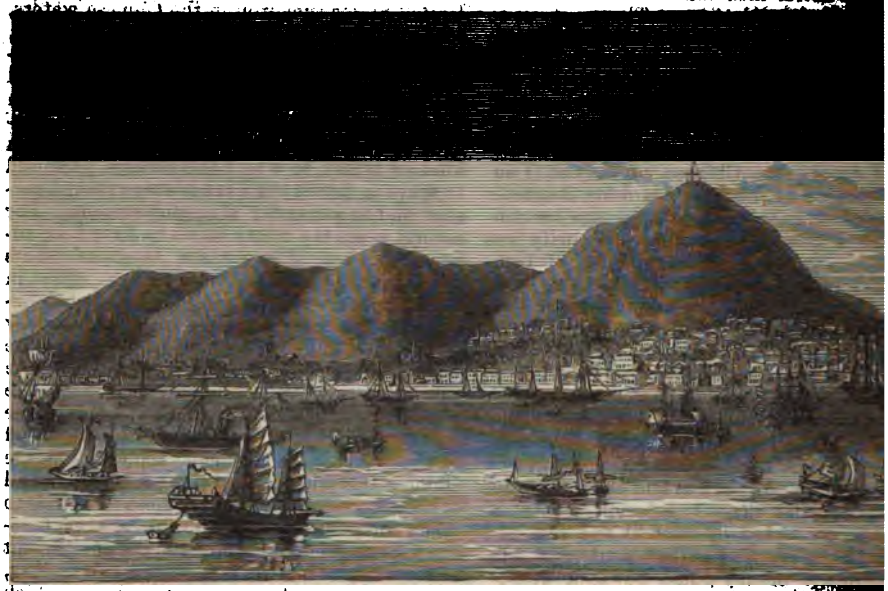
FLAG.	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
British	7,160	3,320,881	8,360	3,954,120	6,955	3,645,557
American	4,600	3,187,643	5,1 4	3,471,298	5,001	3,483,203
German	1,480	428,747	1,976	607,948	1,702	492,033
French	277	135,629	225	164,346	189	151,233
Siamese	115	45,456	146	56,857	147	60,960
Danish	273	59,871	221	51,267	195	51,448
Swedish and Norwegian	218	45,884	209	50,346	131	29,868
Chinese	474	30,013	545	36,117	865	207,118
Russian	88	34,340	31	33,068	62	49,893
Spanish	50	18,454	79	23,959	48	16,727
Netherlands	208	59,791	83	21,673	55	13,968
Other	25	5,148	43	15,870	31	27,696
Total	14,963	9,381,557	17,090	8,486,473	15,381	8,227,754

The Peking *Gazette* of December 15, 1873, contains imperial decrees which confirm the report that had been current of a success obtained by the troops under Tso Tsung-tang, over the Mohammedan insurgents in Kansuh. The achievement turns out to be no less than the capture of the city of Su-chow, in the extreme northwest of Kansuh, which has for

and years past been in the hands of insurgents. It is the last remaining stronghold hitherto retained by the Mohammedans within the limits and its recovery therefore is a matter of great importance to the Imperial Government.

In the southwestern province of Yunnan the Mohammedan rebellion of the Panthays has been fully suppressed in 1873. A weak remainder, which had survived the downfall of the empire, was crushed out in the course of the year 1874. The chief Tahsakou, when the Chinese had surrounded Usar, the last place held by the Panthays, fled with about 200 companions into a pagoda, where he was compelled by hunger to surrender. He was executed, with the majority of his companions, and his head carried about in the province as a warning. The Chinese rule in the province of Yunnan is now fully reëstablished.

The efforts of the Chinese Government in behalf of a suppression of the coolie-trade obtained toward the [illegible] important successes. [illegible] of Macao, Gonsalo [illegible] 27, 1873, announced to the [illegible] Macao that, in virtue of a [illegible] Portugal and China, the [illegible] coolies from Macao would [illegible] and after January 27, 1874, [illegible] caused great excitement [illegible] coolie-trade has been for many [illegible] important business of [illegible] than 195,000 coolies have been [illegible] it since 1852. The Chinese [illegible] many brokers who had received [illegible] their agreements cancelled, [illegible] houses, with one or two [illegible] their doors, and many of the [illegible] were dismissed. It was [illegible] of 300 houses were to be [illegible] 40,000 persons would be thrown [illegible] ployment. The Chinese Government [illegible]



CITY OF HONG-KONG.

ed the Governor of Macao, the master of the port, and the deputy of Macao in the Portuguese Cortes, with gold medals as a mark of its recognition. The stoppage of the coolie-trade at Macao compelled the Government of Peru, which cannot do without coolie-labor, to negotiate with the Government of China a treaty for the regulation of the voluntary emigration of coolies. Aided by the representative of England in Peking, the envoy of Peru, Garcia, succeeded in prevailing upon the Chinese Government to order the Governor-General of Tien-tsin, Li Hung Chang, as superintendent of the commerce with foreign nations, to conclude a treaty with Peru. The treaty was completed and signed by the representatives of the two Governments [illegible] It consists of a convention [illegible] proper. In the former Peru [illegible] China the right to send a [illegible] for the protection of the coolies [illegible] to this commission protection by [illegible] authorities. The coolies now in [illegible] of Peruvians are notified by official [illegible] tions that they may bring forward [illegible] plaints against their employers. [illegible] plaints are to be investigated by [illegible] open session. If they prove to be [illegible] the employers are informed that [illegible] redress the complaints, their contracts [illegible] employés will be annulled. [illegible] contract expires are called upon [illegible]

whether they desire to return to China or not. To those coolies who desire to return, the Government guarantees a free passage, either compelling those employers who engaged to send the coolies back to China, to fulfill their contracts, or in the other cases defraying itself the necessary expenses. The treaty proper consists of nineteen articles; the first five regulate the mutual diplomatic representation at Peking and Lima, the appointment of consular agents in the treaty-ports, the tariff, etc. The emigration of Chinese to Peru is to be entirely voluntary, and every kind of force and fraud is to be punished. Peru promises to appoint official interpreters in all working districts, and to deal out impartial justice to all Chinese complainants in case the Chinese consuls in Peru are unable to adjust the difficulty. The Peruvians in China are under the jurisdiction of Peruvian consuls. The treaty is drawn up in Spanish, Chinese, and English; and in cases of doubtful meaning the English text is to be regarded as decisive. The treaty is to remain in force for ten years; if changes are then to be made, they must be announced six months before the expiration of the treaty; if no such announcement is made, the treaty remains in force for ten years more.

In October a dangerous conspiracy was discovered among the Chinese soldiery at Tien-tsin. Rumors of the most alarming character were in circulation among the foreign community, and a general feeling of insecurity was everywhere manifest. The district of Tien-tsin, since in 1873, has been the scene of great military activity. It is estimated that ever since that time there have been from 20,000 to 60,000 troops within two days' march of Tien-tsin. These troops are principally from Honan, and constitute the flower of the army of the Governor-General, Li Hung Chang. They are strangers in this province, but none the less masters of the soil, and they live on the fat of the land. It was not, then, a matter of surprise that these vagabonds, weary of inactivity, corrupted by idleness and lust, and restrained by no power but their own will, should engage in any game, however desperate. The leader of the revolt was supposed to be General Whang, who was thought to possess the confidence of large numbers of officers and southern troops at present without employment. A number of the rebels were arrested by order of Li Hung Chang, whose fidelity to foreigners was not doubted. One of the rebels confessed that the object of their attack was to plunder Tien-tsin, and to kill all the foreigners. The Chinese said that the organization was not political, being got up by a band of bad characters for purposes of looting. The local authorities professed ignorance of the movement. Three gunboats were at the time at Tien-tsin, and the consuls asked for reenforcements.

The expedition undertaken by the Government of Japan against the native tribes of the island of Formosa (*see* JAPAN), in order to punish them for acts of piracy against Japanese subjects, led to serious complications between Japan and China, as Formosa is claimed by the Government of China as a part of its dominions. It belongs to the province of Fuhkien, has an area of 14,982 square miles, and a population of about 3,000,000. The western and most fertile part of the island is inhabited by Chinese colonists, who have emigrated to the island in large numbers during the last two or three centuries. The eastern and mountainous part is virtually independent of Chinese rule, and is inhabited by a copper-colored race of barbarians, who number only about 20,000, but have thus far defied the Chinese authorities. They were in the habit of killing all the shipwrecked crews thrown on their shores. Thus, in 1867, the captain and crew of the American vessel Rover* were killed, and, as the Chinese authorities failed to give the desired satisfaction, Admiral Bell, the commander of the United States squadron in the Chinese waters, sent an expedition against the savages, which, however, did not meet with the expected success. Subsequently General Legendre, United States consul at Amoy, had an interview with Toketok, the head-chief of the southern savages of Formosa, and concluded with him a kind of treaty, in which the savages promised to spare in future the lives of shipwrecked persons and to surrender them for ransom. For several years the treaty seems to have been adhered to; but, of late years, Japanese fishers were repeatedly massacred by them. Thus, in 1873, fifty natives of a group of islands belonging to Japan were killed by them. An envoy was sent to China to demand satisfaction. He was admitted with the representatives of the European powers to an audience with the young Emperor, but was unable to obtain the redress demanded, as Prince Kung, the head of the Foreign Department, replied that the Chinese Government had not sufficient control of the southern portion of Formosa to be able to reach and punish the guilty. The Japanese Government then concluded to take the punishment of the savages into its own hands, and in May, 1874, sent against Formosa an expedition, which was a brilliant success. As the Japanese showed an inclination to occupy part of the island permanently, the Chinese Governor of Formosa issued a proclamation, in which he said: "The Japanese have come into our land to make war against the tribe of the Bootans for having murdered some of the natives of the Lieuchew Islands. They have taken revenge; but, as the army of invasion does not appear willing to leave the island, the Emperor has sent two high officers to command the Japanese to go home. While the negotiations with the Japanese general are pending, they have commanded the native tribes to lay down their arms." At an interview held in Formosa, in June, between

* *See* AMERICAN ANNUAL CYCLOPÆDIA for 1867, Art. CHINA.

the Japanese General Saigo and a Chinese envoy, Shen-pao-Chen, the latter, apparently upon ample authority, acceded to the requirements of the Japanese general. On his return home his action was repudiated by the Peking Government, and the attitude of China became very threatening. The governors-general of the Chinese provinces made preparations for war, and would have carried out their plans if Prince Kung, by opening direct diplomatic negotiations, had not got the further treatment of the Formosa difficulty into his own hands. The prince seemed to fear that an unsuccessful war might raise the turbulent elements in the country against the Mantchoo dynasty. He was aware that China was any thing but prepared for a serious war. The army was in a most disorderly state, the coolies sent to be trained in the use of Krupp guns simply asked for their pay and then went back again, the ships-of-war would probably be unable to leave their harbors, and the soldiers refused to go on board the transports which were to take them to Formosa. Moreover, the Chinese feared the Japanese iron-clads, especially since the failure of the negotiations for the purchase of the Danish monitor Rolf Krake. The purchase of arms and the appointment of two Frenchmen as military advisers could not at once make the army efficient, at least so far as the men and the system were concerned.

At one time the war party appeared to be in the ascendant. An imperial decree of September 10th declared Prince Kung to have forfeited the title of the First Prince of the Empire, on the ground that, in the interviews with the Emperor, he had neglected the respect due to the person of the Emperor. An edict of September 11th revoked, however, that of September 10th, but adds that it was hoped that Prince Kung would heed the warning. Negotiations for peace were resumed, and terminated in October in the conclusion of a convention between the two Governments, which fully secured the continuance of peace.

The first *bona fide* Chinese telegraph has at length been commenced. The Viceroy of Fuhkien, in July, began (with the assistance of the Great Northern Telegraph Company) a line from Pagoda anchorage to Foochow.

On May 3d a serious riot took place at Shanghai against the French. It was occasioned by a resolution of the Municipal Council of the French residents to build a street through a piece of land containing a former cemetery of natives of the province of Ningpo.* The mob set fire to several houses, plundered, committed acts of violence against several persons, and finally attacked the hall of the French municipality, in which a large number of foreigners had assembled. To the great dissatisfaction of the majority of his countrymen and of the other foreigners, the French consul not only took no steps for the protection of his countrymen, but at once yielded to the representations of the Chinese authorities in the dispute relative to the road interfering with the Ningpo graves. The rioters, who had been arrested, were surrendered to the Chinese authorities for punishment, and quiet was restored.

A request of the Embassadors of England and France, that Messrs. Wade and Geoffroy be admitted on the Chinese New-Year's day to another solemn audience with the Emperor, was refused. The English press, in the Chinese treaty-ports, was all the more indignant at this refusal, as on May 20th the representative of Russia, Bützov, was admitted to an audience, which was moreover officially announced in the Peking *Gazette*. A request from the Government of the United States for a removal of the sand-bank near Wosung, which debars large vessels from entering the Yang-tse River, was also refused.

According to reports from Corea, a great political change has taken place in this vassal-kingdom. The Regent Li, who had married the widow of the deceased King and seized all power, who had repulsed the invasions of the French and American expeditions, derided the Japanese, and shown himself decidedly opposed to any intercourse with foreign nations, has been deposed in consequence of a revolution. The young King is reported to be more liberal, and even to be favorable to opening a port to the foreign trade.

The English projects for establishing a direct trade-road and a railway between the south-western province of Yunnan and Burmah have, according to the well-known Chinese traveler, Baron F. von Richthofen, but little prospect of success. On the other hand, the efforts of the Frenchman Dupuis (*see* ANNUAL CYCLOPÆDIA, 1873, p. 120), to use the Songha, or river of Tongkin, as a trade-road to Yunnan, promise, in his opinion, a better result. The best route for establishing railroad connection between China and Europe is, according to Richthofen, a road from Shanghai, *via* Singan-fu and Hami, to Kooldja. (*See* "Verhandlungen der Gesellschaft für Erdkunde zu Berlin," 1873, pp. 58–67, and 1874, pp. 115–126.)

CHRISTIANS. I. CHRISTIAN CONNECTION.—The statisticians of the Christian Connection declare that the reports of conference clerks are so different in character, and often so imperfect, that it is impossible to harmonize them in a tabulated statement, or to make any item complete. Instead of such statement, the following general summary is given in the *Christian Almanac* for 1875: Number of ordained ministers, 1,197; number of unordained ministers, 210; number of members reported during the year 1873, 64,760; number of members not reported in 1873, 903; number of members added during the year, 4,088; total numbers reported, 69,701. It was thought that full returns from all the conferences, if they could

* It is common for the natives of the several provinces of China to have in each of the large cities special clubs, religious meeting-houses, and cemeteries in which the poor are interred, the corpses of the wealthy being generally sent to their birthplaces.

be had, would show the increase of membership during the year to have been not less than 12,000. Fifteen churches had been dedicated, and thirteen churches remodeled and repaired, during the year. One of the leading clergymen of the Christians, in answer to the inquiries of the officers of the census, has given the following estimate for the denomination as a whole in the United States: church organizations, 1,100; church edifices, 1,050; sittings in the churches, 100,000; value of church property, $785,000.

It is estimated that the Christians and Disciples of Christ together have 3,578 church organizations, 2,822 church edifices, 865,602 sittings and $6,425,137 of church property.

The biennial session of the Christian Publishing Association was held in Dayton, Ohio, June 23d and 24th. The treasurer reported his receipts to June 23, 1874, to have been $15,544.94, and his disbursements, $16,064.02; leaving a balance due him of $519.08. He estimated the value of the assets of the Association under his control to be $33,383, and the amount of its liabilities, $11,469.08. The office agent reported the value of the stock, accounts, and cash, under his control, to be $11,-684.43, and the liabilities of the office to be $4,325.19. The receipts of the office to June 23d had been $12,148.67. Combining the reports of the two officers, the auditing committee found the entire assets of the Association to be $42,123.93, and its liabilities, $15,794.19, leaving a balance over indebtedness of $26,-329.74.

The institution formerly known as the Wolfborough Christian Institute, at Wolfborough, N. H., has been removed to Andover, N. H., and renamed the Proctor Academy.

The report on Sunday-schools made to the Quadrennial Convention, October 6th, showed that about 150,000 scholars were attending the Sunday-schools connected with the church, and that about 40,000 copies of the *Sunday-school Herald* were taken.

The quadrennial session of the *American Christian Convention* began at Stanfordville, Dutchess County, N. Y., October 6th. The Rev. J. H. Coe, of New Bedford, Mass., presided. Visiting delegates were received from the Disciples of Christ, and a strong feeling was shown on the occasion in favor of a closer union of Christian bodies. A prominent feature of the proceedings was the dedication of the Biblical Institute at Stanfordville. This institution was formerly situated at Eddytown, Yates County, N. Y. It had been removed two years before the present meeting of the convention to Stanfordville, where sixty acres of land had been bought for it, at a cost of $18,000. The Institute building and a students' home had been erected by the Hon. David Clark, of Hartford, Conn., at a cost stated to have been between $20,000 and $30,000, and were presented to the Convention as his free gift. The Institute was organized and in operation, with a full faculty and a respectable body of students. The trustees have adopted a rule prohibiting the smoking or chewing of tobacco within any of the buildings or upon the premises. The advantages of tuition, the use of class-books and the library, and, in the case of students without families, the occupancy of a lodging-room and study-room in the students' home, are offered in this institution free "to any worthy man or woman devoted to the gospel ministry."

The following resolutions on the subject of Christian union were unanimously adopted by the convention:

Resolved, That we urge our ministering brethren, so far as possible, to become associated with, or to organize branches of the Evangelical Alliance, and to attend general or branch conferences of the Alliance.

Resolved, In regard to our relations with other denominations seeking union with us, or our union with them, that we reaffirm our faith in Christ as the Great Head of the Church, in the Bible as the only authoritative standard of faith and duty, and in vital Christian piety as the true test of Christian fellowship, and that the very principles of union forbid any discrimination against conscientious followers of the Lord Jesus, because of differences of opinion concerning speculative theology, or the purpose and practice of Christian ordinances, or any interference with the liberty of individual churches in faith or fellowship, and demand constant and well-directed effort for harmony and union among all God's children.

Resolved, That recognizing the difficulties attending formal church union arising from present denominational affiliations, variations of church government, and the possession of vested property, we recommend our ministers to arrange frequent exchanges of pulpits, and to cultivate association and acquaintance with ministers of all denominations.

Resolved, That we cordially greet those churches which, casting off denominational affiliations, and resolving themselves into independent organizations, have made their fellowship Christian fellowship.

A resolution was also adopted extending sympathy and encouragement to the editors, publishers, and contributors of the *Church Union*, a religious journal published in the city of New York, and to other workers in the same cause, in their efforts to secure the unity of the Church. The subject of adjusting a basis of representation in the convention was discussed, but was deferred till the next quadrennial meeting. A new constitution was adopted for the ministerial Life Assurance Association.

II. CHRISTIAN CHURCH.—The General Convention of the *Christian Church* held its fourth quadrennial session at Graham, N. C., beginning May 1st. The Rev. W. B. Wellons presided. A special committee, consisting of the Rev. J. T. Whitley, Rev. John N. Manning, and Mr. John M. Moring, was appointed to consider and report upon the general subject of Christian union. The committee presented a report, recommending the adoption and circulation of a manifesto, setting forth the views and aims of the denomination as an organization. The report was unanimously adopted. The manifesto is as follows:

I. It is the steadfast belief of this body that Christ established but *one* Church, designing that all his followers, as members of that one body, should harmoniously work together for the salvation of the world. We are of opinion that the present division of the Church into sects, and the attitude of these sects toward each other, are offensive to God, detract from the glory of the Saviour, and impede the reformation of the world.

II. It is our belief that entire unanimity of opinion upon matters of theological doctrine and ecclesiastical polity is unattainable, so long as "we see through a glass darkly;" but that a unity of love, forbearance, and coöperation, is fully within the reach of all true Christians.

III. We hail with joy the wide-spread and increasing desire among God's people to come into a closer relationship with one another, manifested in such meetings as those of the Evangelical Alliance, and represented by many periodicals of the day. It pleases us to know that churches are springing into existence in various localities, composed of Christians who are tired of sectarian intolerance, and desire to manifest their essential unity; and that "doubtful disputations" are sinking into disuse, while the great points of faith, common to all Christians, are rising into due prominence.

IV. As an organization, it is the chief object of the Church we represent to bring together all true Christians upon a platform of mutual forbearance, common sympathies, and fraternal love. We therefore offer the hand of fraternal greeting to all true followers of our blessed Redeemer, assuring them of our profound interest in their welfare, and soliciting their kindly sympathies and prayers. Holding these views and aims, we hereby declare our desire to coöperate with any and all those who love our Lord Jesus Christ, in performing the great work he has assigned his Church. We have formed an organization merely to make our labors more effective; and we are ready to form a corporate union with any body of Christians upon the basis of those great doctrines which underlie the religion of Christ; clinging only to those fundamental truths without which Christianity could not exist, we are ready to submit all minor matters to the decision of the individual conscience.

V. We suggest that something like the following be adopted as a

BASIS OF UNION:

1. *Belief.*—1. In God, as our Creator and Law-Giver; 2. In Christ, as our Divine Mediator and Redeemer; 3. In the Holy Spirit, as our Comforter and Sanctifier; 4. In the Bible, as inspired by God, and the supreme standard of appeal in all matters of religion; 5. In the sinfulness and lost condition of man; 6. In the doctrine that salvation is a free gift of God, through Christ, and can be received and enjoyed only by faith; 7. That love to God and men is the whole duty of man; 8. That those who accept and obey the gospel in this world will be happy in the world to come—while those who reject the gospel in this life will be miserable forever.

2. The right to hold and express opinions not conflicting with the above articles of belief is freely conceded to each individual member of the Church.

3. Nothing more ought to be demanded as a prerequisite to admission into the Church than a credible profession of "repentance toward God and faith in our Lord Jesus Christ."

4. The body should be called by some name sanctioned by Scripture usage; either Christian Church, Church of Christ, or some other equally significant and appropriate.

VI. With a view to forming and cultivating fraternal relationships with all Christians who are like-minded with ourselves, we hereby invite correspondence from individual Christians, independent local churches, and other religious organizations.

III. CHRISTIAN CHURCH IN CANADA.—The Conference of the *Christian Church in Canada* met at Burnham, Ontario, September 16th. Nineteen ordained, and seven unordained ministers, were engaged in the work of the conference. Twenty churches were reported, with 900 members. The number of members was more than 100 less than were reported the previous year. The falling off was accounted for by the fact that one church had withdrawn from the connection, and one other church failed to make a report. It was thought that between 4,000 and 5,000 people in the Province of Ontario were in "full sympathy" with the denomination. The reports from the Sunday-schools showed a total of nearly 1,500 officers, teachers, and scholars.

CHRISTIAN UNION. I. CHURCH OF CHRIST OF THE CHRISTIAN UNION.—The following statistics of this denomination were presented at the meeting of the General Council in May: Number of preaching-places, 1,500; of churches, 1,000; of Sunday-schools, 500; of Sunday-school scholars, 25,000; of church homes, 300; value of church property, $150,000; number of protracted meetings held during the year, 1,600.

The fifth General Council of the Christian Union met near Wesley, Ind., May 27th. The Rev. J. V. B. Black, of Missouri, was chosen president or moderator. The following minute on fraternal relations was adopted:

Whereas, There is a tendency on the part of Protestant Christendom to set aside useless and dangerous dogmas and denominational hatreds, and to come closer together upon the essential principles of Christ: therefore—1. Be it known that we hail with glad hearts these signs of unity, and behold in them the hand of God leading men from darkness into the light. 2. We also discover, on the part of the leading clergymen of the United States and Europe, a ready and willing tendency toward a union of all who dwell in Christ. 3. We also hail with grateful emotions the expressions of prominent journals throughout the land, in which we find a manifest desire for the union of all Christians, as the Word of God provides. 4. We stand ready to fraternize with all who receive Christ as their only head; the Bible as their only rule; and good fruits as the only test of membership in the Church of Christ; pledging ourselves, through Christ who strengtheneth us to keep and observe these great principles of heavenly truth. 5. We extend greeting and cheer throughout Christendom to all who have engaged with us in this great reformation, and pray earnestly that God may hasten the time when all his children shall be one.

The Committee on the "State and Wishes of the Churches" reported that an encouraging degree of success had attended the labors of the Union through the churches of the different States, "to develop the oneness of the Church of Christ." They presented the "hope and object" of the free and sovereign churches represented in the Union to be—

1. To abate many of the evils now existing, by virtue of the encroachments upon the natural and gracious rights of conscience exhibited on the part of a professed church authority, existing outside of and above the Church, as founded and transmitted by Christ and his inspired apostles. 2. To exhibit

the practicability of maintaining a state of Christian order and effort inside of *Bible* authority and precedent. 3. To develop extended and general union, communion, and coöperation among all God's children upon the simple, soul-saving faith of the Gospel of Christ, without associating with it the necessity of an arbitrary concurrence in matters of opinion or speculative theology, about which Christians will, do, and may differ, without prejudice to their Christian standing or usefulness. 4. To recognize but one Church—the Church of Christ; having but one head—Christ, "whom God hath given to be head over all things for the church;" having but one rule of law and order—*the inspired Scriptures;* and but one condition of fellowship—"good fruits."

Resolutions were adopted declaring the circulation of the Word of God to be of paramount importance; advising the churches to coöperate with the American Bible Society in extending the circulation of the Scriptures without note or comment; giving a special warning "touching those translations made in the interests of certain sectarian dogmas;" and recommending "the use of, and adherence to, the common translation known as 'King James's.'"

The ministers were exhorted to urge upon the people the duty of living in accordance with the principles of temperance in all things, and themselves to set an example of temperance "by abstaining from all practices and habits that tend to intemperance in eating and drinking."

Sunday-schools were commended, while disapproval was expressed "of the worldly amusements practised by many of the Sunday-schools of the day, in order to render them attractive." It was declared a duty of all Christians to encourage and assist in giving a liberal education to children and youth. The Council also expressed its interest in the education of the ministry, particularly in the Holy Scriptures and Christian truth.

II. UNION CHRISTIAN CHURCHES.—The Ohio State Council of the Christian Union, at its annual meeting, held at Liberty Chapel, Hancock County, Ohio, in September, took the following action;

Whereas, It is very desirable that the mutual recognition and visible union of all genuine Christian Union people should be effected: therefore, to this end we recommend that this Council invite the Rev. J. B. Wellons, of the Christian Church South, to attend and bring with him two of his brethren; the Rev. George E. Thrall, editor of the *Church Union*, to attend and bring with him two of his co-laborers; the Rev. Thomas J. Mellish, of the Baptist denomination, to attend and bring with him two of his brethren; the Rev. W. McCune to attend and bring with him two of his Presbyterian brethren; to meet in the city of Cincinnati on the 21st of October, 1874, three delegates to be appointed by this Council to confer with them, in arranging, if possible, a union on the Bible as the common platform of a common Christianity.

The meeting was held at the appointed time and place, there being present as delegates the Rev. Messrs. J. W. Durant and P. P. Wolf and Mr. Virgil E. Shaw, on the part of the State Council of the Christian Union of Ohio; the Rev. George E. Thrall, the Rev. Thomas J. Mellish, with the Rev. John G. Fee, the Rev. W. McCune, with the Rev. J. A. P. McGaw, and Mr. J. W. Barber and the Rev. J. B. Wellons, D. D., the Rev. J. N. Manning, and Solomon Apple, of the Christian Church South; the Rev. W. McCune was chosen president of the convention. The meeting continued three days. A paper was adopted, entitled the "Basis of the Union Christian Churches of America." It begins with a preamble, declaring that—

In love to God, in faith unfeigned in Christ, in dependence upon the guidance of the Holy Spirit, in charity toward all Christians of every name, in obedience, as we believe, to the requirements of the New Testament, and in order to make manifest the always existing spiritual oneness of believers, and to promote the conversion of the world unto God, we submit to all Christians the following basis of visible Christian union:

Basis.—The Scriptures of the Old and New Testaments are an infallible revelation from God, and a sufficient rule of faith and practice.

This is followed by a list of "great truths of Scripture, held substantially in the same sense by evangelical ministers and churches, always and everywhere," each of which is supported and further defined by two or more texts quoted from the Bible. The points of doctrine thus announced and defined in the language of the Scriptures alone, are:

The unity of God; the nature, works, and attributes of God; Jesus Christ is God; Christ's incarnation and humanity; concerning the Holy Spirit; the universal sinfulness of man; Christ's death for sinners; justification by faith; regeneration and sanctification; repentance; obedience to the Gospel; good works necessarily grow from true faith; the law of love; the law of Christian forbearance; the right of private judgment; death and the resurrection; the judgment; endless rewards and punishments; the Church universal; the church of a city or place; qualifications of bishops or elders; qualifications of deacons; the duty of confessing Christ before men; baptism; the Lord's Supper; religious worship and the Sabbath, or the Lord's Day; discipline; a duty to try the spirit and to reject false teachers.

The following declaration was made respecting the reception of ministers, and appended to the *Basis:*

As evangelical ministers of the various orthodox denominations cordially recognize each other as ministers of Christ, notwithstanding denominational differences, so do we recognize them.

And inasmuch as Christ receives as his ministers those who are not of one mind concerning Calvinism or Arminianism; or as to Episcopal or Methodist Episcopal, or Congregational, or Presbyterian church government; or as to infant baptism or believer's baptism only; or as to immersion or sprinkling, or any other denominational peculiarity, neither do we require an assent to any denominational peculiarity as a condition of fellowship.

Whoever gives us scriptural evidence that Christ has received him as his minister, we will also receive to cordial and unrestricted fellowship in cheerful obedience to Christ.

But as Christ requires that his gospel shall be committed to "faithful men who shall be able to teach others also," and that his ministers shall "be able by sound doctrine both to exhort and to convince the gainsayers," we will require all ministers of the gospel asking our recognition and fellowship, whether

called bishops or elders, and whether proposing to exercise the functions of pastors, evangelists, or teachers, to give satisfactory evidence that they receive substantially in their plain, evangelical sense the above-cited passages of Scripture.

We distinctly disclaim all intention to require an assent to any human modification of these Scriptures or any human inferences therefrom, and we affirm it to be our purpose only to acquire an assent to God's own truth expressed in God's own language, as it has been commonly received by Christ's ministers and people in all times and in all places.

A rule was adopted providing that ministers asking to be received shall be required, after a satisfactory conference, to answer affirmatively three questions, by which they will be committed to receive "the whole of the Scriptures of the Old and New Testaments as an infallible revelation from God, and as a sufficient rule of faith and practice;" to receive the portions of the Scriptures cited in the *Basis* "in their plain and obvious meaning as received by the great body of evangelical believers in all ages, and not in any rationalistic or anti-evangelical sense;" and to a promise to endeavor to discharge all the duties of the gospel ministry that are required of them in the Scriptures.

A declaration was adopted concerning the qualifications of church-members, that "Christian Churches should receive into their fellowship all who make a creditable profession of repentance toward God and faith toward our Lord Jesus Christ," and that "we will receive all into the fellowship of the Church who give Scriptural evidence that they believe in Christ as their Saviour." In connection with these declarations a number of Scriptural texts were cited, illustrative of the doctrines that "Christ saves all who believe on him," of repentance and the new birth, and of the duties of keeping the commandments and of loving the Lord Jesus Christ and the brethren. Candidates for membership will be required to answer affirmatively questions expressing their principles.

The convention further declared:

All members and churches adopting the basis will be recognized and enrolled as Union Christian ministers and churches, to be known as the "Union Christian Churches of America."

Any minister who has adopted the basis, but who does not deem it expedient to sever existing denominational relations, shall at his request be enrolled notwithstanding.

Ministers are requested to signify their adoption of the Basis by a letter addressed to Rev. W. B. Wellons, D. D., Suffolk, Va.

Churches desiring to take action concerning the Basis are requested to give public notice of a meeting for that purpose.

When the church is convened it is suggested that the Basis be read, and that then a vote be taken on the two following questions:

1. Do you approve the "Union Christian Basis?"
2. Do you adopt the "Union Christian Basis?"

The Secretary of the meeting is requested to signify the result in a letter addressed to Rev. W. B. Wellons, D. D., Suffolk, Va.

All churches either approving or adopting the Basis are requested to appoint one or more delegates to attend a general convention of the "Union Christian Churches" at Suffolk, Va., on the first Wednesday of May, 1875. All ministers adopting the Basis, including those who may not have severed heretofore existing denominational relations, are also invited to attend this convention, to take counsel concerning the promotion of Christian union and the conversion of the world.

It was recommended provisionally that any single church, or the several church organizations which may adopt the basis of union, should continue their respective forms of church organization, or such forms as they may adopt, until such time as a permanent plan for the fellowship and coöperation of the Union Christian Churches may be adopted. A committee of five persons, consisting of the Rev. Messrs. Thomas J. Mellish, W. B. Wellons, W. C. McCune, and George E. Thrall, and Mr. V. E. Shaw, was appointed to take into consideration the whole subject of a plan for the organization and coöperation of the churches and ministers adopting the basis of union, with instructions to report at the first General Convention of the churches. The same committee was appointed an Executive Board to consider all matters pertaining to the union movement, and was directed to issue an address to the Churches of America in connection with the basis of union.

CLANRICARDE, Most Noble Ulick John de Burgh, Marquis and Earl of, Baron Somerhill, K. P., a British and Irish peer, born County Galway, Ireland, December 20, 1802; died in London, April 11, 1874. At the age of six years he succeeded his father as fourteenth earl, and was educated at the University of Dublin. He was addicted to manly sports, was a skillful horseman, but never a very close student. A passion for gambling had also taken possession of him. While yet young (in 1825) he turned his attention to politics, and the same year married the only daughter of George Canning, then Premier. In anticipation of this marriage, Mr. Canning appointed him Under-Secretary of State, from 1825 to 1827. He performed his duties indifferently well, and was raised to a marquisate, the title having been anciently in the family, and, in 1826, made a Peer of Great Britain, under the title of Baron Somerhill. He would have been promoted to the cabinet by Mr. Canning, had not some gambling transactions placed him in an unfavorable light. In 1838, however, he was nominated embassador to St. Petersburg by Lord Melbourne, and served there for three years creditably, and under Earl Russell's first administration was Postmaster-General until 1852. Soon after this he was a party in a very grave scandal, and under such circumstances that the public were greatly incensed against him. He offered to resign the lord-lieutenancy of County Galway, but the offer was declined. In 1857, Lord Palmerston appointed him Lord Privy Seal, and the appointment raised such a storm of indignation as led to the overthrow of the cabinet. From that time Lord Clanricarde took no part in public affairs, except an oc-

casional participation in the debates in the Lords. He was an able speaker, well informed on many points, and, through the influence of his wife, a woman of remarkable talent and very exalted character, he was enabled to maintain a position in society which his reputation would have otherwise rendered impossible. He had vast estates in Ireland, and was very popular there.

COCHISE, a famous Indian chief, the head of the Coyotero Apaches in Arizona; died in the White Mountain district in Arizona, June 9, 1874, at the supposed age of sixty years. Cochise had been for some years friendly to the Mexicans and the few white settlers of Arizona, when his hostility was aroused by a very treacherous and criminal massacre of Indians in Arizona by United States troops under the direction of Colonel (afterward General) Harney. Thenceforward he was a bitter enemy of the whites, and his band of Coyoteros was the most daring and destructive of all the Apaches of the Territory. No efforts were made to quiet or pacify them for a number of years, it being supposed that all efforts to that end would prove ineffectual. In 1870 General Safford entertained a different opinion. He visited the Coyoteros in the White Mountains, and became convinced that by judicious management they might be pacified, and urged upon Congress the necessity of providing men and means to aid them. Nothing was done, however, and they became more restless and predatory than before. In the autumn of 1871 Mr. Jefferds, the Indian Agent of Arizona, made an effort to open negotiations with Cochise. Penetrating to his stronghold, he found him in a favorable mood for a treaty, but afraid to go to the Indian agency, lest he should be seized and put to death. Subsequently General Crooke succeeded in having an interview with him and effected a complete reconciliation. Since that time Cochise has been exerting a powerful influence for good over his tribe, and there has been no further trouble with the Coyoteros. His sickness was long and distressing, but he manifested his friendly spirit in his dying speech to his people, telling them to come to the agencies, men, women, and children, and to live at peace forever with the white people. His son Taza, or Tuch-la, succeeded him.

COLOMBIA (Estados Unidos de Colombia), an independent republic of South America, occupying the territory formerly known as the Republic of New Granada, which formed the central part of old Colombia, a nation founded and liberated by Bolivar, and comprising besides Venezuela and Ecuador. The territory of the republic extends from the isthmus of Panama (one of the nine States of the Union) to the peninsula of Goajira, on the Atlantic coast, and to 2° 30′ south latitude on the Pacific coast, and thence to the banks of the Orinoco, which separates it from Venezuela, and to the Amazon, which separates it from the empire of Brazil. The area of the territory of new Colombia has been estimated at rather more than 500,000 square miles; of these, 400,000 square miles lie to the north and the remainder to the south of the equator.

The great height attained by the Andes (which in some parts rise to the region of perpetual snow) gives to the country a variety of climate, from the biting cold of the arctic seas to the burning heat of Senegal. Between these two extremes, in the superandine plateaus and the slopes of the Cordilleras, are to be found all the mild climates of the temperate zone.

The valley of the lower Magdalena, around which is grouped the population of seven States, comprises the vast region of the central part of the country, having a length of 500 miles, and a width varying from 70 to 100, till it finally loses itself in the plains that border on the Atlantic. This valley is covered with dense forests, rich in all sorts of timber, cabinet woods, resinous and medicinal plants of the tropics. In those places where the forest has been cleared and the soil brought under cultivation, its fertility has proved equal to the best in the world.

The Atrato Valley is generally similar to that of the Magdalena in its physical aspect.

The Cauca Valley is, on the contrary, an elevated plain covered with spontaneous and artificial pasturage at a height of 5,200 feet above the level of the Pacific Ocean. Its average temperature is 25° Cent. (77° Fahr.), and it is peopled by 435,000 civilized inhabitants. The general aspect of this valley is uniform in its physical constitution. On a bird's-eye view from the south, the country presents the appearance of a narrow plain wedged between the western and central ranges of the Andes, and extending northward as far as the eye can reach. Its soil, remarkably suited for pasturage, produces cacao, coffee, sugar-cane, rice, tobacco, cotton, and indigo, without counting the plantain, maize, and mandioca, which grow luxuriously in every part of that fertile country.

The towns and villages lying along the Cordilleras enjoy alternately the advantages of both heat and cold, situated as they are among the numerous breaks, slopes, and plateaus formed by the spurs of the Colombian Andes.

The Magdalena, which runs northward between the central and eastern ranges of the Andes to its embouchure in the Atlantic, is the great fluvial highway of the country, through which is conducted all the foreign traffic of the five central States, and the greater part of those bordering on the Atlantic. This traffic is so important that, for more than twenty years, the river has been navigated by steamboats of fifty to two hundred tons, without any pecuniary aid from the Government. During that period from eight to twelve steamers, the property of private companies, have been constantly employed in the service, each carrying a mean aggregate of 50,000,000 lbs., or 25,000

creased duty will act unfavorably upon the consumption or reduce the amount of the revenue.

With regard to the salt, as the duty is levied on an article which is a monopoly and also one of prime necessity, the increase in the price must equal, almost with mathematical exactitude, a proportionate rise in the income derived therefrom. And thus it has happened in the other instances in which the Government has been compelled to raise the price of the article. In 1867 the salt-works produced $1,066,614. With the increase included, salt was to be sold at the offices at the following prices: Rock or native salt at 50 cents the 12½ kilogrammes; the granulated in the boiler or simply evaporated, not calcined, at 60 cents; and the calcined, 80 cents. As the average consumption of salt is 5 lbs. per annum for each inhabitant, even admitting that the half of the price of the article represents the highest value of the monopoly, the tax is barely equal to 30 cents per inhabitant. It is upon these bases that Congress calculated that the estimated revenue for the fiscal year (from 1874–'75) would be as follows:

Customs	$3,400,000
Salt-works	1,100,000
Panama Railway	250,000
Postal, telegraphs, mints, and sundry other branches	173,728
Total	$4,923,728

And as the ordinary expenditures of the Government, including the payment of the dividends on the foreign and home debts, do not exceed from $3,500,000 to $3,800,000, the Administration can reckon, from the first year of the increased duties, upon a surplus of much more than $500,000, which, added to a balance of another half-million, now in the general Treasury, will form, during the year 1875, a secure minimum fund of $1,000,000 to meet any engagements which may be incurred for the construction of the projected railroads. Indeed, these estimates are already corroborated by the results obtained since the arrangements made for the public credit both at home and abroad during the year 1872, which have been the point of departure for Colombian financial affairs. Without reducing the surplus of half a million dollars now in the Treasury, the Government has been able to meet, in the course of the last two years, expenses extraordinary of more than $800,000 for the construction of telegraphic lines, the purchase of a Remington armament, of a steam revenue-cutter, and to make at the same time an unusually large payment on account of the home debt, and of the loan of 1868.

The tranquillity of the last ten years has made itself felt in so favorable a manner in the prosperity of the country that the revenue from the customs has doubled in the course of that period. In 1865 they produced $1,300,000; and in 1873, $2,775,000.

Supposing an increase of only seven per cent. in each year, and the amount derived from the customs to be $3,000,000 instead of $3,400,000; and even regarding all other branches of revenue as stationary, and calculating that all ordinary expenditures will increase at the rate of five per cent. per annum on $3,500,000: the financial position of the Colombian Government, should peace be preserved, will be as follows, during the eleven years, 1875–'85:

YEARS.	Revenue.	Expenses.	Surplus.
1875	$4,500,000	$3,500,000	$1,000,000
1876	4,710,000	3,675,000	1,035,000
1877	4,934,000	3,858,750	1,075,250
1878	5,175,129	4,051,687	1,123,442
1879	5,422,288	4,254,271	1,168,117
1880	5,707,655	4,466,985	1,240,670
1881	6,002,190	4,690,334	1,311,856
1882	6,317,343	4,924,851	1,392,492
1883	6,654,557	5,171,094	1,483,463
1884	7,015,875	5,429,043	1,585,727
1885	7,401,451	5,701,131	1,700,320

The financial capacity of the country cannot be measured by the amount of revenue actually collected, because, in countries where taxes are voted by the representatives of the people, public opinion does not allow their increase with the mere view of expending their product in the payment of public salaries. But when it becomes necessary to appeal to new taxes for works of public utility, the construction of new means of communication, no one can doubt that the country will readily support one or two millions of contributions. The salt-mine revenue alone may produce, if necessary for this object, twice as much as it does at present.

The institutions of credit begin to be established and to work with perfect security. There exists in the capital a good bank of issue and discount, established in 1871, and which gave the following results in 1873:

Deposits	$700,000
Discount bills	2,000,000
Bank-notes in circulation	560,000

The general movement of the bank amounts to $39,000,000.

The national expenditure for the fiscal year ending August 31, 1873, was as follows:

Civil service	$2,100,000
Foreign debt	570,000
Interior debt	480,000
Total	$3,150,000

These figures, compared with those of the revenue, show a surplus of $850,000.

The national debt stood as follows:

Home debt	$10,000,000
Foreign debt	11,000,000
Total	$21,000,000

Up to the 30th of June last more than one-half of the bonds of New Granada were converted into Colombian 4½ per cent. bonds, in accordance with the agreement approved of by Congress on the 4th of March preceding. Bonds were presented for £3,845,350, for which others were issued to the value of £2,589,148 ($12,945,740).

The foreign debt, contracted for the war of independence, will bear interest at 4½ per cent.

per annum until the end of the year 1877, and 4½ per cent. from 1878 forward; but, should the import duties in the year produce $8,000,000 net, the interest is to be increased to 5 per cent. The amortization of this debt will begin from the said year 1878, by means of an accumulating fund of $125,000 per annum.

The general Treasury of the republic hands over every month to the agent of the creditors the twelfth part of the sum necessary to cover the annual interest. This interest is paid every three months, and the payments are made with rigorous punctuality.

For the payment of interest and for the amortization of the capital of the foreign debt arising from the loan of 1863, the republic has to deliver, every month, $10,000; and it is the endeavor of the Government to make further appropriations, with a view to hasten the extinguishment of the debt.

The Bank of Santander, in one of its ordinary sessions held in Bucaramanga in October, found that it had gained, by discounts, premiums, interest, and commission, the sum of $6,602.76.

On January 31st the banks of Bogotá decided to pay a dividend of $37.50 per share.

An attempt is being made to establish an insurance company at Bogotá, which, besides guaranteeing the mercantile movements of Colombia, will leave to the commerce of the country an immense sum now sent abroad to foreign companies. It is calculated that commerce pays in premiums to foreign insurance companies about $100,000 annually, or in fifty years a sum of $5,000,000 lost to the country.

The foreign commerce for the year 1873 was represented by $23,000,000, distributed as below:

EXPORTS—		
Coffee	$1,900,000	
Indigo	400,000	
Cotton	260,000	
India-rubber	150,000	
Hides	500,000	
Gold and silver	2,500,000	
Bark	1,800 000	
Panama hats	260,000	
Tobacco	2,000,000	
Sundries	730,000	
		$10,500,000
IMPORTS		12,500,000
Total trade		$23,000,000

It says a good deal for the increasing trade of the east coasts of Colombia that a Hamburg steamer brought to the port of Sabanilla 1,600 packages on the 11th of August, and left on the 18th for Hamburg and intermediate ports with 5,965 packages of exports and $243,628 in specie.

The removal of the custom-house from Sabanilla to Barranquilla had not yet been determined, it being apprehended that the advantage to be obtained thereby would be counterbalanced by greater facilities for smuggling.

The production of coffee is on the increase in many districts, but especially in the State of Cundinamarca, where four plantations contain above 500,000 trees, which were expected to yield 2,000 quintals, or 200,000 pounds.

Jesuit-bark of good quality is, on the other hand, becoming scarce in the forests of the eastern Cordilleras.

The statistics of Bolivar for 1874 showed the quantity and value of the live-stock in that State to be as follows: Asses, 13,027; horses, 7,888; goats, 7,439; mules, 2,402; sheep, 260; cattle, 139,009: total value, $2,557,100.

The Government of the State of Cundinamarca offers premiums for the introduction of an improved race of horses, sheep, and cattle, into the State.

The foreign trade in the year ending August 31, 1873, was carried on in 739 sailing-vessels with an aggregate of 46,697 tons, and 271 steamers with 14,499 tons, exclusive of the transit trade over the isthmus of Panama, where there is no custom-house.

Señor Parra, the Minister of Finance and Public Works, in an interesting report to Congress, accounts for the decay of trade at Santa Marta and the river port of Mompos in the following terms: "The railroad of Bolivar now offering to commerce from abroad a better and safer route than that by Los Caños, has had the effect of attracting away from the port of Santa Marta, notwithstanding its excellence, vessels of large tonnage, and therefore the latter port has now scarcely any trade with the interior, just as it formerly happened to Cartagena, and as it will happen sooner or later to Sabanilla, if, as is generally expected, the entrance by the Bocas de Ceniza should become navigable for large sea-going vessels. Barranquilla will then no longer be the principal fluvial port of the Colombian Union, as has already happened to Mompos; but some point higher on the banks of the Magdalena will be the anchoring-place of ocean-vessels, and the seat of a great city. The inhabitants of cities like Santa Marta and Mompos, from which the currents of trade have been turned aside by changes in the direction of commercial routes, must then turn their attention to agriculture, cattle-raising, or the extraction of natural products, as those of Cartagena are now doing."

The report also contains some curious remarks on customs, salt-works, the emerald mines of Muzo, the mint and railways, together with important observations on immigration, the conversion of Indian tribes, navigation by the Bocas de Ceniza, and the necessity of light-houses along the coasts.

A new contract was made with Mr. Alexander Weekbehr, modifying that of November, 1872, for the navigation of the Upper Magdalena by steam.

A London house deposited $10,000 as security for the fulfillment of a contract with the President of Bolivar to establish steam navigation along the dike of Cartagena.

A steam-tug company was established at Buga to improve the navigation of the river

Cauca, and the required amount of capital subscribed.

In view of the peculiar topography of the country, hurriedly sketched at the commencement of the present article, it will not be wondered at that the chief subject of deliberation with the Colombian Government is that relating to the construction of railways to connect the valley of the Cauca with the Pacific Ocean, and open up for the 1,600,000 inhabitants of the States of Cundinamarca, Boyacá, Santander, and Antioquia, rapid and convenient communication with the steamers navigating the Magdalena. The prompt and favorable resolution of this problem is the great economical question of the country, and the whole nation has so well understood the necessity of carrying on these works that four successive Legislatures, from that of 1871 to the last in 1874, conferred on the Executive, by unanimity of votes, plenary powers to contract for the construction of the "Cauca & Pacific Railway," and the "Cundinamarca, Boyacá, Santander & Magdalena River Railway," generally known as the Northern Railway. It may, then, be officially stated that in the execution of these two works the aspirations of the country are at present centred. The absence of good roads to place the densely-populated portions of the country in cheap, safe, and rapid communication with the commercial centres of the world, is the chief cause why the industry of the country has not yet received the development proportionate to the number and activity of its inhabitants, the fertility of its soil, and the abundance of its mineral products.

The principal towns of the inter-Andine States are situated at an average distance varying from forty-five to sixty miles from the banks of the Magdalena; goods are transported on mules in loads of ten arrobas, 250 lbs., divided into two bales of five arrobas each, and at a cost of from $6 to $9 each load. The bales that exceed this weight are transported on men's backs, or rather women's, for most of the carriers are women, thus condemned to take the place of beasts of burden, traffic which contributes to debase and degrade this part of the population. The largest packages transported in this way are pianos, mirrors, paintings, crystal, and other articles of luxury or art, requiring delicate handling. As for boilers, cylinders, and all other machinery, whose weight exceeds half a ton, they are usually impossible of transportation, since the mountain-roads do not admit the employment of sledges. The carriage of an ordinary piano over the forty-two miles from the river to the plain of Bogotá costs $160. The heaviest loads lately brought to Bogotá were the following: A steam-boiler, of 4-horse power, for the sulphuric-acid factory, the carriage of which cost $830; and one mechanical printing-press, weighing 5,000 lbs., or 200 arrobas, the carriage of which cost $1,000.

Steam machinery for agricultural and mining purposes, fire-engines, coaches, and carriages, iron boats, suspension bridges, and in general all pieces exceeding the weight of half a ton, are objects impossible of introduction into the interior of the country.

It is not, therefore, to be wondered at that the material development, laboring under such disadvantages, should have been so far, and must of necessity continue to be tardy, until suitable means of transport shall have been established between the populous producing regions of the republic and the navigable rivers.

According to a recent estimate presented to the Government, the Northern Railway would cost the nation $24,175,000.*

There was a keen discussion in Congress, which prolonged its sessions to June 15th, between S. C. Roldan and the Minister of Finance, concerning the proposed railway to the north of the republic, Roldan regarding it as ruinous to the country, and Señor Parra maintaining that the enterprise would be quite the contrary.

The constructors of the Buenaventura Railroad had deposited in the Bank of Bogotá $25,000, as a guarantee that they would go on and finish the road. One of the contractors was expected in Bogotá, with $1,800,000 in bonds, to be legalized by the national Government.

The Government undertook the construction of telegraphs in 1864, and at present there are about 700 miles of wires in actual service. These lines connect the capital with the principal towns of the north of the republic, and also with the port of Buenaventura on the Pacific, where it will unite the submarine cable to be laid along the southwestern coast of America, from Peru and Chili, and to join at Panama the transatlantic cable connecting Europe and America. During the year 1873 the number of telegrams dispatched was 50,000, yielding $14,000. A line of telegraph between Bogotá and Neiva was in course of rapid construction.

The coinage of gold and silver money amounted to $533,671. The emission of silver coin has diminished, because the mines of Santa Ana, which were the most productive of this metal, have ceased working. To make up for this want, the Bank of Bogotá ordered from Europe $200,000 of silver coin, and the value of $100,000 in bars of the same metal, to be coined at the mint in Bogotá. In the month of June last, there were exported from Medellin, in the State of Antioquia, $189,000 in the precious metals. The mines suffered a good deal from the heavy rains of the season, which, by causing the rivers to overflow, seriously affected the mines of Barbosa and others. A land-slide completely covered up the Cristales mines. Mining is nevertheless progressing favorably; certain mining establishments are now worth $1,000,000 which formerly were only valued at $200,000. The Zancudo mine has, since 1866, produced 28,050 lbs. of silver-ore,

* For particulars of direction, stations, etc., of the railway, *see* the ANNUAL CYCLOPÆDIA for 1873.

valued at $1,333,800, exclusive of the gold from the mills. According to a recent estimate, the Zancudo mine is valued at $6,000,000. The Cristales mine yielded in sixteen months 766 lbs. of gold, which, at $147 per lb., gives $112,602. The Frontina mine yielded 7½ lbs. gold from the grinding-mill after thirteen days' work. There are, in the State of Antioquia, 206 mines with metallic veins, and 355 with alluvial washings, giving occupation to 16,000 laborers. The value of the machinery employed is estimated at $240,000, and the net product at $2,300,000. During the present century the mines of Antioquia have yielded $100,000,000 approximately. The yield of gold since 1869 is set down at $8,585,247.09½, and of silver, at $1,846,907.74. Since 1868 the State has derived (from taxes, imposed on denouncements, titles, and preservation of mines) the sum of $40,359,27.

The latest reports received from the gold gravel-washing enterprises in Tolima were still of a promising character, and confidence continued to be felt that the eventual results would be satisfactory. The Malpaso was at work with an increased supply of water; and, as a very large quantity of good pay-dirt was passing through the sluice, a good return from the next clean-up was expected. The future of this undertaking would appear to be assured, the waste having been traversed, and the monitor now operating upon extensive and rich deposits. A slide of gravel had occurred, causing the clean-up to be postponed. It would seem that a considerably supply of water can be brought on the Rica deposits; and, as regards the Malabar, washing was directed toward the high banks, on reaching which it was believed that large profits would be realized. The operations so far attempted were stated to be only of a preliminary nature.

As the present lease of the famous emerald-mines of Muzo and Cascuez is to expire on April 1, 1875, the Government has published proposals for a new contract. These are the mines which yield the emeralds erroneously called in Europe "emeralds of Peru," probably because Peru is considered the great source of the mineral riches of America. From them was extracted the precious emerald specimen so much admired at the Exhibition in 1867, where it was somewhat capriciously labeled "French Industry."

The attention of the Government has of late been directed to the encouragement of national industry; and some now and important branches have been introduced. Since 1870 the following establishments have been inaugurated at Bogotá: The Bank of Bogotá, with a large capital; a sulphuric-acid factory; establishments for the distillation of alcohol and other spirituous liquors; a factory for making glass, with a capital of $400,000; a cigar-factory, where some 60 women are at work. These women, when they learn the business, get from 50 to 70 cents per day. This factory was succeeding so well that it was expected there would soon be work for 500 women. Gas-works are now about to be put in operation. Besides these, an insurance company, with a capital of $2,500,000, was about to be organized, the number of shareholders to be 200.

A bill was laid before Congress for the establishment of an agricultural bureau, the duty of whose members would be to study and use every means to forward agriculture in Colombia in all its branches; collect and preserve specimens of vegetables, foreign and national, seeds and roots; and to publish all the information to be had, bearing on the subject. Besides the chief of the bureau, at a salary of $2,400 per annum, there are to be appointed also a meteorologist and entomologist for the special study of the natural history of insects prejudicial to agriculture, receiving $1,200 each, with a staff of other sub-officials.

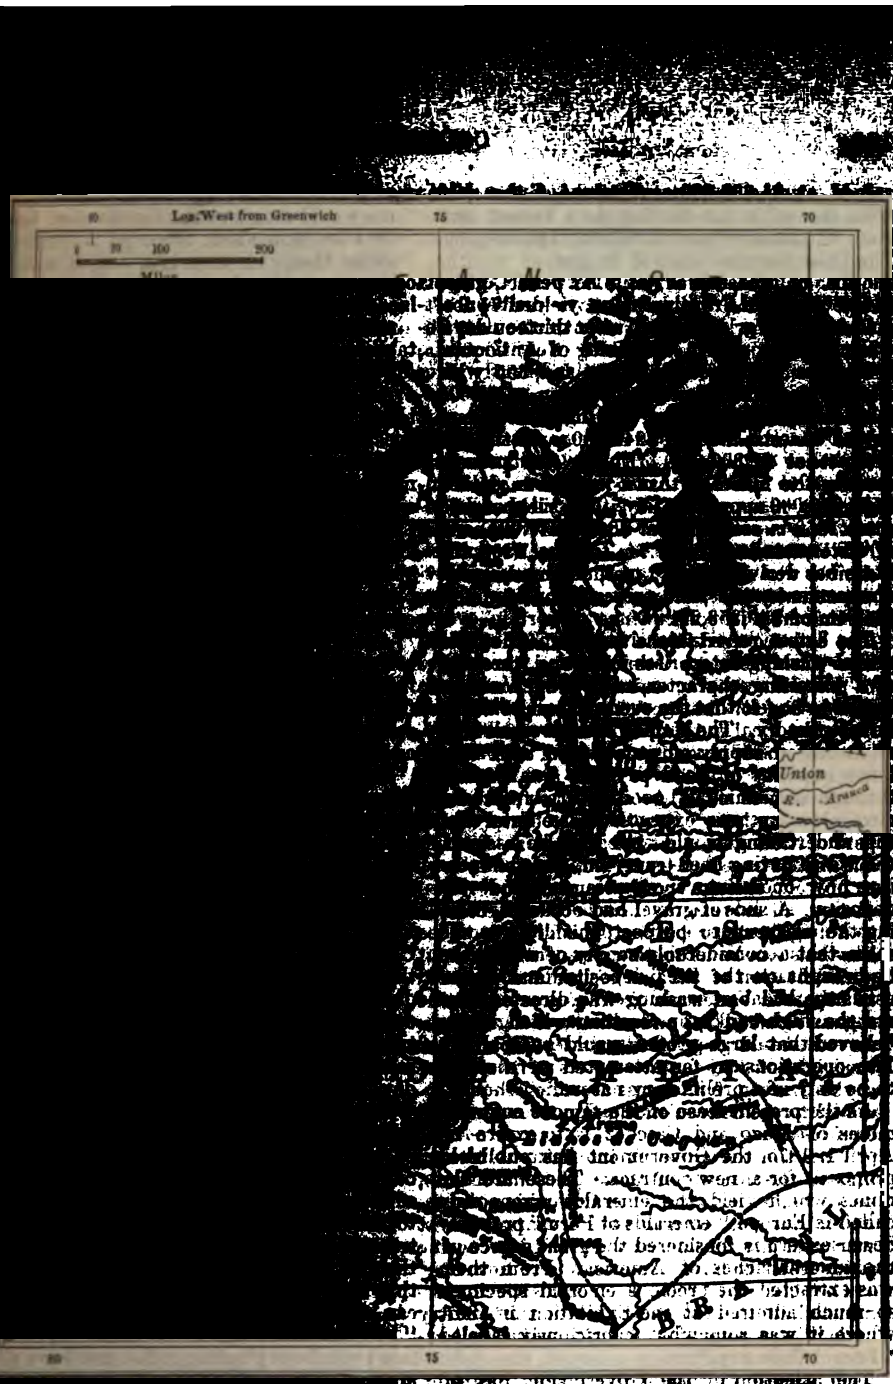
Another bill was read in the House of Representatives for the establishment of a vast iron-manufactory in some central locality, to furnish the various tools, machinery, etc., necessary for the different branches of industry, and particularly for agriculture.

The Executive power of the nation had offered to the London Company for the Constructing of Public Works a guarantee of seven per cent. per annum profit on $500,000 in order to have introduced into the country Hindoo "laborers and colonists." Judging from the opinion expressed by the Minister of Public Works, spontaneous immigration into Colombia is not likely to take place for a long time; but Señor Parra is in favor of the introduction of Asiatics. He regrets to have to confess that in Colombia at present no industry is taken up unless it promises immediate returns; the desire is, to have every thing to-day, even if nothing be left for the morrow. Whatever be the causes of this peculiar idiosyncrasy, the example of the English is pointed out, with whom it is customary to plant oak-trees, and wait fifty years for them to be suitable to be made into planks. They send out to America and procure the young cinchona-trees of the Andean regions, in order to plant them in the English colonies in the East, so that they may possess forests from which they can always supply themselves with quinine. "In Colombia," says the secretary, "we hesitate even about planting coffee, and have almost abandoned the cultivation of cacao."

There was a project on foot for the water-supply of Bogotá by aqueduct, at a cost of $200,000, the municipality to take one-half of the shares.

Various improvements had been undertaken in Cartagena, such as a hospital for measles, a public clock and park, a new theatre, repairs of the College of the State and the prison establishment, and the lighting of the city by petroleum-gas.

In Mompos a monument was to be erected to commemorate the 6th of August, 1810; and in Barranquilla a hospital and general cemetery.



Ministers of Finance and Public Works, Señor [illegible]; of Foreign Affairs, and Minister of War and Marine, Señor [illegible] S. Vila. The legislative power resides in a Senate with 27 members, and a Chamber of Representatives with 61 members.

The chief magistrate of each of the nine States has the title of Governor, save in Panama, where he is called President.

The State Governors, etc., in 1874, were as follows: Antioquia, Señor J. M. Berrio; Bolivar, Señor R. S. D. Vila; Boyacá, Señor V. Rueda; Cauca, Señor T. O. Mosquera; Cundinamarca, Señor J. Barriga; Magdalena, Señor

J. M. Campo Serrano; Panamá, Señor Miró; Santander, Señor N. Cadena; Tolima, Señor J. N. Leiva. The Colombian consul-general in New York is Señor M. Salgar.

The old question of limits between Colombia and Venezuela, which has never yet been settled since the dismemberment of the first Colombian republic, comprising New Granada, Venezuela, and Ecuador, still frequently gives place to stormy altercations between the Governments of Carácas and Bogotá. The past year was marked by one of these disputes, and the tenor of the press of the Colombian capital seemed to indicate that a waywardness or indiscreet management on either side might result in a rupture of the comparatively cordial relations existing between the sister republics. A note was dispatched to the Venezuela Government by the Secretary of Foreign Affairs of Colombia in consequence of certain events that had occurred in the State of Zulia, which intervenes between Colombia and the shores of Lake Maracaybo, claiming from Venezuela satisfaction for damages caused and persevered in by the local authorities of that republic, regarding goods in transit between the two nations by way of the river Zulia, and requesting that measures should be adopted to put an end to said vexations. Proofs were offered on the part of Colombia, that her respective frontier authorities have done every thing in their power to prevent, within territories under her jurisdiction, all movements hostile or disagreeable to a neighboring republic. It is difficult to see how this can be altogether prevented without a modification of the line of limits understood to separate Venezuela from Colombia in the region referred to, and which, if rigidly observed, would deprive the latter republic of the right of way on the waters of the Maracaybo Lagoon, free access to which should redound to the convenience and interests of both countries.*

With the exception of intermittent bickerings of the nature of those just alluded to, peace reigns undisturbed in Colombia; the republic has not, for now twelve years, been at war with any foreign nation; and internecine strife seems to have come to an end forever.

The last civil war, that of 1860-'62, terminated in the reorganization of the country under the constitution of 1863, which still exists. This constitution adopted the federal form, similar to that of the United States of America, giving to each of the nine States, into which the Union is divided, the full extent of power necessary for its internal government; but even as far back as 1853 the country had secured in its institutions the most precious conquests of human liberty. Foreigners enjoy in Colombia the same civil rights as natives; and, in case their property be taken for public use, they are entitled to a pecuniary indemnification therefor.

There is no state Church in Colombia; natives and foreigners enjoy unbounded liberty of conscience and worship; and there are Protestant churches in Bogotá, Barranquilla, Panama, and other towns.

Nearly all the States of the Union have adopted the trial by jury for felony and other great crimes.

Imprisonment for debt has been abolished.

The exercise of all professions, including law and medicine, is completely free.

The only monopolies now existing are those of the salt-mines, which belong to the General Government, and the distilleries of spirits in some of the States.

Brigandage is and has always been unknown in Colombia.

Among the more important proceedings of the Congress during the year may be enumerated the following:

I.—PUBLIC ORDER.

ARTICLE I. The organization of a government, such as is required by the Constitution. Section 1 of Article VII. ceases to exist in any of the States in the following cases:

2. When a President, governor, or supreme chief, dissolves the Legislative Assembly or impedes its reunion; 2. When, without due faculty, new elections for deputies are ordered or a constituent convention called; and 3. When obedience to the Assembly is refused, and the latter has no power to compel it.

2. The individual who, either as President, governor, or the highest authority of a State, executes any of the afore-mentioned acts in this article, commits the crime of treason to the institutions, and shall suffer the punishment of expulsion from the territory of Colombia for ten years.

ART. II. When, in any of the States, any of the infractions treated of in the preceding article takes place, the Executive power of the Union shall inform the Attorney-General of the same, forwarding him such documentary proofs as can be obtained. The Attorney-General shall then transmit them to the Supreme Court of the Union, which, within three days, shall give its opinion on the existence of the acts, and whether they are or are not such as are expressed in Article I.

The Supreme Court shall decide regarding these same points within eight days after being furnished with the documents in the case. Its resolution will be a decree that declares whether there is or not ground for preferring against the person of the magistrate referred to an accusation of treason.

ART. III. If the sentence of the court declares that there are grounds for accusation against the individual, who, either as President, governor, or superior authority of a State, has committed any of the transgressions above expressed, the Executive power of the Union, at the request of the Legislature, or of the president, governor, or superior authority of the same State, will furnish an armed force for the defense of its government and the establishment of the latter, if overturned by sedition.

II.—PENAL CODE.

A bill to reform the penal code was presented by Señor Correosa, and passed its first reading.

III.—CIVILIZATION OF INDIANS.

A bill for the conversion and civilization of the savage Indian tribes of the republic passed its first reading.

IV.—POLYGLOT JOURNAL.

The House of Representatives, by unanimity of votes, approved of the following proposition: "Let the President of the Chamber name a committee of

* *See* the ANNUAL CYCLOPÆDIA for 1872, page 109.

two representatives to bring forward a project of law for the purpose of establishing a periodical, to be published in Europe, in the French, English, and German languages, for the purpose of making known the United States of Colombia in the great mercantile centres of Europe, in an industrial, political, mercantile, and geographical point of view." Señors Restrepo and Araujo S. were named as a committee.

Additional testimony to the prosperous condition of the republic is presented in the summary hereafter transcribed from President Murillo's message to Congress, dated February 1, 1874:

The President congratulates the assembled Senators and Representatives on the highly-satisfactory and flattering condition of the republic in general. The elections for members of Congress and for the next President of the Union have been effected without any disturbances, which, with the confidence of the people in peace and progress, have shown that Colombia marches on firm ground, that liberty is secure, and industry remunerative and increasing on every side.

The satisfactory condition of the national finances at the present time places it beyond a doubt that the Treasury will be quite able, from this time henceforth, to meet the interests of a capital of not less than $15,000,000, which will enable the country easily to initiate the construction of the railways proposed as parts of a great line of communication from ocean to ocean, and all of which, faithfully and honestly carried out, cannot fail to place Colombia in a distinguished positition as a contributor to the general productions of the world.

With respect to the railway from Buenaventura to Cali, it as yet has gone on slowly. The contractor, Mr. Smith, was daily expected at Buenaventura with every requisite to go on with the road. The task of building this line is a gigantic one, and excuses for its delay are found in the great obstacles to be overcome. The railway from Sabanilla to Barranquilla continues profitably and satisfactorily. Telegraph-lines are of daily construction, so that before long the territory of the republic will be crossed by wires from the port of Buenaventura on the Pacific to the Venezuelan frontier and near to Lake Maracaybo on the Atlantic, making in all 969 miles of telegraph.

Primary instruction continues to diffuse knowledge, notwithstanding the opposition of the Church. Religious teaching not being now recognized as a function of the Government, the schools and other establishments supported by it are warned to abstain from being in any way accessory to religious propagandism. The people in this question have sided with the Government.

All the foreign relations of the republic, especially with Great Britain, are on the most friendly footing.

The Government of Venezuela still refuses to continue the negotiation of treaties for the arranging of the commercial relations and territorial limits between the two countries.

General Buenventura Correosa, as minister from Colombia to Costa Rica, succeeded in concluding with that republic a treaty of amity, commerce, and navigation, a postal convention, and one respecting the literary copyright, all of which are to be submitted for the approval of Congress.

The treaty of commerce with Peru, approved by Congress, has been found beneficial to both countries. Señor Vallenzuela, who negotiated this treaty, is now occupied in negotiating with a company that has undertaken to lay a telegraphic cable between Panama and the coasts of Peru, for the establishment of a telegraph-station of this cable at the port of Buenaventura, in exchange for the permission to land one of its extremes on the coast of Colombia. In order to secure the station at Buenaventura, it has been found necessary to revoke a former permission of which advantage has been taken, but the continuation of which would tend to prevent the certainty of getting the above-mentioned acquisition.

The relations of Colombia with Ecuador are as friendly as possible.

In Pasto were collected $643.50 to assist in printing copies of the Bible.

By virtue of a decree, issued on November 1, 1870, public instruction ceased to be an exclusively clerical charge, and was placed under the immediate direction of the Government, under whose auspices the entire school system was reformed; competent teachers were brought from Europe—principally from Germany. Schools multiplied in every direction; and, to insure the full measure of happy results fairly to be expected from a work inaugurated by dint of patient labor and the liberal expenditure of public funds, Colombia was first among the nations of the New World to adopt the measure of compulsory education.

The beneficent influence of the school-reform is already apparent, as is eloquently attested by the extracts here transcribed from an official report, dated October 16, 1874.

In the State of Antioquia there were, in December, 1873, the following schools:

Primary public schools for males	97
" " " " females	47
Grammar " " " males	88
" " " " females	18
Private schools for males	135
" " " females	155
Normal School	1
Total	486

The attendance at these schools, exclusive of the Normal School, was 21,416; and the total expenditure for instruction, $121,455.

In Bolivar there were but 44 schools open, against 119 in 1872; but this decadence was attributed to causes foreign to a lack of interest in the education of youth.

Boyacá possessed 208 public schools, 86 of which were for females, with a total attendance of 9,000. The amount annually contributed by the various districts for the support of these schools was $88,531.

The schools in Cauca numbered 158 public, 22 of which were for females; and 71 private, 85 being for females. The total attendance was 9,925; and the annual outlay for the support of the establishments, $77,298.

Cundinamarca had in 1873 the following:

Public schools for males	130
" " " females	88
Private " " males	50
" " " females	58
Schools for both sexes	12
Total	338

The number of scholars enrolled at these schools was 16,489; and $76,000 were expended for teachers' salaries alone.

In Magdalena there existed 49 public and 51 private schools, attended by 2,968 scholars, and supported at an expenditure of $15,974, contributed by the several departments.

Santander had 300 schools, 279 of which

were public; the total attendance was 11,974; and the appropriations for their support, $81,470, of which $58,010 were from the State, and the remainder contributed by the various districts. There were 100 schools of all kinds in Tolima, with 3,640 scholars.

As for Panama, public instruction is reported to be in as forward a state there as circumstances permit. At the beginning of the year 1874 there were no public schools on the isthmus; and in September sixteen had been established.

The actual progress attained in this important branch will be better seen by comparing the attendance at the schools in Santander in each of the seven years (1868–'74), as follows:

Years.	Attendance.	Years.	Attendance.
1868	5,631	1872	13,207
1869	6,608	1873	11,974
1870	6,625	1874	13,295
1871	12,238		

The advantage of the new system is manifested by the increase in the number of scholars from 1870 to 1871: the attendance having almost doubled immediately. The expenditure in Santander, at the end of 1874, for public instruction, was—

From the national Treasury	$6,200
From the State	81,470
From the districts	46,357
Total	$134,027

The increase in the attendance at school in the State of Cundinamarca from January to August, 1874, was nearly 6,000, or almost fifty per cent.; that from July, 1872, to August, 1874, was 14,515; and 26 new schools were opened in the year 1873–'74. Out of the State revenue in Cundinamarca, $164,664 per annum are expended on the schools.

The national Treasury devotes $317,120 yearly to the development of public instruction, as follows:

Subsidies to the States	$200,000
Subsidy to the National University, the Vasquez Academy, and other colleges	117,120
Total	$317,120

And this, besides the *renta nominal privilegiada* recognized by the Treasury in favor of public instruction, and amounting to $1,680,000, which is punctually paid.

In almost all the States there are colleges in which higher instruction is given, and which are supported out of private incomes, amounting in the aggregate to about $1,000,000 per annum.

There are in Bogotá schools of engineering, natural sciences, arts, and trades; and five teachers of painting, music, architecture, sculpture, and engineering, for the Vasquez Academy, were to be brought from Europe. Normal schools for females, and several new common schools, were to be established in each State.

From the foregoing statistics it would appear that each State in the Colombian Union devotes nearly one-half of its entire revenue to the cause of education, and that alone affords sufficient proof that the present administration of the republic, and the two immediately preceding it, have not been ignorant of the maxim that the education of the people is the groundwork of prosperity.

COLORADO. The officers of this Territory are as follows: Governor, Edward M. McCook; Secretary, John W. Jenkins; Judges of Supreme Court, Moses Hallet (Chief-Justice), James B. Belford and E. T. Wells (Associate Justices); United States Attorney, H. C. Alleman; United States Marshal, M. A. Schaffenburg; Assayer U. S. Mint, J. F. L. Schirmer; Surveyor-General, T. B. Searight. Colorado is fast becoming a popular resort for invalids, especially those afflicted with pulmonary complaints. In respect to climate, the Territory may be divided into two parts, viz., mountains and plains. The former, comprising about one-half of the area of the Territory, and forming its western portion, consists of a succession of perpetually snow-clad ranges and peaks, separated by beautiful and fertile valleys and parks, which are from 7,000 to 9,000 feet above sea-level, while many of the peaks attain an altitude of nearly 15,000 feet. It is well watered by clear, cold rivers and streams, which are rapid in their course, and abound with speckled trout. The forests are composed principally of pine and fir, which give a delightful and healthful aroma to the air. Hot and cold mineral springs, possessing a great variety of medicinal virtues, are found in many localities. The atmosphere is a little moister than that of the plains, and is rare, clear, cool, and charged with an unusual amount of electricity. This region is unsurpassed, in its endless variety of grand and beautiful natural scenery, by any place in America. Persons desiring to escape the fatal diseases incident to large towns and cities in the summer months, may here gain not only health and comfort, but pleasure; those who are fond of botany may find in the abundant flora many rare and most beautiful plants and flowers; while those who have a taste for mineralogy may also here find deposited every variety of the base and precious metals, from the crude iron-ore to the delicate frosted wire-gold.

The second climatic division of Colorado embraces the eastern portion, which extends from the foot of the mountains to the boundary-line. It is an open prairie, or plateau, which varies in altitude from 3,000 to 6,000 feet above the level of the sea. It is watered by streams rising in the mountains, which are all swift in their courses. The soil is dry and alkaline, free from boggy and marshy places, and "blossoms as the rose" with a great variety of flowers during the spring months, but is principally covered with a short, thick herbage, called buffalo-grass, which usually dries into sweet and nutritious hay during the month of August. Trees are only found along

the river or creek bottoms. This portion has a pure, rare, dry air, bracing and exhilarating in its effects, warmed and softened by the rays of a genial sun, which is seldom shaded by clouds or hidden by storms, subject to frequent changes of temperature, but nearly free from dampness at all seasons, fogs and dews being almost unknown.

Although many diseases are mitigated or cured by residence in Colorado, the climate is peculiarly favorable to those relating to the air-passages. The malady called the hay-asthma has never been known, and those who suffer annually from this distressing disease in other climates may here escape every symptom of it. Persons suffering from spasmodic asthma here find speedy relief. The most desirable place of residence for consumptives is upon the plains, within twenty miles of the foot-hills, for this portion is protected from the dry north winds by spurs or divides from the main range; and furthermore, there is daily an interchange of currents of air between the plains and mountains, similar to the land and sea breezes upon the beach. The mountain air is moister, and, mingling with the dry atmosphere of the plains, relieves it of any harshness it may possess.

The chief source of wealth of Colorado is found in its mines. Recently new mining districts have been opened, and promise to add largely to the material resources of the Territory. Probably the most productive of the new districts is that known as "Mount Lincoln," on whose lofty and precipitous slopes untold wealth has been unearthed by the exertions of the restless prospector. The deposits are essentially different from any of those elsewhere made known among the mountains of Colorado, and form a valuable and most interesting feature of its mineral resources. The ores are found in limestone formations which compose the exterior crust of the mountain, and in layers, or strata (dipping to the east and into the mountain at an angle of twenty degrees), making the process of extraction easy, and, from their great extent and richness, highly profitable. The principal mine, and one highly characteristic of the limestone region, is the "Moose" mine. This mine, discovered in the fall of 1871, has produced an enormous quantity of high-grade ore, which has given a desirable impetus to the mining interest of Park County. The character of the ore is an argentiferous galena with copper pyrites.

The Territory has an efficient system of public schools. The Superintendent of Public Instruction is appointed by the Governor for two years, and receives an annual salary of $1,200. There are 25 county superintendents. Nearly all of the public school-houses have been built since 1869. In 1874 there were 243 school districts, 180 schools, and 125 school-houses; number of persons from five to twenty-four years of age, 14,417; enrolled in the public schools, 7,456; average cost of tuition per month for each pupil, $3.12; average monthly salary paid male teachers, $62; female, $51; value of school-houses, $260,183; average rate of taxation for school purposes, 8.77 mills; total school-fund, exclusive of bonds issued for building purposes, $137,557.

The following railroads are now in operation:

	Miles.
Kansas Pacific, connecting Northern Colorado with St. Louis and Chicago, within our territorial boundary	210
Denver Pacific, forming a connection with the Union Pacific Continental Railway	106
Denver & Rio Grande (narrow gauge) on its way to the Mexican coast, connecting Northern and Southern Colorado	162
Colorado Central, opening up the great gold and silver region	41
Kansas Pacific, Kit Carson & Fort Lyon, opening up the old overland Santa Fé and Arkansas River trail, and the rich country of Southern Colorado	54
Denver & Boulder Valley, from Denver to Erie, Valmont, and Boulder, opening the rich mineral region of Caribou and Gold Hill	39
Golden & Julesburg, completed to Longmont, traversing the fine farming valleys of Northern Colorado	30
Total	642

COMMERCE OF THE UNITED STATES.

The number of merchant-vessels and amount of tonnage belonging to the several customs districts and ports of the United States, June 30, 1874, are shown in the following statement. By the act of April 18, 1874, canal and other boats employed on inland waters, with few exceptions, are exempt from enrollment and license:.

STATES.	Vessels.	Tons.
Maine	3,221	565,842.59
New Hampshire	62	11,370.18
Massachusetts	2,563	452,373.10
Rhode Island	274	36,265.55
Connecticut	836	96,317.44
New Jersey	1,124	94,699.24
New York	5,051	1,026,023.56
Pennsylvania	2,935	363,542.18
Delaware	197	13,583.86
Maryland	1,993	142,267.65
District of Columbia	472	28,196.50
Virginia	892	22,623.54
North Carolina	279	7,406.91
South Carolina	195	8,143.43
Georgia	63	9,291.84
Florida	237	9,583.76
Alabama	99	7,909.41
Mississippi	94	3,368.56
Louisiana	572	50,961.71
Texas	306	11,996.27
Total on the Atlantic and Gulf coasts	21,465	2,997,715.30
Total on the Western rivers	1,564	373,464.59
Total on the Northern lakes	4,833	758,836.84
Total on the Pacific coasts	1,125	164,418.99
	28,987	4,294,437.72
Unrigged vessels not reported	2,936	331,446.00
Aggregate in 1874	31,923	4,595,883.72
Aggregate in 1873 (including unrigged vessels)	31,684	4,468,046.81
Increase in 1874 over 1873	239	127,836.91

The value of the total imports from and of total exports to the various foreign countries for each of the three years, ending June 30th, was as shown in the following table. (For further details, *see* FINANCES OF THE UNITED STATES, in this volume.)

CONCHA, Don MANUEL DE LA, Marquis of Douro and the Havana, a Spanish general and statesman, born at Madrid in 1794; died from wounds received in battle before Estella, at Martemuro, June 28, 1874. He first saw service in the War of Independence under Napoleon I., and in 1816 sailed for the Spanish South American colonies, which were then in revolt, and in that troublesome and difficult conflict distinguished himself as a skillful soldier under Espartero. Returning to Spain in 1824, he engaged in the Carlist War on the side of Queen Maria Christina. He was successively commissioned brigadier and major-general in the campaign, and at its close was elected a deputy to the Cortes from the city of Cadiz. In the Cortes he was at first a supporter of Espartero, but after his defeat he advocated the administration of Narvaez. In June, 1843, he was made commandant of Valencia and Murcia, and, by his rapid movements, compelled the insurgents of Saragossa to capitulate, and occupied Barcelona in the name of the Queen. In February, 1844, he suppressed a new insurrection at Cartagena so promptly and wisely that he was appointed Captain-General of Catalonia. He put down the Carlists with a strong hand, and proclaimed both Don Carlos and the Prince of the Asturias traitors and outlaws. In 1847, on the occasion of the differences with Portugal, he proceeded to the frontier with 6,000 picked troops and occupied Oporto. The same year he accompanied Queen Maria Christina to Paris, and, returning to Madrid, took his seat in the Cortes among the ultra-Conservatives. In 1849 he went to Italy

with the Spanish troops designed to aid the Pope, and on coming back was reinvested with the captain-generalcy he had formerly held. General Concha next took a leading part in the insurrection of 1854. He signed the address, which was the signal for that outbreak, and was ordered into exile in the Canary Isles. The wily soldier, however, preferred going to France, whence he was soon enabled to return by the progress of the popular uprising. Arriving at Saragossa he was placed by the Junta in command of the insurrection, which speedily resulted in the exile of Queen Maria Christina, the downfall of Narvaez, and the triumph of Espartero. His friends being now in power, General Concha was restored to all his former honors, made Director-General of the Artillery, and finally marshal. He continued in the enjoyment of his titles after O'Donnell overthrew Espartero in 1856, but he was deprived of them by Narvaez, who forced him to live aloof from politics. The veteran was living in retirement when, during the troubles of 1868, Queen Isabella II. called him to form a ministry. The revolution was meanwhile making progress, but he believed that it might be suppressed if the Queen would return to Madrid and send away her friend Marfori. This she refused to do, and Marshal Concha handed her his resignation at the frontier, after instructing the officers of the Madrid garrison to oppose no longer the popular movement. After the revolution of 1868, Marshal Concha, already in his seventy-fifth year, had remained in retirement until the spring of 1874, when the successes attained by the Carlists had alarmed Serrano so greatly that he summoned the veteran soldier, though in his eightieth year, to take command of the army and lead them to battle against his old foes. Bilbao, which had been for some time invested by Don Carlos, was first to be relieved, as its garrison was reduced to the greatest straits. Taking command as promptly as of old, Marshal Concha left Madrid April 11th, and, arriving at the seat of war, advanced with 20,000 men against the enemy. Acting with masterly skill, he assailed the enemy in the rear while Serrano attacked him in front, and at the same time succeeded in joining his forces with those of that commander. The Carlists fought bravely, but were overmatched by this strategy and hastily abandoned their positions. Marshal Concha entered the beleaguered city, as he had promised to do, on the national festival of the 2d of May, amid the acclamations of the people. Being placed in supreme command of the Northern Army, Concha now determined to follow up his successes, and by driving the Carlists to a small district destitute of resources place them entirely in his power. Leaving Bilbao, May 11th, he reached Portugalete the same day and stopped there for the night. On the 12th he entered Somorrostro, then infested by Carlist bands which collected customs duties and levied contributions in rations and money. On the 13th he marched to Sopuerta, which is situated on the Valmaseda road, at the foot of the Galdames Heights, and on the 17th he was at Orduna. On arriving at the latter place he had a slight skirmish with the Carlists, who it seems were taken by surprise. On the 18th the marshal arrived at the little town of Espejo, and informed the inhabitants that if a shot was fired he would not leave one stone standing in the place, which threat, together with the presence of the army, proved effectual. On the 19th he reached Vittoria, the scene of Wellington's victory, and on the 6th of June gained Logrono. Marshal Concha continued marching into Navarre with the view of establishing a fortified line which would prevent the Carlists advancing beyond that province, while he protected the roads to the capital. His strategy had so far forced the Carlists to abandon Durango and to retire to Estella, where they established three intrenched lines. The roads being impracticable for heavy artillery, Marshal Concha was obliged to suspend operations for a time against Estella, which he constantly menaced. His force numbered 38,000 men, with eighty-seven pieces of artillery, while that of the enemy was estimated at 24,000, commanded by Don Carlos in person. On the 25th of June he began the attack on Estella, and on the 28th, while encouraging his troops to resist the bold defense of the Carlists, he was shot just as he was mounting his horse, and was borne by a gallant lieutenant of hussars to an inn at Abarzuza, where he died in a few minutes. A brave soldier, and humane as brave, his errors of former years were covered by the halo of glory which surrounded him in his last hours.

CONGREGATIONALISTS. At the meeting of the National Council of the Congregational Churches in the United States, held in October, 1874, the Secretary presented a comparative summary of the statistics of the churches for that year, and of those of 1871, when the last National Council was held. It showed a net increase, in three years, of 204 churches. The number of churches organized during the period was 413, but 209 churches once on the list had been dropped. Nearly all of the churches dropped were in the recently-settled but not in the most recently-settled States, and the loss was occasioned by changes in population. The existing churches might be grouped by locality thus: In the New England States, 1,451; in New York, New Jersey, and Pennsylvania, 340; from the eastern boundary of Ohio to the Mississippi River, 853; west of the Mississippi (excluding the Pacific States), 552; in the Pacific States and Territories, 75; in the Southern States (exclusive of Missouri), 54. More than one-half the increase of churches (124 churches) had been gained in the four States of Iowa, Kansas, Nebraska, and Wisconsin. The gain in the Southern States (not including Missouri) had been twelve churches. The net gain in church-members had been 17,161, an annual average of 5,720. The an-

nual average increase for the preceding fifteen years had been 6,554. The present report did not include the additions made in the revivals of the previous winter. The additions by profession of faith during the three years had been 40,432. The gain in members was distributed geographically as follows: In New England, 1,245; in New York, New Jersey, and Pennsylvania, 3,358; from the eastern boundary of Ohio to the western boundaries of the first tier of States beyond Missouri, 10,092; in the Southern States (not including Missouri), 1,245; in the Western and Pacific States and Territories, 1,232. The number of Sunday-school scholars had increased 11,089. The benevolent contributions had been imperfectly reported. The estimates did not include the large amounts given by individuals. The report of 1874 showed an increase of $259,260.24 over that of 1871. The amounts raised for the home expenses of the churches were not included in the calculation. Of $1,213,816 of contributions, reported in 1873, $856,833.19 had come from the New England States. The State of Arkansas had been dropped from the rolls, and the States of Nevada and West Virginia and the Territory of Idaho had been added. The number of theological seminaries in 1874 was seven (or the same as in 1871). In 1871 they had thirty-two professors; in 1874, thirty-five; in 1871 they had eleven lecturers; in 1874, sixteen; in 1871 they had 272 students; in 1874, 327.

A Council of Congregational Churches met in the city of Brooklyn, N. Y., March 24th, to consider questions which were submitted to it concerning the nature and terms of membership and the principles of fellowship in the Congregational churches. The occasion for summoning the Council was given in certain action of Plymouth Church, Brooklyn, in a case of discipline, to which two neighboring churches took exception on the ground that it was not according to the principles of Congregational church government and usage. A member of Plymouth Church had ceased to unite with it in worship and to attend its meetings in 1869. He claimed that he had thereby withdrawn himself from the jurisdiction of the church. About four years afterward, charges were brought against him for conduct unworthy a church-member. They were not pressed for trial; but at the annual meeting of the church, October 31, 1873, the name of this member was called in examining the rolls of the church, and the fact of the existence of the charges was announced. The explanation was made to the meeting that he was no longer a member of the church. Although this was the first public notice that had been given of his withdrawal, the case was dropped without further proceedings, and the member's name was stricken from the rolls. The attention of the neighboring churches was called to this action as presenting novel and singular features. It was discussed at meetings of the Church of the Pilgrims and of the Clinton Avenue Congregational Church. An address, expressing the views of these meetings, and their objections to the principle of action adopted by Plymouth Church, was sent to that church. Plymouth Church objected to the tone of the address, and made a reply to it, in which it was intimated that the remonstrating churches had passed judgment and condemnation upon the case without fairly examining it. The remonstrating churches replied with a letter, explaining their motives, repelling the imputation that they were offensive, and making inquiry as to the position which Plymouth Church held in the case. Plymouth Church replied, embodying in its letter an extract from its manual, first published in 1848, in which was affirmed in substance its entire independence of all other churches "in regard to its faith, order, and discipline." It was held by the remonstrating churches that such independence had never been claimed by the Congregational Churches of America. Further correspondence was had, with a view of discussing by fraternal conference, or by a council, in the call of which the complaining churches and Plymouth Church should join, the following questions:

1. Does the order and usage of Congregational churches permit a member, who has entered into public covenant with a church, to terminate his relations with that church by his own volition or act, so that no action on the part of the church is requisite to such termination of membership?
2. Was the action of Plymouth Church on the 31st October, 1873, in dropping a member against whom grave and specific charges had been formally presented, an action in accordance with the usages of Congregational churches, and with their understanding of the rule of Christian discipline?

Plymouth Church was also invited to give its adhesion to the following declaration on church-fellowship, to the principle of which it was considered to have committed itself in one of its letters: "Whenever any church shall openly and avowedly change the essential conditions upon which it was publicly received into the fellowship of neighboring churches, it is their right, either by individual action, or by council, to withdraw their fellowship." Plymouth Church asked for modifications in the statement of the points to be submitted to the Council, and the imposition of conditions to the calling of it, which the other churches did not feel at liberty to grant. The remonstrating churches, therefore, determined to call the Council alone. Invitations to attend the Council were sent out to seventy-nine churches and seventeen ministers not settled over churches. The Council met in the Clinton Avenue Congregational Church, Brooklyn, and was constituted by the election of the Rev. Leonard Bacon, D. D., of New Haven, Conn., as moderator; Judge Charles J. Walker, as assistant-moderator; the Rev. Alonzo Quint, D. D., of New Bedford, Mass., as scribe; and the Rev. J. C. Meserve, of Brooklyn, N. Y., as assistant-scribe. Two

of the churches invited had declined to be represented. The delegates who were present had gathered from fourteen States. Plymouth Church was invited to declare its views orally before the Council on the questions presented by its pastor and such committee as it might appoint, and by the same committee to convey such information concerning the action referred to in those questions as the Council might request. It declined to appear, "lest," as it replied in its letter, "by our acceptance we should seem to renounce our conscientious convictions and to withdraw our solemn testimony against the violation of Christian liberty, courtesy, and equity, which has characterized the calling of this Council and the steps which led to it, and lest we should establish a precedent full of danger to smaller churches, as encouraging irregular and unwarrantable proceedings on the part of strong churches, which the weaker party might afterward, by the force of our example, be compelled to condone." In the same letter, the church made some explanations of its position on the subject of church-fellowship, which were subsequently referred to in the decision of the Council as having, to a certain extent, influenced its action. The first business was to determine whether the Council was a mutual, an *ex-parte*, or an advisory one. It was decided to be an advisory Council. Its discussions were conducted for the most part in secret session.

The decision of the Council was embodied in a formal document. It reviewed the circumstances which led to the calling of the Council, and the preliminary correspondence which took place between the churches calling it and Plymouth Church. In respect to that part of the correspondence in which a reference of the points of difference to the advice of a Council was sought, it said:

We find on the part of Plymouth Church no definite expression either of consent or refusal. Yet, inasmuch as the Plymouth Church did not distinctly refuse to unite on a reference to a Council, we cannot but regret that the complaining churches did not urge their request till a refusal or an evasion should have become unequivocal.

On the main questions on which advice was sought, it pronounced the following judgment and opinions:

We say distinctly that the idea of membership in a Congregational Church is the idea of a covenant between the individual member and the church; that by virtue of that covenant the member is responsible to the church for his conformity to the law of Christ, and the church is responsible for him; and that this responsibility does not cease till the church, by some formal and corporate act, has declared the dissolution of the covenant. The covenant may be broken by the member. He may offend, and, when duly admonished, may give no satisfactory evidence of repentance. In that case, he is cut off from communion; the Church having given its testimony is no longer responsible for him, and he can be restored only by the removal of the censure. Voluntary absence of a resident member from the communion of the Church, and from its public worship, does not dissolve the covenant, but is a reasonable ground of admonition, and, if persisted in, of final censure.

When a regular complaint is made against such a member that in some other respect he violates the laws of the Church, and especially when the complaint is that he has circulated and promoted scandals derogatory to the Christian integrity of the pastor and injurious to the reputation of the Church, the consideration that he has long ago forsaken the Church is only an aggravation of his alleged fault.

In regard to the future relations between these churches and Plymouth Church, we express our hope that the very extraordinary proceeding which gave occasion for the correspondence and for this Council will not be a precedent for the guidance of that Church hereafter. Could we suppose that such proceedings will be repeated, we should feel that the disregard of the first principles involved in the idea of church-membership and the idea of the fellowship of churches with each other, would require the strongest possible protest. But the communication from the Plymouth Church to this Council makes professions and declarations which justify the hope that such deviation from the orderly course of discipline will not be repeated. The accused person in that case has not been retained in the church, nor commended to any other church.

We recite some of those declarations from the Plymouth Church which encourage the hope we have expressed: "We rejoice," says the Plymouth Church, "to live in affectionate fellowship with all churches of the Lord Jesus, and especially with those who are in all things like-minded with us, holding to the same faith and order, not only in things fundamental but in things less essential yet dear to us by conviction or association. * * * * We cheerfully admit that whenever any church shall openly and avowedly change the essential conditions upon which it was publicly received into the fellowship of neighboring churches, or shall by flagrant neglect exert a pernicious and immoral influence upon the community, or upon sister churches, it is their right either by individual action or by council to withdraw their fellowship. We hold that preceding disfellowship in all such cases there should be such affectionate and reasonable inquiry as shall show that the evil is real, that the causes of it are within the control of the church, that the evil is not a transient evil, such as may befall any church, but is permanent and tending to increase rather than diminish."

While it is not to be forgotten that this communication from Plymouth Church is entirely subsequent to the case as it stood upon the convening of this Council, when the Plymouth Church, by its action of December 5th, had declared itself responsible for no other church, and no other church for it, in respect to doctrine, order, and discipline, which action, as interpreted in the circumstances then existing, implied a withdrawal to the ground of total independency, yet that church is to be fraternally judged by its latest utterance.

These professions on the part of Plymouth Church may be accepted by other churches as indicating its intention to maintain an efficient discipline, and to regard the mutual responsibility of churches. At the same time, the Council feels constrained to declare that these declarations seem to us inconsistent with the resolution of interpretation adopted by Plymouth Church, December 5, 1873, and with other acts and statements appearing in the published documents. We think that the action of that church, as presented in these documents, if unmollified, would justify these churches in withdrawing fellowship. Yet, inasmuch as the Plymouth Church seems to us to admit, in its communication to us, the Congregational principles of discipline and fellowship, we advise the churches convening this Council to maintain with it the relations of fellowship as heretofore, in the hope that Plymouth Church may satisfy these churches of its acceptance of the principles which it has been supposed to disavow.

The sixth *National Council of the Congregational Churches in the United States* (or the second, counting from the organization of the Council as a permanent body at Oberlin, O., in 1871), met at New Haven, Conn., September 30th. The Hon. Lafayette S. Foster, of Connecticut, was chosen moderator, and the Rev. George F. Magoun, D. D., and the Rev. I. E. Dwinell, D. D., were chosen assistant-moderators. Attention was given chiefly to the consideration of the report of the committee appointed at the preceding meeting on the consolidation of the benevolent societies supported by the Congregational churches. The main provisions of the plan supported by the committee were adopted as follows:

I. That for the work of foreign missions the American Board of Commissioners for Foreign Missions be earnestly commended to the churches; and that it is advised that the funds which formerly were contributed by our churches to the operations in papal lands, through the American and Foreign Christian Union, be added to the contributions ordinarily made to that board.

II. That for the work among the freedmen of our land, heretofore carried on with so much efficiency and success by the American Missionary Association, that organization be commended to the continued support of our churches.

III. That the Council heartily approve of the consolidation already effected between the American Education Society and the College Society, and commend the new organization to the generous support of the churches.

IV. That for the ordinary home missionary work the American Home Missionary Society is deserving of vigorous support, and that in the judgment of the Council it is desirable that it so far enlarge its operations as to comprehend and supervise all that work of the churches which is properly related to the idea and plan of home evangelization in the special fields which it occupies; that the now separate enterprises of church erection and missionary Sunday-school work be incorporated with the work of the American Home Missionary Society, and be provided for by the establishment of district bureaus or otherwise, at the discretion of the Executive Committee, and that separate annual collections be taken for the special work of church-building and missionary Sunday-schools.

V. That we advise that the Congregational Publishing Society be disembarrassed of all work inconsistent with a strictly business enterprise, and that every possible effort be made to promote its prosperity in its special field by securing through its agency the publication and sale of denominational and Sunday-school literature of a high order.

VI. That in the judgment of this Council the consolidation into one of our various missionary and benevolent magazines is desirable, and that the officers of the different societies are respectfully requested to consider the practicability of such a consolidation.

The report of the committee also contained recommendations that the missions of the American Board among the North American Indians be transferred to the care of the American Home Missionary Association, and the foreign missions of the latter organization be transferred to the American Board and kindred societies; and that the congregations be advised to transfer to the denominational boards representing kindred enterprises their present contributions to union societies. These propositions were not approved by the Council.

A resolution was adopted, commending all the benevolent societies to the continued confidence and support of the churches, and declaring "that no proposal of union, necessarily in the future, need, in the intermediate time, lessen the contributions to their various objects." A paper, by the Rev. D. B. Coe, D. D., on "Christian Comity between Denominations in the Home Field," called attention to an agreement which had been made a short time before between the Presbyterian Board of Home Missions and the Executive Committee of the American Home Missionary Society, for the purpose of avoiding rivalry in establishing churches in sparsely-populated districts. It had often happened that the agents of different denominations had undertaken to build up two or more churches, in neighborhoods which could, at most, competently support but one. Thus, several weak congregations, constantly dependent upon the missionary organizations for help, had been started in places where a single congregation, of either denomination, might have sustained an independent existence, and flourished. In their agreement, the Presbyterian Board of Home Missions and the Executive Committee of the American Home Missionary Society had consented that they would mutually exert their influence to prevent interference of this kind with each other's work; that, so far as they could control operations, neither board should hereafter enter a field requiring help which was already occupied by the other; that, in places where the two societies were already represented by different churches dividing energy and resources that ought to be united, they would counsel mutual forbearance and yielding, and the withdrawal of one or the other church in favor of the one which should seem best fitted for the work there; and that, in selecting new fields, they would take care to prevent interference. This paper was ordered to be printed with the proceedings of the Council. A special committee was appointed to address other evangelical bodies on the subject to which it related, and solicit them to appoint committees for a general conference in regard to the evils against which it was intended to provide. In case the conference is held, this committee will also represent the council in it.

The first General Council of the Congregational churches was held at Cambridge, then called Newtown, Mass., in 1637. The second was held at Cambridge in 1646. Adjourned sessions of the same body were held in 1647 and 1648, and the result of their deliberations was embodied in the so-called "Cambridge Platform." The third council was held at Albany, N. Y., in 1852, and considered plans for carrying on missionary operations in the West. The fourth council was held at Boston in 1865, and held an adjourned session at Plymouth. The fifth council was held at Oberlin, Ohio,

where the National Council was organized as a permanent body, to meet every three years. The present session, although only the second meeting of the council as a permanent body, was, by including all the previous meetings of general councils, counted as the sixth.

The twenty-first anniversary of the *American Congregational Union* was held in the city of New York, May 14th. Mr. A. S. Barnes presided. The trustees reported that grants had been made during the year to forty-six churches. The receipts for the year ending May 1, 1874, were $61,184.64, which, with the balance on hand at the beginning of the year, made the available resources of the Union $67,044.19. The expenditures for the same period were $60,580.40, leaving a balance at the close of the year of $6,468.79. The usual social reunion was held in the evening, and was addressed by the Rev. Dr. Post, of St. Louis, the Rev. H. M. Gallaher, Baptist, the Rev. Dr. John Hall, Presbyterian, and by other persons.

The forty-eighth anniversary of the *American Home Missionary Society* was held in New York City, May 13th. The receipts for the year were reported to have been $290,120.34, and the expenditures $287,662.91. The sum of $12,652 was still due to missionaries for labor performed, but not yet reported, and further appropriations had been made to the amount of $106,979, making the total amount of moneys pledged $119,632. Nine hundred and sixty-nine missionaries had been employed, of whom three had preached to congregations of colored people, and thirty-two had preached in foreign languages. The number of congregations and missionary stations supplied was 2,195, fifty more than were supplied during the previous year, and twenty more than the largest number occupied in any former year. The receipts were $22,429 more than those of the previous year, and had been exceeded by those of only one year in the history of the society.

The sixty-fifth annual meeting of the *American Board of Commissioners for Foreign Missions* was held at Rutland, Vt., October 6th. The Rev. Mark Hopkins, D. D., LL. D., presided. The treasurer, according to the orders of the board, made separate statements of the receipts and expenditures for the ordinary missionary work among the heathen, and for the work in "nominally Christian lands." The total receipts for the general work had been $443,925.29. The expenditures on the same account had been:

Cost of missions	$399,681 96
Cost of agencies	9,247 63
Cost of publications	10,666 30
Cost of administration	16,904 93
Total expenditures	$436,590 82

For the work in "nominally Christian lands," the receipts had been $33,981.22, the expenditures as follows:

Cost of missions	$43,886 88
Cost of agencies	2,133 63
Total	$46,020 51

The board was reported in debt to the amount of $30,441.07.

Several events had occurred to impede the progress of the missionary operations: among them were named the famine which had prevailed in some parts of Turkey; the murder of the Rev. Mr. Stephens in Mexico; the intrusion of English High-Churchmen into the Mahratta mission, in India; the attempts of the Turkish Government to suppress the circulation of the Scriptures among the Moslems; and the financial stringency at home. Nevertheless, an increased interest in the cause, and a healthy growth in most of the missions, were reported. The board resolved to endeavor to raise the sum of $400,000 among the churches for the payment of its debt and the prosecution of its work during the coming year, expecting to secure $100,000 more from legacies and other sources, and fixing the whole amount sought at $500,000. Twenty-five hundred dollars were pledged during the meeting toward the establishment of an institution of Christian learning in Japan.

The twenty-eighth annual meeting of the *American Missionary Association* was held at Clinton, Iowa, October 28th. The treasurer's report showed the total receipts for the year to have been $319,728.75, and the aggregate expenditures $344,004.05. Of the latter sum, $280,833.87 had been expended in the South. The expenditures in the foreign missionary work had been $9,034.16 for Africa, $4,156.29 for the Jamaica mission, $2,967.61 for Siam, and $92.67 for special purposes in the Sandwich Islands.

The *Congregational Union of Ontario and Quebec* held its meeting in June. The Rev. Joseph Unsworth, of Georgetown, was elected chairman for the year. The receipts of the Congregational Missionary Society for the year had been, including a balance of $1,200 from former years, $8,032, of which sum $4,900 had been actually raised among the Canadian churches. The Colonial Missionary Society of England had given during the previous year £400 toward the operations in Ontario and Quebec, and would give £350 for the current year.

The forty-fourth annual meeting of the *Congregational Union of England and Wales* was held in London, May 11th. The total income of the Union for the year was reported to have been £7,311 12*s.* 4*d.* A Conference on church finance had been held in December, 1873, at Birmingham, at which the conclusion was reached that the stipends of Congregational ministers were, as a rule, insufficient to such a degree as to limit the usefulness of their ministry. The Conference had estimated that no stipend in the country districts should be lower than £150, and had sketched a plan of operations, the object of which was to bring the subject more directly before the churches, and to secure greater liberality and promptness in the collections for this object.

The following resolution was unanimously adopted in reference to the relations of church and state:

Resolved, That this Assembly recognizes the gravity of the political difficulties and perils arising from the doctrines and pretensions of the Ultramontane party, now supreme in the Roman Catholic Church, and believing that these difficulties are greatly aggravated by the existence of organic relations between churches, whether Catholic or Protestant, and civil governments, desires to express its deliberate judgment that the civil supremacy of the state, which it is the duty of nations and governments to defend against all ecclesiastical encroachments, and the rights of conscience, which it is the duty of nations and governments to respect, can be secured and permanently maintained only by the dissolution of all organic relations between the church and state.

In reference to the growth of ritualism in the Church of England, the following resolution was also unanimously adopted:

Resolved, That, in view of the prevalence and rapid growth in the Church of England of doctrines and practices closely resembling those of the Church of Rome, this Union earnestly calls upon Protestant Nonconformists to meet the danger to which the spiritual life of the nation is exposed by increased activity in inculcating Scriptural truth. In particular, it suggests to pastors and Sunday-school teachers the desirableness of such elementary teaching—whether in the form of sermons, lectures, or catechetical instruction—as may serve to protect the people from being misled by religious teachers who misuse the authority and influence with which they have been invested.

The autumnal meeting of the Congregational Union of England and Wales was held at Huddersfield, beginning October 8th. The Rev. J. G. Rogers presided, and delivered an address on "The Age, and our Work in it." He criticised the utterances of Prof. Tyndall in his address before the British Association, and expressed disapproval of the schemes of the Episcopal High Churchmen for the reunion of Christendom. The most important subjects considered by the meeting were those of finance and ministerial support. The present arrangements of the churches for supplementing the stipends of ministers were declared, in the opinion of the Union, to be insufficient. The assembly expressed its appreciation of the importance of the work carried on by the Home, the Irish Evangelical, and the Colonial Missionary Societies, and invited increased contributions to their funds. A resolution was adopted recognizing "the great service which the Sunday-schools of England have rendered in promoting religious knowledge among the young, and in leading many, whom probably no other agency would have reached, to the obedience of faith;" regarding the stimulus which recent legislation had given to the cause of education, "as rendering it only the more imperative that the Sunday-school system should be maintained, and that efforts should be put forth to raise it to the highest point of efficiency;" and suggesting a closer pastoral oversight of the schools, preparatory instruction of the teachers, coöperation in the management of the schools, periodical examinations of them, and special services for their benefit.

The eightieth annual meeting of the *London Missionary Society* was held in London, May 14th. The treasurer's balance-sheet showed the total receipts for general purposes to have been £99,954 16*s.* 10*d.*; contributions and dividends for special objects, £12,986 4*s.* 1*d.*; total income, £115,909 10*s.* 10*d.* The expenditures had been £114,061 19*s.* 8*d.* The number of English missionaries engaged by the society was stated to be 155; but beyond these were an increasing number of fairly qualified native agents engaged as pastors and teachers. During the year thirty-three offers of service had been received by the directors, and nine of them had been accepted. The results of the foreign work of the year were spoken of in the report of the directors as "both numerous and important."

The annual meeting of the *Congregational Union of Scotland* was held in April, the Rev. Dr. Russell presiding. The report of the widows' fund showed that it had increased £480 during the year.

The following are the statistics of the Congregational Churches in the United States and British America, as given in the *Congregational Quarterly* for January, 1875:

STATES, ETC.	Churches.	Ministers.	Church-Members.
Alabama	8	7	335
California	66	68	2,949

CONGRESS, UNITED STATES. The first session* of the Forty-third Congress commenced on December 1, 1873. (For the Message of the President, *see* PUBLIC DOCUMENTS, ANNUAL CYCLOPÆDIA, 1873.)

The Vice-President, Henry Wilson, of Massa-

* The following is a list of members at the first session of the Forty-third Congress.

SENATE.

Alabama—George Goldthwaite, George E. Spencer.
Arkansas—Powell Clayton, Stephen W. Dorsey.
California—John S. Hager, Aaron A. Sargent.
Connecticut—William A. Buckingham, Orris S. Ferry.
Delaware—Thomas F. Bayard, Eli Saulsbury.
Florida—Abijah Gilbert, Simon B. Conover.
Georgia—Thomas M. Norwood, John B. Gordon.
Illinois—John A. Logan, Richard J. Oglesby.
Indiana—Daniel D. Pratt, Oliver P. Morton.
Iowa—George G. Wright, William B. Allison.
Kansas—James M. Harvey, John J. Ingalls.
Kentucky—John W. Stevenson, Thomas C. McCreery.
Louisiana—J. Rodman West, ——— ———.

New Mexico—Stephen B. Elkins.
Utah—George Q. Cannon.
Washington—Obadiah B. McFadden.
Wyoming—William R. Steele.

chusetts, presided in the Senate, and James G. Blaine, of Maine, was elected Speaker of the House.

In the Senate, on December 1st, Mr. Sumner, of Massachusetts, submitted the following resolutions:

Whereas, By international law and existing custom war is recognized as a form of trial for the determination of differences between nations; and—

Whereas, For generations good men have protested against the irrational character of this arbitrament, where force instead of justice prevails, and have anxiously sought for a substitute in the nature of a judicial tribunal, all of which was expressed by Franklin in his exclamation: "When will mankind be convinced that all wars are follies, very expensive and very mischievous, and agree to settle their differences by arbitration?" and—

Whereas, War once prevailed in the determination of differences between individuals, between cities, between counties, and between provinces, being recognized in all these cases as the arbiter of justice, but at last yielded to a judicial tribunal, and now, in the progress of civilization, the time has come for the extension of this humane principle to nations, so that their differences may be taken from the arbitrament of war, and, in conformity with these examples, submitted to a judicial tribunal; and—

Whereas, Arbitration has been formally recognized as a substitute for war in the determination of differences between nations, being especially recommended by the Congress of Paris, where were assembled the representatives of England, France, Russia, Prussia, Austria, Sardinia, and Turkey, and afterward adopted by the United States in formal treaty with Great Britain for the determination of differences arising from depredations of British cruisers, and also from opposing claims with regard to the San Juan boundary; and—

Whereas, It becomes important to consider and settle the true character of this beneficent tribunal, thus commended and adopted, so that its authority and completeness as a substitute for war may not be impaired, but strengthened and upheld, to the end that civilization may be advanced and war be limited in its sphere: Therefore—

Resolved, That in the determination of international differences arbitration should become a substitute for war in reality as in name, and therefore coextensive with war in jurisdiction, so that any question or grievance which might be the occasion of war or of misunderstanding between nations should be considered by this tribunal.

Resolved, That the United States, having at heart the cause of peace everywhere, and hoping to help its permanent establishment between nations, hereby recommend the adoption of arbitration as a just and practical method for the determination of international differences, to be maintained sincerely and in good faith, so that war may cease to be regarded as a proper form of trial between nations.

They were ordered to be printed, and referred to the Committee on Foreign Relations.

Mr. Ferry, of Michigan, offered the following resolutions:

Resolved, That the Committee on Finance be instructed to consider the expediency of providing for a national system of banking and currency in lieu of the present one, which shall embody the substantial features following, to wit:

1. Banking to be open and free to all individuals and associations without limitation of capital.

2. The maximum currency circulation to be $800,000,000 exclusive of fractional, and to be issued and authenticated solely by the Government, of uniform character, with "United States Currency" imprinted on its face, made lawful money and a legal tender for all public and private dues except duties on imports and interest on the public debt, and convertible on demand into Government bonds bearing interest at 3 65-100 per cent. per annum in currency.

3. The Government to issue bonds stamped "currency bonds," of denominations of $1.00 and multiples bearing interest at the rate of 3 65-100 per cent. per annum, convertible into currency on demand, and to be exempt from taxation by Federal, State, municipal, and local authority.

4. Substitution of the United States currency for national currency to be done at the convenience of the Government, without diminishing the volume of current circulation, and the bonds held for the security of the national currency to be adjusted with the banks by purchase or surrender; substitution of United States currency for other existing forms, bringing about uniformity of currency, to likewise be done without lessening the current circulation.

5. For immediate relief to existing monetary stringency the forty-four millions Treasury reserve to be issued without delay in the purchase of Government bonds bearing the higher rates of interest, and as fast as practicable additional purchases of like bonds to be made with United States currency, until the maximum circulation be reached.

6. Preparatory to withdrawal of the fractional currency the Secretary of the Treasury is required to make public designation of a period after which to begin the redemption in silver of denominations of twenty-five cents, and under also a second period designated at which to commence like redemption of the remaining fractional currency then in circulation, and all when so redeemed to be destroyed; and that the committee report at as early a day as practicable by bill or otherwise.

The resolution was referred to the Committee on Finance.

In the House, on December 8th, the special committee on increased salaries reported a bill to repeal the increase of certain salaries adopted March 3, 1873, and to restore the former rates, to wit, for members of Congress, etc. On December 9th the bill was considered.

Mr. Wilson, of Indiana, said: "Mr. Speaker, the subject now under consideration is one which has attracted much public attention. The action of the Forty-second Congress, in passing the act by which the salaries of Senators and Representatives were increased, which it is now proposed to repeal, and especially that feature of it whereby the increased pay was made to date from the beginning of the Congress, has met with the fiercest denunciation. Not only those who voted for it, but those who voted against it, yet received its benefits, have been stigmatized as thieves and robbers.

"It matters not how many years of faithful service had been devoted to the country, nor how exalted a character for integrity had been builded up; this one act has been deemed an unpardonable sin, and treated as an unmitigated criminality. While indulging in this wholesale denunciation, no one stopped to consider the circumstances under which any member happened to be placed, and which to him, and to any reasonable man, might seem to make it his duty to vote for the measure; no difference of opinion was permitted as to

its justice; no appeal to reason would be listened to. My distinguished friend from Ohio (Mr. Garfield), who struggled against it until, in a conference report which he had resisted to the last, it was brought before the House attached to one of the most important appropriation bills, and then, as all of us who are familiar with the facts must confidently believe (and it is but justice to him to say so here), voted for it in the conscientious discharge of his duty to the country, has fared no better than any one else.

"I do not doubt that this unstinted abuse has been indulged in by many honest, conscientious men, who, in my judgment, came to hasty conclusions; and certainly by many who thought they could see in it their opportunity for preferment, hoping for official honors upon some demerit of others, rather than upon any merit of their own.

"Mr. Speaker, I may be mistaken, but I have thought that I could see, in what has transpired here since this question came before the House, a disposition upon the part of some gentlemen to seek to gain popularity for themselves by trying to cast reproach upon their fellow-members.

"Now, sir, it is not my purpose to argue against the repeal of that act, nor that it did not fix the salaries too high, but to show that there is nothing in it that is immoral or dishonest; that a man might vote for it, or receive its benefits, and still be the peer in integrity and conscience of the very best of all the multitude of his detractors. The limit fixed to this debate will not permit me to enter into an elaborate consideration of this subject in its various aspects, and I must necessarily treat it briefly. As the Constitution now is, the power is granted to each Congress to fix its own compensation. This power was granted for the reason that it was not deemed wise to allow one Congress to fix the compensation of its successor; it was recognized as a delicate duty for members to fix their own salaries, but, after weighing all the arguments *pro* and *con*, it was deemed best that it should be so. A great many newspaper articles have been published, and speeches made, in which it has been assumed that, when a Senator or a member of Congress is elected, it is a contract to serve, during the period for which he was elected, for the compensation provided for at the time of his election. But, sir, nothing is plainer than that the assumption is without foundation. On the contrary, as before remarked, for reasons which the framers of the Constitution regarded as outweighing those that were urged against it, it was provided that each Congress might judge of its own compensation. Such is not only the plain letter of the Constitution, but there is history which shows that so the people themselves desired it to be.

"Now, Mr. Speaker, five Congresses have increased the salaries, and each time dated the increase back to the beginning of the Congress, or, in other words, have embodied in the law this feature, which the gentleman from Ohio (Mr. Lawrence), a short while ago, so earnestly objected to as 'back pay.'

"The Constitution was purposely framed so as to allow each Congress to fix its own salary, and, acting within its express constitutional power, the Forty-second Congress, in passing the act to which I have referred, has followed an unbroken line of precedents, and has trodden in the footsteps of many illustrious predecessors.

"Having the right to fix its own compensation, it is of course wholly immaterial on what day of the Congress it is done. The merit or demerit does not in any way depend upon whether it is done on the first, or the last, or any intervening day. It might be done on the first day, and then it would all be 'front pay,' to use the language of some of the newspapers; but the effect upon the Treasury would be precisely the same as if fixed upon the last day. The merit or demerit, the good or bad qualities of the act, depends, therefore, not on the time in the session when it is done, but altogether upon the amount. If the amount fixed would have been right if it had been fixed at the beginning of the Congress, it is equally right if fixed at any later day in the Congress to date from the beginning. Upon this question of amount it is but natural that there should be a diversity of opinion, and that difference may exist between honest men.

"I shall not argue the question whether or not the action of the Forty-second Congress was ill-timed or indiscreet, although it would possibly not be difficult to convince a thinking man that it is never ill-timed nor indiscreet to do what is right; but this would involve the single question, and it is the only question involved, as the gentleman from Ohio (Mr. Lawrence) now admits, whether or not the amount fixed by that Congress was in excess of a fair compensation. Those who had experience here would differ in regard to it, and those who have had no opportunity to know to what expenses Senators and Members are subjected are not in a good condition to form a correct opinion.

"It is sufficient for us to know that the people, whether wisely or unwisely, are unwilling to pay the amount fixed by that Congress. We cannot now argue that they are wrong. They have a right to dictate what they will pay. They have a right to demand that it shall be repealed. They have made that demand, and we are now about to accede to it. When repealed we must once more fix salaries; and that, also, we are about to do. Whatever we may do will be criticised; but we must do something, and perhaps the best guide to us in disposing of the matter is the law as it was before, and I trust that the House will place the bill upon that basis."

Mr. Townsend, of Pennsylvania, said: "The people of the country are willing to compen-

sate their Representatives fairly and equitably. They are neither unjust nor ungenerous. They are willing that we should have a fair salary for the services we are rendering them here. I think, Mr. Speaker, that the popular indignation during the past summer was not directed so much against the increase of pay as it was against what has been called the back pay. The people felt indignant that in the last hours of the last day of the session, after we had signed our receipts monthly, acknowledging that we had been paid in full for our services here, we should pass a law taking immediately out of the Treasury $5,000 each, which we had acknowledged we had not earned. It was for this that people called members to a stern account.

"I thought on that occasion, when the bill was before the House, that it was injudicious, and I thought that it was wrong. I thought that the people had had no opportunity to pass upon the bill. And I am very sure that, if the bill had been brought into the House at the first session of Congress, before the county, and district, and State conventions met, that bill increasing the pay and giving back pay never would have passed, in the form and at the figures at which it did eventually pass. If it had been passed at that earlier session, however, if the people had had a chance to express their sentiments with regard to it, in their different constituencies, they would have made no complaint. They could have dealt with their Representatives as they thought best. But they had no such opportunity. On that occasion I advocated the bill extending the pay to $6,000 a year. I did it because I saw there was a determination to increase the pay, and I felt that $6,000 a year, as I proposed at that time, would be about a just compensation for what we would lose, in the shape of stationery, mileage, and obligation to pay postage on public documents, under the bill that finally passed.

"Therefore it was that I voted against the bill, and never touched the back pay, but turned it over to the Treasurer, who receipted for the same."

Mr. Poland, of Vermont, said: "Mr. Speaker, I should not have occupied any of the time of the House on this subject had it not been that I have introduced a substitute for the bill reported by the committee, for which, and in behalf of which, I desire to say a word or two. A few days since I was in company with a considerable number of gentlemen—I think over a hundred—when the subject of the salary bill and what ought to be done with it was the sole topic of conversation, and a number of them expressed their views in relation to it. They all concurred in saying that it had been utterly condemned by the public judgment of the whole people of the United States; that the thing had been discussed, and considered, and adjudicated, by the sovereign people, that authority to which we all owe allegiance, whose commands and whose judgments we are bound to obey. Gentlemen declined to discuss the question whether or not the bill was itself wrong, whether the provision for raising salaries from $5,000 to $7,500 was right or wrong. They said it was a non-essential question, now that the people had considered it and had passed judgment upon it, from which there was no appeal, and by which judgment we were bound; that our sole duty now was to execute that judgment. They said it was as idle now to discuss whether it was right or wrong as to discuss what a man might have proved in a case that had already been tried and gone to final judgment. And, Mr. Speaker, such has substantially been said by almost every gentleman who has discussed the question before the House.

"My friend from Indiana (Mr. Wilson), while maintaining here that the increase was just, and right, and proper to be made, and justifying his vote in favor of it, says it is too late to stand upon that; that it has been decided the other way, and decided by a tribunal that we are all bound to obey. Now, Mr. Speaker, I owe as much allegiance and obedience to the public judgment upon this and upon all subjects as any gentleman upon this floor; but I do not agree in the conclusion that is to be drawn. The people have decided that this increase of salary—increased in amount, and going back and making it apply to that Congress which had almost expired—was wrong. So, gentlemen, all say. Now, what does the bill that has been reported by your committee propose to do? Why, it proposes that that bill shall be left to stand; that all the increased pay that was received by members of the Forty-second Congress, they shall be allowed to keep; and that all the increase of pay which the members of this Congress have so far received they shall be allowed to keep. Now, Mr. Speaker, let me ask you, and ask the gentlemen on the floor, whether that is conforming to the public judgment on this subject? Is that what the people have decreed?

"Is this going to satisfy the demands of the people on this subject? When the people have resolved in conventions, and when they have said through the public press, that the law is to be repealed, what did they mean by it? That we were merely to change the law now and take a different and lower rate of compensation hereafter? Not at all; what the public judgment has demanded and now demands on this subject, if it demands any thing, is that this thing shall be utterly wiped out. That no benefit or advantage that any man has derived under it shall be kept and retained by him. That, and that alone, will satisfy the public demand and the public judgment on this subject; and, sir, it was for that purpose and with that view that I introduced a substitute for the report of the committee. Why, those very gentlemen who said, upon the occasion that I refer to, that the public judgment had so pro-

nounced against this thing that nobody was at liberty to say a word in favor of it, now come in here with this lame and impotent conclusion.

"Mr. Speaker, while I agree with these gentlemen in their premises, I utterly disagree to their conclusions. I propose for one to vote for a bill which shall carry out the decision of the people upon this subject, and utterly wipe out all the effects, consequences, and benefits, that have been derived by members of Congress under that bill. And, Mr. Speaker, I must do upon this subject as many gentlemen have done, because we are all personally interested; I must state my own personal experience on the subject and how I stand in reference to it. I voted against the bill. In reference to whether it was right or wrong as to the amount, I was governed, I suppose, in my vote very much as other gentlemen were. I voted to retain the $5,000 because it was enough for me. Before I came to Congress, I had been for a considerable time in public office in my own State, where salaries are very small, and had become accustomed to live upon a very small salary, and habits of simple and plain economy that I had acquired in that way I could well enough preserve here. Five thousand dollars was an ample compensation for my services, and furnished me ample means to live in the manner in which I chose to live. Therefore, so far as I was personally concerned, that was the consideration that affected my vote.

"But more than that, Mr. Speaker, I considered it an exceedingly unfortunate time to make this increase. Various things that had taken place last winter had greatly excited the public mind with reference to corruption in public office; the whole country was agog upon that subject, and I knew that this increase of salary at that time, and especially the retroactive feature, would excite public condemnation, and draw down the censure of the people upon it, as it has done, and therefore, sir, I voted against it. But, notwithstanding my vote, it passed, and then came the question of what was to be done. The press of the country immediately began to say that every man who took that pay, that was given to him by law, was a grabber and a thief. The idea that I held an office, the salary of which was fixed by law, and was to be called a thief for taking that salary, was not one that was very palatable to me. It did not commend itself to my judgment nor to my conscience; nor did I propose to be actuated or influenced by any threat of that sort, and therefore, sir, I took the money and still retain it. Other gentlemen's consciences were more tender and susceptible than mine. They began to be affected differently, and one after another they returned this back pay into the Treasury. Well, what was the result of that? Why, people immediately began to say they were cowards and hypocrites, and that they did it merely for the purpose of pacifying the press; making a show of honesty they did not possess; courting public favor, and commending themselves in that way to the people. That brought me to commune with myself, with my own judgment and conscience, in relation to what I ought to do; whether I were more amenable upon the one side to be called a grabber and thief, or whether, by pursuing a different course, I should subject myself to be called a coward and a hypocrite, who was, by false pretenses, endeavoring to curry public favor. Well, now, the result of my communing with myself was—(and I do not intend by this to cast any reflection on the motives of other members)—the result of my own reflection and judgment was, that I should be altogether more amenable to the latter charge. That in point of fact it would be much better proved, so far as I was concerned, than the opposite charge, that, by keeping the money thus given me by law, I was a grabber and a thief. Therefore, Mr. Speaker, I chose to retain what I received under the law, and make my endeavor here to have the law so modified and changed that I may be allowed to return the money to the Treasury, if that is the will of the people, without subjecting myself to the charge of being a hypocrite and a coward, and of doing it because of the clamor of the public press upon the subject.

"And inasmuch as I found my conscience upon this subject was a little obtuse, and not easily moved by the threats and denunciations of some portions of the press, and that a majority of the gentlemen who stood in the same position with myself had consciences equally as torpid as my own, and equally, perhaps, needed the quickening of law to help them, I propose that we regulate this thing by law; that by law we wipe out all the consequences of that act by which the salary was raised and given to members of the Forty-second Congress and to members of the Forty-third Congress.

"Now, this is an important question to be decided. If we have not the legal power to do this, if there is any thing in the Constitution, either expressed or implied, that prohibits our doing it, then we ought not to attempt to do it. But I insist that there is not any thing in the Constitution against it; I say that we have a perfect right to do it. We cannot, of course, go back and regulate the salaries of the members of the Forty-second Congress. But we have full power over the salary of every member of this Congress, a perfect right to regulate it by law as we choose.

"Now, the bill that was reported by the minority of the committee, and which has been proposed as a substitute for that of the majority, goes to the extent of saying that members of the Forty-third Congress shall account for what they have received since the 4th of March last. Nobody has questioned, and I think nobody can successfully question, the power of the House to compel them to account for what they have received under the law since the 4th of March last. Now, is not the question of

our power precisely the same in relation to what they have received as members of the Forty-second Congress?"

Mr. Stephens, of Georgia, said: "Mr. Speaker, I wish to make a few remarks upon this subject now under debate. For, as little as members of the House may think of this subject, in my judgment it involves a great principle; and I shall speak mainly to the principle.

"As was remarked by the gentleman from New York, who opened the debate yesterday with so much eloquence (Mr. Tremain), I am utterly disconnected with that branch of the subject, the 'back-pay grab,' as it is called, which has so entered into and pervaded this discussion, but upon that branch I have something to say. Therefore my remarks will be confined, first to the moral principle involved in the question, and then to the political expediency and policy of the increase of salaries adopted by the last Congress. Sir, I was utterly astonished the other day when some gentleman undertook to speak of this question as a party question. In my opinion neither party is responsible for the measure of the increase of salary at the last session. I believe that the Democracy, in the proportion of votes, according to the analysis I have seen, are as much responsible for it as the Republicans. Perhaps some of our Republican friends at the time the bill was passed were a little shy—a little timid—anxious to have the measure pass, but at the same time not wishing to take what they deemed the risk of popular disfavor by voting in accordance with their personal convictions.

"But, sir, to come at once to the gist of the morality of the act. The gentleman from New York (Mr. Tremain) yesterday made some important admissions which cover the whole case. He admitted that, by the Constitution of the United States, each Congress for itself is empowered to fix the pay of its own members. This, sir, is a wise provision of the Constitution, which the States, after its ratification, refused to change. This provision of the Constitution has been acted on from the beginning of this Government. Congress has repeatedly increased the pay, and at every such increase the *back* pay was considered as legitimate as the *front* pay. This the gentleman also admitted. This saves me from going into historic details. I therefore confine myself to principle. If it was not immoral to take it on all former occasions, how can it be on this? The principle is the same. Whenever the pay has been increased, it was necessarily retroactive and extra. Were the men who did this thing in the last century and in the early part of this century—the brightest ornaments in our history for intellect, for talents, and for virtue—were they 'salary-grabbers?' Were they 'thieves' and 'robbers,' for doing just what was their constitutional right to do?

"Now, sir, if there is any thing wrong, any thing immoral, any thing dishonest, any thing which would reflect disgrace upon a man's memory for taking this legal appropriation, I must confess I do not see it. One gentleman said that he returned it because it was too much pay, and the inquiry was promptly made, how much he thought would have been admissible.

"If it is wrong to take the whole, it was wrong to take a single cent of it. The principle is the same; and, if it is wrong for the present House to take what the law allows them to take, where are we to make the distinction between right and wrong? During my life I have endeavored to pursue the right, and, whenever I am acting in pursuance of the right, I do not consider I am committing any offense whatever which would subject me to the charge of 'grabbing' what did not rightfully belong to me.

"I say, Mr. Speaker, when Congress passed the retroactive law at its last session it was their right to do it—their constitutional right. I am not now saying whether it was expedient to do it, but I do say that no blot should rest upon the name of any man or be cast upon that of his children or upon his memory if, after it passed, even against his vote, he took what the law gave him. I have nothing to say of those who, after taking it, returned it, for that is a matter with themselves. All that I mean to say is, that if I had been here, whether I voted for it or not, I would have taken it, and I should have felt I was justly entitled to it, just as though it were eight dollars a day or one dollar a day, if the Congress voted it.

"It was a constitutional law, constitutionally passed, and those who are entitled to it are as much entitled as at any other time to the pay then fixed. If there were those who thought it was too much, it was, of course, their right to refuse to take it. I would not attempt to cast a slur upon any gentleman who saw fit to return it; I am only speaking for myself. So much for the morality view. It is well known that every Congress which has ever increased the pay increased it from the beginning; and I think I may say that every Legislature in the United States which has increased its pay increased it from the beginning. There is not a single case of exception that I know of; and therefore I trust that the press, that the men who attempt to lead the masses of the people, will perceive where the right is, and not attribute wrong where there was none. If they think it was inexpedient let them discuss it from that point, and not allege there was any immorality.

"This brings me to the second view which I propose to present to the House. I am not going to state what I deem my services here worth, but I do intend to state what I think the services of a representative of any people in any district in the United States ought to be worth; and perhaps I will go far above the figure of any law which has ever been passed upon the subject. I will say this: that repre-

tentatives in this hall ought to be men of that mental calibre, that moral calibre, that information, that education, that virtue, of that trustworthiness—of all the qualities that make men fit for the highest pursuits of life. The representative ought to be of that character which would entitle him to the highest amount of wages, if you choose to call it so, which is given to the highest grades of skilled labor in the country. There are, Mr. Speaker, various kinds of labor, skilled and unskilled, and there are various kinds of power—water-power, steam-power, muscle and mind or brain-power.

"My standard of wages for a member of this House would be that amount which the higher grades of skilled labor, combined with brain-power and virtue, usually commands. And I am satisfied that, when the people of this country understand the nature of the duties and proper character of a member of Congress, when they understand the importance of government, and good government, and wise government, there are none throughout the length and breadth of the country who will dispute this proposition.

"Why, sir, the salaries of managers of railroads reach $25,000. There is hardly a master mechanic in any of the machine-shops who does not receive $10,000 as a compensation for his skilled labor, his brain-labor. There is hardly a town in which there are not merchants who make from $10,000 to $15,000. There is hardly a district in the United States, I suspect, where there are not one or more lawyers whose income is not as much as $10,000 or $15,000. There is hardly any place or district where the most eminent physicians do not make $10,000 or $15,000. There is hardly any business of life requiring skilled labor or brain-labor which does not command that compensation; the income of many journalists greatly exceeds it.

"Now, sir, when you teach the people what government is, the science of government, the nature of the duties of a member of Congress, the interest that everybody in the community feels and every member of society has in good government, in the laws we pass here within the sphere of Federal limited power, touching more or less the interest and the pocket of the humblest human being now within the jurisdiction of these States, they will say that legislation should be in the hands of men of character, of virtue, and integrity, who understand their duties—men who understand the science of government. This requires study, it requires labor, it requires an immense deal of thought; and, therefore, if the government is maintained rightly in the Senate and in the House, the rule of fixing the pay under the Constitution should be such as to afford an arena in these halls for the virtue and talent of the highest grade in our country.

"Some sham, would-be leader of the people may go to the poor man driving the plane or the plough and tell him 'he is getting only a pittance for his daily toil, while a member of Congress is getting $10 a day [illegible] that man, in the humblest [illegible] life, to vote for him as [illegible] the pay. But that same [illegible] would send for a skilled [illegible] ence to a quack, though [illegible] ing twice as much as the [illegible] other learned professions [illegible] ple properly understand [illegible] good legislation, they will [illegible] for a cheap Congressman [illegible] or a cheap lawyer.

"What, Mr. Speaker, is [illegible] of all humanity that [illegible] that inward force which [illegible] action? It is a desire for [illegible] sire for honorable position, [illegible] It is the desire of a man [illegible] for himself, but for his family [illegible] ciety is the great object. [illegible] ments of station? Income and [illegible] acquisitions and meritorious [illegible]

"Now, sir, to return to the [illegible] the House, in fixing a salary [illegible] Congress, of a President of the [illegible] of the judges of the Supreme [illegible] your diplomatic and foreign [illegible] on which the whole should [illegible] have said—the standard of [illegible] my opinion, upon the basis [illegible] ing to the grade of service, [illegible] in all its departments, should [illegible] tition for the highest virtue [illegible] with all the other vocations [illegible] of the country in selecting [illegible] be driven from the political [illegible] those inducements offered by [illegible] employment. The political [illegible] compensation, affords the [illegible] and grandest field for intelligent [illegible] that view it is necessary that [illegible] should offer the highest inducements [illegible] and brain labor in all its departments [illegible] the idea I wish to impress upon [illegible] a general principle. Let the [illegible] upon a principle that will [illegible] ment service to come in fair [illegible] the other enterprises of this [illegible] it is termed.

"I will state another thing [illegible] that one of the last things I ever [illegible] floor, fourteen years ago, was [illegible] of salary. It grew out of a [illegible] sition to increase the salary [illegible] think, the western district of [illegible] so to speak, delivering my [illegible] then members of this House, [illegible] return here again, and therefore [illegible] disinterestedly. I gave it as my [illegible] and I will give it to you now [illegible] the expenditures of the Government [illegible] about $80,000,000 per annum, [illegible] for the whole civil, diplomatic [illegible] legislative departments of the [illegible] not exceeding, I think, $[illegible]

[illegible]

[illegible] public opinion [illegible] public opinion [illegible] public opinion [

where the highest power was the best paid, his scheme would be perfect and his argument unanswerable. But, so far as I have studied life, exactly the reverse is the accepted rule. The things that have the highest marketable value in the world, as we find it, are not the things that stand highest in the intellectual or moral scale.

"One of the brightest and greatest men I know in this nation, a man who, perhaps, has done as much for its intellectual life as any other, told me not many months ago, that he had made it the rule of his life to abandon any intellectual pursuit the moment it became commercially valuable; that others would utilize what he had discovered; that his field of work was above the line of commercial values; and when he brought down the great truths of science from the upper heights to the level of commercial values, a thousand hands would be ready to take them and make them valuable in the markets of the world."

(A voice: "Who was he?")

Mr. Garfield: "It was Agassiz. He entered upon his great career, not for the salary it gave him, for that was meagre compared with the pay of those in the lower walks of life; but he followed the promptings of his great nature and works for the love of the truth and for the instruction of mankind. Something of this spirit has pervaded the lives of the great men who did so much to build up and maintain our republican institutions. And this spirit is, in my judgment, higher and worthier than that which the gentleman from Georgia (Mr. Stephens) has described.

"To come immediately to the question before us, I agree with the distinguished gentleman that we should not be driven or swayed by that unjust clamor that calls men thieves who voted as they had the constitutional right to vote, and accepted a compensation which they had the legal and constitutional right to take. I join in no clamor of that sort; nor will I join in any criminations against those who used their right to act and vote differently from myself on this subject. It is idle to waste our time now in discussing the votes of the last Congress in relation to the salary bill. We are called upon to confront this plain, practical question, 'Shall the salary bill of the last Congress be repealed?' I shall argue it on two grounds: first, the just demands of public opinion; second, the relation of this repeal to the Government and its necessities; and I shall confine my remarks to these two points. I think it cannot be doubted that public opinion plainly and clearly demands the repeal; and on a subject like this the voice of the people should have more than even its usual weight.

"When the public says to me, and to those associated with me, that we have under constitutional law given ourselves more pay than that public is willing to grant us, it would be indelicate and indecent in us on such a question to resist that public opinion.

"It does not compromise the manhood, the independence, or the self-respect of any Representative to say that he will not help to keep on the statute-book a law which allows him more pay than public opinion thinks he ought to have. Even if he believes public opinion wrong, he ought to yield to it in a matter of such delicacy.

"That is all the argument I make on the score of public opinion.

"I now come to the other point, the necessities of the Government. Gentlemen must remember that only seven years ago our expenditures had risen to a volume that was simply frightful, in view of the burdens of the country. We were then paying out over the counter of our Treasury $1,290,000,000 a year as the cost of sustaining the Government and meeting the great expenses entailed by the war. What was the duty of this national Legislature? Manifestly to bring the expenditures of the Government down as rapidly as possible from the high level of war to the normal level of peace.

"If, therefore, the Forty-third Congress intends to go forward in the work of economy and retrenchment, if it has any hope of making further reductions in the expenditures of this Government, we must, before undertaking to carry out that work, give ourselves the moral power that will result from a reduction of our own pay to the old standard. As the case stands to-day, our own salaries are the master-key in our hands by which, and by which alone, we can turn the machinery that will bring about a further reduction of expenses in the Government.

"Mr. Speaker, I say all this on the theory that we are to run the Government as our fathers who made it intended it should be run —not on the principle of the gentleman from Georgia (Mr. Stephens), a principle that would make this the most expensive Government on the globe, but on the old principle that there is something due to the honor of the service we perform."

The bill was subsequently recommitted with instructions, and on December 16th the committee reported the following bill:

A Bill (H. R. No. 798) to repeal the increase of certain salaries and to establish the rate of the same.

SECTION 1. *Be it enacted*, That all provisions in an act entitled "An act to provide for the legislative, executive, and judicial expenses of the Government for the year ending June 30, 1874, and for other purposes," approved March 3, 1873, that increase the salary or compensation of Senators, Representatives, or Delegates in Congress, or of any officer or employé, are hereby repealed, except so far as the same relate to the judges of the Supreme Court, and to the President of the United States, during his present term of office.

SEC. 2. Hereafter the compensation of Senators, Representatives, and Delegates in Congress shall be at the rate of $5,500 per annum; and this shall be in lieu of all allowances except the actual and necessary individual traveling expenses in coming to and returning from the national capital once each session, which shall be paid to each Senator, Representative, and Delegate, on the same being certified by him

...tional matter] such reporting to them, he ...ply credited for the remaining officers ...bill in question, with the exceptions ...tions, so as to embrace all officers, with ...exceptions referred to in the instructions, ...the justices of the Supreme Court, the ...residents of the United States during the ...nt term of office. After fixing the salaries ...of members of Congress, all other salaries, ...cordance with instructions, are put back ...rate that they were under the law prior ...to the passage of the act of March 3, ...all that part of it which is commonly ...as the salary bill. ...ow, the committee in doing this have ...vered to follow strictly the instructions ...House, and have presented this bill in ...mony with those instructions. ...Mr. Speaker, said: I offer the following ...amendments to come in at the close of ...second section of the bill: ...

Provided, That Senators, Representatives, and ...gates in the Forty-third Congress who shall ...received their compensation since the 4th ...1873, in accordance with the act ...repealed, shall hereafter be paid ...monthly installments on their ... make their compensation severally from the ...March, 1873, to the close of the present Con... ...gress, in the amount of salary herein provided.

I suppose, Mr. Speaker, that that amendment explains itself. I offer it in order that the entire compensation of members of Congress for this Forty-third Congress shall only amount to the figure provided for in this bill. Mr. Eldredge, of Wisconsin, said: Mr. Speaker, I have no idea of making a speech on this bill, but I desire to say a few words personal to myself. I am one of those who have been subjected to most malicious and ungrateful assaults on account of voting for the salary bill of the last Congress. It is the first and only vote of mine since I have been a member of this House that has been challenged or criticised by my constituents, though I have never 'dodged' a vote, never been absent from the House except from unavoidable necessity. ...

I have voted and spoken on most or all the questions that have come before Congress growing out of the war, being forced to vote many times to vote under the operation of the previous question without opportunity for discussion or reflection. For the first time I am charged with sinister motives in casting my vote. Though, up to this time, I have said nothing in vindication of it, I have by no means ignored the fact or been indifferent to the epithets that have been uttered against me in common with others, or the unjust charges made. *I voted for the bill.* I will not deny nor shrink from the responsibility of the vote. I voted for it, believing in my soul that it was right, and that it was for the best interest of the country that it should be passed. *I believe so now.* Neither the clamor of the press, the so-called voice of the people, nor the as-

guments of the present discussion, have convinced me to the contrary. I shall not now attempt to answer. I cannot, in the time I shall have allowed me, even refer to the objections which have been made to the law of 1873, nor will I retort in invective upon those who have maligned me. I repeat only what is no longer denied, that the Congress had the constitutional power and the legal right to enact the law. There was, therefore, no moral wrong or vice in it. It was not '*theft*,' '*robbery*,' *nor any other crime*. There was never, in fact, any question of any real importance involved except the sum at which the salary should be fixed. Was the sum in the law too much or too little? Was it reasonable or unreasonable, just or unjust? No fault was ever found with the amount at which the salary was established by the law of 1866. And yet I assert, what I most solemnly believe, and what no honest man can, after a full consideration and understanding of the subject, doubt, that the old law giving a salary of $5,000, with the perquisites then provided for, and the franking privilege as it then existed, was, in a pecuniary point of view, more desirable, *better*, for the members of Congress than the salary as now provided by law. I cannot go into the figures; I have not time to show this; but the gentleman from Nevada (Mr. Kendall), and the gentleman from Missouri (Mr. Comingo), and others, have demonstrated this beyond cavil or doubt. I do claim, therefore, and if time permitted could show and satisfy all honest men, that the pay of members is not too high.

"I have been in Congress more than ten years. If there be any ten years of life better than any *other ten*, they are those when we are most mature; and in that sense I have been in Congress the best ten years of my life. I have never taken from any man during my life a dollar that did not belong to me, or that I did not believe I had honestly earned. I would not do it now. I am an economical man, reared in poverty and accustomed to live upon small means. I have indulged in no extravagances, and have not even felt myself able, in view of the support of my family and the education of my children, to return or reciprocate the social courtesies and compliments that have been extended to me. And yet I now and here declare I have not been able to lay up any thing or add one dollar to what I had when elected to Congress, and have not now of this world's goods as much as when first elected. My own case I supposed to be that of all those who have attended to their duties honestly and faithfully, and who were not blessed with large wealth. *I suppose so now.* I have conversed with many members, and found their experience the same as mine. The sessions of Congress have been longer and the expenses of members far more for the last ten years than ever before. The cost of living everywhere has been greater, and especially in Washington.

"Mr. Speaker, I have listened attentively to this whole debate. I have waited for arguments, *for reasons* to be given why this law should be repealed. It is intimated by some that it provides for the payment to members of too large a salary. And yet when it is asserted here, and demonstrated by those who have spoken, *demonstrated by figures*, that the pay and perquisites, including the franking privilege, as it is called, under the old law were as much or more than the present pay, no answer is made, no denial even is put in.

"But it is said the whole question has been before the bar of public opinion and has there been decided, and Representatives are here predicating their action, their votes, upon this decision—*bowing*, as they call it, *to public opinion*. Now, sir, I have as much respect for public opinion as any man. I believe, too, when the people have a fair chance, when they have had the opportunity to examine, to know and understand all the facts, that their judgment is very likely to be right. I bow with reverential awe to such judgment—to the judgment of the people so formed. But, in order to be right, it is absolutely essential that the subject should have been fairly and truthfully presented, and candidly and calmly considered. When this is not the case, *public opinion* is quite as apt to be wrong as right. The masses can be no better judge—are no more likely to be right without deliberation, without consideration, without knowledge of all the facts and circumstances—*than an individual*. The voice of the people is only the aggregation of the voices of individuals. If the individuals are wrong, if they are moved by caprice, or passion, or error, there is no safety or propriety in following or obeying their demands. It is the duty of the representative to examine for himself, to weigh the whole subject, to ascertain the *right*, and act accordingly as duty and conscience dictate. It is not true statesmanship, it is not the duty of the representative, to bow to the storm, to yield to the passion or the caprice of the multitude, and surrender his individual judgment and conscience, his honest convictions, to inconsiderate clamor. There can be no government, no individual representation, no freedom or liberty even, in such case. The power that would elect a President one day would crown a king the next. I do not argue that the representative must stand with his fingers on the public pulse and bow down or rise up according as it shall beat high or low. He is the *representative*, not the *slave* of the people. He is one of the people at the same time that he represents the people. He is chosen a representative not because he has *no* views or opinions of his own, but *because of his views and opinions*, known and understood beforehand, and because he is known to be reliable in the hour of danger and trial. There is, if you please, a '*higher law*' than the people speaking through the press—the mere echo of the

hour, an unorganized and unrecognized force, appreciated only because of its noise or the good it might do. I was elected under the Constitution, hold my office, receive my instructions, and learn my duty, from the people—my constituents—through that instrument. *It is the supreme law to me.* They expect me—my constituents expect me—to bow in absolute submission to its requirements, and I will obey them in that or resign. I was not, I never was chosen because I was the weakest and most submissive of my people, but rather because I was believed to be able to withstand a storm. I have stood here on this floor in opposition to the public, the general opinion of this House, of the country, resisting some of the most popular measures of the time, assaults, as I believed then and still believe, upon the Constitution, when there were only twenty-five or thirty to stand with me and share with me the taunts and jeers of the overwhelming majority, some of whom—the gentleman from Massachusetts (Mr. Dawes), for one—admit now that they were wrongs so flagrant they will not do for precedents. The storm of public opinion does not blow now as it blew then. I remember when it was claimed that public opinion demanded the impeachment of your President, and some were foolhardy enough to insist that it ought to be done because the people demanded it, whether he was guilty or not; and there is not a statesman throughout this broad land who does not now know, if that popular clamor had been obeyed, it would have shivered your Constitution and Government to atoms.

"Public opinion! what sacrifices has it not demanded? What crimes has it not committed? Inexorable, unrelenting, and unreasoning, it hung upon the cross the Saviour of man, and has more than once since demanded the crucifixion of the innocents. Once moved, what reason, what argument, what consideration of justice or humanity ever satiated its thirst for blood?

"It is needless to multiply or suggest instances; thousands rush to the recollection of us all—both ancient and modern—where humanity, duty, and true statesmanship required, demanded the representative should resist, and not pander to, public opinion. 'The voice of the people is the voice of God,' is as absurd as it is irreverent and profane.

"But, whether right or wrong, this question of the salaries of members, as provided for under the old law and the law of 3d of March, 1873, has never to my knowledge or belief been even fairly stated in a half-dozen newspapers in the United States. Why is it that it has never been candidly discussed? Why is it that it has received only denunciation? Why have the facts been suppressed or outrageously misrepresented? It was because truth and fairness would not subserve the purpose."

Mr. Hale, of New York, said: "Mr. Speaker, this debate seems to have taken a somewhat remarkable turn. The provisions of that law were condemned by popular clamor, if gentlemen choose to call it so; but it was a popular clamor based on sufficient grounds, and commending itself, in my judgment, to the mind of every upright man in this House or out of it. The complaint made against the statute increasing the pay of members of this House was, as I understand, first and last, in regard to the amount, as being excessive. I believe that the sentiment of the better class of the community was that the amount fixed by that bill was larger than it ought to be, irrespective of every other consideration; and I for one especially believe that it was larger than it ought to be in proportion to the other official salaries paid by the people of this country in the administration of their State and national Governments. But that, as I have said, was the least of the considerations weighing with the people in this matter. The second, and a greater consideration, was that the members of the Forty-second Congress constituted themselves the judges in their own case, increasing at the end of their term their pay for the entire term, and that to an amount which the people believed excessive. The third proposition on which this popular condemnation rested, and, in my judgment, the weightiest of all, relates to the manner in which the act was done. It was not done by square, manly, honest legislation. This House in the Forty-second Congress repeatedly by large majorities voted down the proposition for an increase of their pay when presented as a bold and naked proposition, and then by trick and subterfuge and evasion ingrafted the increase upon a bill on which they could have some excuse for saying, 'We vote ourselves increased pay purely as a matter of necessity, because we must do it or defeat the appropriations for the support of the Government.' Each and every one of these objections I claim to be well founded, ranking in weight according to the order in which I have stated them.

"And, therefore, sir, I am unqualifiedly in favor of the repeal of that bill so far as the salaries of members of both Houses of Congress are concerned, and the return directly to the old compensation, salary, and mileage."

The Speaker: "The question now is upon the amendment of the gentleman from Iowa" (Mr. Kasson).

The question was taken as follows:

YEAS—Messrs. Albright, Archer, Arthur, Ashe, Atkins, Banning, Barrere, Barry, Bass, Beck, Berry, Bowen, Bright, Brown, Buckner, Bundy, Burchard, Burleigh, Burrows, Benjamin F. Butler, Cannon, Cason, Amos Clark, Jr., John B. Clark, Jr., Clements, Clymer, Stephen A. Platt, Jr., Randall, Rapier, James C. Robinson, Sheats, Sloss, George L. Smith, William A. Smith, Stephens, St. John, and Thomas—87.

So the amendment was agreed to.

Several amendments were offered and rejected, or adopted, and on December 17th Mr. Hurlbut, of Illinois, offered the following substitute to the bill:

Be it enacted, etc., That from and after the passage of this act the compensation of Senators, Representatives, and Delegates, shall be at the rate of $6,000 per annum, payable monthly; and in addition thereto the actual individual expenses of each Senator, Representative, and Delegate, in coming to and returning from the seat of Government once in each session, to be certified in writing by each.

SECTION 2. That the compensation of the Speaker of the House of Representatives shall be at the rate of $2,000 in addition to his pay as Representative, amounting in all to $8,000. And that of the Vice-President shall be the same amount, with the same allowance for traveling expenses as hereinbefore provided.

SEC. 3. That all laws and parts of laws inconsistent with the provisions of this act are hereby repealed.

SEC. 4. That the Secretary of the Treasury is required to cover into the Treasury all sums which may remain undrawn, or which have been received as increased compensation under the provisions of said act, approved March 3, 1873, and which shall have or may come into his possession by the return thereof.

Mr. Hurlbut: "On that substitute I demand the previous question."

The Speaker: "The first question is upon the substitute moved by the gentleman from Illinois (Mr. Hurlbut) for the bill as amended by the House."

The question was taken, as follows:

YEAS — Messrs. Adams, Albert, Archer, Ashe, Atkins, Averill, Barrere, Barry, Beck, Begole, Biery, Bowen, Bradley, Bright, Buffinton, Burrows, Benjamin F. Butler, Roderick R. Butler, Cain, Cessna, Amos Clark, Jr., Clayton, Clements, Clinton L. Cobb, Comingo, Cook, Creamer, Crocker, Crooke, Crossland, Crutchfield, Darrall, Davis, De Witt, Dobbins, Duell, Durham, Eldredge, Elliott, Farwell, Field, Freeman, Giddings, Robert S. Hale, Hamilton, Hancock, Harmer, Benjamin W. Harris, Harrison, Hathorn, Havens, Hays, John W. Hazleton, Herndon, E. Rockwood Hoar, George F. Hoar, Houghton, Howe, Hubbell, Hunton, Hurlbut, Hynes, Kelley, Lamar, Lamport, Lansing, Leach, Lewis, Lofland, Lowndes, Lynch, Alexander S. So the substitute of Mr. Hurlbut was agreed to.

The Speaker: "The question is now on ordering the bill as amended to be engrossed and read a third time."

Mr. Hale, of Maine, said: "I shall be careful not to trespass upon the indulgence of the

House; but I have certain privileges, and those privileges I shall surely claim. I shall not be cried nor howled down.

"Everybody, Mr. Speaker, I think, will admit that the passage of the salary bill on last March was unfortunate and inopportune. If there had been any doubt upon that question, the almost unanimous voice of the people settled it. And, sir, it was a matter upon which the people might well pass—it was the voting of money from the public purse to pay public servants. Now, there can be no question as to that being a subject-matter which the people might consider. There can be no question as to what was the result of that consideration. It was sharp, swift, and immediate condemnation, and it was so marked and so undoubted that I see no humiliation on the part of any gentleman here following that direction of the people on this subject-matter. I, of course, feel no humiliation. I have no back-track to take, no new record to make; but I do not, from this comfortable stand-point, gloat over the gentlemen who have changed their views, because there was the best reason for change. The people passed upon the subject they had a right to pass upon! The contract for pay, and this is the fair formula to put it in, was a two-sided contract, and the party paying the money vetoed the bill involving the increase. The public stamped its disapproval upon it, and, therefore, I see no inconsistency on the part of gentlemen like the gentleman from Massachusetts (Mr. Butler) taking ground now in favor of substantial repeal as that gentleman here assures us he does.

"He has been instructed on a matter where he originally voted as he pleased, subject to the disapproval of the other contracting party, and, therefore, I repeat again there is no humiliation here in responding on this question to the people's voice.

"Now, sir, I cannot vote for the proposition which is at present before the House, because I believe that it is an evasion of the public demand. It evades our instructions from our constituencies, whose money we are passing upon. The people have decided in favor of substantial repeal. There have been gentlemen enough here who, within the last ten days, have reiterated this proposition to carry it if they will vote as they have talked. But the proposition before the House is not repeal simon pure. This House has already passed upon it that it is not. Less than a week ago —on the motion of the gentleman from Indiana (Mr. Orth)—this whole matter was committed to the special committee, with instructions to report a repeal of the salary increase, so far as the same was practicable under the Constitution, and to go back to the old salary and allowances; but instead of these allowances being unfairly distributed, as was the case under the mileage law, to lump the mileage and average it among the members as salary. The committee reported such an equalizing bill to this House. It involved substantial repeal. It took no more money from the Treasury than the old law. It equalized mileage, not as I would rather have seen it done, from the pockets of members who draw excessive mileage, into the Treasury, but from the pocket of one member into that of another. But, so far as that goes, it was one kind of equalization. I, for one, was willing to stand to it, and the committee reported a bill fixing the salaries at $5,500, the $500 over the old law being the average amount of mileage and stationery allowances.

"I tried to bring the House to vote upon that proposition. I was in favor, as I have been from the beginning, of not incumbering bills that carried repeal on their forefront with any thing that would clog them. But I could get no direct vote on the proposition, though members enough would talk for it.

"And now, sir, after the House has voted first upon one thing and then another, after it has instructed its committee to fix our salaries at $5,500, right in the face of the report of the committee a proposition is put in here by which at the end of a fortnight's hard fighting, with the eyes of everybody upon us, we seek to get out of the fray by increasing our salaries in the sum of $500.

"Sir, it is not the amount that the people will care about. It was not, as has been often stated in this discussion, any particular sum that awakened the country last spring, but it was the conduct of the business that roused the people; and to-day, sir, this House cannot afford, as the upshot of all this agony for 'repeal,' to again increase our salaries over the old figure and negative the idea of repeal. Sir, the people do not expect that from us. They expect us to go back to the old law or to its equivalent. Is there any gentleman here that can give us a reason why we should add $500 to what we formerly received? And, what is the worst of it, no option is given us in voting. The gentleman from Illinois who springs this proposition refuses to allow me to move an amendment inserting $5,500 for $6,000, and refuses to allow the gentleman from Massachusetts (Mr. Dawes) to offer as a substitute the bill reported by the select committee."

The Speaker: "The question now is, will the House order that the bill as amended by the substitute of the gentleman from Illinois be engrossed and read a third time."

The question was taken as follows:

YEAS—Messrs. Adams, Albert, Archer, Ashe, Atkins, Averill, Barrere, Barry, Bass, Beck, Begole, Bell, Biery, Bowen, Bradley, Bright, Buffinton, Burchard, Benjamin F. Butler, Roderick R. Butler, Cain, Cannon, Cessna, Amos Clark, Jr., Clayton, Clements, Clinton L. Cobb, Stephen A. Williams, James Wilson, Jeremiah M. Wilson, Wolfe, Woodworth, John D. Young, and Pierce M. B. Young—104.

NOT VOTING—Messrs. Barnum, Bland, Freeman Clarke, Dobbins, Hereford, Hersey, Hooper, Kendall, Killinger, Lamison, Lewis, Loughridge, McKee, Mitchell, Morey, Purman, Rapier, James C. Robinson, Sheats, William A. Smith, Stephens, St. John, and Walls—23.

So the bill, as amended, was ordered to be engrossed and read the third time.

The question was put upon the passage of the bill, and on a division there were—yeas 122, nays 74.

So the bill was passed.

In the Senate, on January 5, 1874, the bill of the House was considered. The Committee of Civil Service reported in favor of striking out the three sections of the bill and inserting in lieu thereof the following:

That so much of the act of March 3, 1873, entitled "An act making appropriations for legislative, executive, and judicial expenses of the Government for the year ending June 30, 1874," as provides for the increase of the compensation of members of Congress and Delegates, and the several officers and employés of either House of Congress, or both, be and the same is hereby repealed, and the salaries and compensation of all said persons shall be as fixed by the laws in force at the time of the passage of said act.

SECTION 2. That the compensation of the several heads of Departments shall be each $8,000 per annum.

The amendment to the amendment offered by Mr. Pratt, of Indiana, was to insert at the end of line 10 of the amendment of the committee the following:

Provided, however, That the Senators, Representatives, and Delegates of the Forty-third Congress who have received their compensation since the 4th day of March, 1873, at the rate of $7,500 per year, in accordance with the act of March 3, 1873, shall hereafter be paid only such monthly installments as shall, in the aggregate, make their compensation for the whole Congress equal to the sum of $5,000 per year, exclusive of mileage allowances.

Mr. Logan, of Illinois, said: "Mr. President, I should like to ask the Senator from Indiana a question, inasmuch as he is reputed to be a very fine lawyer, and doubtless is. He is aware of the provision of the Constitution which declares that Senators and Representatives shall receive a compensation for their services, to be ascertained by law and paid out of the Treasury of the United States. When that compensation is ascertained by law and paid out of the Treasury of the United States, has this Congress any power to reclaim it or require them to pay any portion of it back?"

Mr. Pratt, of Indiana, said: "I suppose that we have the control of this question during the entire term of Congress; that we could provide now that those who had received the limit of $5,000 should receive nothing further for their services during the residue of this Congress. I suppose we could dispense with the salary entirely if we thought proper. But this bill with my amendment makes the compensation precisely equal for all—$5,000 apiece."

Mr. Logan: "Now, Mr. President, the Senator says that he supposes that we could abolish the salary entirely. That is very probably true; but that is not the question. I put the question to him whether this Congress has any power to reclaim a salary that has been paid out of the Treasury to a member of Congress, under a law which has fixed such salary? Is there any difference between doing that directly and providing that a Senator or member of Congress shall have his future salary reduced by debiting against it that which he has drawn before, under the law? Is not that a taking back part of that which he has drawn under the law, when the Constitution expressly provides that his compensation shall be fixed by law and paid out of the Treasury of the United States? This is the compensation fixed by law, and it has been paid out of the Treasury of the United States, and you have no power to touch it any more than you have any other of his private property; and, as a lawyer, it seems to me that the Senator from Indiana will so say."

Mr. Pratt: "It seems to me that that question does not arise here. It could only arise in case the whole $5,000 provided by this bill as compensation for each member of Congress had been in fact already paid, and, more than that, had been paid and an attempt was made to recall it. Such is not the case here. No one has

yet been paid, under the law of March last, $5,000."

Mr. Logan: "That is dodging the question again. I certainly do not desire to discuss this question at length. I expect I have received my portion of the odium of this law of March last. I do not say that we have not made a mistake in the eyes of the people; but, because the country does not believe in the amount of salary we provided, that is no reason why reasonable men should demand of us to do that which we have no power as a Congress to do; nor do they.

"I am willing to yield to the demands of the people as readily as any other man in this chamber, when reasonable. I may not satisfy my constituents, but am willing to yield in my official capacity to their demands or their requests. But to go further than that, and beyond reason and law and the dictates of common-sense, to satisfy the unreasonable demands of Senators who are playing a *rôle* for themselves, we are not called upon to do it. No demand has been made to go beyond our constitutional power by the people. Sir, the demand made by the people on the Congress is this—the repeal of the law of March 3, 1873.

"What effect does the amendment have? It has the effect to charge every member of Congress for the next year to come with what he has already received in excess of the rate of $5,000 a year—to debit him with so much, and only allow him to draw enough hereafter to bring him down to $5,000. I suppose I should not get any thing for the next three months under this, because my conscience has not prevented me from drawing my salary under the law. I guess I shall have to stay here without any money. The conscience of my friend from Indiana probably being a little more sensitive, he may not have drawn his amount, and hence he will be permitted to receive some pay. There is the distinction this amendment makes between Senators—between the consciences of Senators.

"But it goes further. Here are our cabinet ministers, here are our heads of bureaus, here are all the men who are incorporated in the increased salary bill, and you provide that the members of Congress who are now here having seats shall return their pay, but everybody else may keep his. Is that honest? Is that what the people want? Is that what they demand? Do they mean that we shall perpetrate a fraud upon them; that we shall by clipping our own wings impose upon them and hide the increase of salary as it affects other officers? They demand no such thing.

"Now, I do not claim that I am so versed in the law as my friend from Indiana; but what little law I do know suggests to me at least that we have no power to do that which he asks by his amendment. I am aware that, when we decide questions here, sometimes our legal knowledge is overriden by outside pressure; sometimes our views are changed very much by the popular verdict, though the law is just as plain as it can be written, and we are willing to violate it merely to say before the country that we rushed to the rescue. I do not believe in such legislation."

Mr. Thurman, of Ohio, said: "I wish to say a word upon the legal question suggested by my friend from Illinois, because I think if he comes to understand it perfectly he will find there is not the difficulty in this amendment of the Senator from Indiana that he supposes to exist. If the amendment be adopted, it creates no inequality whatsoever in the payment of members. They will all be paid precisely the same sum. Nor is it any violation of vested right. The amendment proposes that the excess over $5,000 provided by the act of March last, when received by members, shall be taken into account in settling with them in the future until the expiration of the year; the whole effect of which, if carried out, would be that each member of the Forty-third Congress would receive for the year the sum of $5,000.

"But the objection that this is in violation of vested rights of members, or will produce any inequality between them, I submit to my friend from Illinois is not well taken. It does not destroy the equality between the members at all, nor does it destroy vested rights. Let us see how that is. In regard to the compensation of Senators and Representatives the Constitution provides:

> The Senators and Representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the Treasury of the United States.

"There is no provision as to when it shall be paid, or how it shall be paid, except that it shall be paid out of the Treasury of the United States. But, when we come to the compensation of the President, the Constitution reads:

> The President shall, at stated times, receive for his services a compensation, etc.

"And the same provision in regard to the judges of the courts:

> The judges both of the Supreme and inferior courts shall hold their offices during good behavior, and shall, at stated times, receive for their services a compensation which shall not be diminished during their continuance in office.

"The first difference, then, between members of Congress, whether Senators or Representatives, and the President and the judges, is that the Constitution is obligatory in respect to the President and the judges, that their compensation shall be paid at stated times; whereas there is no such provision in regard to that of Senators and Representatives.

"There is then another material difference between the two, and that is, that the salary of the President and the salaries of the judges cannot be diminished during, in the case of the President, the period for which he shall have been elected, and as to the judges, during the term they shall hold office; whereas the com-

pensation of members of Congress may be increased or diminished during the very term of their office. We may increase our own salaries, or we may diminish them; and that being the case, as we have complete power over that subject to increase or diminish the salary, if now at this moment each member of Congress had already received precisely the sum of $5,000 for the year commencing on the 4th day of March last, I say, as the Senator from Indiana has already said, if we thought he had received enough for this year, we might say he should be paid no more than the $5,000 that he had already received. We may increase our own salary or diminish it, and we might diminish it for the succeeding three months down to a dollar a day, and no one could dispute that that would be a constitutional law, although the effect of it might be to make the whole compensation for the year just $5,000. I will suppose such a case as that. So we might say that it should be nothing for the next three months because we have already received enough.

"I do not find, therefore, any constitutional difficulty in the adoption of the amendment of the Senator from Indiana; and I shall vote for it for this, if no other reason, that I feel myself bound by the instructions of my Legislature to undo, as far as it is in my power to do, the effect of the act of 3d March last."

Mr. Logan: "I ask the Senator whether, when the individual receives the money under the law payable monthly, it does not vest in him and become his private property?"

Mr. Thurman: "I will answer the question of my friend. That question would arise provided you required the member to pay it back; but the amendment of the Senator from Indiana does not require anybody to pay back."

Mr. Ferry, of Connecticut, said: "Does not the amendment of the Senator from Indiana require that this shall be charged to the member of Congress?"

Mr. Thurman: "Yes; and, if the effect of charging it is to take away any right to any more compensation for that year, he will get no more; but, if the excess should be more than his compensation at the rate of $5,000 a year would be for the remainder of the year, he is not required to pay back the excess."

Mr. Logan: "On this point, because it is the point of controversy, I want the Senator—for he is a very good lawyer—to answer me this question: Has Congress any power to deprive you of your property after it is once vested in you?"

Mr. Thurman: "The Senator, being a very good lawyer himself—and I say that not to bandy compliments—does not need to be told that private property cannot be taken without making just compensation, under the Constitution of the United States."

Mr. Logan: "Very well. The question then is, whether, if a man receives his salary, it does not become private property. Does it not? I know I cannot put questions to the Senator that he cannot answer, but I should like to know whether or not it does not become private property. If it does not, is it real estate? It is something. I should like the Senator to tell me, after he receives his salary, what kind of property it is."

Mr. Thurman: "Certainly when a member has drawn his pay and got it in his pocket it is his private property, and is liable for his debts; and if he goes into bankruptcy it can be taken by the assignees."

Mr. Logan: "Now, following that, I will ask this question: Suppose it is private property, and it is liable for his debts, by what process can Congress divest him of it, without making just compensation?"

Mr. Thurman: "It does not divest him of it."

Mr. Logan: "Yes, it does. You do not divest a man of what he is to get, but of what he has got, by refusing to pay the amount due to him monthly until it is equalized to the $5,000 per annum. That is exactly what you do. Now I should like to ask the adroit Senator another question. Suppose this bill should become a law to-day. I have drawn several thousand dollars of my pay; I do not remember how much. The law passes to-day, and is signed by the President, requiring that money which I have drawn to be charged over on my account in future, and in that way the Government of the United States is to obtain the money back. Now, suppose I resign to-morrow, can the Government recover that money from me? That is the question I ask."

Mr. Thurman: "I am afraid the Senator will resign in order to keep his money." (Laughter.)

Mr. Logan: "There is no danger of that; but I should like the Senator to answer me that question, inasmuch as his legal mind controls him in voting for this bill. He thinks it is legal and proper, because he has been so instructed."

Mr. Scott, of Pennsylvania, said: "The amendment proposes equalization, as I understand it; that it proposes to take all the members of the present Congress—the Forty-third Congress—who have drawn the increased rate of compensation since the 4th of March last, and to deduct from their compensation in the future an amount which will bring them down to the $5,000 per year fixed in this bill.

"Now, if equalization is the purpose, if you intend to make the salary of the members yet under congressional control as nearly equal as possible, why not go farther back? Here are a large number of Senators who were in the Forty-second Congress; there are many members of the House who were in the Forty-second Congress; and, if there be any feature in the legislation of last March which was considered objectionable, it is what has been popularly baptized as the back-pay feature of the bill. If the Forty-third Congress has power

to defalcate against the coming salary what has been received in the months since March last, why has it not the power to defalcate against the members who took the back pay in the Forty-second Congress? Why does the amendment of the Senator from Indiana stop there? I can understand no difference. If my friend from Ohio takes the ground that Congress has the power now to open accounts, and to defalcate against the coming salary the excess that has been received since the 4th of March last, why have we not the power to go back into the Forty-second Congress?"

Mr. Thurman: "That would be a discrimination between members."

Mr. Scott: "Between what members?"

Mr. Thurman: "Between those who belonged to the Forty-second Congress and those who did not."

Mr. Scott: "Not at all. It makes no discrimination among the present members; it reduces them all to $5,000. The only discrimination it makes is in favor of those who were in the Forty-second Congress and are not in the Forty-third. They have got the money, and you cannot reach them; but, if you can reach members from the 4th of March last, you can reach every member of the Forty-third Congress who was a member of the Forty-second, and this amendment falls short of its highly-patriotic purpose."

Mr. Stockton, of New Jersey, said: "I understood the Senator from Ohio to say that he could see nothing unconstitutional, he could see no invidious distinction in an amendment which provided that those Senators who, since the 4th of March, have been drawing pay at the rate of $7,500, should have charged up to them that sum, so that they would draw now a less sum than those who did not receive the increased pay under the salary bill. To that proposition the Senator from Ohio, impelled, as he says, by the action of his Legislature to speak on the subject, has given the weight of his authority, than which there is no greater in this Senate.

"Mr. President, the Constitution says that the Senators and Representatives shall receive a compensation to be ascertained by law. It must be the Senators each and all of them alike. It must be ascertained, namely, made certain as to amount. It must be by law that it is made certain; that is, by a general rule applying to all. If I understand this question, a Senator of the United States, a member of the Congress of the United States, under the Constitution and the law passed thereunder, may receive the sum ascertained by law. He has no option about it. If it is nothing, he has no right to any thing; if it is a larger sum than it was when his constituents elected him, he must receive that sum and no other. It is the sum 'ascertained by law.' Those are the words of the Constitution. That that law was unconstitutional; that that law was improper or illegal—I speak not now of motives, nor of the propriety or wisdom in its passage—but simply that it has never been claimed that there was any defect in that law by which it was not an operative law. This has never been suggested. So it has never been whispered that a Senator of the United States had a right to receive more or less than that sum. When it was received it was his own. Of course, no Senator was bound to draw it. A man may let his money that is due him pile up in the Treasury of the United States, or in the office of the Secretary of the Senate, to any amount he pleases, as he may in a bank or anywhere else. There it piles up; there it goes to his credit; it is credited to him. The day the bill became operative the amount due to each was payable; and the man who did not go to the office the day he was entitled to it and draw the sum, the average of which, it was said in this debate, was about $3,000, was just as much entitled to it as those who did, and his administrators were just as much entitled, by the laws of this land, to collect it if he died as if he had taken it during his life. That position cannot be controverted. It is impregnable.

"Now, Mr. President, how would it be in case it appears that any Senator has not received this pay? No such case can exist under the law. Every member of Congress received his pay—back pay, increased pay, and all. Take the case of the gentleman who devoted the back pay, which was his legal right, to building the Washington Monument; or of the gentleman who divided among the poor of his district, kind and charitable as he was, the money so taken from the Treasury; and are they, with their charitable and generous disposition of it, embraced in the clause of this amendment, or are they excluded as those that did not take the increase? If they are included because they did with it what their good and charitable hearts suggested, nevertheless they took it. The United States Government did not make an appropriation to assist in the building of the Washington Monument. Money cannot be taken out of the Treasury to be distributed among the poor of a congressional district except by law. No, Mr. President, they took it; and a Senator who wrote a letter to the Secretary of the Senate telling him to cover the pay which was due him back into the Treasury of the United States took that money. He could only convey a title to it, because it was their property. He disposed of it where his conscience, where his means, where his disposition led him in the exercise of that right which it was his duty to exercise, where they told him it had better go; but it was nevertheless his act. It was covered into the Treasury by no law of Congress, but by the act alone and solely of that individual; and if that individual had died before he made that disposition it would have belonged to his estate, and could have been claimed by his executors. He was generous

with his own, not with the public money. So that, Mr. President, whether a Senator, receiving it as all did, devoted it to pay his debts, or whether in the exercise of a noble generosity, claiming the right to do what he would with his own, he gave it for such purposes as he thought convenient and proper, or whether he did it without taking any action on the matter, still in contemplation of law this sum was to his credit; and it required his act, his conveyance, to divest himself of it; or, in case of death, the act of his representative. So it has been in every case; and in such instances, if there be such where the voluntary disposition of it has not been made by the individual, it stands there as his property now, subject to an action in case of his death by his administrator or executor."

Mr. Thurman: "Mr. President, I should not say a word more on the point immediately under consideration, but that I must have been extremely unfortunate in the expression of my views, or else I must be exceedingly mistaken in my view of what is the Constitution, for I find that I am criticised all around and told that I am wrong in my views. But yet, sir, I cannot see it. What is considered back pay in popular parlance was the additional sum of $5,000, less mileage, which was paid to each one of the members of the Forty-second Congress for his services in that Congress. That was the back pay. It amounted to different sums to the different members, according to the amount of their mileage. To the Senators from Ohio it amounted to about $4,300, or between $4,300 and $4,400. To the Senator from Oregon, who liberally contributed his share to finish the Washington Monument, it amounted to the sum of one hundred and forty-odd dollars; and so on. It was a very different sum, according to the amount of mileage that a member was to receive. That is not in this bill, nor is it in the amendment offered by the Senator from Indiana farthest from me (Mr. Pratt). But the act of March 3, 1873, provided that the salary of members of Congress should thenceforth be at the rate of $7,500 per annum, payable monthly. It made an annual salary, just as the previous act had made; an annual salary just as the act of 1856, which established $3,000, had made. So this act of March last provided that in the future the compensation of a member of Congress should be $7,500 per annum.

"Now, it is agreed on all hands that that act is to be repealed, and we are to go back to $5,000 per annum; and, inasmuch as that is done in deference, as it is said, to public opinion, which condemns the act, the Senator from Indiana farthest from me proposes to give full effect to that public opinion and make it apply to this Congress just as fully as if the salary had not been raised at all *quoad* this Congress.

"Now I want to go on and state what this amendment of the Senator from Indiana is. It is simply to say in effect that the pay of members of the Forty-third Congress shall be $10,000 for this Congress, and in computing their pay $10,000 you take into account what has already been paid. I put it to any one here if this amendment, read in these words—'that the compensation of members of the Forty-third Congress, for the Congress, shall be $10,000'—if that was the simple amendment and nothing more, and not a word was said about charging up to them what they have received—would not the necessary effect be that all they have received would be taken out, and they would only receive the balance of the $10,000; and is there anybody who would say that was not constitutional?

"Or suppose you take it in another way and provide that the bill shall take effect from the 4th day of March next, leaving you to receive pay at $7,500 up to the 4th day of March next, and then provide that for the succeeding year your pay shall be only $2,500 a year, would anybody say that that would be unconstitutional? And yet that would be precisely the effect of the amendment of the Senator from Indiana. It would make your pay for the Congress $10,000 and no more, and his amendment makes it $10,000 and no more, and this objection is a mere objection to the form of the thing, to what is called the charging up, the debiting members with what they have received over and above at the rate of $5,000 a year; and as we have power to decrease our compensation as well as to increase it, as we may do it at any time whatsoever, as we may take into consideration what we have received heretofore in determining what we shall receive in the future, I, for the life of me, cannot see, with the utmost respect for those who think otherwise, where is the difference between the proposition of the Senator from Indiana and either one of the propositions that I have suggested; for instance, the proposition that the pay of the Forty-third Congress shall be $10,000 for the Congress, or that this act shall take effect on the 4th day of March next, and the pay for the next year shall be at the rate of $2,500.

"Inasmuch as you might plainly provide that this law should take effect on the 4th of March next, and that then for the next succeeding year we should receive only $2,500 a year, or inasmuch as you might provide that the compensation of members for the two years ending the 3d of March, 1875, should be $10,000, and that would leave you to be charged up with all you had received before this time, so you may take it in the form in which it is expressed in the amendment of the Senator from Indiana.

"Now a word as to the back pay. The Senator from Pennsylvania says, Why may you not charge up the back pay? For this reason: that that would make an inequality in the pay of members of Congress, paying some men one salary, and others another and different salary.

I do not go into the question whether or not there must be equality; whether there must be uniformity. I know that there are some persons who think there need not be uniformity."

Mr. Wright, of Iowa, said: "I trust that the vote will be taken upon this amendment at once, as also upon all other amendments that may be offered, though I trust none will be offered, and that we shall get to a vote on the bill in a very short time.

"Upon this measure, as upon all others, while I have a seat upon this floor I propose, as far as I can, to look to practical results. In other words, I think a vast deal more of a practical certainty than I do of theoretical perfection. I know that we may remain here and discuss this and other questions day after day, whereas if we would come down to the real question before us, and decide it on the judgment of each Senator, we should be more likely to reach such practical results as would be beneficial to the country as well as to ourselves.

"So far as the amendment offered by the Senator from Indiana is concerned, if it stood alone and aside from its effect on this bill, I certainly am not prepared to say that I should oppose it. I think my course upon this question last session, as well as this, is sufficient to indicate how I would stand upon the general proposition. In other words, I think that in justice and in right, and in view of all the considerations that obtain, it is but proper that this bill, so far as Senators and members are concerned, should relate back to the 4th of March last. But, as I have already said, while that is my opinion, I nevertheless am as well of the opinion that, if this amendment shall be carried, it perhaps will result in the defeat of the bill—if not here, that it perhaps may fall as between the two Houses."

Mr. Carpenter, of Wisconsin, said: "The amendment as it is now drawn discriminates from this time forth as to the pay of Senators in this Chamber. That cannot be done constitutionally, in my opinion. We can figure on this question; we can ascertain just what every Senator has received; we presume that they have received all that they are entitled to; if they have not, they have but to go to the office and draw the money; it is there for them; they have received, or may to-day obtain, $6,250. Now, then, let us fix the pay of all Senators from this time out at $8,750, if that is the proper amount."

Mr. Pratt: "Mr. President, I do not share the constitutional scruples of my learned friend from Wisconsin; but, sir, to return to the objections which have been made against the pending amendment, the first proposition which I make in answer to all of the objections which have been urged against it is this: in now changing the compensation of members of Congress from $7,500 a year to $5,000 a year we do so in obedience to the will of the people, to the pronounced popular judgment. So my friend from Wisconsin has just announced to the Senate. He says that despite his own convictions on the subject he is going to vote for this reduction because the people, his masters, demand it. Now, sir, the point I make is this, that if it was wrong on the 3d of March, 1873, to raise the salary from $5,000 to $7,500 a year, it has been wrong every day since, and we are wrong-doers in having received compensation under that law, and should either return it to the Treasury or else it should be deducted from our compensation in future. I do not see how we can escape from that conclusion. The whole argument of my friend from Wisconsin is this: He yields to this demand because the people have willed it; because they have determined that this increase of salary was wrong. I submit to him that the same people likewise demand that this bill which we are now considering should relate back to the 4th of March, 1873, so that at no period should we be in the receipt of more than $5,000 a year. The second proposition which I make is, that, upon every increase which has been made by Congress of the compensation of its members, the increase has related back uniformly to the beginning of the Congress when the increase was made. The compensation has been changed some five or six times, and I repeat that, wherever that increase has been made, it has related back to the beginning of that Congress. If that be correct as a principle, why should not the decrease of compensation be governed by the same principle, and the decrease relate back to the beginning of the Congress?

"Now, let us take our legislation from 1789 down to the present time. The first compensation was an allowance of six dollars per day. The first increase was from six dollars to seven dollars per day; the next increase was to eight dollars a day; the next to $1,500 a year; the next to $3,000; and then, in 1866, an increase was made to $5,000, and in 1873 to $7,500. There has been but one instance, I believe, since the institution of this Government, when the compensation of members of Congress was decreased, and that took place in the year 1818. The previous Congress had increased the compensation from six dollars or eight dollars a day, whatever it was, to $3,000 for the Congress, or $1,500 a year. There was great complaint made of that increase, and the succeeding Congress promptly repealed the law, decreasing the compensation to eight dollars a day, and made that decrease relate back to the commencement of that Congress. I have the act here by me if any Senator has any question upon that subject.

"There is but one consideration more, then, Mr. President, which I wish to submit to the Senate; and that is in reply to the objections of my friends from Illinois and Wisconsin. They complain that there will be inequality between the compensation of members of Congress; they complain that they will have to refund money which they have already re-

ceived under the existing law, and the complaint is that it is violative, if not of the letter, at least of the spirit, of the Constitution, as impairing the obligation of the contract under which the money was paid.

"This position would have great force in case it were well founded; but the amendment which I have offered is prospective in its operation; it compels no Senator, no member of the House of Representatives, to refund a dollar of the money which he has received under the act of March 3, 1873. Under that law the compensation for the entire Congress would be $15,000. Up to the 4th day of January in this present year the compensation under the law amounts to the sum of $6,250. That, subtracted from the compensation established by this bill ($10,000 per Congress), leaves $3,750 yet to be paid to members of Congress, to be distributed over the fourteen months remaining of the Forty-third Congress; and, according to my calculation, that will leave $268 per month to be paid to each member of Congress in the future. Nothing is to be returned whatever; so that I think that objection is not well taken. This amendment contemplates no return to the Treasury of any dollar that has been received under an existing law, but fixes the compensation in the future so that those who have received under the existing law $625 a month will hereafter, during the remaining fourteen months of this Congress, receive but $268 a month. That is the whole of it."

Mr. Sherman, of Ohio, said: "The committee, after a careful consideration of this subject, with the House bill and with all the debates in the House before them, concluded that it was better from this time forth, from the passage of this bill, to restore the salary of $5,000 a year and the ordinary allowances and mileage. It is true that objections were at once made that the old mileage system was objectionable, was unequal, by giving to members from remote States a greater portion than was their due. On the other hand, it was insisted that men who come from a great distance, from their business and from their families, ought to have some additional compensation, more than the mere expense of traveling from their remote place of residence to this point. Other considerations operated. At any rate, this was a long-established system, that had not given rise to much complaint; and if there was any gross injustice in it, that might at any time be corrected by a reduction of the rate of mileage. If twenty cents a mile is now too high, owing to the cheapness of transportation, it can at any time, by a mere amendment of the law, be reduced to ten cents a mile. The committee thought it was better simply to restore the law as it was on the 3d of March, 1873; and there are grave and serious reasons why this system of mileage ought to be maintained, but perhaps at a lower rate than that now fixed by law.

"In regard to other allowances, as to which so much complaint has been made, what are they? They are fixed and ascertained. We were allowed under the old law $125 per annum apiece to pay for the ordinary stationery and the incidents connected with the ordinary discharge of our duty. It is true that the newspapers say that five or ten thousand knives are supplied to members of the Senate. If so, they are paid for by members of the Senate. The whole amount of our allowance as fixed by law is $125 to each member, and that is not more than sufficient for the purpose. What other allowances are given? None other. No member of Congress can by any possibility draw from the public Treasury under the old law any thing but his compensation, the $5,000 a year, the mileage allowed by law, and this allowance for stationery. The franking privilege being repealed, as a matter of course, we are relieved in a great measure from the burden of franking public documents. The amount of postage that may be paid by any of us probably would range somewhere in the neighborhood of two or three hundred dollars a year. That may or may not be provided for, as Congress may hereafter deem wise. I say, therefore, Mr. President, that the amendment reported by the committee is substantially correct.

"As to the proposition now offered by the Senator from Indiana, I certainly would not vote for it. I have no more power and we have no more right to take from members of Congress money which they have earned and received in pursuance of law than we have the right to take your house, or your farm, or confiscate your property. It is their property, and although it is in the form of money, as exhibited here yesterday by my friend from Texas (Mr. Flanagan), what he has received is property—his property—and no man has a right to take it from him. With all due deference to my friend from Indiana, who I know would never like to do any thing by indirection, I do say that the legal effect of his amendment is by indirection, by a device, to take money from the pockets of the men who earned it, and hold it, and have it now by law. Why, sir, what is the proposition? Senators are discussing the various forms in which the proposition may be put. They say if it is framed in such and such words it is constitutional, but if framed in other words it is unconstitutional. Sir, I care not in what form you put it, it is unjust, and therefore I will not vote for it. I would not vote for it under any demand.

"Mr. President, there are one or two other points that have been made on which I desire to say a word, because I do not wish to speak on this bill again. When the committee reported this bill they considered other questions, which, I see from the amendments prepared all around me, are to be presented, and we have got to debate them over again; and I wish now in advance to give, as near

as I can, the reasons why we did not do so and so.

"In the first place, it is said that the President of the United States had the benefit of this increase-of-salary act, it raising his salary from $25,000 up to $50,000 a year, and that if we are now disposed, either in deference to public opinion or because we think it is right, to go back to the old salary, we ought to put the President in the same position. I could not answer that argument if we had the power to do it. If the same public opinion which controls the votes of some members—it does not control mine, because I think the salary of $5,000 is enough—and induces them to go back to $5,000 a year, is to apply to members of Congress, it may be asked, why not go back to $25,000 for the President? The answer at once is that the Constitution of the United States forbids us to do so.

"But, they say, let us do it any way; let us repeal the law of March 3, 1873, and not say any thing about the President. Well, sir, if we do that, we do what we know we have not the constitutional power to do.

"But, they say, the courts will set aside our action. I trust in God the Congress of the United States will never allow the courts to set aside our action in passing a law that we know to be unconstitutional; and no man now can touch the salary of the President of the United States, during his term of office, in the slightest degree, without violating the oath which he took at your desk, sir, and which ought to be sacred to him at every hour of his life. It is utterly impossible for him to do it; and we ought not to pass a law which by any construction would assert the power to do what the Constitution forbids us doing. Therefore it was that the committee omitted from the operation of this bill the President of the United States, whose salary is now protected by the Constitution; and we cannot touch it to the amount of five cents.

"The same observation would apply to the judges of the Supreme Court of the United States. But it is said that there is a vacancy in the Supreme Court which may be filled after the passage of this act; other vacancies may occur from time to time, and let us pass an act that will operate upon future judges. That would be manifestly unfair. There ought to be one equal rule, applying to all the existing judges and those to be appointed in the future. Therefore you cannot make a discrimination there.

"But there is another reason. I would not reduce the salary of these judges if I had the absolute power to do it, because I believe the judges of the highest tribunal of the United States are not too highly paid when they receive $10,000 a year. They are secluded; they are excluded from all other employment; they are separated from the mass of the people nearly to hold even the scales of justice. That is not our position. We are members of Congress, representatives of States. We are at liberty to pursue nearly all the vocations of life. We can engage in our professions during the time that we are not here employed in the public service. We are not cramped and crippled by those rules of propriety which guard and protect the Supreme Court of the United States. Therefore, in measuring our compensation, we are not to be governed by the same rules and the same principles that we would be governed by in fixing the compensation of the judges of the Supreme Court. I do not think their compensation is too high. As far as my constituents are concerned, I never have heard any one complain about the reasonable increase of the salaries of the judges of the Supreme Court of the United States.

"In regard to the President of the United States, heretofore, while his salary was fixed at $25,000 a year, it was supported and aided by direct appropriations made by Congress, so that, instead of $25,000 a year, the President has for many years, away back into the time of Andrew Jackson, and thence down, been paid for certain matters which ordinarily enter into the private expenses of every citizen, in order to add to his salary of $25,000 a year. If, then, we think the salary now fixed by the Constitution and the law is too high at $50,000, we have it in our power, to the extent that we desire, to the extent we think is fair and right, to cut off those additional appropriations that have been made from time to time in addition to the salary of the President of the United States; so that we are not beyond remedy to reduce the incidental expenses of the Executive office if we think the compensation is sufficient to enable the President to pay these things out of his own salary."

The President *pro tempore:* "The question is on the amendment proposed by the Senator from Indiana (Mr. Pratt) to the amendment of the committee."

The amendment to the amendment was rejected.

Mr. Morrill, of Vermont, said: "I offer the following amendment, to come in after line 10 of the first section of the amendment of the committee, as a proviso:

Provided, That the allowance for mileage hereafter to be paid to each Senator, Representative, and Delegate, for going to and returning from the seat of Government once in each session shall be one-half of the sum allowed and paid prior to the act of March 3, 1873.

"I desire to say that one of the strongest arguments that was made use of in order to carry the increase of salaries, and to defend it after it had been carried, was that it rectified the great abuse of the mileage system, by which we paid for travel four, five, or six times as much as the cost thereof. It would suit me, perhaps, better than any mileage at all, to have a fixed sum; but as it is not perhaps practicable to introduce a measure in

relation to that matter here, or is not as practicable as it would be to reduce it, I propose to fix the same amount that we allow our military officers—that is, ten cents per mile—reducing it from what it is now—twenty cents a mile—to ten cents a mile, which is the same we allow our military officers to have for traveling expenses. That will be in most cases twice the amount of the cost, and it is amply sufficient."

Mr. Stevenson, of Kentucky, said: "I should like to inquire of the Senator from Vermont why he desires in his proposed reform to adhere in his amendment to the inequality and alleged injustice of the former system of mileage. If he seeks to reach an exact standard of justice, why not pay every member of Congress exactly what it costs him to travel to and from the capital? The Senator remarked that the bill to increase pay at the last session derived its greatest strength from the injustice and inequality of the mileage system which that compensation bill dispensed with. It does not occur to me that his amendment removes that injustice. It is true that those who receive mileage will, by the amendment, only get one-half as much as they did under the old law, but still the mileage will be unequal, and the injustice of the measure would seem to me to run just in the same ratio as it did before, though the amount of mileage would be lessened. For instance, a Senator from the Pacific coast, who can come here for $300, would, under the Senator's pending amendment, get $800; while a Senator living in the vicinity of Washington would only get one-half of the mileage he would be entitled to, which, perhaps, might not, under the reduction, pay him what he had absolutely expended. Now, if the object of the Senator be to reduce it down to a proper standard, why not fix the amount at the precise sum which it costs every member by the most direct route of travel to reach Washington? Why go back to the principle of inequality in mileage which must always discriminate so unequally between members of Congress, and which it was one object of the present law to get rid of?"

Mr. Morrill, of Vermont: "I have already admitted that this amendment does not remedy the abuse wholly, but it does remedy it to the extent of one-half, and it leaves that amount in the Treasury. It gives us precisely the same mileage that we allow the officers of the Army and Navy when they are compelled under military or naval orders to travel over the country; and that sum is deemed to be a just one. If we are to have any mileage at all, it strikes me that ten cents a mile is amply sufficient. We all know that it is much more than the actual cost of travel.

"Then, when you come back to the proposition of the Senator from Kentucky, as I said before, the idea of giving an account of our traveling expenses is to me offensive and rather repugnant. Shall I, when I make out my bill of expenses, if I happen to smoke cigars—as I do not—give an account of how many cigars I have smoked? When I travel, shall I come on night and day, or shall I be allowed for the expense of a day at a hotel in New York, or at Springfield? I do not know precisely what is legitimate. If I come with my family, part of the expenses, perhaps, may be mingled up with those of my family. I hardly know how to separate them. Suppose I stop a day in New York, and require a parlor for my family, am I to charge that to the Government? Therefore I would much prefer to have a fixed sum for us all. If, perhaps, the total salary had been fixed at $5,500, it might have been acceptable; but in the absence of any such provision I do propose to remedy the gross abuse that exists in the mileage system; and I therefore propose that we shall be paid, what we allow our military officers, ten cents a mile—that is to say, to reduce the former mileage allowances from twenty cents a mile to ten cents a mile."

The President *pro tempore:* "The question is on the amendment proposed by the Senator from Vermont (Mr. Morrill) to the amendment of the committee."

The question being taken by yeas and nays, resulted—yeas 30, nays 33; as follows:

YEAS—Messrs. Anthony, Bogy, Boreman, Buckingham, Cameron, Carpenter, Conkling, Crozier, Davis, Edmunds, Fenton, Ferry of Connecticut, Ferry of Michigan, Frelinghuysen, Hamlin, Ingalls, Morrill of Maine, Morrill of Vermont, Morton, Norwood, Oglesby, Pratt, Ramsey, Ransom, Saulsbury, Schurz, Scott, Sherman, Sumner, and Thurman—30.

NAYS—Messrs. Allison, Bayard, Boutwell, Brownlow, Chandler, Clayton, Conover, Cooper, Cragin, Dennis, Dorsey, Flanagan, Gilbert, Goldthwaite, Hamilton of Maryland, Hitchcock, Howe, Kelly, Lewis, Logan, McCreery, Merrimon, Mitchell, Patterson, Sargent, Spencer, Sprague, Stevenson, Tipton, Wadleigh, West, Windom, and Wright—33.

ABSENT—Messrs. Alcorn, Ames, Gordon, Hamilton of Texas, Johnston, Jones, Robertson, Stewart, and Stockton—9.

So the amendment to the amendment was rejected.

Mr. Cragin, of New Hampshire, said: "I move to add at the end of the first section of the committee's amendment the following:

Provided, That mileage shall not be allowed for the first session of the Forty-third Congress.

"There cannot be any objection to that, I think, as we have received our actual traveling expenses."

The President *pro tempore:* "The question recurs on the amendment proposed by the Senator from New Hampshire (Mr. Cragin) to the amendment of the committee."

The amendment to the amendment was agreed to.

The President *pro tempore:* "The question now recurs on the amendment proposed by the Senator from Maryland (Mr. Hamilton)."

The Chief Clerk read the amendment to the amendment, which was to strike out the first

Mr. Morton: "Will it be in order, if this amendment is adopted as an entirety, to move to strike out any portion of it?"

The President *pro tempore*: "It will not. It will be in order to add to it, but not to strike out any portion of it."

The Secretary proceeded to call the roll, and the result was announced as follows:

YEAS—Messrs. Allen, Anthony, Bogy, Brownlow, Clayton, Fenton, Flanagan, Gilbert, Goldthwaite, Gordon, Hamilton of Maryland, Kelly, Lewis, Norwood, Sehurz, Sprague, and Tipton—18.

NAYS—Messrs. Alcorn, Ames, Bayard, Cooper, Cragin, Davis, Dennis, Dorsey, Ferry of Connecticut, Hamilton of Texas, Hamlin, Johnston, Jones, Logan, Shulsbury, Spencer, Stevenson, Stewart, Sumner, and Thurman—20.

So the amendment of Mr. Conkling was rejected.

The President *pro tempore*: "The question recurs on the amendment proposed by the committee as amended, which is to substitute what has been read for three sections of the House bill."

The amendment was agreed to.

The Chief Clerk read the fourth section of the House bill, as follows:

SEC. 4. That the Secretary of the Treasury is required to cover into the Treasury all sums that may remain undrawn or which have been received as increased compensation under the provisions of said act approved March 3, 1873, and which shall have or may come into his possession by the return thereof.

Mr. Conkling: "I move to strike it out."

The President *pro tempore:* "The question is on the amendment of the Senator from New York."

The amendment was agreed to.

The bill was read the third time.

The question being taken, resulted as follows:

YEAS—Messrs. Allison, Anthony, Bayard, Bogy, Boreman, Boutwell, Buckingham, Cameron, Carpenter, Chandler, Clayton, Conkling, Crozier, Davis, Dorsey, Edmunds, Fenton, Ferry of Michigan, Frelinghuysen, Goldthwaite, Hamilton of Maryland, Hamlin, Hitchcock, Howe, Ingalls, Logan, McCreery, Merrimon, Mitchell, Morrill of Maine, Morrill of Vermont, Morton, Oglesby, Patterson, Pratt, Ramsey, Robertson, Sargent, Saulsbury, Schurz, Scott, Sherman, Spencer, Stevenson, Stockton, Sumner, Wadleigh, West, Windom, and Wright—50.

NAYS—Messrs. Brownlow, Conover, Flanagan, Gordon, Lewis, Norwood, Sprague, and Tipton—8.

ABSENT—Messrs. Alcorn, Ames, Cooper, Cragin, Dennis, Ferry of Connecticut, Gilbert, Hamilton of Texas, Johnston, Jones, Kelly, Ransom, Stewart, and Thurman—14.

So the bill was passed.

On motion of Mr. Conkling, the title of the bill was amended so as to read: "A bill repealing the increase of salaries of members of Congress and other officers."

In the House, on January 13th, the amendments of the Senate were considered.

The Speaker: "The first bill upon the Speaker's table is a bill to establish the compensation of Senators, Representatives, and Delegates, returned from the Senate with amendment."

Mr. Hurlbut, of Illinois, said: "It was my fortune, sir, to introduce the bill which comes back amended by the Senate. I believe the bill which I introduced was just and fair as a measure of future compensation. I believed then, and believe now, that mileage was injudicious, discriminating, and unfair. But, sir, the Senate of the United States has sent back to us practically a new bill, restoring the status not only of the members of the House and of the Senate, but of all other officers and employés of the Government whose salaries were increased by the act of March 3, 1873, with the exception of the President of the United States and the judges of the Supreme Court, who are covered and protected by a constitutional provision. I propose to accept that measure as a measure looking to economy and as a settlement, so far as I am concerned, of this vexed question."

Mr. Hale, of Maine, said: "I move, Mr. Speaker, that the House concur in the Senate amendment; and upon that I call the previous question."

The question was taken; and the tellers reported—yeas 126, nays 57. The previous question was seconded and the main question was ordered, which was on concurring in the Senate amendment.

The question was taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Albright, Archer, Arthur, Ashe, Atkins, Banning, Barber, Barnum, Bass, Beck, Begole, Bell, Berry, Biery, Bland, Blount, Bowen, Bradley, Bright, Bromberg, Brown, Buckner, Buffinton, Bundy, Burchard, Burleigh, Burrows, Benjamin F. Butler, Roderick R. Butler, Cain, Caldwell, Cannon, Cason, Cessna, Amos Clark, Jr., John B. Clark, Jr., Clayton, Clements, Clinton L. Cobb, Stephen A. Cobb, Coburn, Comingo, Conger, Cook, Corwin, Cotton, Crittenden, Crooke, Crounse, Crutchfield, Curtis, Danford, Davis, Dawes, De Witt, Dobbins, Donnan, Dunnell, Durham, Eames, Eden, Elliott, Farwell, Field, Fort, Foster, Frye, Garfield, Giddings, Glover, Gooch, Gunckel, Eugene Hale, Robert S. Hale, Hamilton, Hancock, Harmer, Benjamin W. Harris, Henry R. Harris, Harrison, Hatcher, Hathorn, Havens, John B. Hawley, Joseph R. Hawley, Gerry W. Hazelton, John W. Hazelton, Hendee, Hereford, Herndon, Hersey, E. Rockwood Hoar, George F. Hoar, Holman, Hoskins, Houghton, Howe, Hubbell, Hunter, Hunton, Hurlbut, Hyde, Kasson, Killinger, Knapp, Lamport, Lansing, Lawrence, Lawson, Leach, Lewis, Loughbridge, Lowe, Luttrell, Lynch, Magee, Marshall, Martin, McCrary, Alexander S. McDill, James W. McDill, MacDougall, McKee, McNulta, Mellish, Merriam, Milliken, Mills, Mitchell, Monroe, Moore, Morrison, Myers, Neal, Nesmith, Niblack, Niles, Nunn, O'Brien, O'Neill, Orr, Orth, Packard, Packer, Page, Hosea W. Parker, Isaac C. Parker, Parsons, Pelham, Pendleton, Perry, Phelps, Pierce, Thomas C. Platt, Poland, Potter, Pratt, Purman, Rainey, Rapier, Rawls, Read, Rice, Richmond, Robbins, Ellis H. Roberts, James W. Robinson, Ross, Rusk, Sawyer, Henry B. Sayler, Milton Sayler, John G. Schumaker, Scofield, Isaac W. Scudder, Sener, Sessions, Sheats, Sheldon, Sherwood, Lazarus D. Shoemaker, Small, Smart, A. Herr Smith, H. Boardman Smith, J. Ambler Smith, John Q. Smith, William A. Smith, Southard, Sprague, Stanard, Starkweather, Stone, Strait, Strawbridge, Swann, Thornburgh, Townsend, Tyner, Vance, Waldron, Wallace, Walls, Jasper D. Ward, Marcus L. Ward, Wells, Wheeler, Whitehead, Whitehouse, Whitthorne, Wilber, Charles W. Willard, George Willard, Charles G. Williams, John M. S. Williams, William B. Williams, Willie, Ephraim K. Wilson, James Wilson, Wolfe, Wood, Woodford, Woodworth, John D. Young, and Pierce M. B. Young—225.

NAYS—Messrs. Albert, Averill, Barry, Clymer, Cox, Crossland, Hays, Hynes, Kelley, Kendall, Lamison, Morey, Negley, James H. Platt, Jr., Randall, Shanks, Sloss, Standeford, Storm, Stowell, Todd, Waddell, White, Whiteley, and William Williams—45.

NOT VOTING—Messrs. Adams, Barrere, Freeman Clarke, Creamer, Crooker, Darrall, Duell, Eldredge, Freeman, John T. Harris, Hooper, Jewett, Kellogg, Lamar, Lofland, Lowndes, Maynard, McJunkin, McLean, Phillips, Pike, Ransier, Ray, William R. Roberts, James C. Robinson, Henry J. Scudder, George L. Smith, Snyder, Speer, Stephens, St. John, Sypher, Taylor, Thomas, Tremain, and Jeremiah M. Wilson—36.

So the amendment of the Senate was concurred in.

The question recurred upon the following amendment of the Senate to the title of the bill:

Amend the title so as to read: "An act repealing the increase of salaries of members of Congress and other officers."

The amendment was concurred in.

In the House, on January 7th, the bill to establish an educational fund, and to apply the proceeds of the public lands to the education of the people, was considered.

Mr. Hoar, of Massachusetts, said: "Mr. Speaker, after the excited discussions which have taken place in the House during the whole of the present session, I suppose it is not disagreeable to all of us to address ourselves to a measure intended purely for the benefit of the country, containing nothing which can appeal to partisan or sectional ambition, interest, or desire.

"One-fourth of the voters of the country to-day are unable to read or write. For the next ten years thirty-two Senators and one hundred and four Representatives, constituting, when voting compactly, a power which will be able to control on very important measures of legislation of the country, are to be chosen by States one-half of whose voting population have not knowledge enough of reading or writing to make either of practical advantage in receiving or conveying information. This condition of things, disclosed by the census of 1870, is, in the opinion of those persons most capable of judging, growing worse instead of better. And if a census were to be taken of the illiterate portion of the population of the country to-day, it would disclose a very much larger number unable to derive any information in the discharge of their duties as citizens from reading, and unable to convey such information to others by writing. It is true I ought to say that a sentiment has grown up in many, and perhaps all, of the States which promises better things in that respect; that is an encouraging symptom. It is true, also, that the State of Virginia is a most conspicuous and honorable exception to the general statement that I have made. But, with the exception of the fact that men are waking up in the southern portion of the country to labor in this matter, and with the exception of the State of Virginia, to whose Democratic authorities I desire to pay a tribute of respect which their recognition of this great work deserves, this condition of things is rapidly growing worse.

"Now, there are two main objects which are intended to be reached by this bill. The first is to consecrate forever to the purpose of the education of the people this vast national domain, so far as it may be considered the property of the nation. Of course, whatever policy may commend itself to Congress as necessary for furthering the interests of the settler, to that the legislation which treats of the public lands as mere property must give way. The interests of the great States which in the future are to cover this domain, the interests of the people that are to compose their population, must of course be paramount to every other interest whatever.

"But at the present time the policy of the country is to sell for reasonable prices these lands, and the proceeds are received into the public Treasury. This bill proposes to make an annual distribution among the States of one-half the amount of those proceeds, for the purpose of aiding in the endowment of public schools in the different States. It is proposed that for the first five years this distribution shall be made on the basis of illiteracy; that is, of the need of the particular States. It is true that this distribution will create a certain inequality among the States for the first five years. But I think every gentleman who remembers, looking now at the interests of his own State, that the vote of an illiterate and uneducated person in another State affects all national questions, affects the policy of the country as much as the vote of the most educated and instructed citizen of his own State, that the humble black laborer in the rice-swamp by his vote affects the national policy of the country with exactly the same power that Agassiz, or Eliot, or Barnard does, will see that it is for the interest of each State that the distribution should be made for the present in proportion to the needs of the several States.

"Heretofore, in discussing this question, I have presented to the House some statistics, with the view of showing the need of different States, growing out of the number of persons therein who are unable to read or write. When I presented those statistics, some gentlemen, representing States where the number of illiterate was large, seemed to suppose that it was done for some purpose of exciting reproach against their States, or of vaunting in some way the superiority of my own. Sir, it was with no such purpose that these statistics were presented to the attention of the House and of the country. I am perfectly aware that the State which I have the honor to represent, if it has any advantage in this respect over any other State, owes that advantage largely to its wealth, its compactness of population, and the length of time which it has been settled. And I am not here, in discussing a question of this kind, to make any claims to any special merit or credit on account of any thing that may have been done by my people or by my forefathers in this respect. I am aware that other States, new, with populations scattered over a large territory, which have had, whether by their fault or the fault of others, the great burden of slavery, which have been devastated by war, have been unable, even if willing, to supply this want for themselves.

"But I will beg of the representatives of the States now to be affected, not to reject this olive-branch which is held out to them by the people of the wealthier and more densely populated States, which offers them not merely national aid in the establishment of their institutions of education, but offers to give them for the first five years, subject to extension by Congress hereafter, if at the end of five years such a condition continues to exist, this great advantage in the distribution of a common fund.

"I have prepared, and shall have printed as a part of my speech, a table showing the amount

of the fund which will be received by different States under this distribution. Let me refer to the manner in which the distribution will operate as respects two or three States.

"The whole net proceeds of the sale amount to about $2,000,000 annually. Of this sum one-half is proposed to be distributed annually, while the other half is to constitute a permanent fund, the income of which shall be distributed in the same way. Under this distribution the State of Alabama, with a population of 996,992, would receive as its share of $1,000,000 the sum of $67,689.71; while the State of Connecticut, with a population of 537,454—a little more than half the population of Alabama—will receive only $5,234.03. The State of Kentucky, with a population of 1,321,011, would receive $58,705.46; while the State of Massachusetts, with a population of 1,457,351, would receive only $17,273.94.

"Now, Mr. Speaker, this bill in its mechanism is exceedingly simple; but I believe (and in the expression of this belief I am fortified by the unanimous testimony of educators in all parts of the country) that its protection of the Government against the waste or misapplication of these funds is absolute and complete. It requires of the States just two conditions, and declares that every State which shall, within one year, comply with those two conditions shall, in the next year, receive its share of this distribution. Those two conditions are: first, the establishment of a system of free public schools for all its citizens, leaving all the details of that system to its own discretion; and, secondly, a report that it has established such a system, and that it has applied the money in accordance with the provisions of the bill, and a report of the number of children that have been in attendance at those schools during the previous year. A great many other conditions have been suggested as desirable to be added; but it seems to me that the performance of these conditions will be sufficient for the end proposed.

"Many gentlemen say, 'Why, how is it possible that a gift of $50,000 to a State of a million and a half of inhabitants, one-half of whom cannot read or write, can suffice to produce the result which this bill aims to accomplish?' But, Mr. Speaker, the history of education in this matter answers that question, and answers it to the surprise as well as the satisfaction of persons who have not previously investigated the subject. I am informed by the distinguished agent of the Peabody fund, Dr. Sears, perhaps the highest authority in this country on this special subject, that the expenditure of $30,000 a year from this fund (I believe that is the amount, though I may not have it precisely in my memory) causes probably an expenditure of from ten to twenty times that amount in the localities where this slight expenditure has been made; and not only that, but that the results proceed in a vastly increasing ratio. When you say to a town, or a parish, or a neighborhood, 'We will give you $5,000 for the establishment of schools,' not only is the proposition readily accepted — for any community dislikes to see such an offer go by unimproved —but every town or community within the circuit of forty miles around comes in and says, 'Why can you not do the same for us?'

"The bill contemplates that there shall be made to the General Government a report setting forth the number of schools in each State, and the number of pupils actually attending therein.

"That list will be tabulated and reported to Congress, and the result will be if in any State it appears, either that the State has refused to get its share of the bounty of Congress, or that the State stands lowest in rank in these particulars which are reported, somebody in that State will set its rivers on fire until that state of things is changed. It was that stimulant, and that stimulant alone, giving a few dollars only to each town, by which Horace Mann created anew the common-school system of Massachusetts, and raised it from its degraded condition, thereby making his name immortal among the benefactors of mankind. On this point the authority of the various school superintendents as given by Dr. Sears, to which I have alluded, is decisive.

"Then, Mr. Speaker, that will leave the other million dollars to be deposited in the national Treasury, and invested in Government bonds, the interest only to be distributed, leaving the principal to accumulate as a national educational fund.

"It seems to my mind the vast public domain we are rapidly disposing of in one way or another ought not to be used up for the necessities of a single generation. The people of the country, and especially the laborers of the country, take a deep interest in the public lands. They will not consent to any disposition of the proceeds of the sale of these public lands; and this bill gives no public lands, but simply disposes of the proceeds of their sale when paid into the Treasury—they will not consent, I say, to the disposition of them to any purpose less sacred than that of the education of the people.

"It does not seem just that the entire proceeds of this vast national heritage should be disposed of for the necessities of a single generation, and nothing left for the future."

Mr. Dunnell, of Minnesota, said: "Mr. Speaker, I desire to make some remarks upon this bill, but shall not long occupy the attention of the House. I think there are very grave questions involved in the measure—some that we ought not to forget or overlook in the discussion of it. While it is not agreeable for me ever to vote against any measure that looks toward public free schools, yet I am constrained to present a few considerations in opposition to the passage of this bill, and give some of the reasons why I shall vote against it. In the first place, it is a new departure; it is

[illegible] Then you must [illegible] the East, in the older States, who [illegible] in the West, every homestead settler upon the public domain, that he must pay $1.25 or $2.50 an acre. Will it pay them to [illegible] public lands? I say not. We will [illegible] who are the poorest and [illegible] people in the country; we will [illegible] who wish a home, the poor man, who come into the country; for, unless we [illegible] these lands, we will get no [illegible]

The Committee on the Public Lands [illegible] before it a bill to [illegible] that law. It ought to be repealed. [illegible] those Mississippi [illegible] of direct speculators. [illegible] speculator in public lands get the [illegible] and carry on the business? [illegible] that [illegible] preemption laws. [illegible] man, only every man may have a [illegible] the homestead law alone. The [illegible] is where the fraud comes in; [illegible] the double swearing takes place; [illegible] the speculator thrives and flourishes.

Mr. Kasson, of Iowa, said: I wish to call the attention of this House particularly to the fact that we are endeavoring by this bill to move further in the direction which we were already necessary by the war, but which has seemed to be necessary with the declaration of peace. So, in this Congress we have framed many laws in which, under the so-called war power of the Union, we have assumed powers of a very dangerous character, but also of a very necessary character at the time. During the continuance of the war we got great powers into this body, and, to execute the duties of the war, we amended the Constitution so as to get still further powers for a condition of peace. I ask gentlemen now whether, when the Constitution has been amended as thoroughly as any gentleman desires, and when we are in a condition of peace and restored Union, there is a man upon this floor who desires in any respect to further centralize the Government at this time? I ask which clause of the Constitution can bring us into connection with the school districts of the different States of this Union? I wish some member of the committee would point me to a clause of the Constitution, or to any amendment of the Constitution, that brings the Congress of the United States into contact with subdivisions of States of this Union, known as school districts, and with teachers' wages therein? I know of none. I know of no power in that instrument by which we can touch the school districts of this Union in the manner of regulation; and yet this bill provides for the payment of the salaries of the

teachers of a certain class of school districts in the several States; it provides for a certain class of scholars that shall be entitled to the benefits of the fund appropriated from the people's Treasury, to the exclusion of others.

"Sir, I say it is a stretch of power which, as a member of the Republican party, I repudiate as not being within the range of the powers of the Congress of the United States. I have stood upon this floor in times of danger, and have advocated the use of all the powers that could be gathered to strengthen the hands of the Government; but I am here to-day to protest with all my force against taking away one solitary State or municipal right that exists now in this free Union.

"Sir, the great pendulum of the clock of history is moving ever to and fro. After reaching one extremity it is bound to go back toward the other extremity. We reached the extreme in one direction during the war, and now the pendulum has commenced sweeping in the other direction. If gentlemen on this floor are not wise, we shall find ourselves now, with the views we entertain as the majority, imploring Heaven to come to our help to prevent these powers being turned against us and our dearest home interests. Can no gentleman on this side of the House imagine such a political revolution in the future as shall take from men of our views the power on this floor, and at the other end of the Capitol?

"Can they not see, then, that the principles established in this bill will put us, perhaps, under a majority here who do not appreciate our municipal organizations of the North, our school-district system and its value; who may, as we are doing now, put the strong hand of the Federal Government upon the dearest rights which we cherish in the States to which we belong and which we love? Everybody, sir, who looks at all to the philosophy of history, must see that the time has come when we must heed the swinging of this great constitutional pendulum, when we must guard against the extreme to which we shall inevitably drift, unless we commence early to apply the steadying powers of a more wise, and constant, and peaceful judgment."

Mr. Phillips, of Kansas, said: "The gentlemen defending the measure have claimed that this bill interferes with nothing; that it leaves the preëmption and homestead laws intact; that it interferes with no new legislation; that it only takes moneys formerly derived from public lands and applies them as a school fund in the way specified. In taking this position, I believe the gentlemen are honest; in expressing it, I am sure they are candid; I feel equally sure that they are mistaken.

"On the American land question the public mind is deeply stirred; and the settlers, who are, after all, the interested parties, are determined on reform. An indignant protest has gone up against permitting the lands to go into the hands of corporations and speculators, great or small. The public lands left have little or no value save that which the labor of the settler gives them. That this value should not be taxed to sustain other interests, is demanded. And while these demands are being made, while the few good steps already taken are sought to be blended with better ones still to be taken, while the Committee on the Public Lands is engaged in preparing measures to properly dispose of the public domain, this bill comes in from the Committee on Education and Labor to settle the question effectively and ruinously, and to bar the avenues to land reform forever. Do not tell me that legislation hereafter may do what it pleases. Pass this bill, and you create a great interest, which will forever fight all questions of land reform, and which will be here, whenever a bill is pending to aid the struggling settlers, to argue that all lands are consecrated to education, and the ghost of religion and morals will be conjured up to make this bill a finality, and to seal and foreclose all the blunders of American land legislation.

"I think it high time that the land question be considered apart from all such propositions. It is the foundation-stone of American politics. The time is surely coming when the hardy pioneers will no longer be asked to develop the country and maintain outside benevolence. I would a thousand times rather vote money from the Treasury. The last thing Congress should part with is the public domain."

Mr. Cox, of New York, said: "Mr. Speaker, I am opposed to this bill for several reasons. First, on economic ground; secondly, because I am opposed to the enactment by Congress of the civil-rights bill as reported and recommitted; thirdly, because the bill itself augments Federal power, is unjust in the distribution of the funds, and is a part of a pernicious system of 'over-legislation.'

"First, as to economy: Whether we stop prodigal expenditure or husband legitimate resources, it is alike wise; in fact, it is necessary in this emergency of the Treasury. I have before me the President's message. Last year, he says that there were 1,626,266 acres of public lands sold for cash. This was some 800,000 more than the year before. By the Land-Office Report of October 20, 1878, it appears that there were cash gross receipts, under various heads for lands sold, for the year ending June 30, 1878, amounting to $3,408,515.50. Under this head are certain scrip not strictly cash. These are to be deducted, together with the expenses of sale. The appropriation for land-sales ending June 30, 1878, was $772,000.

"Without being too nice, therefore, I may take the calculation of the gentleman who reports the bill (Mr. G. F. Hoar), and reckon the proceeds of the lands for each year, as from one to two millions net cash, the mean being one million and a half. Of this, under the bill, for five years the more illiterate sections, as where the negroes predominate, will get the

"Mr. Speaker, whether [illegible] any one may [illegible] such statesmanlike way as [illegible] man from Massachusetts [illegible] this bill? He did not appeal to the [illegible] the House as to the [illegible] did not seek to question that body [illegible] which, like the Arabian Sphinx, [illegible] the riddle until its responsibility is [illegible] signs to its judiciary, education, and [illegible] If, however, its pleadings serve to [illegible] able lawyer of the gentleman from South [illegible] line (Mr. Elliot), who spoke so well for [illegible] or the chartered libertines of debate, who [illegible] ble about in bellicose drollery, I am content to praise and enjoy this novel mode of debate.

"But I do not refer to the civil-rights bill merely to mark the difference in the [illegible] of debate. This act consecrates the net proceeds of the public lands for education, and provides the mode of their application. The civil-rights bill provides for mixed schools; and if it becomes a law the funds thereto devoted will be thus applied.

"But, it is said, the civil-rights bill is to be committed, and may be reported back without the mixed schools.' I do not know as to that. I will give three or four reasons why I think 'civil rights' and mixed schools will return to us again for our action: first, partisan reasons; second, the speech and oath of the gentleman from Massachusetts (Mr. Butler), the champion of the measure; and, third, the attitude of the colored people as to mixed schools since the recommittal of the bill."

The bill was subsequently discussed on several occasions, but failed to become a law.

In the Senate, on December 10th, the resolution offered by Senator Sherman, of Ohio, on specie payments and the currency, was considered.

The resolution was read, as follows:

Resolved, That it is the duty of Congress during the present session to adopt definite measures to redeem the pledge made in the act approved March 18, 1869, entitled "An act to strengthen the public credit," as follows:

"And the United States also solemnly pledges its faith to make provision at the earliest practicable period for the redemption of the United States notes in coin."

And the Committee on Finance is directed to report to the Senate at as early a day as practicable such measures as will not only redeem this pledge of the public faith, but will also furnish a currency of uniform value always redeemable in gold or its equivalent, and so adjusted as to meet the changing wants of trade and commerce.

Mr. Ferry, of Michigan, said: "I offer the following as a substitute for the resolution:

Strike out all after the word "resolved," and insert:

That the Committee on Finance is directed to report to the Senate at as early a day as practicable such measures as will restore commercial confidence and give stability and elasticity to the circulating medium, by making banking free to all, by provid-

ing for an increase of currency of $100,000,000 (including the $44,000,000 reserve), by making the whole currency of Government issue and lawful money by the issue of currency bonds bearing 3.65 per cent. interest.

Mr. Pratt, of Indiana, said: "Mr. President, I wish to submit some remarks upon the resolution reported by the chairman of the committee. Before doing so I will ask that the views of the minority be read by the clerk."

The Presiding Officer: "The Clerk will report the views of the minority."

The Chief Clerk: "The resolution reported as the views of the minority, by Mr. Bayard, is as follows:"

Whereas a just regard for the interests of every class of the community demands that the national basis of finance shall consist of a uniform standard and intrinsic value: therefore—

Resolved, That the Committee on Finance be, and they are hereby, instructed to report to the Senate measures which will secure at the earliest practicable day a return to specie payments.

Mr. Pratt: "Mr. President, there is just this difference between the resolution submitted by the chairman of the Committee on Finance and that submitted by the Senator from Delaware, on the part of the minority of that committee: The one declares it the duty of Congress during its present session to adopt definite measures for the redemption of the United States notes in coin, but also declares it to be its duty to furnish a currency of uniform value, always redeemable in coin or its equivalent, and so adjusted as to meet the changing wants of commerce and trade; while the other instructs the committee to report to the Senate measures which will secure at the earliest practicable day a return to specie payments.

"The one contemplates legislation in respect to the currency, while the other looks solely to measures for the redemption of the existing currency in coin, and that too at the earliest practicable period.

"To be sure, these resolutions are not legislation. They do not bind Congress to do any thing upon the subject-matter, nor do they undertake to define *when* the earliest practicable day for the resumption of specie payments shall be.

"It is now nearly five years since Congress made a memorable pledge to the same effect. I read from the act of March 18, 1869:

And the United States also pledges its faith to make provision at the earliest practicable period for the redemption of the United States notes in coin.

"What could sound fairer to the ear? What could be more explicit? What could the United States pledge, possessing higher guarantee to the holder of its notes, than its faith? Well, that 'earliest practicable period' when this redemption should take place has not come yet; and yet, as everybody is aware, the intervening years have been marked by a higher degree of prosperity than this nation has ever known. Never, during all our national life, has there been such diversified industrial activity; never for the same period of time have the products of labor been so large, or our commerce, foreign and domestic, so great; never was labor better paid. In fine, in agriculture, mining, and manufactures especially, in commerce at home and abroad, in the increased acreage of the land cultivated, in the founding of new communities, in the extension of railways and the development of our great natural resources, the nation never exhibited greater signs of prosperity. During all this time we proudly pointed to our paper currency as the best the country had ever possessed. We boasted of its uniformity in value in all parts of the United States, of the excellence of its engraving, rendering counterfeits the next thing to impossible, and, above all, our pride was that it rested upon the wealth and credit of the country for ultimate redemption. We read upon the face of every greenback the promise of the United States to pay the bearer so much money, and upon the face of every bank-note the promise of the bank to pay in money or greenbacks on presentation. So that, while the bank-note might be redeemed in a United States note or greenback, we knew that the greenback could be redeemed in nothing but coin. It was not a promise as in the case of a national-bank note to redeem in another promise, but to pay the bearer so many dollars. And that was interpreted, and rightly too, to mean metallic dollars—gold or silver—the money of the Constitution, the recognized standard of value of the world.

"Indorsing this view, came first the declaration by Congress in March, 1869, in the act to strengthen the public credit, and then the decision of the Supreme Court. There is nobody, I take it, that denies at this day this interpretation of the nation's obligation written upon the face of every greenback. The promise is to pay the bearer so many dollars, either at Washington or at the office of the assistant treasurer in New York. That means that they shall be paid on the demand of the holder. They are not post-notes, but demand-notes, due whenever presented at the place where payable for payment. If they were the notes of an individual or a bank, no one would doubt the nature of the obligation nor the effect of a refusal to pay. The notes would go to protest, the individual into bankruptcy, and the bank into the hands of a receiver.

"While this is the strict legal view of the obligation of the greenback, I know it is urged that greenbacks were issued at a time of great national necessity because there was very little specie in the country at the time, inadequate entirely to the wants of Government, and not available on account of the suspension of the banks, and because there was an absolute necessity for a larger volume of currency which possessed the functions of money. The Government, at that time in close grapple with the rebellion, needed money to carry on the war. The soldiers and sailors must be paid; they

must be fed and clothed, and supplied with arms and munitions of war and transportation. A great deal of money was needed; at first a million a day; then two millions, and finally three. Congress, driven to its wit's end to devise the ways and means to procure it in such amounts as were needed, devised in a happy moment of inspiration the greenback scheme, which has accomplished such a wonderful success. But it was in its nature a forced loan. You compelled soldiers, contractors, and every creditor of the Government, to accept as money, and in full discharge of the debt, the promissory notes of the Government. It was as if a man deeply embarrassed, but with plenty of property, should call his creditors around him and say, 'Gentlemen, I owe you and haven't the money to pay. Take my due-bills with my blessing. When I am able to pay, I will take them all up.' There was just this difference in the two cases: Congress compelled the creditor to accept the due-bills. The citizen debtor had no such power. The debtor in the one case could be sued on his due-bills if not paid on presentation, while the United States could not be. The due-bill of the citizen was a simple evidence of debt; the greenback possessed the function of paying debts.

"When the act of Congress passed creating greenbacks and imparting to them the qualities of money and making them a legal tender for all debts public and private, except duties on imports and interest on the public debt, its constitutionality was questioned all over the country. It was regarded and treated as a war measure necessary for the exigencies of the times and justified only by that necessity. When we looked into the Constitution for the power, we found these words, and no more, in the enumeration of the powers of Congress:

> To coin money, regulate the value thereof, and of foreign coin.

"We found the States prohibited from coining money, emitting bills of credit, and from making any thing but gold and silver coin a tender in payment of debts. Thus stood the Constitution.

"The objectors argued that money could not be coined from paper, leather, or any other material than metals, and that the framers of the Constitution intended from the clause I have quoted, and from the context, to confer upon Congress the simple power of coining money from gold, silver, and copper, the only metallic currency then in use in the world, and that this was all the power conferred on it.

"On the other hand, it was urged that as the States were prohibited from making any thing but gold and silver coin a tender in payment of debts, there was in the very terms of that prohibition an implication that Congress might do what the States could not, that is to say, make something else than coin a legal tender in the payment of debts. This view, as we know, prevailed, and it is too late now to draw in question the constitutionality of that legislation on which the greenback issues rest.

"But the law, as originally passed, was as just as the necessities of the case allowed. Congress had provided as to the bonds, which had a long time to run, that the interest should be paid semi-annually in coin, and those holding greenbacks were allowed to fund them in these bonds so as to compensate them for any damage or loss in being kept out of the promised coin when the Treasury could not or would not redeem them upon presentation.

"I repeat that the holder of the greenbacks could at his option, at any time, convert them into the time obligations of the Government bearing six per cent. interest, which contained explicit guarantees for the payment of both principal and interest. Upon these obligations the Government has never made default, but scrupulously has observed its promises; and we have seen, as the gratifying result of its good faith, these obligations constantly rising in value, until they now are, and for some time past have been, worth their face in gold both at home and abroad, and even command a premium.

"But Congress, in an evil hour, as I think, repealed that portion of the law allowing the conversion of greenbacks into bonds at the option of the holder, the repeal to take effect after the 1st of July, 1868. As at first issued there was this indorsement upon them:

> This note is a legal tender for all debts public and private, except duties on imports and interest on the public debt, and is exchangeable for United States six per cent. twenty year bonds, redeemable at the pleasure of the United States after five years.

"The act of March 3, 1863, which destroyed this option after the 1st day of July following, was an act of injustice, because it was a breach of the plighted faith of the United States to those who had taken them in good faith, relying upon this guarantee that they could at pleasure exchange them for bonds. From that time forth the greenbacks have been at a discount as compared with the bonds, and must continue so until Congress shall take measures either to allow their conversion into interest-bearing bonds or compel their redemption in coin.

"As the matter stands now, we have $356,000,000 of this legal-tender issue afloat, circulating as money, without any power in the holders to get the promised coin, or to exchange them for bonds. They are dishonored promises to pay, or, as my friend from Vermont the other day styled them, 'engraved falsehoods.' This state of things has continued for ten years, and is likely to continue for ten years to come unless Congress takes measures to wipe away the dishonor.

"But how shall this be done? If we count the $44,000,000 United States notes retired while Mr. McCulloch was Secretary of the Treasury, and until recently supposed to be redeemed and canceled notes, as a part of the valid greenback issue, it will require $400,000,-

000 of coin to redeem them. When redeemed, of course, the national banks will be compelled to redeem their circulation in coin, which will require $354,000,000 more.

"But suppose that the Government after redeeming them continues to treat them as lawful money and pay them out in discharge of its debts and in the payment of current expenses: They must in that case be redeemed again, and as often as they are issued, if the holder of them prefers coin. Thus it will be seen that Congress when it enters upon the work of redemption must take measures not only to redeem them once, but as often as they are reissued. And right here comes the difficulty. While no doubt it is practicable to borrow $400,000,000 of gold to redeem the entire issue once, yet if we are to maintain redemption we must be prepared to supply ourselves with the requisite amount of coin not only to resume, but to maintain resumption.

"I repeat, sir, where is the coin to come from? If the Treasury, in addition to what is in its vaults now, could command all the coin in the country, in the hands of the banks and individuals, nobody supposes that there is enough at this time to redeem one-half of the outstanding greenbacks. There has been ever since the war a constant drain of the precious metals abroad. We are paying about $100,000,000 of coin a year in the shape of interest upon our national bonds, and probably more than one-half of them are held in Europe, where the interest must go. In addition to this there is a large volume of indebtedness of the States, cities, mining and manufacturing companies, and railway corporations, held abroad, amounting in the aggregate to a greater sum than the national bonds, which are in the hands of foreign capitalists and on which we pay interest. The whole product of our mines, large as it is, is insufficient to pay this interest account. More than this, and worse than all, the balance of trade every year for the last ten years has been against us, and this balance has to be adjusted in coin or its equivalent. Until recently there has been a constant outflow of specie from this country to pay these balances. We cannot discharge them in our greenbacks or national-bank notes. They can be paid only with money, such money as is recognized by the commercial world; that is, gold and silver.

"I should not omit to say in this connection that it is estimated that American citizens traveling in Europe spend $75,000,000 a year, of course in gold.

"Mr. President, it is mournful to study those monthly reports emanating from the Treasury Department, which exhibit the state of our commerce with foreign countries. On the one hand, what we export is in the main the necessaries of life—such things as people must have to subsist on and clothe themselves with. To be sure, they are comprehensively classed as commodities, the growth, produce, and manufactures of the United States; but when you come to analyze the tables you find what is exported is chiefly raw material, the products of the soil, the mines, the quarries, and the forests; but where are the manufactures? Leaving out the oils, mineral and animal, a few sewing-machines, mowers, and reapers, a little leather, and certain classes of machinery, and our tables of exports present a dreary barrenness of the products of skilled labor. Thus, last year, we exported over $227,000,000 in value of unmanufactured cotton, while all the manufactures of every kind, produced from that material, exported by us, amounted to less than $3,000,000 in value. We exported last fiscal year in gold and silver bullion, and in gold and silver coin, $76,905,546. That exhausted and more than exhausted the entire products of our mines, whose yearly income is rated at, I believe, about $58,000,000

"In the mean time, what have we been importing during the last fiscal year? Here again we must turn to the tables. The total of those imports, including both those dutiable and free of duty, was the startling sum of $663,410,597. I embrace in this statement all commodities entered for immediate consumption and those entered for warehousing, which mostly go into consumption ultimately.

"Now, sir, contemplate a few of the items. I want to show in this connection what we recklessly and needlessly import, to the detriment of our domestic industries, which could just as well have furnished to our hand most of the articles we have run in debt to buy, or which we were better off to do without entirely.

"I begin with the manufactures of wool. We imported—

Cloths and cassimeres	$16,000,000
Shawls, a little short of	3,000,000
Carpets, about	4,333,000
Dress-goods, about	19,500,000
Hosiery, shirts, and drawers	613,000
Other manufactures of wool not specified	7,500,000
Total manufactures of wool	$50,946,000

"We imported of—

Leaf-tobacco	$6,500,000
Cigars	3,320,300
Perfumery and cosmetics, a little over	1,000,000
Precious stones, a fraction short of	3,000,000
Printing-paper, writing-paper, paper hangings, papier maché, and other manufactures of paper, upward of	2,000,000
Paintings, chromo-lithographs, and statuary, say	1,330,300
Musical instruments	1,000,000
Leather of all kinds	6,750,000
Gloves of kid, and all other, of skin or leather, say	3,500,000

"We imported of—

Pig-iron	7,203,769
Bar-iron	5,388,481
Railroad bars or rails of iron	10,541,036
Hardware	6,643,513
Machinery	1,693,966
Muskets, pistols, rifles, and sporting-guns	822,119
Steel ingots, bars, sheets, and wire	4,155,284
Railroad bars or rails of steel	9,199,866
Cutlery	2,234,317
Total of iron and steel and their manufactures	$47,782,130

"I have omitted other varieties of iron and

The sum total of legal-tender notes and of national currency in circulation on that day was $[illegible]

But this expressed only a part of our paper currency.

On November 1, 1873, there were 1,980 national banks in existence, having an authorized circulation of $354,000,000, and the actual circulation of $340,260,149; the sum of [illegible] being still due to banks organized or in process of organization.

The paper currency of all kinds in circulation, it will thus be seen, is $788,056,606; greater by two-thirds than the entire paper circulation of the United Kingdom of Great Britain and Ireland in August last. To this amount be added whatever sum has been drawn from the forty-four million greenback reserve, so called. The actual paper circulation at this time, including the bank reserves, is not probably far from $750,000,000; making nearly $19 per capita to our population, estimated at forty millions.

By the census of 1870 the entire wealth of the country was estimated at about thirty thousand million dollars, so that the currency of the country as compared with its wealth is not far from four per cent.

Now, it is important to understand what relation the present volume of our currency bears to that furnished by the banks of the several States before the war. That circulation in the year 1860 amounted to $207,102,000. So that it will be seen that the national bank notes and the legal-tender notes now constituting our circulation amount to more than

three and a half times the entire circulation authorized in 1860 by all the States of the Union.

"The bank circulation of the States in 1862, previous to the greenback issue, had increased somewhat over that of 1860, being $238,671,210; and the amount *per capita* at that time was $7.59, and the ratio of this circulation to the wealth of the country was at that time 1½ per cent. I know that gold and silver constituted in 1860 and 1861 no inconsiderable part of the circulating medium of the country, but I am not able to state the exact ratio it bore to the paper currency—probably not greater, however, than one-third or one-half at most.

"I have given these statistics to the Senate to show that, whether we measure the present volume of our currency by the wealth or population of the country, the percentage is largely in excess of the paper currency, gold, and silver, which constituted the circulating medium of the country in 1860 and 1862.

"I have not adduced the facts I have given in respect to the amount of our currency, nor instituted the comparison that its volume bears to that which we had in 1860 and 1862, for the purpose of showing that no more currency is needed at this time to carry on the business, trade, and commerce of the country. Indeed, sir, it is quite evident that at certain seasons of the year, in the fall and winter months especially, there is great stringency in the money market—more money being required to purchase and move the crops to market than can be commanded. The President, in his last message to us, has very plainly said so, and it is very clearly implied in the reports laid upon our desks of those gentlemen managing the national finances, whose opinions command our respect. I refer to the Secretary of the Treasury, the Treasurer, and Controller of the Currency; all of them qualified, by the positions they hold and their means of information, to speak to us with authority upon this question.

"The voice of the entire West, if I except capitalists and bankers, who have money to loan, is emphatic that we require more currency. There is one test which I regard as demonstrative that we have too little money. I refer to the extraordinary high rate of interest which prevails throughout the Western country. There must be a real scarcity when for legitimate purposes money commands 12 per cent.

"But, Mr. President, I did not rise to discuss this precise question, nor the merit of the many schemes offered to graduate the currency to the wants of production and trade at different seasons of the year. That is a deep and very difficult question—I mean the adjustment of our currency to the legitimate wants of business, by a plan comprehensive enough to embrace the present and future, which shall relieve the present distress, and which shall look forward steadily to a return to specie payments, when all the currency now passing as money and all we shall add to it shall be money in fact, in its ready convertibility into gold and silver. In voting for the resolution submitted by the Committee on Finance, I wish it to be distinctly understood I do it in the expectation that the committee will furnish to the Senate a plan by which the volume of the currency may be increased at needed seasons without undue inflation. But we must constantly guard against doing any thing which shall disturb the present system of values, derange prices, or affect materially existing relations between creditors and debtors. Any legislation which shall cause these results—will be vicious and disastrous."

Mr. Fenton, of New York, said: "I do not concur with a prominent Senator on this floor, as reported at a recent lecture by him in New York, that an unfavorable balance of trade is the prime cause of our financial evils. It is bad enough, but, more strictly speaking, an unfavorable balance is rather the effect than the cause. While, therefore, a more favorable state of trade to us is altogether desirable, we shall best promote such a condition by making our currency equivalent to gold. The immense expansion of 1836 carried the consumption of foreign commodities up to $10.93 *per capita* under the medium tariff; while under a still lower one, in 1840, the expansion was but $5.21. In this connection, it is not out of place to refer to a coincident increase of trade in the two most notable periods of currency expansion in our previous history. I embrace the year just mentioned, and come forward to another which is still fresh in our recollection. I do not here dwell upon the effects of the tariff, because it does not bear upon my argument upon this point. I only ask that it be kept in mind that taxation not only fails as a remedy for such a condition, but may even aggravate the difficulty.

YEAR.	Amount of Currency.	Amount of Imports.	YEAR.	Amount of Currency.	Amount of Imports.
1835	$186,000,000	$149,895,742	1855	$377,000,000	$261,468,520
1836	255,000,000	189,980,035	1856	408,000,000	314,639,943
1837	276,000,000	140,989,317	1857	445,000,000	360,890,141
1838	200,000,000	113,717,404	1858	841,000,000	282,613,150

"In the amount of currency here given I embrace both the circulation and deposits. The affinity observable in this table is broken, as will be seen, only in a single instance, and that is capable of a special explanation, as of a condition somewhat similar during the last three or four months. If we were to examine the statistics of reports for the same periods, we should perceive a corresponding tendency to decline, though not as certain and uniform

as the increase of imports. It will not do to congratulate ourselves on the past fall trade as a real change in our favor. Whatever there is of it may be traced to transient and extraordinary causes. If it were otherwise, our case would be even more critical, in that it would be evidence of a disturbed condition in Europe, which might tend to weaken confidence in our securities which are held there. Our indebtedness over the sea is so great and our commercial relations are so intimate and dependent that trouble there would increase our embarrassment here.

"Here I am naturally led to the inquiry as to the amount of gold in the country and its supply. The amount in the States east of the Rocky Mountains in 1861 has been given by competent authority at $165,000,000. The annual productions of the mines average about $60,000,000, making a total for the thirteen years beginning with the fiscal year which closed June 30, 1861, and ending June 30, 1873, of about $780,000,000. The imports of coin for the same period were $248,459,652. On the other hand, the exports of coin and bullion amounted to $922,641,003. Allowance must also be made for a portion of the production of the mines which have been employed in the arts. What amount has been devoted to this use cannot be accurately determined; but if I fix it at $120,000,000 for the thirteen years it will be low enough. Treating the amount brought into the country by immigrants as offset by the amount taken away by travelers, the balance will stand thus:

Coin in 1861		$165,000,000
Production of mines for thirteen years		780,000,000
Imports for same time		244,459,652
Total		$1,189,459,652
Exports for thirteen years	$922,641,003	
Used in the arts	120,000,000	
		$1,042,641,003
Coin in Atlantic States, 1873		$146,816,649

"I have no doubt this sum is equal to the present amount of specie, notwithstanding the larger importations during the fall months—a sum about equal to the annual interest upon our indebtedness held abroad. To state the case another way: The average amount in the Treasury during the past few years has been about $80,000,000. The banks hold also possibly $25,000,000, and $40,000,000 would be a liberal estimate for all that may be found in other hands; making not far from $145,000,000, or less than one dollar of specie to every five of the paper issues. How are specie payments to be maintained with such a disproportion? Gold, if left free, will tend in the direction where there is the greatest demand. It may accumulate from temporary causes for a brief period, even when there is a redundancy of paper currency, but it will surely flow away again to other countries where it will have employment as a standard of value. We have, as matters now stand, little reason to hope for any permanent accumulation here. This position is fortified by the movements of specie during the last six years:

IMPORTS.		EXPORTS.	
YEAR.	Amount.	YEAR.	Amount.
1868	$14,188,168	1868	$93,784,102
1869	19,807,876	1869	57,138,280
1870	26,419,179	1870	58,155,666
1871	21,270,024	1871	98,441,968
1872	13,743,689	1872	79,877,534
1873	21,480,937	1873	84,608,571

"It thus appears that during these six years the net exports of specie amounted to $855,096,268, while the whole production of the mines for the corresponding period has been $860,000,000.

"This leads me to repeat that for a resumption by the Government there must be a reduction of paper, so that paper and specie shall bear a recognized relation to each other."

Mr. Morton, of Indiana, said: "Mr. President, I do not desire to make a speech on this subject, but before voting on this resolution I wish to give some reasons for my vote. In the first place, I desire to call the attention of the Senate to what this resolution is. It contains two propositions, and I will now read the first one:

That it is the duty of Congress during its present session to adopt definite measures to redeem the pledge made in the act approved March 18, 1869, entitled "An act to strengthen the public credit," as follows:

And the United States also solemnly pledges its faith to make provision at the earliest practicable period for the redemption of the United States notes in coin.

"The question first presented is, whether it is the duty of Congress at this session to take definite measures for the redemption of the United States notes in coin, for that is the pledge given in the act of 1869. I agree that the faith of this Government is pledged to redeem what are called greenbacks in coin. I agree to that as fully and as strongly as anybody; and I further agree that we are to keep steadily in view what is called a return to specie payments; but the question is, whether it is our duty at this session of Congress, at this time, in the present condition of the country, to look to and adopt such measures; and at this point I differ with the committee. There is a wrong time to do a right thing; and in my opinion this is not the time in which we should adopt definite measures—to redeem these notes in coin—unless the time be put off so far that it will not increase the present embarrassment or intensify the effects of the panic upon the country.

"The Senator from Massachusetts (Mr. Sumner) has repeatedly declared before the Senate, and I think in substance the other day, and that declaration was made very strongly this morning by the Senator from Wisconsin (Mr. Howe), that every day we failed to redeem the legal-tender notes the faith of the public was broken; that we were 'lying,' and that the

country was deceived. I desire to enter my protest against that language. The Government is not liable to that charge. The Senator from Massachusetts said the other day in his argument that it was a promise to pay coin upon demand, and that is the literal effect of that promise; and yet when that promise was made it was understood by everybody that it was to be broken for an indefinite length of time. If it was to be redeemed literally and at that time, there would have been no use in issuing greenbacks. The understanding of the country was, and nobody can be deceived upon that point, that the Government was to redeem those notes in coin when it was practicable to do so, and not before; and the question may be fairly presented, Has it up to this time been practicable?

"Mr. President, is this the time (and that is the main question I rose to discuss) to adopt definite measures to return to specie payments? I submit that we should come to specie payment in prosperous times, and not in adversity; that any definite measures now to return to specie payment in a short time will create a further shrinkage of values. Everybody understands that. And now, when we want relief, when we want to come out from under the load that is upon us, it is proposed that we shall adopt measures that will increase that burden, and diminish the general prices of property and labor.

"Mr. President, let me ask another question. It is said, and that has been the argument, that this is a good time to return to specie payments. I have heard it said by able men, 'We have got pretty nearly down to the bed-rock now; it is time to return to specie payments.' I ask this question: Has this panic increased or does the present condition of things increase the facility of returning to specie payments? I say no. Why? Because, while property has decreased in value and there has been a vast shrinkage in the price of property and in every thing, still the same difference exists between greenbacks and gold that existed before the panic. Gold has now an average premium of ten per cent. So it had before the panic took place. Therefore, if you still go down to gold value you must go down ten per cent. more. So that the panic has not increased the facility of returning to specie payments, for you will have an additional shrinkage on the top of the shrinkage you have now.

"Sir, the panic was not caused by the depreciation of the currency; and if it was not caused by that, I ask how you are to relieve the effects of the panic by taking steps to come to specie payments? The good physician always looks to the character of the disease, and what brought it about, before he attempts to prescribe; and when we look to the cause of this panic we find that it was not caused by any defect in the currency. The people have faith in our currency, more than they have ever had in any paper currency this nation has had heretofore. While we may abuse greenbacks, I tell you the nation has faith in them. The great body of the people love them, and nearly all of them want more. What was it that caused this panic? Why, sir, it was just such a cause as operates in countries where they have no currency but gold and silver; and I make the statement that panics occur quite as frequently where the currency is gold and silver as where it is paper convertible into coin. They have had two panics in England when their currency was upon a gold basis since we have had one in this country. Panics are just as likely to occur in countries where they have nothing but gold and silver as in other countries. Panics do not spring out of the character of the currency generally, but out of some sudden and unexpected event. A panic in finance is just like a panic in the army. It is generally caused by some sudden event that confuses the minds of men and destroys confidence, and it has nothing to do with the character of the currency.

"Then, Mr. President, I desire to meet the idea that this panic was brought about by a defect in our currency; and I assume that it was not, and, assuming that proposition to be incontrovertible, I will pass on a little further.

"Money is scarce—made scarce by a want of confidence. It is all in the country. Men have it, but they are hoarding it; and they are hoarding paper-money as it was never hoarded before, showing the confidence the people have in this currency. They are hoarding our paper-money just as they hoarded gold and silver in other times. Men were willing to convert every thing they could into your greenbacks, national bank notes, and bonds. Money became scarce by the panic, because it was not in circulation.

"Now, sir, what is the real remedy for a panic? I ask that question, and I should like at some time for the distinguished chairman of the Committee on Finance to answer it. Is it by the resumption of specie payments? When before was it ever proposed as a remedy for a panic? I should like to know the single time that it was ever proposed before as a remedy for a panic. Why, sir, a suspension of specie payments has generally been the remedy—not the resumption. I call the attention of the Senate to the experience of banks and governments in every country, and I maintain the proposition that so far from resumption being regarded as a remedy for a panic, suspension has often been the remedy. In 1837, when that panic took place, the solvent banks of the country were saved only by suspending specie payments. Take a single illustration: The State Bank of Indiana, one of the best banks at that time in the country, was hard run and could not discount a dollar. The Legislature came together and authorized the banks to suspend for five years. Relief was at once obtained; the bank began to discount freely;

finances of the world; that the price of gold would rise, and thus the effort at redemption defeat itself; and that to prevent its flow to us, various devices and hostile legislation would be resorted to by other nations. All this is probably true, if the proposal was to secure this accumulation in a short period of time. And to meet that difficulty the proposed plan avoids fixing any period within which the accumulation shall be made, or the gold purchased, and it fixes no specific time when the redemption shall commence. The proposed act leaves that necessarily to the discretion of the Secretary, who would act in view of the price of gold from time to time, and would avail himself of those products of our own mines, which have never yet constituted a portion of the circulating medium of the world—a product which, I understand, is estimated to amount this year to $60,000,000.

"We at one time had in our Treasury $100,000,000; and if we had that amount now, with the power in the Secretary to reissue the redeemed notes at par for gold, and in default of gold to redeem with six per cent. bonds, we could, without risk of suspension, commence to redeem in coin to-day.

"2. The next objection is, that the plan proposed would create a too sudden transition in the modes of business, and would produce a shock injurious to the country. I agree that resumption should not be sudden; and such is not the purpose of the bill. Due notice would be given by the passage of the act that the Government was moving slowly, though irresistibly and inevitably, to the fulfillment of its provisions and to resumption. The act would fix no time when the resumption would commence; that would depend on what success the Secretary had in obtaining the coin on sufficiently favorable terms, and when, in view of the situation of the money market, it was wise to commence the payment of coin; of all which the public, week by week, would have full notice.

"Thus the objection as to impossibility of at once obtaining the gold, and the objection that the plan would be a shock to business, are met by having no arbitrary and definite time fixed for resumption, but having taken the firm resolve to redeem, having conferred on the Secretary the power to obtain the means wherewith to redeem, it is left to the Secretary, fully informed as to all the circumstances in his discretion, exercised in full view of the nation, to fix the day to commence resumption.

"3. Another objection to the plan is, that combinations would be made to drain the Treasury of the gold, and resumption would be a failure—that it would be followed by suspension.

"The one important point in any attempt at resumption, a consideration in importance overshadowing all others, is, that when we commence to redeem, the impossibility of defeat or failure must be apparent.

"It must come so slowly as to produce no jar, and so inevitably as to disarm opposition. The Secretary of the Treasury should have the power to issue $225,000,000 of these six per cent. bonds. He should have the right to reissue the redeemed United States notes in exchange for coin at par; to avoid possible failure he should have the right to redeem the United States notes in sums of $1,000 with such of the bonds as remained unissued. With such powers and resources, it would be apparent that resumption could not be defeated, when the Secretary, selecting the opportune time, should say the resumption would begin. That time he would select in view of the accumulation of gold he had made, in view of the condition of the money market, and in view of the permanent approximation in value the United States notes had made to gold. The passage of the proposed act, rendering it certain that at some time the United States notes were to be redeemable, would do much to raise their value in the market, and a much less gold reserve in the Treasury would be required for redemption than I would be willing now to state. Perhaps few would agree with me as to the amount."

Mr. Schurz, of Missouri, said: "I shall now approach the question of financial policy. Is there any one among us who, under ordinary circumstances, when we had a metallic currency in the country, would have thought of substituting for that metallic currency an irredeemable Government paper-money? If there is any one I have not heard of him. We all know that there was a time when the great leaders of public opinion in the United States—a large majority of them at least—considered it unconstitutional to make any thing a legal tender save the precious metals. I might quote for hours from the sayings of the great men of the past, whose names are mentioned only with respect. I state this not for the purpose of reviving a discussion on the constitutional point, which would now be too late, as it has been otherwise decided, but to give a specimen of the old-fashioned way of thinking which quite generally prevailed before the war, and which was disturbed only by its extreme necessities. Leaving the constitutional question entirely aside, certainly no consideration of financial policy was then advanced to urge the substitution of irredeemable legal-tender paper currency for gold dollars. Nobody thought of such a thing.

"The reasons why the precious metals were considered the most reliable measure of value and the best available tool of exchange were so generally accepted then, and are in fact so little called in question now, in this debate at least, that I do not feel called upon to go into an elaborate defense of a position which is virtually not attacked. Even the opponents of the resolution under debate on this floor seem to recognize them as valid, for they admit that only actual distress has forced us to give up the specie basis, and that at some time we

must return to it. I think even the honorable Senator from Indiana on my left (Mr. Morton), and the honorable Senator from Michigan on my right (Mr. Ferry), want to be considered hard-money men in a certain sense.

"I am well aware that in the country all sorts of schemes are broached by which an irredeemable paper currency is to be made a perpetual institution. Every one of us is fairly flooded with pamphlets from all sides, setting forth the wildest conceptions, which pretend to be new discoveries, but, in fact, wittingly or unwittingly, are only repetitions of schemes which have always appeared in the same way in every country when an irredeemable currency had entangled a nation in great embarrassments which it was difficult to overcome. Most of them only show that a disturbed condition of things is apt to throw the minds of men out of balance; and that while an irredeemable currency was but recently looked upon as a disease, patients may sometimes become so afraid of a cure that they positively fall in love with their ailment. I will not spend any time in discussing any of these schemes now, but shall take them up when they come before us. I merely mention them to point out to the inflationists on this floor in what direction they are tending.

"Now, sir, have we any inflationists on this floor? Those who oppose the resolution repel the name. They do not like it. There is a certain odious flavor about it. They say that they are not opposed to resumption, but want to put it off to a better time. But what do they propose now? There is the Senator from Indiana (Mr. Morton), who proposes an increase of our currency at least to the amount of $44,000,000. There is the Senator from Michigan (Mr. Ferry), proposing an increase of our irredeemable currency to the amount of at least $100,000,000. Now, gentlemen, I call this by its right name—inflation. Whatever circumlocution they may use to disguise the fact, it remains after all what it is.

"Thus we have the alternative plainly before us—resumption or inflation. The inflationists all speak of our business embarrassments as the reason why resumption should be put off and inflation resorted to.

"Now we come to the second question—the remedy to be applied to the difficulties surrounding us. At an early stage in this debate the Senator from Indiana and the Senator from Michigan were ready with their answer. The Senator from Indiana says: not resumption, but suspension of specie payments has always with good effect been used as a cure for panics. When listening to him I wondered how the panic could have occurred at all here at this time, since we were already in a decidedly suspended condition, and since the remedy had been applied for eleven years constantly without interruption before the disease broke out. Now, what does the Senator from Indiana want? Does he want to cure this crisis by suspending us still more? He may by his advice suspend us more, but certainly he will not cure the crisis.

"Thus the relief sought by an inflation of our currency turns out to be a mere delusion, as anybody who had given any attention to the subject always knew it must; but there are people who seem to be clinging with a childlike faith to the ridiculously absurd notion that by printing and issuing more Government promises to pay we shall increase the wealth of the country. We might call it a ludicrous form of superstition, if not insanity, were it not so serious and sad. Now, suppose for a moment we could, by some sort of witchery, wipe out all existing engagements in which money is involved, such as debts, contracts, and so on, and then multiply all the greenbacks and national-bank notes in the possession of the people by ten, so that, waking up one beautiful morning, every individual in the United States would find ten greenback dollars in his pocket, or safe, where the day before he had only one. What a jubilee there would be among fools! But what a disappointment as soon as the true state of the case became generally understood! Does any sane man think that by such multiplication the wealth of the country would be increased one farthing? It is evident that it would not.

"Now, since all Senators admit that ultimately we must come back to a specie basis, the only question to be discussed in that respect seems to be that of method and opportunity. The difficulties which stand in the way of redemption I see clearly enough. In considering them I have at once to enter my protest against two plans suggested, which, as I believe, involve dangerous delusions. The first is that proposed by the Senator from Michigan (Mr. Ferry), that we should first expand the currency in order to revive prosperity, which revived prosperity would then enable us to return to specie payments with greater ease and facility. The second is that proposed by the Senator from Massachusetts (Mr. Boutwell), to do nothing, but let things remain as they now are, and to wait until the business of the country will have grown so much that its necessities will bring gold and paper to a par by a natural process of development.

"I approach now the proposition of the Senator from Massachusetts (Mr. Boutwell), that we should sit still, do nothing with the currency, waiting patiently and quietly for the development of the resources of the country and the increase of business to bring greenbacks and gold together in value, as he said in his speech a few days ago. When in his opinion that period is likely to arrive the Senator did not tell us, and yet an answer to just that question would be a very valuable piece of information, coming from the principal champion of that policy.

"Now, I repeat I do not under-estimate the difficulties that stand in the way of resump-

tion; but I declare as my candid opinion that since the first year after the close of the war, when our irredeemable currency system had not so deeply eaten its way into the whole economic life of the nation, and when the business of the country had to adapt itself from the ways of war to the ways of peace—a moment which unfortunately we missed — the present time is the most opportune for the inauguration of a resumption policy; and if we lose that opportunity again we shall have to wait for another and perhaps more disastrous revulsion to see it return. And it is just from the present crisis in our economic affairs that the new opportunity springs. The reason is very simple. Many of the difficulties which, it was feared, would accompany and follow resumption have already been anticipated by the crisis. Much of that preparation which must precede resumption in order to avoid disastrous embarrassment has already been performed by the crisis.

"As to the resolution now under discussion, I shall vote for the amendment of the Senator from Delaware (Mr. Bayard), in which I find the simplest and clearest statement of the object I pursue. If that should fail, the resolution introduced by the honorable chairman of the Committee on Finance will of course have my support. Let me express the hope that at an early day a bill embodying a method of a return to specie payments will be laid before us."

Mr. Sherman, of Ohio, said: "Mr. President, at the outset of my remarks I wish to state some general propositions established by experience, and the concurring opinions of all writers on political economy. They may not be disputed, but are constantly overlooked. They ought to be ever present in this discussion as axioms, the truth of which has been so often proved that proof is no longer requisite.

"The most obvious of these axioms, which lies at the foundation of the argument I wish to make to-day, is that a specie standard is the best and the only true standard of all values, recognized as such by all civilized nations of our generation, and established as such by the experience of all commercial nations that have existed from the earliest period of recorded time. While the United States as well as all other nations have for a time, under the pressure of war or other calamity, been driven to establish other standards of value, yet they have all been impelled to return to the true standard; and even while other standards of value have been legalized for the time, specie has measured their value as it now measures the value of our legal-tender notes.

"This axiom is as immutable as the law of gravitation or the laws of the planetary system, and every device to evade it or avoid it has, by its failure, only demonstrated the universal law that specie measures all values as certainly as the surface of the ocean measures the level of the earth.

"I purpose now to pursue the argument further, and to prove that we are bound both by public faith and good policy to bring our currency to the gold standard; that such a result was provided for by the financial policy adopted when the currency was authorized; that a departure from this policy was adopted after the war was over, and after the necessity for a depreciated currency ceased; and that we have only to restore the old policy to bring us safely, surely, and easily, to a specie standard.

"First, I present to you the pledge of the United States to pay these notes in coin 'at the earliest practicable period.' In the 'act to strengthen the public credit,' passed on March 18, 1869, I find this obligation:

> And the United States also solemnly pledges its public faith to make provision at the earliest practicable period for the redemption of the United States notes in coin.

"Without renewing the discussion in regard to the nature of these notes, or quoting the decision of the Supreme Court of the United States, or the declaration of the various acts of Congress from 1862 down, I rest upon this pledge of the public faith. Under what circumstances was it made? The condition of our currency, the obligation of our bonds, the nature of our promises, had been discussed before the people of the United States in the campaign of 1868; various theories had been advanced; and the result was that those who regarded the faith of the nation as pledged to pay not only the bonds of the United States, but the notes also, in coin, prevailed, and General Grant was elected President of the United States. On the eastern portico of the Capitol, on March 4, 1869, he made this declaration:

> A great debt has been contracted in securing to us and our posterity the Union. The payment of this, principal and interest, as well as the return to a specie basis, as soon as it can be accomplished without material detriment to the debtor class or to the country at large, must be provided for. To protect the national honor every dollar of Government indebtedness should be paid in gold, unless otherwise expressly stipulated in the contract. Let it be understood that no repudiator of one farthing of our public debt will be trusted in public place, and it will go far toward strengthening a credit which ought to be the best in the world, and will ultimately enable us to replace the debt with bonds bearing less interest than we now pay.

"The Congress of the United States, in order to put into form its sense of this obligation, passed the act 'to strengthen the public credit,' and the last and most important clause of this act is the promise which I have just read, that these notes should be paid 'at the earliest practicable period' in coin.

"Mr. President, we see, then, the effect of this promise. And I here come to what I regard as a painful feature to discuss—how have we redeemed our promise? It was Congress that made it, in obedience to the public voice; and no act of Congress ever met with a more hearty and generous approbation. But I say

to you, with sorrow, that Congress has done no single act the tendency of which has been to advance the value of these notes to a gold standard; and I shall make that clearer before I get through. Congress made this promise five years ago. The people believed it and business men believed it. Four years have passed away since then, and your dollar in greenbacks is worth no more to-day than it was on the 18th of March, 1870; and no act of yours has ever tended to advance the value of that greenback to par in gold, while every affirmative act of yours since that time has tended to depreciate its value and to violate your promise.

"Mr. President, these are simple facts, although it may be painful for us to discuss them. I do not say that Congress, in this matter, disregarded the will of the people, because there was a public feeling against any measure which tended to advance the value of the greenbacks to the gold standard. I am not complaining of Senators or Members who represent their constituents, but I do say that the fact stands out as clear as light, that the Congress of the United States which made this promise has done no single act the tendency of which even leads one to suppose that it will ever redeem its promise.

"Sir, let us see what has been done. We have paid $400,000,000 of the public debt, and we boast of it—of debt not due for years. We have paid to redeem that debt a premium of $40,000,000. In other words, we have paid $440,000,000 to redeem four hundred millions of debt not yet due, and we have not redeemed a single debt that was due in March, 1869; but, on the contrary, we have increased the kind of debts then due more in proportion than the increase of our population. And, sir, while our promise did advance the credit of our bonds and of our notes alike, and while the execution of that promise as to our bonds has advanced our bonds to above par in gold, yet we have done nothing whatever to redeem the second clause of that pledge; but, on the other hand, all we have done has been done with the intention and with the effect of depreciating the value of our notes.

"Mr. President, I am not here to find fault with individuals; but I do say that the Congress of the United States in the measures which have been adopted has not done what it ought to have done to redeem the pledge of the public faith to pay these notes in coin 'at the earliest practicable period.' Why, sir, at this moment we are living in daily violation of this pledge. I said a moment ago that instead of adopting measures looking toward specie payments we have increased the volume of our currency in every branch of it. Now let us see if this be true. I have here a statement, taken from the official report of the Secretary of the Treasury, of the amount of the currency on the 30th of June, 1869. I cannot find a statement for the 1st of March, 1869, but it was the same, because it was fixed by law. I find on the 30th of June, 1869, we had three hundred and fifty-six millions of greenbacks, the same amount that we had on the 18th day of March. That was the maximum amount, as it was supposed, fixed by law. When the act of the 18th of March, 1869, was passed, no one dreamed that there existed a power to issue forty-four millions more.

"Our greenbacks were then $356,000,000. On the 1st of January, 1874, according to the last statement of the public debt, they were $378,481,339. We had, then, increased this form of our currency $22,481,000. And that is not all. Since that time, and up to the 10th of January, according to a New York newspaper—and I suppose it is correct—I find that the amount of legal-tender notes outstanding was $381,891,000, or an increase since the 1st of January of something like $3,400,000, or at the rate of $400,000 a day. Every dollar of this new issue of paper-money directly tended to depreciate that outstanding and was in violation of the spirit and the provision of the law of 1869. I am not now speaking of the legal power of the Secretary of the Treasury to make this issue, because I have already given my opinion fully on this subject in an official report, but only call your attention to the fact that by our acquiescence we have actually watered, debased, and depreciated by new issues the very notes we promised to pay in coin at the earliest practicable period.

"Nor is this all. Under authority clearly conferred by law to the Secretary of the Treasury, we have increased the fractional currency from $27,508,928, at which it stood on the 30th of June, 1869, to $48,554,792, or an increase of fractional currency of $21,036,000. Again, sir, driven by a local demand which we could not resist, founded upon a palpable injustice growing out of the mistake of an officer of the Government long ago in the distribution of the national-bank circulation, we did authorize by law an increase of the bank circulation to the South and West to the amount of $54,000,000. The amount of bank-notes issued at the time we made this pledge was $299,789,000; and to-day the amount outstanding is $339,081,000, showing an increase in this kind of notes of $39,300,000, or an increase of the currency since the promise to pay it in coin at the earliest practicable period, and all legal tender in effect, of $82,317,000; and now this process of inflation is going on daily—first, by the issue of the balance of the forty-four million reserve; and, second, by the issue of new bank-notes as banks are organized under the act of July, 1870; and yet there is a cry for more, more.

"My honorable friend asked me a while ago what was the nature of the pledge made by the act of March, 1869, as to the time of payment of United States notes in coin. If I was defending a person charged as a criminal for violating this law, or one like it, I would claim,

as the Senator from Indiana does, that as no time was fixed, no man could be convicted for a penitentiary offense for a violation of the law. But what is this pledge? Let me read it again:

> And the United States also solemnly pledges its faith to make provision at the earliest practicable period for the payment of the United States notes in coin.

"What is the meaning of that? Does it not mean that the United States shall apply its means, its power, its energies, its revenue, its money, to redeem these notes? Does it mean a vague promise, such as party platforms sometimes use to deceive and mislead the people? Does it mean only a vague, indefinite promise by which business men are to be gulled and deluded into basing their contracts upon an artificial standard? No, sir; it is the promise of a great, proud, and rich people, who mean what they say—that every practicable means shall be used to that end.

"Now, sir, I ask, has it been practicable at any time in the last four years to advance in some degree these notes toward the specie standard? My honorable friend from Indiana says that for the last four or five years we have had a time of unbounded plenty and great prosperity; we have built thousands and tens of thousands of miles of railroads; we have built furnaces; we have expanded our enterprises and proved our energy. Yes, sir; all this we have done. We have gone through a period of prosperity almost unexampled; but it seems we never were prosperous enough during all this time, according to the Senator from Indiana, to fulfill any part of this obligation which we made on the 18th of March, 1869. Sir, when will it be practicable?

"But now let us come to the specific question of the time for resumption. Shall the redemption of this pledge be postponed until the public debt is paid? Why, sir, one-tenth of the money we have used to pay the public debt not due would have brought us to a specie standard. No one supposes that under an ordinary state of affairs the currency of the country—the greenbacks—need be reduced below three hundred millions in order to bring us to a specie standard. I have heard some of the ablest and most experienced business men of the country declare that, whenever the right to convert greenbacks into gold or its equivalent was secured so that prudent men would see that the Government had the power to maintain its specie standard, there would be no reduction of the currency to any appreciable extent. But whether that be so or not, no one has claimed that the amount of greenbacks need be reduced below three hundred millions in order to bring that remaining three hundred millions up to the standard of gold. That would be a reduction of $56,000,000. Fifty-six millions of the money that we have applied to the payment of debt not yet due would have brought all the remaining greenbacks up to par in gold, would have made our bank-notes convertible into the standard of gold, and we would have had, without knowing it, specie payment—a solid, safe, and secure basis. The forty millions of greenbacks we paid as premium for our bonds would have accomplished this result. Thousands of men who have been ruined by the false ideas that sprung from this fever-heated, depreciated paper-money would be now useful, able, and successful business men, instead of being ruined by bankruptcy.

"Sir, we gain nothing by postponing the fulfillment of our promise with a view to reduce the public debt. We have to pay the debt in coin any way, and the same coin that pays it now would pay it after our currency had been restored to par. If the old idea of Mr. Pendleton had prevailed, that these bonds should be paid in greenbacks, then there would be a motive for us to depreciate the greenbacks in order to pay off our bonds at the cheapest rate. But this promise to pay in coin extended to the bondholder. We promised to pay the bondholder gold for his bond and the people gold for their greenbacks. We have fulfilled our promise to the bondholder. We have paid him in gold. We have bought the gold. We have paid him at a premium of ten per cent. on our currency. Not a single effort, not a single measure, has succeeded in either House of Congress that looks to the redemption of the promise to the people who hold these greenbacks, and which measure their daily toil in their productive avocations. We cannot postpone this obligation until the payment of the public debt, because, although we have rapidly advanced in the payment of the public debt, it will be many long years before that 'consummation most devoutly to be wished' will be reached.

"Shall we postpone the redemption of our greenbacks until we can accumulate enough gold in our Treasury to pay them? We know the effect of that policy. Any attempt to accumulate great masses of gold in the Treasury will not only excite popular opprobrium, by holding idle in the vaults of the Treasury money that ought to draw interest, but it will create a stringency in the gold-market. It will advance the value of every thing we wish to get. Accumulate gold in great masses, and it will advance the price of gold all over the world. We could not now, with all our teeming productions, draw to this country $200,000,000 in gold without disturbing the Bank of France, the Bank of England, and all the money centres in the world. Therefore the idea of postponing the day of specie payments until we can accumulate enough gold to redeem the greenbacks would be the idlest, vainest delusion and the most foolish hope.

"Mr. President, I have gone into this argument to show, first, that we are bound by the obligation that we assumed on the 18th of March, 1869, to resume specie payments, or to do something to advance our notes to the par of gold. I have endeavored to show that such

was the legal and established policy of the Government when the notes were first issued. Now, I have only to say, very briefly, that there are various modes, to none of which do I intend to commit myself until the whole subject is finally discussed, by which this can easily, without trouble, without difficulty, be accomplished. There are three modes that have been proposed in debate in the Senate, and a multitude come to us from the people, but I will group them into three classes.

"There is, first, the proposition to accumulate gold in the Treasury with a view to the actual redemption of our notes in coin. That is supported by two bills now before the committee: one introduced by the Senator from Vermont (Mr. Morrill), and the other by the Senator from New Jersey (Mr. Frelinghuysen). What are the objections to this plan? They seem to me to be these: In the first place, any attempt to accumulate large masses of gold in the Treasury, lying idle to await some future event not fixed by act of Congress, would not be a wise use of the public moneys. In the next place, I entirely object to conferring upon the Secretary of the Treasury the power of issuing one hundred millions or any lesser sum of six per cent. bonds with a view to buy gold to hoard it in the Treasury to maintain resumption. I believe that it is impossible, in the very nature of things, to maintain the resumption of specie payments at all times and under all circumstances; and if any thing has been established by modern experience, it is that all a nation can do that issues paper-money is to maintain it at a specie standard in ordinary times; but, in times of panic, such as by periodical revulsions come over every country, specie payments cannot be maintained. They can scarcely be maintained in England, and are not now maintained in France, although they approach them. Therefore, every plan for specie payments ought to have some provision for the temporary suspension of specie payments, or some means by which in times of great panic and financial distress there may be a temporary departure from the specie standard. I say this not that it ought to be so, but simply as a matter of demonstrated experience shown by the history of almost all commercial nations in Europe.

"The second plan is the actual payment of the United States notes and their cancellation; in other words, the plan of contraction. In the first place, this plan while it operates does so with such severity as, in a popular government like ours, to cause its suspension and repeal. Undoubtedly, the most certain way to produce specie payments is by retiring the notes that are dishonored, paying them off, taking them out of circulation. But the trouble is, the process of contraction is itself so severe upon the ordinary current business of the country that the people will not stand it; and in this country the people rule. The policy of Mr. McCulloch, already commented upon, if it had been continued further, would have undoubtedly brought us to a specie standard, but with great distress, great impoverishment, and with more difficulty than was really necessary to accomplish the object in view.

"These are the difficulties that occur to me as against these two policies. There is a third plan. This plan, which in my judgment presents the easiest and best mode of attaining specie payments, is to take some bond of the United States which in ordinary times, by current events, is shown to be worth par in gold in the money-markets of the world, where specie is alone the standard of value, and authorize the conversion of notes into that bond.

"I again appeal to the Senate to now firmly take its stand against any inflation of paper-money under any circumstances, under any provocation, or any plea. This alone will do a great good to the country. But if it will go further—if the Senate will lead the way to some wise and practical measure, looking to a redemption of the pledged faith of the United States, the people we represent will have cause to be proud of the political body which they have so long honored. I believe, sir, that no act of the Senate would so much inspire confidence, give strength to our business men, revive our industry, as by a decided vote on these propositions to show that our firm purpose is to take the road that leads to specie payments and a restored currency."

Mr. Logan, of Illinois, said: "Mr. President, if a return to specie payments will cure all our financial evils, why not come to it at once? If the doctrine advanced by its advocates be true, the evils resulting will only be temporary. When our personal health is at stake we swallow the medicine presented by the physician that we may regain our vigor and strength.

"If the doctrine advanced by specie-payment theorists be correct, why not give the medicine at once? We have the power in our hands: repeal all laws which make any thing but gold and silver legal tender, and restore these metals to their former functions of standard value. Government will have a little trouble, perhaps, to take up her greenbacks, and commerce will certainly have to pass through some narrow straits; but, according to the theory advanced by learned Senators, the clear and open sea is just a little distance ahead.

"But, sir, the admission which the advocates of specie payment make here and elsewhere, either directly or indirectly, in regard to the supply of the precious metals, seems to me to be fatal to their theory.

"How many are there who will contend that the supply is sufficient to meet the wants of trade? How many are there among our national legislators ready to face the storm which would result from a shrinkage of prices so as to correspond with the amount of gold and silver which can be brought into circulation. Why, sir, in a 'Memorial of the Chamber of Commerce of New York' which lies be-

like me, and which leads the van in favor of specie payment, I find this admission, which they are forced to make:

"Whatever policy might have been judicious before, it is vain to talk of contraction now, when three hundred and fifty millions of greenbacks and three hundred millions of national-bank notes are employed unceasingly to keep the wheels of an extended commerce in motion (page 8).

"This, it seems to me, is almost if not entirely fatal to their theory, and contradicts all the arguments they have advanced to sustain their position. It is an open admission on the part of those thoroughly acquainted with all the intricacies of the money-market that there is not a sufficient amount of the precious metals for use. This is virtually admitting the whole question at issue. If the gold and silver in circulation, or that can be brought into circulation by legislative action, is not sufficient in amount for the business of the country—and the advocates of specie payment generally admit it is not—then it is evident it does not represent the value of the commodities of trade or products of labor, and therefore can neither answer the purpose of a standard of value alone within our country, nor a sufficient medium of exchange. If the demands of commerce are such that as it expands in volume it requires a corresponding increase in the amount of currency or medium of exchange in use, then it is apparent that there is something in the very nature of trade and laws of exchange which will not allow a continual shrinking in the nominal value while the volume is actually increasing. In other words, there is a strong tendency in the natural laws of trade and commerce to maintain a comparatively uniform price of products, even when it requires a strong pressure upon the amount of the circulating medium afloat. The theory of the contractionists or advocates of specie payment, when reduced to a nutshell, is this, that there is no reason why twenty-five cents may not represent the value of a bushel of wheat in New York as well as $1.50, provided the prices of all other articles of trade and commerce are reduced to the same standard. I hope they do not desire this, yet if their logic is true, then theoretically the iron money of Lycurgus, or the 'cowries' of the Africans, may answer all the purposes of money; but practical facts, and not theories, are the things we are called to deal with at present.

"Apply the theory, then—no matter how correct it may appear on paper—to the case as it stands, and tell me what would be the result. Suppose that by a reduction of the currency wheat was reduced in New York to twenty-five cents per bushel, and other things to a corresponding value, when would the national, State, county, city, and individual debts be liquidated? Does any one fail to see that we would be involved in financial ruin and bankruptcy? Sir, the evil effect would not stop even here, for our civilization would feel the shock, our system of [illegible] of spreading and increasing [illegible] be crushed, and we would [illegible] backward toward a state of [illegible] perstition.

"I am aware that the [illegible] payment do not propose any [illegible] measure as this, but [illegible] ever we contract below that [illegible] perience has shown to be the [illegible] standard, we are in the [illegible] and retrograding in a [illegible]

"What inference, then, are [illegible] from these facts which [illegible] presenting? Most undoubtedly [illegible] and vigorous commerce [illegible] currency uniformly proportioned [illegible] of trade.

"Having now discussed [illegible] have a general bearing [illegible] metallic basis, I approach [illegible] before us, which may [illegible] sound financial policy to [illegible] present as shall tend to a [illegible] our currency?

"One point in this question [illegible] to be universally conceded, [illegible] we cannot reach specie payments [illegible] forced contraction without [illegible] tress and probable bankruptcy [illegible] ple. Another point made [illegible] panic is, that the amount of [illegible] present arranged, falls [illegible] the country, and that some [illegible] to meet the present necessities [illegible]

"To attempt a review of [illegible] proposed would require more [illegible] at present devote to it; therefore [illegible] fine my remaining remarks [illegible] of but one or two leading propositions.

"If 'taking action looking [illegible] sumption of specie payments' [illegible] it means displacing a portion [illegible] rency that gold may be [illegible] the consequent increase in the [illegible] maining paper; or, if [illegible] far distant, by positive [illegible] Secretary of the Treasury [illegible] pay gold for legal-tenders [illegible] methods proposed are but [illegible] responsibility of meeting [illegible] squarely, and, although [illegible] good faith, yet they [illegible] which tend to ease the [illegible] in the least to cure the [illegible] but three methods open, [illegible] contraction, or resumption [illegible] by simple operations of law; [illegible] all we must proceed in [illegible] these plans. Any thing [illegible] shifting the burden from [illegible] other. It is admitted that [illegible] practicable under the present [illegible] therefore we may dismiss [illegible] sion, for to argue that we [illegible] panding is simply a perversion [illegible]

pansion is what we need at present, let it be admitted plainly and unreservedly, and let us at once proceed to take such action as will bring about this result as speedily as the nature of the case will admit of.

"If the way to contraction is blocked, then there are but two paths open before us—resumption by direct operation of law, or expansion.

"Without attempting to follow out the various plans presented for returning to specie payment, I select the memorial first alluded to as the best and perhaps clearest exponent of this theory. It says (page 8): 'We have reached the verge of success in bringing gold and currency to a par with each other, and it apparently needs but an announcement by the Secretary of the Treasury that legal-tender notes will be paid in gold at an early day, to annul the present differences between the two;' and suggests that the redemption of legal-tender notes be commenced the 4th of May next, but that the power to issue be continued.

"This is the money-holders' side of the question, presented in plain and unequivocal language, and is the theory of those who advocate a return to a specie basis reduced to a nutshell.

"Suppose, Mr. President, we pass a law requiring the Secretary of the Treasury to commence redeeming legal-tender notes on the 4th of May next, or even the 1st of January, 1875: how is this to bring relief? Will it increase the volume of currency, or unlock any considerable portion of that which is now hoarded up? For each dollar of gold put into circulation a dollar of legal tender will be withdrawn; and there will be no increase in the amount of currency in circulation, unless we assume, as is done in this memorial, that all legal tenders will at once come to par, and thus increase the total value of the currency by the amount of the present difference between these and the same nominal amount of gold. Suppose it to be true that the promise to redeem would, without the presentation of a single dollar, bring the entire amount of the legal-tender issue to a par with gold, would this afford the relief demanded? Would this place more money in circulation than there is at present? Sir, go further: suppose the utmost that the most sanguine advocate of the theory can possibly claim—that the reaction of this policy upon the national-bank notes, by transferring the required reserve for their redemption into gold or its equivalent, would also bring them up to a par with gold—would even this meet our financial demands? Would this supply the wants of the commerce and business of our country? Would this start our mills and manufactories again into full and active operation? Would it unlock the storehouses of the West, and pour the grain, beef, and pork, into the Eastern market? Is there some talismanic power in a dollar of gold that will render it so much more effective in trade than a sound and secure paper dollar?

"Would this loosen the grasp of those who now cling so firmly to their greenbacks and hide away their national-bank notes? No, sir; they would hold them the firmer, as the ten per cent. would be made to them by holding on and not by letting them out. There would be no more dollars in circulation then than now; the volume of the currency would be just the same then as now. But even this supposition every one knows to be impracticable, for to come to specie payment there must be contraction; the amount of gold and paper must be brought nearer together.

"And right here we have revealed to us the two parties to this question, the opposing forces in this contest; those who hold the funds, and those who need them; those who live by interest and percentage, and those who live by labor and traffic.

"The same contest arose in England about twenty years ago, when the gold of California and Australia began to flow into the European markets. The money-lenders, annuitants, and those having fixed incomes, sent forth pamphlets and treatises on currency containing warnings of the danger threatened by this extraordinary influx; they plied Parliament, with all the sophistry and arguments of which they were masters, to enact such laws as should maintain their advantages over the producing class and business men of the country.

"In one of these pamphlets, which I have here before me, I find this remarkable statement:

"I read from 'Financial Pamphlets,' vol. xvi., page 28:

> Those who are in debt, or those who think themselves likely to have to borrow money, see a manifest advantage in a state of affairs which promises to alleviate the burden of their present and future incumbrances. The trading classes, in addition to their share of these advantages, expect a great extension of trade—all expect a reduction in taxation, and exclaim against any interference with a natural event which offers these advantages, for the sake of a few capitalists. It seems hopeless to attempt to meet such an array of opponents by arguments on the abstract propriety of maintaining a steady currency, yet it is very much to be wished that they should be met on this ground.

"This, sir, is a confession of the very principle for which we who advocate a moderate increase of the currency are now contending. And when the Chancellor of the Exchequer (as you will find on page 30 of the same pamphlet), wisely looking to the welfare of the great mass of the people of England, announced in his financial statement that 'the discovery of gold has established credit in this country in a manner which no political economist could ever have imagined; that it has increased and confirmed credit, and immensely increased the employment of the people'—those who had been striving to limit the standard of value to silver alone felt all their sophistry scattered to the winds by the announcement of these facts. The struggle now, sir, is the same in principle as then; the results which flowed from the in-

crease of currency then by the influx of gold will follow the moderate increase of our currency now."

Mr. Boutwell, of Massachusetts, said: "If I am, as I am, in favor of the resumption of specie payments, with such limitations as were set forth in the annual report of the Secretary of the Treasury for 1872, I may be asked, Why not come at once to specie payments? The statement has been made here that during four years no progress has been made toward resumption. I am incapable of comprehending the value of facts if considerable progress has not been made. In 1868 the average premium on gold was 39½ per cent.; in 1869 it was 32½; in 1870 it was a trifle less than 15; in 1871, a little less than 12; in 1872 it was 12.4; and in 1873 it was 13.84. Consider, if you please, four years. In 1869 the premium on gold was 32½, and in 1873 it was 13.84.

"Do not these facts, in themselves considered, open to explanation of whatever sort, demonstrate conclusively that in these four years we have made an advance toward resumption, unless the delusion has taken possession of men's minds that it is of no consequence whether, commercially considered, paper and coin are substantially at the same value or not when we consider the ability of the country to resume specie payments? If the theory be abroad that it is of no consequence whether the premium on gold be much or little, that the ability of the country to resume specie payments is substantially the same in each case, then I can only say that those who entertain that opinion are beyond the reach of any argument which I can present."

Mr. Morton: "Will the Senator allow me in this connection to ask him a question?"

Mr. Boutwell: "Yes, sir."

Mr. Morton: "I ask him to give his opinion, if he will, to the Senate as to the cause of the decline in the price of gold from March, 1869, to March, 1873, and how much of that decline does he attribute to the influence of the act respecting the public credit passed in March, 1869?"

Mr. Boutwell: "I attribute great importance to that act, because it was an initial step in a policy by which the public credit was established—a policy by which up to this time the public credit has been maintained. When that act was passed the credit of the United States in Europe was substantially that of Italy, Spain, Turkey, and the dishonored countries of Europe that for a generation have been struggling under the weight of heavy debt, and have not received those ideas by which the resources of nations are developed.

"From the passage of the act of March 18, 1869, which declared the purpose of the country, followed as it was by the collection of the public revenues and the appropriation of the surplus to the payment of the public debt, the credit of the country steadily and rapidly advanced, until in all the markets of Europe it has been the equal of any other nation. For three years our bonds have been sold in more markets of Europe than the bonds of any other state, and commanded as high a price as any. But the depreciation in the price of gold, due largely to that fact, was not due exclusively to it. It was due also to the fact that the business of the country increased, that the uses for money were enlarged, that the field in which money circulated was extended; and it is to further similar progress, which is a natural progress, supported, as I should hope it might be, by such legislation as would develop the resources and increase the business of the country, especially with reference to its commercial marine, that I look to the ultimate and not distant equalization, commercially, in the value of paper and coin.

"Until that time arrives, I say advisedly, until that time arrives, any policy looking to a resumption of specie payments by direct and specific legislative action is fraught with the greatest danger to public and private interests.

"There are two ways of securing specie payments. One is by a contraction of the currency. By contracting the currency you can diminish the volume, so that a dollar in paper, commercially, shall be of the value of a dollar in coin. But that process of force will prostrate the business of the country, close up our factories and workshops; not only reduce the wages of labor, but drive hundreds and thousands of men from employment in every part of the land. Believing this, I of course cannot consent to any policy by which the power of the Government is to be directly applied in the contraction of the currency. Not apprehending merely, but believing, knowing even, as far as I can know any thing in the future that is not capable of absolute demonstration, that results like those which I have stated, or results kindred to them, are sure to follow, I cannot take the responsibility imposed by a policy of direct specific contraction. On the other hand, I am certain that the development of the resources of the country, the increase of its business, the addition of uses to which currency can be applied, will certainly and without great delay close the slight difference that exists between the value of paper and the value of coin."

The formal debate on the resolution was here suspended.

Subsequently, on March 23d, Mr. Sherman, of Ohio, from the Committee on Finance, reported to the Senate a bill "to provide for the redemption and reissue of United States notes, and for free banking." On March 24th the bill was considered.

Mr. Sherman said: "Mr. President, some complaint has been made in the Senate and in the country at the delay in the presentation by the Committee on Finance of some bill covering the financial question; but a moment's reflection will, I am sure, convince every Senator that there has been no fault on the part of that

committee. From the beginning of the session to this hour that committee, under the direction of the Senate, has been studying and discussing the various plans and propositions which were referred to the committee; and I may say that over sixty different propositions, either coming in the form of petitions or in the form of bills, have been sent to the committee, all of them suggesting different plans and ideas. It was impossible to consider all these and to agree upon any comprehensive measure until within a day or two.

"There was another consideration. The committee found themselves divided in opinion, precisely as the country is, and precisely as the Senate is, into as many as three different classes of opinion. There were, first, those who desired to take a definite and positive step toward the resumption of specie payments. There were, second, those who desired an enlargement of the currency, or what we commonly call an inflation of the currency. There were, third, those who, while willing to see the amount of bank-notes increased and the question of the legal tenders settled in some form, were also desirous that some definite step should be taken toward a specie standard. There were these differences of opinion.

"For the purpose of ascertaining the views of the Senate, and not involving ourselves in reporting a bill that would be defeated as the bill of the last session was, we presented early in the session resolutions of a general character which stated these three ideas: First, the resolution of the majority of the committee that some definite step should be taken toward specie payments. Then there was the amendment offered by the gentleman who now occupies the chair (Mr. Ferry, of Michigan) that there ought to be an increase of the currency without reference to any plan of redemption. Third, there was the proposition made by the Senator from Delaware (Mr. Bayard) that measures should be taken at once looking to the resumption of specie payments.

"These propositions were discussed, and the committee were enlightened by that discussion; at least they obtained the opinions of members of the Senate. Subsequently, in the course of our investigation, a question about the $25,000,000 section (section 6 of the act of July 12, 1870) came up, and the committee deemed it right, by a unanimous vote, to ascertain the sense of the Senate as to whether they wished this section carried into execution. As it stood upon the statute-book it was a law without force. It was a law so expressed that the Controller said he could not execute it. Therefore the committee reported a bill which would have provided the necessary details to carry into execution that section of the existing law. But in the present temper of the public mind in the Senate and in the country that bill was discussed, and has been discussed day after day, without approaching the question at all. During all this time the committee have been pursuing their inquiries, and finally they have reported the bill which is now before us.

"The measure that is reported is not a satisfactory one to any of us in all its details. Probably it is not such as the mind of any single member of the Senate would propose. It is in the nature of a compromise bill, and therefore, while it has the strength of a compromise bill, it has also the weakness of a compromise bill. There are ideas in it which, while meeting the views of a majority, taken separately will be opposed by others. I am quite sure that I say nothing new to the Senate when I say it does not in all respects meet my own views. But there is a necessity for us to yield some of our opinions. We cannot reconcile or pass any measure that will be satisfactory to the country unless we do so. Any positive victory by either extreme of this controversy will be an absolute injury to the business of the country. Therefore, any measure that is adopted ought to be so moderate, pursuing such a middle course, such a middle ground, that it will give satisfaction to the country. It must be taken as a whole; and therefore the effect of amending this proposition will be simply to destroy it. If an amendment in the direction of expansion is inserted, it will drive away some who would be willing to support it as it is. If an amendment in the way of contraction is proposed and carried by a majority of the Senate, it will drive away those who might be willing to take this measure as a compromise. The only question before the Senate now is, whether this is a fair compromise between the ideas that have divided the people of this country and the members of the Senate; whether it will surely improve our currency while giving the relief that is hoped for by a moderate increase of the currency. Now I ask the Secretary to read the bill."

The Chief Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the maximum limit of United States notes is hereby fixed at $382,000,000, at which amount it shall remain until reduced as hereinafter provided.

On March 26th Mr. Merrimon, of North Carolina, offered a substitute for the entire bill. The discussion continued for some days, as in Committee of the Whole. On the question of agreeing to the amendment proposed as a substitute, Mr. Sherman, of Ohio, said: "I simply want to call attention to the fact that the only difference between the substitute and the bill as pending is in one section with regard to the increase of the public debt. That is the only difference between the two. They are *in hæc verba* the same except as to that one section. The substitute now pending offered by the Senator from North Carolina, differs only from the text of the bill now before the Senate in omitting that one section."

Mr. Conkling, of New York, said: "So that those who vote for the amendment vote that

there may be an increase of the public debt, and those who vote against it that there shall not."

The roll-call having been concluded, the result was announced—as follows:

YEAS—Messrs. Allison, Bogy, Boreman, Cameron, Carpenter, Clayton, Dorsey, Ferry of Michigan, Goldthwaite, Gordon, Harvey, Hitchcock, Ingalls, Johnston, Lewis, Logan, McCreery, Merrimon, Morton, Oglesby, Patterson, Pease, Pratt, Ramsey, Robertson, Spencer, Tipton, West, and Windom—29.

NAYS—Messrs. Anthony, Bayard, Chandler, Conkling, Cragin, Davis, Fenton, Frelinghuysen, Hager, Hamilton of Maryland, Hamilton of Texas, Hamlin, Howe, Jones, Kelly, Morrill of Vermont, Sargent, Saulsbury, Schurz, Scott, Sherman, Stewart, Thurman, and Wadleigh—24.

ABSENT—Messrs. Alcorn, Boutwell, Brownlow, Buckingham, Conover, Cooper, Dennis, Edmunds, Ferry of Connecticut, Flanagan, Gilbert, Mitchell, Morrill of Maine, Norwood, Ransom, Sprague, Stevenson, Stockton, and Wright—19.

So the substitute of Mr. Merrimon, as modified, was agreed to.

The bill was reported to the Senate as amended.

The President *pro tempore:* "The Senate, as in Committee of the Whole, having made one amendment to the bill, the question now is on concurring in that amendment made as in Committee of the Whole."

Mr. Conkling: "This is inflation, utter and hurtful. Spasmodic relief may come from it, temporary and apparent prosperity may come from it, but it takes no heed of the future except to smoothe the way to degradation, disaster, and distress.

"Without necessity or even sore temptation to extenuate it, such a policy spurns the experience of all epochs, tramples on reason and right, and violates the pledged faith of the nation as attested by solemn and repeated acts of the American people in Congress assembled, by the avowals of every department of the Government, and by the declarations in national convention of the political party which chose most of us to the seats we hold, and chose also a Chief Magistrate bound by his word against every scheme and device of repudiation and dishonor. I mean so to vote that by my act the record of Congress shall not palter in a double sense, and shall not be stained by a trace of bad faith."

Mr. Stewart, of Nevada, said: "I can add nothing to this debate. I simply wanted to indicate that this was the beginning of a struggle in which there is nothing but disaster until we finally get back to money that has a real purchasing value, a real measure of value that the world recognizes. Until we get back to solvency and honesty the struggle will be severe. It looks as if it would be protracted, because after ten years' talk of gradual resumption we find ourselves taking a leap—not a step, but a leap—in the other direction, refusing to say that we mean any thing but expansion, refusing to say that we mean any thing but repudiation of our solemn obligation that we would redeem the greenbacks at some time, refusing to say any thing, but starting off in the direction of repudiation; and it will be hard to come back gradually. You will come back with a crash; you will come back with such a crash as this country has never seen. You will come back through struggle. The day will be long remembered by the American people when this vote is cast, taking the step we are about to take."

Mr. Anthony, of Rhode Island, said: "Mr. President, I have taken no part in this discussion, and I do not propose to delay this vote a moment. I have voted steadily according to my judgment, which accords with the judgment and the interests of those whom I have the honor in part to represent.

"We are now about to do an act which has the quality of novelty. In a time of profound peace, with all the elements of prosperity and productiveness in as great abundance as they have ever been, with money exceptionally plentiful, with only that stagnation and hesitation of business which is caused by the apprehension of what we are now about to do, we are proposing to add largely to the paper currency of the country; and in doing that we refuse to take any, the slightest, measure looking to its present or its ultimate redemption or reduction at any time whatever. We are going against all the lessons of history, against all the teachings of experience, and against all the laws of political economy which have been evolved by the observation and the practice of life. I can only enter against it the protest of my vote."

Mr. Thurman, of Ohio, said: "Upon the measure itself I have a word to say. It simply means that no man of my age shall ever again see in this country that kind of currency which the framers of the Constitution intended should be the currency of the Union; which every sound writer on political economy the world over says is the only currency that defrauds no man; it means that so long as I shall live, and possibly long after I shall be laid in the grave, this people shall have nothing but an irredeemable paper currency with which to transact their business, that currency which has been well described as the most effective invention that ever the wit of man devised to fertilize the rich man's field at the expense of the poor man's brow. I will have nothing to do with it, sir."

The roll-call having been concluded, the result was announced—as follows:

YEAS—Messrs. Allison, Bogy, Boreman, Cameron, Carpenter, Clayton, Dorsey, Ferry of Michigan, Goldthwaite, Harvey, Hitchcock, Ingalls, Johnston, Lewis, Logan, McCreery, Merrimon, Morton, Norwood, Oglesby, Patterson, Pease, Pratt, Ramsey, Robertson, Spencer, Tipton, West, and Windom—29.

NAYS—Messrs. Anthony, Chandler, Conkling, Cooper, Cragin, Davis, Fenton, Frelinghuysen, Hager, Hamilton of Maryland, Hamilton of Texas, Hamlin, Howe, Jones, Kelly, Morrill of Vermont, Sargent, Saulsbury, Schurz, Scott, Sherman, Stewart, Thurman, and Wadleigh—24.

On April 22d the following note message was received in the Senate from President Grant:

To the Senate of the United States:

Herewith I return, without my approval, the bill entitled "An act to fix the amount of United States notes, and the circulation of national banks, and for other purposes."

In giving my reasons briefly for withholding my approval of this bill, I do not wish to be understood as objecting to a measure which has received the sanction of a majority of both Houses of Congress, chosen by the people to make laws for the country during the terms for which they were elected, and I have studiously sought to find reasons in favor of the measure sufficient to justify me in signing it, but have failed to find them sufficient.

Personally, it is a question whether the proposed financial transaction would give an additional volume to the irredeemable paper currency of the country, or not, and whether by requiring future contraction of the currency to be retained by the banks and people the interest to be involved on the currency, if issued, will prove a contraction. But the fact cannot be concealed that theoretically the bill increases the paper circulation $100,000,000, less only the amount of the portion restrained from circulation by the provisions of the second section. The measure has been supported on the theory that it would give an increased circulation. If it is a fair inference, therefore, that in practice the measure should fail to secure the additional circulation expected of it, the friends of the measure, particularly those out of Congress, would clamor for such inflation as would give the expected relief.

The theory, in my belief, is a departure from the true principles of finance, national interest, national obligations to creditors, congressional pledges, party pledges on the part of both political parties, and of personal views and promises made by me in every annual message sent to Congress, and in each inaugural address.

In my annual message to Congress in December, 1865, the following passages appear:

"Among the evils growing out of the rebellion, and not yet referred to, is that of an irredeemable currency. It is an evil which I hope will receive your early attention. It is a duty, and one of the highest duties, of government to secure to the citizen a medium of exchange of fixed, unvarying value. This implies a return to a specie basis, and no substitute for it can be devised. It should be commenced now, and reached at the earliest practicable moment consistent with a fair regard to the interest of the debtor class. Immediate resumption, if practicable, would not be desirable. It would compel the debtor class to pay beyond their contracts the premium on gold at the date of their purchase, and would bring bankruptcy and ruin to thousands. Fluctuations, however, in the paper value of the measure of all values (gold) is detrimental to the interests of trade. It makes the man of business an involuntary gambler; for in all sales where future payment is to be made both parties speculate as to what will be the value of the currency to be paid and received. I earnestly recommend to you, then, such legislation as will insure a gradual return to specie payments and put an immediate stop to fluctuations in the value of currency."

I still adhere to the views then expressed.

As early as December 4, 1865, the House of Representatives passed a resolution, by a vote of 144 yeas to 6 nays, concurring "in the views of the Secretary of the Treasury in relation to the necessity of a contraction of the currency, with a view to as early a resumption of specie payments as the business interests of the country will permit," and pledging "cooperative action to this end, as speedily as possible."

The first act passed by the Forty-first Congress on the 18th day of March, 1866, was as follows:

"*An act to strengthen the public credit of the United States.*

"*Be it enacted, etc.*, That in order to remove any doubt as to the purpose of the Government to discharge all its obligations to the public creditors, and to settle conflicting questions and interpretations of the law, by virtue of which such obligations have been contracted, it is hereby provided and declared that the faith of the United States is solemnly pledged to the payment in coin, or its equivalent, of all the obligations of the United States, and of all the interest-bearing obligations, except in cases where the law authorizing the issue of any such obligations has expressly provided that the same may be paid in lawful money, or in other currency than gold and silver, but none of the said interest-bearing obligations not already due shall be redeemed or paid before maturity, unless at such times as the United States notes shall be convertible into coin at the option of the holder, or unless at such time bonds of the United States bearing a lower rate of interest than the bonds to be redeemed can be sold at *par* in coin. And the United States also solemnly pledges its faith to make provision at the earliest practicable period for the redemption of the United States notes in coin."

This act still remains as a continuing pledge of the faith of the United States "to make provision at the earliest practicable moment for the redemption of the United States notes in coin."

A declaration contained in the act of June 30, 1864, created an obligation that the total amount of United States notes issued, or to be issued, should never exceed $400,000,000. The amount in actual circulation was actually reduced to $356,000,000, at which point Congress passed the act of February 4, 1868, suspending the further reduction of the currency. The forty-four millions have ever been regarded as a reserve, to be used only in case of emergency, such as has occurred on several occasions, and must occur when, from any cause, revenues suddenly fall below expenditures; and such a reserve is necessary, because the fractional currency, amounting to fifty millions, is redeemable in legal tender on call.

It may be said that such a return of fractional currency for redemption is impossible. But let steps be taken for a return to a specie basis, and it will be found that silver will take the place of fractional currency as rapidly as it can be supplied, when the premium on gold reaches a sufficiently low point. With the amount of United States notes to be issued permanently fixed within proper limits, and the Treasury so strengthened as to be able to redeem them in coin on demand, it will then be safe to inaugurate a system of free banking with such provisions as to make compulsory redemption of the circulating notes of the banks in coin, or in United States notes, themselves redeemable and made equivalent to coin.

As a measure preparatory to free banking, or for placing the Government in a condition to redeem its notes in coin "at the earliest practicable moment," the revenues of the country should be increased so as to pay current expenses, provide for the sinking fund required by law, and also a surplus to be retained in the Treasury in gold.

I am not a believer in any artificial method of making paper-money equal to coin when the coin is not owned or held ready to redeem the promises to pay; for paper-money is nothing more than promises to pay, and is valuable exactly in proportion to the amount of coin that it can be converted into. While coin is not used as a circulating medium, or the currency of the country is not convertible into it at par, it becomes an article of commerce as much as any other product. The surplus will seek a foreign market as will any other surplus. The balance of trade has nothing to do with the question. Duties on imports being required in coin, creates a limited demand for gold. About enough to satisfy that demand remains in the country. To increase this supply I see no way open but by the Government hoarding through the means above given, and possibly by requiring the national banks to aid.

It is claimed by the advocates of the measure herewith returned that there is an unequal distribution of the banking capital of the country. I was disposed to give great weight to this view of the question at first; but, on reflection, it will be remembered that there still remains $4,000,000 of authorized bank-note circulation assigned to States having less than their quota not yet taken. In addition to this, the States having less than their quota of bank circulation have the option of twenty-five millions more to be taken from those States having more than their proportion. When this is all taken up, or when specie payments are fully restored, or are in rapid process of restoration, will be the time to consider the question of "more currency."

U. S. GRANT.

EXECUTIVE MANSION, WASHINGTON, *April* 22, 1874.

On April 28th the message was considered in the Senate.

The President *pro tempore:* "The bill (S. No. 617) to fix the amount of United States notes and the circulation of national banks, and for other purposes, is now before the Senate; and the question is, Shall the bill pass, notwithstanding the objections of the President of the United States? upon which question the Constitution requires that the yeas and nays shall be taken. Senators in favor of passing the bill, notwithstanding the objections of the President of the United States, will, as their names are called, answer 'yea,' those opposed 'nay,' and the Secretary will call the roll."

The question being taken by yeas and nays resulted—yeas 34, nays 30; as follows:

YEAS—Messrs. Allison, Bogy, Boreman, Cameron, Carpenter, Clayton, Conover, Dennis, Dorsey, Ferry of Michigan, Goldthwaite, Gordon, Harvey, Hitchcock, Ingalls, Johnston, Lewis, Logan, McCreery, Merrimon, Mitchell, Norwood, Oglesby, Patterson, Pease, Pratt, Ramsey, Robertson, Spencer, Sprague, Tipton, West, Windom, and Wright—34.

NAYS—Messrs. Anthony, Bayard, Boutwell, Buckingham, Chandler, Conkling, Cragin, Davis, Edmunds, Fenton, Ferry of Connecticut, Flanagan, Frelinghuysen, Gilbert, Hager, Hamilton of Maryland, Hamilton of Texas, Hamlin, Howe, Jones, Kelly, Morrill of Vermont, Sargent, Scott, Sherman, Stevenson, Stewart, Stockton, Thurman, and Wadleigh—30.

ABSENT—Messrs. Alcorn, Brownlow, Cooper, Morrill of Maine, Morton, Ransom, Saulsbury, and Schurz—8.

The President *pro tempore:* "Upon this question the yeas are 34 and the nays are 30. Two-thirds of the Senators present not having voted in the affirmative, the Senate refuses to pass this bill."

An act was finally passed by Congress which increased the legal-tender notes $26,000,000, and abolished the reserve on bank-note circulation. Other sections were expected to produce an equal amount of contraction.

In the House, on December 18, 1873, Mr. Butler, of Massachusetts, from the Committee on the Judiciary, reported a bill to protect all citizens in their civil and legal rights. The bill provided that whoever, being a corporation

or natural person and owner, or in charge of any public inn, or of any place of public amusement or entertainment for which a license from any legal authority is required, or of any line of stage-coaches, railroad, or other means of public carriage of passengers or freight, or of any cemetery or other benevolent institution, or any public school supported in whole or in part at public expense or by endowment for public use, should make any distinction as to admission or accommodation therein of any citizen of the United States because of race, color, or previous condition of servitude, should, on conviction thereof, be fined not less than $100 nor more than $5,000 for each offense; and the person or corporation so offending should be liable to the citizens thereby injured in damages to be recovered in an action of debt.

The second section provided that offenses under this act, and actions to recover damages, might be prosecuted before any territorial, district, or circuit court of the United States having jurisdiction of crimes at the place where the offense was charged to have been committed, as well as in the district where the parties might reside, as now provided by law.

Mr. Butler, of Massachusetts, said: "I desire briefly to explain to the House the thesis on which this bill proceeds. It is perhaps sufficiently explained in the title—'A bill to protect all citizens in their civil and legal rights.' The bill gives to no man any rights which he has not by law now, unless some hostile State statute has been enacted against him. He has no right by this bill except what every member on this floor and every man in this District has, and every man in New England has, and every man in England has by the common law and the civil law of the country. Let us examine it for a moment. Every man has a right to go into a public inn. Every man has a right to go into any place of public amusement or entertainment for which a license by legal authority is required. He has a right to ride in 'any line of stage-coaches, railroad, or other means of public carriage of passengers or freight,' and to be buried in any public cemetery; or he has a right in any 'other benevolent institutions or any public school supported in whole or in part at public expense or by endowment for public use'—that is, while he behaves himself and pays the requisite cost, charges, and fees; and he has a right of action now against every man who interferes with that right unless there is some state of hostile legislation.

"Now, then, we propose simply to give to whoever has this right taken away from him the means of overriding that state of hostile legislation, and of punishing the man who takes that right away from him. This is the whole of that bill. There is an amendment offered by the gentleman from Louisiana (Mr. Morey) which I am inclined to accept, or, at least, to permit a vote of the House to be taken upon it; and that is applying the remedies and penalties under those transactions of the civil rights bill of 1866.

"Now, then, who shall say that this bill ought not to pass? What is the ground of possible opposition to it? Whether right or wrong, whether for good or ill, the result of the late war has been that every person born on the soil, or duly naturalized, is a citizen of the United States, entitled to all the rights, privileges, and immunities of a citizen. All legislation, therefore, that seeks to deprive a well-behaved citizen of the United States of any privilege or immunity to be enjoyed, and which he is entitled to enjoy in common with other citizens, is against constitutional enactment. But I am not unmindful of the great point to be taken against this bill by its opponents. They will say that it is an invasion of State rights; that the citizens ought to be left to regulate their own domestic affairs in their own way; that that is in accordance with the resolutions of 1798, and that it is in accordance with the well-understood doctrines upon which this confederation of States was founded.

"I know, I think, as well as I know any other portion of human knowledge, the length, breadth, and extent of State rights, and I am content to uphold them everywhere; but I am not content to uphold State wrongs, and there is the distinction I take. No State has a right to pass any law which inhibits the full enjoyment of all the rights she gives to her citizens by discriminating against any class of them provided they offend no law; and while from my teaching and from my belief I am an old State-rights Democrat, yet State rights are one thing and State wrongs are another, and State wrongs must yield to the Constitution of the United States.

"Why, sir, if a citizen of the United States, black or white, places his foot on the soil of a foreign country, say England, for instance, and is there deprived of his common rights by force, the whole power of the United States, the Army and Navy, can be brought to bear, and ought to be brought to bear, and will be brought to bear to protect him. 'I am an American citizen' is now a prouder cry than was 'I am a Roman citizen,' when it was uttered by the apostle Paul in his defense against unjust imprisonment. A greater power than Rome is behind him with men, money, and political power, and civil and religious liberty, and with the determination to enforce all in his behalf.

"Now, shall it be said that it is only on the soil of the United States where a citizen cannot have that power exerted in his behalf? All over the world he is entitled to the protection of that power, except where? Except if a State can inhibit it on the soil of the United States, and under the flag which he or his father or his children have shed their blood to defend and perpetuate as a symbol of the glory, the honor, and the power of his country. I say, sir, that, the Constitution having given equal

rights to all men, no State, no man, no power, no potentate on earth, has a right to take away or abate one jot or tittle of those rights. Whether it was wise or not to have given these equal rights is a question which no man can answer to-day, because we are trying an entirely new experiment in government. Rome threw her laws all over the world, but kept her citizenship in Latium. She held by force her colonies and gave them her laws, but she held on to the birthright of citizenship, and it was sold only by corrupt emperors at a great price. We are trying the other experiment of a republic. Rome failed; we may fail; but ours is the other and correlative experiment. We take in nations or parts of nations; we take in peoples or parts of peoples wholly diverse from us; and instead of throwing our laws over them and holding them by force, we have always given to them equal rights of citizenship with us and rights of self-government; and not only the right of governing themselves, but of assisting in governing us. This great experiment, for the first time tried in the history of the world, has not yet been concluded so that any man can say with certainty that it is the very summit of human wisdom. Certain it is, however, that it is the best emanation of human wisdom yet shown in government, with the best results, and it is going forward as the missionary idea of liberty and equality in the world with the high hopes of every patriot and every well-wisher of his country for its success. It is incumbent upon us to do every thing we may that that success shall be achieved, that no prejudice against race or color shall prevail for a moment in any quarter of the country. When a man is a citizen he springs up to the high plane of citizenship; and standing upon that plane he is the equal of every other citizen, whatever may have been his former condition of nationality, race, or color, and he must have all his rights secured to him inviolate. This is the ground on which we present this bill to the House and the country, and we insist that whatever there may have been in State rights in olden times, there is now no right in any State to baffle or abate one jot or tittle any constitutional right of equality in the civil and legal privileges of the meanest citizen of the republic."

Mr. Beck, of Kentucky, said: "Mr. Speaker, I do not believe that any man on this side of the House opposes this bill because he wants the negro race oppressed, because he desires to see them deprived of education or of any other right guaranteed to them by the Constitution and laws. But many of us do object, and I for one, to the usurpation by Congress of authority over matters that belong exclusively to the States, prescribing severe penalties to be enforced by the courts of the United States; to enforce laws which are violative, as I believe, of the rights of the States and the people thereof. We are approaching consolidation fast enough. We are drifting into centralism step by step so rapidly and steadily that it will not be many years before the States will occupy the same relation to the General Government that the counties bear to the States. Ten years ago that suggestion met with ridicule only from men of all parties.

"I object further to this bill, because this coercive legislation, which seeks to put the colored population of the States of the South into the common schools with the white children, will not only be no advantage to them, but will be a positive injury, and will only be available when men who are seeking to drive party politics at the point of the bayonet will make disturbances there, and will seek to enforce martial law because the behests of Congress are not obeyed, and thus carry the elections at the point of the bayonet for the man they want to elect against the popular will.

"I object to this bill because the Constitution of the United States and all its amendments are violated by its provisions. This question has been carefully examined by the Supreme Court of the United States; and that tribunal, as I read the decision, has decided in the late case from New Orleans, that these rights pertaining to the rights of corporations, and inferentially to common schools, are not embraced in the powers confided to Congress by the constitutional amendments. Under the authority to enforce the amendments by appropriate legislation, these are not rights guaranteed by them, or rights about which Congress has authority to legislate.

"Massachusetts, to-day, does not allow a man to vote in the State unless he can read the constitution in the English language and write his name. If the people of Kentucky, in the exercise of their constitutional authority, should do as Massachusetts has done—should amend their constitution by incorporating such a proposition—not one negro in a hundred in the State of Kentucky could go to the polls and vote. We have not done so; we have not thought of doing it, because we have endeavored, in good faith, to give those negroes, ignorant as they are, the rights conferred upon them by the fifteenth amendment. Under such a provision ninety-nine out of every hundred of the negroes, who were slaves in my State seven years ago, would be excluded from the polls. We could, if we saw fit, prescribe other qualifications for the exercise of suffrage or the qualification for office.

"The Supreme Court of the United States, as I before remarked, very recently considered these questions in the slaughter-house cases; it carefully examined the bearings of the constitutional amendments on this subject. The fourteenth amendment, as is well known, did not allow to colored men the right to vote, and that was controlled by State laws, notwithstanding all the rights conferred by former amendments, and therefore it was necessary to pass the fifteenth amendment. The fourteenth amendment provides as follows:

SECTION 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

"Now, what does the court say in commenting upon the amendment?

"Let me read a few paragraphs from the opinion:

The next observation is more important in view of the arguments of counsel in the present case. It is that the distinction betweeen citizenship of the United States and citizenship of a State is clearly recognized and established. Not only may a man be a citizen of the United States without being a citizen of a State, but an important element is necessary to convert the former into the latter. He must reside within the State to make him a citizen of it, but it is only necessary that he should be born or naturalized in the United States to be a citizen of the Union.

It is quite clear, then, that there is a citizenship of the United States and a citizenship of a State which are distinct from each other, and which depend upon different characteristics or circumstances in the individual.

We think this distinction and its explicit recognition in this amendment of great weight in this argument, because the next paragraph of this same section, which is the one mainly relied on by the plaintiffs in error, speaks only of privileges and immunities of citizens of the United States, and does not speak of those of citizens of the several States. The argument, however, in favor of the plaintiffs rests wholly on the assumption that the citizenship is the same, and the privileges and immunities guaranteed by the clause are the same.

The language is, "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of *the United States*." It is a little remarkable, if this clause was intended as a protection to the citizen of a State against the legislative power of his own State, that the term "citizen of the State" should be left out when it is so carefully used, and used in contradistinction to "citizens of the United States," in the very sentence which precedes it. It is too clear for argument that the change in phraseology was adopted understandingly and with a purpose.

Of the privileges and immunities of the citizen of the United States, and of the privileges and immunities of the citizens of the State, and what they respectively are, we will presently consider; but we wish to state here that it is only the former which are placed by this clause under the protection of the Federal Constitution, and that the latter, whatever they may be, are not intended to have any additional protection by this paragraph of the amendment. If, then, there is a difference between the privileges and immunities belonging to a citizen of the United States as such, and those belonging to the citizen of the State as such, the latter must rest for their security and protection where they have heretofore rested, for they are not embraced by this paragraph of the amendment. * * * But when, as in the case before us, these consequences are so serious, so far-reaching and pervading, so great a departure from the structure and spirit of our institutions; when the effect is to fetter and degrade the State governments by subjecting them to the control of Congress in the exercise of powers, heretofore universally conceded to them, of the most ordinary and fundamental character; when, in fact, it radically changes the whole theory of the relations of the State and Federal Governments to each other and of both these governments to the people, the argument has a force that is irresistible, in the absence of language which expresses such a purpose too clearly to admit of doubt.

"The whole spirit and bearing of the decision is against the constitutionality of the law now proposed, matters of regulation as to education, local corporations, and their rights and privileges, being subjects which bear only on the individual as a citizen of the State, and not as a citizen of the United States.

"But it is now proposed to legislate in Congress as to matters such as the regulation of corporations, inns, endowed seminaries of learning, and how school funds shall be distributed, and to compel all children, white or black, to attend school together. That is a matter for State legislation, and Congress has no right to interfere with it. Surely, sir, the people could establish schools in any of the States which none but white females should attend or that none but white males should attend, and might do the same for colored males and females. That would not at all interfere with the colored population having their proportion of the taxes collected to be expended in the education of colored children. We in Kentucky have a right, I say, to arrange separate schools for them, wherein they will get their equal rights. I suppose no man will contend that in any school in my State, established expressly for the education of females, any male negro shall have the right to force himself where no white male can go. The principle may be extended even that far hereafter if Congress enters upon this character of legislation. The effect of trying to force the colored children among the whites will not be of any benefit to the negro, but, on the contrary, will be of positive injury. Men make a mistake when they think coercion is the appropriate and legitimate province of legislation. Something is due even to the prejudices of men; something is due to the views which State Legislatures may entertain; and whenever Congress undertakes to take control of the States and to deprive them of power, either from spite or any other cause, it is acting unwisely, because it tends to destroy whatever is valuable in the common-school system by making people loathe and despise instead of love and cherish it.

"When you undertake, by your legislation here, to force white and black, male and female, into the same school, the men who have wealth will not send their children; but the poor man will be compelled to send his or let them grow up in ignorance and vice, which will be the alternative chosen in most instances. You will force, in all the States where there is a large colored population, all the skilled industry of other parts of the world away from us, because men who are poor and desire to come among us will not, when they see their richer white neighbors sending their children to private schools or to other States, where they can send their children nowhere but to be

with the colored children. You will destroy the public schools altogether, and will not benefit the colored people by doing it. If there was no question as to your power—if the Constitution of the United States gave to you the authority—it would be impolitic and unwise to force it to that extent. It is this question in regard to schools that I look at with the most serious apprehension, though the other provisions of the bill are equally vicious in principle. Does any gentleman upon this floor think that any intelligent man representing a Southern State wants to keep the colored people of the South in ignorance? If he does he is grievously mistaken.

"No, sir; if he had no higher motive than his own interest, he would endeavor by every means in his power to improve them mentally and morally; and the States are rapidly developing means to do so, as rapidly as can be expected. They are straining every nerve to furnish them the means of education, to make them industrious, to make them honest, to make them understand the great duties imposed on them by the amendments to the Constitution in their altered condition. No matter what may have been his views of the policy of those changes, now that they are the fundamental law, no man desires to restore the former state of things. Every man is desirous of seeing that the interests of the colored people are promoted; that their intelligence shall be increased; and that all the elements which will make them more virtuous citizens than they were shall be given them in abundance.

"Why, sir, if Congress takes this step, it is the entering wedge to take absolute control over education everywhere. Your courts will have to watch the States, and will have to punish the wrongs done, and the colored people will be driven on and on as demagogues arise wanting their votes, and they will be brought here to hold conventions and make demands of Congress, until there is no telling where the strife will end.

"I suppose there are gentlemen on this floor who would arrest, imprison, and fine a young woman in any State of the South if she were to refuse to marry a negro man on account of color, race, or previous condition of servitude, in the event of his making her a proposal of marriage, and her refusing on that ground. That would be depriving him of a right he had under the amendment, and Congress would be asked to take it up, and say, 'This insolent white woman must be taught to know that it is a misdemeanor to deny a man marriage because of race, color, or previous condition of servitude;' and Congress will be urged to say after a while that that sort of thing must be put a stop to, and your conventions of colored men will come here asking you to enforce that right."

Mr. Rainey, of South Carolina, said: "Mr. Speaker, I did not expect to participate in this debate at this early period; and I would have preferred to wait until I should have had a full exposition of the opinions entertained by the other side of the House. I know, sir, that gentlemen on the other side have professed a great deal of friendship for the race to which I belong; and in the last presidential election they pledged themselves that they would accord to the negroes of this country all the rights that were given to other citizens. I am somewhat surprised to perceive that on this occasion, when the demand is made upon Congress by the people to guarantee those rights to a race heretofore oppressed, we should find gentlemen on the other side taking another view of the case from that which they professed in the past. The gentleman from Kentucky (Mr. Beck) has taken a legal view of this question, and he is undoubtedly capable of taking that view. I am not a lawyer, and consequently I cannot take a legal view of this matter, or perhaps I cannot view it through the same optics that he does. I view it in the light of the Constitution—in the light of the amendments that have been made to that Constitution; I view it in the light of humanity; I view it in the light of the progress and civilization which are now rapidly marching over this country. We, sirs, would not ask of this Congress as a people that they should legislate for us specifically as a class if we could only have those rights which this bill is designed to give us accorded us without this enactment. I can very well understand the opposition to this measure by gentlemen on the other side of the House, and especially of those who come from the South. They have a feeling against the negro in this country that I suppose will never die out. They have an antipathy against that race of people, because of their loyalty to this Government, and because at the very time when they were needed to show their manhood and valor they came forward in defense of the flag of the country and assisted in crushing out the rebellion. They, sir, would not give to the colored man the right to vote or the right to enjoy any of these immunities which are enjoyed by other citizens, if it had a tendency to make them feel their manhood and elevate them above the ordinary way of life. So long as he makes himself content with ordinary gifts, why, it is all well; but when he aspires to be a man, when he seeks to have the rights accorded him that other citizens of the country enjoy, then he is asking too much, and such gentlemen as the gentleman from Kentucky are not willing to grant it."

Mr. Stephens, of Georgia, said: "I am opposed to the passage of this measure, or any one kindred to it, even if any of the rights proposed to be secured by it were properly just in themselves, because of the want of the necessary power, under the Constitution, on the part of Congress to apply the appropriate remedy by the enactment of any such law as this bill proposes. I presume that it will not be assuming too much to take it for

granted that it will be admitted by every member of the House that the powers of Congress are specific as well as limited, and that all the powers which Congress can, legislatively or otherwise, rightfully exercise are held by delegation from the people of the several States of the Union. Where, then, in the Constitution is to be found the power which authorizes the passage of this measure? The power under which it is claimed, as I understand it, is derived chiefly from the first and fifth sections of the fourteenth article of amendment. It is true, in this connection, I have frequently seen reference made, also, to the fifteenth article of amendment. To see how far the power is sustained by the claim, we must therefore look into the purport and meaning of both these articles of amendment as they stand, without any consideration at this time as to their history, or how they became incorporated into the organic law of the Union.

"The two sections of the fourteenth article referred to are in the following words:

ARTICLE XIV. *Section* 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws. * * *

Sec. 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

"Sections 2, 3, and 4 of this article embrace a number of different subjects, not at all germane to the one under consideration.

"The fifteenth article is in the following words:

ARTICLE XV. *Section* 1. The right of the citizens of the United States to vote shall not be denied or abridged by the United States, or by any State, on account of race, color, or previous condition of servitude.

Sec. 2. The Congress shall have power to enforce this article by appropriate legislation.

"The reading of the fifteenth amendment shows it has no application whatever to the subject. Its main object was to deny to both Congress and the States the exercise of a certain power.

"And as to the first section of the fourteenth, all I have to say here is that it very clearly appears from its words that it has but two objects. These were, first, to declare the colored race to be citizens of the United States, and of the States, respectively, in which they reside; and, secondly, to prohibit the States, severally, from denying to the class of citizens, so declared, the same privileges, immunities, and civil rights which were secured to the citizens of the several States, respectively, and of the United States, by the Constitution as it stood before citizenship to the colored race was declared by this amendment.

"As to the fifth section of the fourteenth amendment and the second section of the fifteenth, so far as they relate to the subject-matter of the body of each amendment, respectively, their clear meaning and import are to provide security to the colored race in the enjoyment of the privileges, immunities, and rights so declared, in the same way and in like manner as was provided for the security of like privileges, immunities, and rights of the citizens of the several States, respectively, by the Constitution before this amendment, and that no other remedy for a violation of the prohibitions on State action in either of these amendments was contemplated than such as existed for like violations of like prohibitions anterior to the amendments. The exercise of no new power was conferred by either of these new amendments. The denial of the exercise of any number of powers by the United States, severally, does not, most certainly, confer its exercise upon the Congress of the States. Neither of these amendments confers, bestows, or even declares, any rights at all to citizens of the United States, or to any class whatever. Upon the colored race they neither confer, bestow, nor declare civil rights of any character; not even the right of franchise. They only forbid the States from discriminating in their laws against the colored race in the bestowment of such rights as they may severally deem best to bestow upon their own citizens. Whatever rights they grant to other citizens shall not be denied to the colored race as a class. This is the whole of the matter. The question then is, how can Congress enforce a prohibition of the exercise of these powers by a State? Most assuredly in the same way they enforced or provided for violations of like prohibitions anterior to these amendments.

"The proper remedies before were, and now are, nothing but the judgments of courts, to be rendered in such way as Congress might provide, declaring any State acts in violation of the prohibitions to be null and of no effect, because of their being in violation of this covenant between the States as set forth in the Constitution of the United States. No new power over this matter of a different nature or character from that previously delegated over like subjects was intended to be conferred by the concluding sections of either the fourteenth or fifteenth article of amendment. No such thing as the tremendous power of exercising general municipal as well as criminal legislation over the people of the several States could have been dreamed of by the proposers of these amendments. Such a construction would entirely upset the whole fabric of the Government, the maintenance of which in its integrity was the avowed object of the war. If the construction upon which this bill rests be a true construction, then you have power to prosecute and punish all those in Georgia and other States, numbering not only thousands but hundreds of thousands, who are

seeking to avail themselves of the benefit of relief acts passed by their States, which acts the Supreme Court of the United States have declared, in the way properly provided by Congress, to be in violation of that clause of the Constitution prohibiting the States, severally, from passing any law impairing the obligation of contracts. The prohibition against the States in the one case is the same in words and effect as in the other. To what monstrous consequences would not such a construction lead? It is my purpose, sir, to show, beyond the power of refutation, the correctness of all these propositions or positions.

"First, then, that the chief object of the first and fifth sections of the fourteenth amendment was, as stated, to make citizens of this class of persons there can be no doubt, or if there was any doubt before, it seems that there ought to be none any longer; for the Supreme Court, in the case before cited, said in direct terms of these parts of the fourteenth amendment just quoted, 'that its main object was to establish citizenship of the negro can admit of no doubt.' So that proposition may rest there.

"Next, as to the correctness of the other propositions, I prefer to rely upon the same high authority rather than to indulge in any process of reasoning myself. I therefore shall cite extensively from the same decision in sustainment of all the positions taken.

"In speaking of that clause of the Constitution as it stood before this amendment, in reference to the privileges and immunities of citizens of the several States secured by it, this court distinctly assert:

> Its sole purpose was to declare to the several States that, whatever those rights, as you grant or establish them to your own citizens, or as you limit or qualify, or impose restrictions on their exercise, the same, neither more nor less, shall be the measure of the rights of citizens of other States within your jurisdiction.

"And in relation to the powers of Congress to enforce such rights under the Constitution, as it stood before, by municipal laws operating over the people of the States, the court further assert:

> It would be the vainest show of learning to attempt to prove, by citations of authority, that up to the adoption of the recent amendments, no claim or pretense was set up that those rights depended on the Federal Government for their existence or protection, beyond the very few express limitations which the Federal Constitution imposed upon the States—such, for instance, as the prohibition against *ex post facto* laws, bills of attainder, and laws impairing the obligation of contracts. But, with the exception of these and a few other restrictions, the entire domain of the privileges and immunities of citizens of the States, as above defined, lay within the constitutional and legislative power of the States, and without that of the Federal Government.

"The court, then, in reference to the powers of Congress to pass municipal laws as a proper remedy against the exercise of powers prohibited to the States by the Constitution, with great point and potency put the question:

> Was it the purpose of the fourteenth amendment, by the simple declaration that no State should make or enforce any law which shall abridge the privileges and immunities of *citizens of the United States*, to transfer the security and protection of all the civil rights which we have mentioned from the States to the Federal Government? And where it is declared that Congress shall have power to enforce that article, was it intended to bring within the power of Congress the entire domain of civil rights heretofore belonging exclusively to the States?

"They answer it, too, with equal emphasis and power, in these words:

> All this and more must follow if the proposition of the plaintiffs in error be sound. For not only are these rights subject to the control of Congress whenever, in its discretion, any of them are supposed to be abridged by State legislation, but that body may also pass laws in advance, limiting and restricting the exercise of legislative power by the States in their most ordinary and usual functions, as in its judgment it may think proper on all such subjects. And still further, such a construction, followed by the reversal of the judgments of the Supreme Court of Louisiana in these cases, would constitute this court a perpetual censor upon all legislation of the States on the civil rights of their own citizens, with authority to nullify such as it did not approve as consistent with these rights as they existed at the time of the adoption of this amendment.

"Further on, in the same decision, in speaking of the fourteenth and fifteenth amendments and the heat and excitement of popular sentiment when they were before the people, the court gives forth certain other most important utterances on this subject, to which I call special attention. They say:

> Under the pressure of all the excited feeling growing out of the war, our statesmen have still believed that the existence of the States, with powers for domestic and local government, including the regulation of civil rights—the rights of person and of property—was essential to the perfect working of our complex form of government, though they have thought proper to impose additional limitations on the States and to confer additional power on that of the nation.

"Additional prohibitions imposed on the States severally and additional powers conferred on the General Government, but none of a new nature or character. It is here judicially affirmed that all the essential features of our original complex Federal system are still preserved. In substance it amounts to this, that these amendments (whether rightfully or wrongfully incorporated into the Constitution) do not change the nature and character of the Government. Soul-inspiring words are these! So long as an incorruptible judiciary shall sustain the pillars of the Constitution in their stately position, and the grand old Federal arch unbroken in any of its parts, no serious apprehension need be indulged in as to our future safety from the batteries of legislative demolition or reconstruction of the temple of our liberties, if the people of the several States shall continue equally true to themselves. The United States still exist as a Federal republic, and are not yet merged into a centralized empire. It is true the court here speaks of the States in union as a nation.

This is also eminently correct as the word was here doubtless intended to be used. The United States is indeed, and ever has been, a nation, and a nation of the highest type. It is a Federal republic — a republic of republics. Hence, the armorial motto stamped upon the great seal, as it was in the beginning: '*E pluribus unum*'—a nation of nations!

"But to proceed. I wish to call special attention to another decision, made by the same tribunal at the same term (*see* 16 Wallace, 138, 139), giving additional light upon the true construction of the fourteenth amendment, which very clearly shows that the power claimed under it, even as it stands, cannot justify the passage of this bill, and that the rights embraced within its provisions are not of that character which can be rightfully legislated for by congressional enactment. I quote extensively, for nothing I could say could impart either force to the argument or clearness to its conclusion. They say:

In regard to that amendment (the fourteenth) counsel for the plaintiff in this court truly says that there are certain privileges and immunities which belong to a citizen of the United States as such, otherwise it would be nonsense for the fourteenth amendment to prohibit a State from abridging them; and he proceeds to argue that admission to the bar of a State of a person who possesses the requisite learning and character is one of those which a State may not deny.

In this latter proposition we are not able to concur with counsel. We agree with him that there are privileges and immunities belonging to citizens of the United States in that relation and character, and that it is these and these alone which a State is forbidden to abridge. But the right to admission to practice in the courts of a State is not one of them. This right in no sense depends on citizenship of the United States. It has not, so far as we know, ever been made in any State, or in any case, to depend on citizenship at all. Certainly many prominent and distinguished lawyers have been admitted to practice both in the State and Federal courts who were not citizens of the United States or any State. But on whatever basis this right may be placed, so far as it can have any relation to citizenship at all, it would seem that, as to the courts of a State, it would relate to citizenship of the State; and as to Federal courts, it would relate to citizenship of the United States.

The opinion just delivered in the Slaughter-house cases (16 Wallace, page 36) renders elaborate argument in the present case unnecessary; for, unless we are wholly and radically mistaken in the principles on which those cases are decided, the right to control and regulate the granting of license to practise law in the courts of a State is one of those powers which are not transferred for its protection to the Federal Government, and its exercise is in no manner governed or controlled by citizenship of the United States in the party seeking such license.

It is unnecessary to repeat the argument on which the judgment in those cases is founded. It is sufficient to say they are conclusive of the present case.

"If it is within the reserved powers of a State to deny the right of admission to the bar to any who may be held to be her citizens, or citizens of the United States, is it not much more one of her reserved rights to say who may, or who may not, be admitted into her public schools or other institutions?

"Here I leave the question, so far as our powers over the subject-matter are concerned. I consider it as settled by the highest judicial tribunal of the country, so far as that tribunal is competent to settle any question of constitutional law.

"But, in the second place, among the reasons for my opposition to this bill, I oppose it because of its inexpediency. Even if the power were, without question or doubt, vested in Congress to pass municipal regulations of this sort to operate over the people of the several States of the Union, I think it would be exceedingly injudicious and unwise to exercise it. Better leave all such matters to the States. In point of fact, I do not believe the colored people of Georgia have any desire for mixed schools, and very little, indeed, for mixed churches, as contemplated by this measure. The tendency on their part, throughout the State, in all the religious denominations, except the Catholic, is to separate from the whites in church association and organization. In all instances, within my knowledge, the whites have been perfectly willing, and even solicitous, for them to remain and worship in the same houses and before the same altars; but they preferred to go by themselves. So with the schools. They have no desire or wish for mixed schools composed of white and colored children. All they want is their right and just participation in the common-school fund in schools of their own. This they now have in Georgia. They also have a university for themselves at Atlanta, aided by the State; as the State University for whites is in like manner aided by the State. They have no desire for any thing partaking of the character of social rights; and if the people, colored and white, in the several Southern States, shall be left to themselves to work out their own destiny under the present system, subject alone to the controlling law of justice, as before stated, without external interference of any sort, it will, in my judgment, be infinitely better for both races. Reciprocal duties will soon, of themselves, bring about as much harmony and concord as are usually found in any State or country.

"Interference by the Federal Government, even if the power were clear and indisputable, would be against the very genius and entire spirit of our whole system. If there is one truth which stands out prominently above all others in the history of these States, it is that the germinal and seminal principle of American constitutional liberty is the absolute, unrestricted right of State self-government in all purely internal municipal affairs.

"Let us not do by the passage of this bill what our highest judicial tribunal has said we have no rightful power to do. If you who call yourselves Republicans shall, in obedience to what you consider a party behest, pass it in the vain expectation that the republican principles of the old and true Jeffersonian school are dead, be assured you are indulging a fatal delusion.

The old Jeffersonian, democratic, republican principles are not dead, and will never die so long as a true devotee of liberty lives. They may be buried for a period, as Magna Charta was trodden under foot in England for more than half a century; but these principles will come up with renewed energy, as did those of Magna Charta, and that, too, at no distant day. Old Jeffersonian, democratic, republican principles dead, indeed! When the tides of ocean cease to ebb and flow, when the winds of heaven are hushed into perpetual silence, when the clouds no longer thunder, when earth's electric bolts are no longer felt or heard, when her internal fires go out, then, and not before, will these principles cease to live; then and not before will these principles cease to animate and move the liberty-loving masses of this country."

Mr. Elliott, of South Carolina, said: "While I am sincerely grateful for this high mark of courtesy that has been accorded to me by this House, it is a matter of regret to me that it is necessary at this day that I should rise in the presence of an American Congress to advocate a bill which simply asserts equal rights and equal public privileges for all classes of American citizens. I regret, sir, that the dark hue of my skin may lend a color to the imputation that I am controlled by motives personal to myself in my advocacy of this great measure of national justice. Sir, the motive that impels me is restricted by no such narrow boundary, but is as broad as your Constitution. I advocate it, sir, because it is right. The bill, however, not only appeals to your justice, but it demands a response from your gratitude.

"The honorable gentleman from Kentucky, always swift to sustain the failing and dishonored cause of proscription, rushes forward and flaunts in our faces the decision of the Supreme Court of the United States in the Slaughter-house cases, and in that act he has been willingly aided by the gentleman from Georgia. Hitherto, in the contests which have marked the progress of the course of equal civil rights, our opponents have appealed sometimes to custom, sometimes to prejudice, more often to pride of race, but they have never sought to shield themselves behind the Supreme Court. But now, for the first time, we are told that we are barred by a decision of that court, from which there is no appeal. If this be true, we must stay our hands. The cause of equal civil rights must pause at the command of a power whose edicts must be obeyed till the fundamental law of our country is changed.

"Mr. Speaker, I venture to say here in the presence of the gentleman from Kentucky, and the gentleman from Georgia, and in the presence of the whole country, that there is not a line or word, not a thought or dictum even, in the decision of the Supreme Court in the great Slaughter-house cases which casts a shadow of doubt on the right of Congress to pass the pending bill, or to adopt such other legislation as it may judge proper and necessary to secure perfect equality before the law to every citizen of the republic. Sir, I protest against the dishonor now cast upon our Supreme Court by both the gentleman from Kentucky and the gentleman from Georgia. In other days, when the whole country was bowing beneath the yoke of slavery, when press, pulpit, platform, Congress, and courts, felt the fatal power of the slave oligarchy, I remember a decision of that court which no American now reads without shame and humiliation. But those days are past. The Supreme Court of to-day is a tribunal as true to freedom as any department of this Government, and I am honored with the opportunity of repelling a deep disgrace which the gentleman from Kentucky, backed and sustained as he is by the gentleman from Georgia, seeks to put upon it.

"What were these Slaughter-house cases? The gentleman should be aware that a decision of any court should be examined in the light of the exact question which is brought before it for decision. That is all that gives authority to any decision.

"The State of Louisiana, by act of her Legislature, had conferred on certain persons the exclusive right to maintain stock-landings and slaughter-houses within the city of New Orleans, or the parishes of Orleans, Jefferson, and Saint Bernard, in that State. The corporation which was thereby chartered was invested with the sole and exclusive privilege of conducting and carrying on the live-stock-landing and slaughter-house business within the limits designated.

"The Supreme Court of Louisiana sustained the validity of the act conferring these exclusive privileges, and the plaintiffs in error brought the case before the Supreme Court of the United States for review. The plaintiffs in error contended that the act in question was void, because, first, it established a monopoly which was in derogation of common right and in contravention of the common law; and, second, that the grant of such exclusive privileges was in violation of the thirteenth and fourteenth amendments of the Constitution of the United States.

"It thus appears from a simple statement of the case that the question which was before the court was not whether a State law which denied to a particular portion of her citizens the rights conferred on her citizens generally, on account of race, color, or previous condition of servitude, was unconstitutional because in conflict with the recent amendments, but whether an act which conferred on certain citizens exclusive privileges for police purposes was in conflict therewith, because imposing an involuntary servitude forbidden by the thirteenth amendment, or abridging the rights and immunities of citizens of the United States, or denying the equal protection of the laws, prohibited by the fourteenth amendment.

"On the part of the defendants in error it

was maintained that the act was the exercise of the ordinary and unquestionable power of the State to make regulation for the health and comfort of society—the exercise of the police power of the State, defined by Chancellor Kent to be 'the right to interdict unwholesome trades, slaughter-houses, operations offensive to the senses, the deposit of powder, the application of steam-power to propel cars, the building with combustible materials, and the burial of the dead in the midst of dense masses of population, on the general and rational principle that every person ought so to use his own property as not to injure his neighbors, and that private interests must be made subservient to the general interests of the community.'

"The decision of the Supreme Court is to be found in the 16th volume of Wallace's Reports, and was delivered by Associate-Justice Miller. The court hold, first, the act in question is a legitimate and warrantable exercise of the police power of the State in regulating the business of stock-landing and slaughtering in the city of New Orleans and the territory immediately contiguous. Having held this, the court proceed to discuss the question whether the conferring of exclusive privileges, such as those conferred by the act in question, is the imposing of an involuntary servitude, the abridging of the rights and immunities of citizens of the United States, or the denial to any person within the jurisdiction of the State of the equal protection of the laws.

"That the act is not the imposition of an involuntary servitude the court hold to be clear, and they next proceed to examine the remaining questions arising under the fourteenth amendment. Upon this question the court hold that the leading and comprehensive purpose of the thirteenth, fourteenth, and fifteenth amendments was to secure the complete freedom of the race which, by the events of the war, had been wrested from the unwilling grasp of their owners. I know no finer or more just picture, albeit painted in the neutral tints of true judicial impartiality, of the motives and events which led to these amendments. Has the gentleman from Kentucky read these passages which I now quote? Or has the gentleman from Georgia considered well the force of the language therein used? Say the court, on page 70:

> The process of restoring to their proper relations with the Federal Government and with the other States those which had sided with the rebellion, undertaken under the proclamation of President Johnson in 1865, and before the assembling of Congress, developed the fact that, notwithstanding the formal recognition by those States of the abolition of slavery, the condition of the slave race would, without further protection of the Federal Government, be almost as bad as it was before. Among the first acts of legislation adopted by several of the States in the legislative bodies which claimed to be in their normal relations with the Federal Government, were laws which imposed upon the colored race onerous disabilities and burdens, and curtailed their rights in the pursuit of life, liberty, and property to such an extent that their freedom was of little value, while they had lost the protection which they had received from their former owners from motives both of interest and humanity.
>
> They were in some States forbidden to appear in the towns in any other character than menial servants. They were required to reside on and cultivate the soil, without the right to purchase or own it. They were excluded from any occupations of gain, and were not permitted to give testimony in the courts in any case where a white man was a party. It was said that their lives were at the mercy of bad men, either because the laws for their protection were insufficient or were not enforced.
>
> These circumstances, whatever of falsehood or misconception may have been mingled with their presentation, forced upon the statesmen who had conducted the Federal Government in safety through the crisis of the rebellion, and who supposed that by the thirteenth article of amendment they had secured the result of their labors, the conviction that something more was necessary in the way of constitutional protection to the unfortunate race who had suffered so much. They accordingly passed through Congress the proposition for the fourteenth amendment, and they declined to treat as restored to their full participation in the government of the Union the States which had been in insurrection until they ratified that article by a formal vote of their legislative bodies.
>
> Before we proceed to examine more critically the provisions of this amendment, on which the plaintiffs in error rely, let us complete and dismiss the history of the recent amendments, as that history relates to the general purpose which pervades them all. A few years' experience satisfied the thoughtful men who had been the authors of the other two amendments that, notwithstanding the restraints of those articles on the States and the laws passed under the additional powers granted to Congress, these were inadequate for the protection of life, liberty, and property, without which freedom to the slave was no boon. They were in all those States denied the right of suffrage. The laws were administered by the white man alone. It was urged that a race of men distinctively marked as was the negro, living in the midst of another and dominant race, could never be fully secured in their person and their property without the right of suffrage.
>
> Hence the fifteenth amendment, which declares that "the right of a citizen of the United States to vote shall not be denied or abridged by any State on account of race, color, or previous condition of servitude." The negro having, by the fourteenth amendment, been declared to be a citizen of the United States, is thus made a voter in every State of the Union.
>
> We repeat, then, in the light of this recapitulation of events, almost too recent to be called history, but which are familiar to us all, and on the most casual examination of the language of these amendments, no one can fail to be impressed with the one pervading purpose found in them all, lying at the foundation of each, and without which none of them would have been even suggested: we mean the freedom of the slave race, the security and firm establishment of that freedom, and the protection of the newly-made freeman and citizen from the oppressions of those who had formerly exercised unlimited dominion over him. It is true that only the fifteenth amendment in terms mentions the negro by speaking of his color and his slavery. But it is just as true that each of the other articles was addressed to the grievances of that race, and designed to remedy them, as the fifteenth.

"These amendments, one and all, are thus declared to have as their all-pervading design and end the security to the recently-enslaved race, not only their nominal freedom, but their complete protection from those who had for-

merly exercised unlimited dominion over them. It is in this broad light that all these amendments must be read, the purpose to secure the perfect equality before the law of all citizens of the United States. What you give to one class you must give to all; what you deny to one class you shall deny to all, unless in the exercise of the common and universal police power of the State you find it needful to confer exclusive privileges on certain citizens, to be held and exercised still for the common good of all.

"Such are the doctrines of the Slaughter-house cases—doctrines worthy of the republic, worthy of the age, worthy of the great tribunal which thus loftily and impressively enunciates them. Do they—I put it to any man, be he lawyer or not; I put it to the gentleman from Georgia—do they give color even to the claim that this Congress may not now legislate against a plain discrimination made by State laws or State customs against that very race for whose complete freedom and protection these great amendments were elaborated and adopted? Is it pretended—I ask the honorable gentleman from Kentucky or the honorable gentleman from Georgia—is it pretended anywhere that the evils of which we complain, our exclusion from the public inn, from the saloon and table of the steamboat, from the sleeping-coach on the railway, from the right of sepulture in the public burial-ground, are an exercise of the police power of the State? Is such oppression and injustice nothing but the exercise by the State of the right to make regulations for the health, comfort, and security of all her citizens? Is it merely enacting that one man shall so use his own as not to injure another's? Are the colored race to be assimilated to an unwholesome trade or to combustible materials, to be interdicted, to be shut up within prescribed limits? Let the gentleman from Kentucky or the gentleman from Georgia answer.

"But each of these gentlemen quotes at some length from the decision of the court to show that the court recognize a difference between citizenship of the United States and citizenship of the States. That is true, and no man here who supports this bill questions or overlooks the difference. There are privileges and immunities which belong to me as a citizen of the United States, and there are other privileges and immunities which belong to me as a citizen of my State. The former are under the protection of the Constitution and laws of the United States, and the latter are under the protection of the constitution and laws of my State. But what of that? Are the rights which I now claim—the right to enjoy the common public conveniences of travel on public highways, of rest and refreshment at public inns, of education in public schools, of burial in public cemeteries—rights which I hold as a citizen of the United States or of my State? Or, to state the question more exactly, is not the denial of such privileges to me a denial to me of the equal protection of the laws? For it is under this clause of the fourteenth amendment that we place the present bill, no State shall 'deny to any person within its jurisdiction the equal protection of the laws.' No matter, therefore, whether his rights are held under the United States or under his particular State, he is equally protected by this amendment. He is always and everywhere entitled to the equal protection of the laws. All discrimination is forbidden; and while the rights of citizens of a State as such are not defined or conferred by the Constitution of the United States, yet all discrimination, all denial of equality before the law, all denial of the equal protection of the laws, whether State or national laws, are forbidden.

"The distinction between the two kinds of citizenship is clear, and the Supreme Court have clearly pointed out this distinction, but they have nowhere written a word or line which denies to Congress the power to prevent a denial of equality of rights, whether those rights exist by virtue of citizenship of the United States or of a State. Let honorable members mark well this distinction. There are rights which are conferred on us by the United States. There are other rights conferred on us by the States of which we are individually the citizens. The fourteenth amendment does not forbid a State to deny to all its citizens any of those rights which the State itself has conferred, with certain exceptions, which are pointed out in the decision which we are examining. What it does forbid is inequality, is discrimination, or, to use the words of the amendment itself, is the denial 'to any person within its jurisdiction the equal protection of the laws.' If a State denies to me rights which are common to all her other citizens, she violates this amendment, unless she can show, as was shown in the Slaughter-house cases, that she does it in the legitmate exercise of her police power. If she abridges the rights of all her citizens equally, unless those rights are specially guarded by the Constitution of the United States, she does not violate this amendment. This is not to put the rights which I hold by virtue of my citizenship of South Carolina under the protection of the national Government; it is not to blot out or overlook in the slightest particular the distinction between rights held under the United States and rights held under the States; but it seeks to secure equality, to prevent discrimination, to confer as complete and ample protection on the humblest as on the highest.

"Sir, I have replied to the extent of my ability to the arguments which have been presented by the opponents of this measure. I have replied also to some of the legal propositions advanced by gentlemen on the other side; and now that I am about to conclude, I am deeply sensible of the imperfect manner in which I have performed the task. Technically this bill is to decide upon the civil status of the colored American citizen; a point disputed at

the very formation of our present Government, when by a short-sighted policy, a policy repugnant to true republican government, one negro counted as three-fifths of a man. The logical result of this mistake of the framers of the Constitution strengthened the cancer of slavery, which finally spread its poisonous tentacles over the southern portion of the body politic."

Mr. Butler, of Massachusetts: "Mr. Speaker, if these are rights, again let me ask, why should they not be given to all citizens of the United States, if we have the constitutional power to do so? If the States give them and execute them, then there will be no longer any need for this statute. It will not be enforced, and will do no harm. Where a State will do its duty, there this statute will be inoperative. Where the State does not do its duty in this behalf, then the flag of the United States, and the power of the United States, and the judiciary of the United States, should protect the citizens against all unfriendly State legislation, or against the want of legislation. And I have the authority of the gentleman from Virginia (Mr. Harris) for saying that 'no State has legislated on the subject.'

"And it is because of the very prejudice which has prevented such legislation that I claim the passage of the bill.

"Is it a prejudice at all? Was there any objection in the South to consorting with the negro as a slave? Oh, no; your children and your servants' children played together; your children sucked the same mother with your servants' children; had the same nurse; and, unless tradition speaks falsely, sometimes had the same father.

"Would you not ride in first-class cars with your negroes in the olden time? What negro servant accompanying a mistress or master, and administering to his or her health, was ever denied a first-class passage in a first-class car in the South before the war? What negro girl, being the nurse or servant of a lady, was not allowed to sit by that lady and that child in a first-class car? What negro servant, accompanying a lady or a gentleman, was ever denied admittance to a first-class hotel? My friend from Tennessee, I think it was, told us that in the olden time the master and his slave always used to worship together in the same churches, but that now there are separate churches, and the negroes prefer to worship by themselves.

"But how was it before the war? You talk about your prejudices against social equality! I put this question to the minds and consciences of every man of you. Who is the highest in the social scale, a slave or a freeman? You associated with the slave in every relation in life. He now has become your freeman, and now you cannot associate with him; he has got up in the scale, and you cannot stomach him. Why is this? It is because he claims that as a right which you accorded him always freely as a boon. It is because the laws of your land, the Constitution of your country, gave all men equal rights in accordance with the fiat of God Almighty which has made some of them your equal in all things, and therefore he is no longer to be associated with or tolerated! This is not a prejudice against the negro in any personal objection to him—it is a political idea only.

"I had, sir, to deal with this question early in the war, and I cannot better explain the operations of this kind of prejudice than by stating the exact fact which happened on board one of the boats upon Chesapeake Bay, between Baltimore and Fortress Monroe. A member of the Christian Commission went North after two school-teachers, and brought back two ladies, one of whom had some colored blood in her veins, but so much more white that it took a connoisseur to find the color. The women bought first-class tickets, and took their state-room, sat down at the table, and paid for their supper. A Virginian, who was on board, being able to know a negro from long use whenever he saw one, smoked out the fact that one of them, a lady in dress, a lady in culture, a lady in manners, had some negro blood in her veins, and he complained to the clerk of the boat that he could not eat at the table in the saloon with her, and the clerk ordered her forward among the deck-hands and servants. The lady and her companion, frightened, ran to their state-room, and locked themselves in. The Virginian insisted on her being taken out of that. But a provost passenger on board was roused to his duty, and insisted that all that should be stopped. Next morning complaint was made to me as commanding general, and I sent for the clerk—an inoffensive old gentleman, who looked as if he would not harm anybody. I said, 'What is all this?' He said, 'I was only carrying out the rules of my boat.' I said, 'Do you not recognize the fact that the war has made a difference in these things?' He answered, 'Not in the rules of our boat.' I asked, 'What were the rules of your boat before the war? Could not a colored nurse go with the children of her mistress, and occupy a state-room with them?' 'Yes, sir.' 'Could she come to the table with them?' 'Yes, sir.' 'Which do you think, Mr. Clerk, is the highest in the social scale, a freeman or a slave?' 'Oh, a freeman, general, of course.' 'Very well, Mr. Clerk; I think I can make a rule for your boat now that will be easy of enforcement. Do not go away and say that the commanding general says that the negro is as good as a white man. I am not going to say any such thing. But hereafter let this be your rule: Let no free person ever be deprived of any privileges on your boat that were ever accorded to a slave person. Do this, and there will be no trouble hereafter.' And there was none.

"That tells the whole story and covers the whole argument of prejudice. It is not a prejudice, gentlemen. You make a mistake.

A prejudice is where you do not like the thing itself. We in the North had somewhat of this prejudice against the colored. You of the South had none. From the rarity, they were offensive to us. But we are getting used to the negro, and are getting free from our former mode of feeling and speaking on the subject. That was a prejudice. But you had not any such feeling of dislike or offensiveness at the South. Now I am getting over that feeling, and you are getting it. And it is a political idea you are getting, and not a prejudice at all.

"Now, sir, you will allow me to state how I got over my prejudices. I think the House got over theirs after the exhibition we had yesterday. I think no man will get up here and say he speaks only to white men again. He must at first show himself worthy before he can speak to some colored men in this House after what occurred yesterday.

"I got over my prejudices from the exhibition of like high qualities of the negro, but in a different manner from that in which, I have no doubt, many a prejudice was removed against the negro in the House yesterday. In Louisiana, in 1862, when our arms were meeting with disasters before Richmond, I was in command of the city of New Orleans with a very few troops, and those daily diminishing by the diseases incident to the climate, with a larger number of Confederate soldiers paroled in the city than I had troops. I called upon my Government for reënforcements, and they could not give me any, and I therefore called upon the colored men to enlist in defense of their country. I brought together the officers of two colored regiments that had been raised by the Confederates for the defense of the city against us—but which disbanded when we came there because they would not fight against us, and staid at home when their white comrades ran away—and I said: 'How soon can you enlist me one thousand men?' 'In ten days, general,' they answered; and when the thousand men were brought together in a large hall, I saw such a body of recruits as I never saw before. Why, sir, every one of them had on a clean shirt, a thing not often got in a body of a thousand recruits. I put colored officers in command of them, and I organized them. But we all had our prejudice against them. I was told they would not fight. I raised another regiment, and by the time I got them organized, before I could test their fighting qualities in the field, the exigencies of the service required that I should be relieved from the command of that department.

"I came into command again in Virginia in 1863. I there organized twenty-five regiments, with some that were sent to me, and disciplined them. Still all my brother officers of the regular army said my colored soldiers would not fight; and I felt it was necessary that they should fight to show that their race were capable of the duties of citizens; for one of the highest duties of citizens is to defend their own liberties and their country's flag and honor. On the 29th of September, 1864, I was ordered by the commanding general of the armies to cross the James River at two points and attack the enemy's line of works; one in the centre of their line, Fort Harrison, the other a strong work guarding their left flank at New Market Heights; and there are men on this floor who will remember that day, I doubt not, as I do myself. I gave the centre of the line to the white troops, the Eighteenth Corps, under General Ord, and they attacked one very strong work and carried it gallantly. I went myself with the colored troops, to attack the enemy at New Market Heights, which was the key to the enemy's flank on the north side of James River. That work was a redoubt built on the top of a hill of some considerable elevation; then running down into a marsh; in that marsh was a brook; then rising again to a plain which gently rolled away toward the river. On that plain, when the flash of dawn was breaking, I placed a column of three thousand colored troops, in close column by division, right in front, with guns at 'right shoulder shift.'

"I said: 'That work must be taken by the weight of your column; no shot must be fired;' and to prevent their firing I had the caps taken from the nipples of their guns. Then I said, 'Your cry, when you charge, will be, "Remember Fort Pillow!"' and as the sun rose up in the heavens the order was given, 'Forward!' and they marched forward, steadily as if on parade—went down the hill, across the marsh, and as they got into the brook they came within range of the enemy's fire, which vigorously opened upon them. They broke a little as they forded the brook, and the column wavered. Oh, it was a moment of intensest anxiety, but they formed again as they reached the firm ground, marching steadily on with closed ranks under the enemy's fire, until the head of the column reached the first line of abattis, some one hundred and fifty yards from the enemy's work. Then the axe-men ran to the front to cut away the heavy obstructions of defense, while one thousand men of the enemy, with their artillery concentrated, from the redoubt poured a heavy fire upon the head of the column hardly wider than the clerk's desk. The axe-men went down under that murderous fire; other strong hands grasped the axes in their stead, and the abattis was cut away. Again, at double-quick, the column goes forward to within fifty yards of the fort, to meet there another line of abattis. The column halts, and there a very fire of hell is pouring upon it. The abattis resists and holds, the head of the column seemed literally to melt away under the rain of shot and shell, the flags of the leading regiments go down, but a brave black hand seizes the colors; they are up again and wave their starry light over the storm of battle; again the axe-men fall, but strong hands and willing hearts seize the heavy sharpened

trees and drag them away, and the column forward, and with a shout which now rings in my ear they went over that redoubt like a flash, and the enemy never stopped running for four miles!

"It became my painful duty, sir, to follow in the track of that charging column, and there, in a space not wider than the clerk's desk and three hundred yards long, lay the dead bodies of five hundred and forty-three of my colored soldiers, slain in defense of their country, and who had laid down their lives to uphold its flag and its honor as a willing sacrifice; and as I rode along among them, guiding my horse this way and that way lest he should profane with his hoofs what seemed to me the sacred dead, and as I looked on their bronzed faces upturned in the shining sun to heaven as if in mute appeal against the wrongs of that country for which they had given their lives, and whose flag had only been to them a flag of stripes on which no star of glory had ever shone for them —feeling I had wronged them in the past and believing what was the future of my country to them—among my dead comrades there I swore to myself a solemn oath, 'May my right hand forget its cunning and my tongue cleave to the roof of my mouth if I ever fail to defend the rights of these men who have given their blood for me and my country this day and for their race forever!' and, God helping me, I will keep that oath.

"From that hour all prejudice was gone, and an old-time States-right Democrat became a lover of the negro race; and as long as their rights are not equal to the rights of other men under this Government I am with them against all comers; and when their rights are assured, as other men's rights are held sacred, then, I trust, we shall have what we ought to have, a united country North and South, white and black, under one glorious flag, for which we and our fathers have fought with an equal and not to be distinguished valor.

"Now, Mr. Speaker, these men have fought for their country; one of their representatives has spoken, as few can speak on this floor, for his race; they have shown themselves our equals in battle; as citizens they are kind, quiet, temperate, laborious; they have shown that they know how to exercise the right of suffrage which we have given to them, for they always vote right; they vote the Republican ticket, and all the powers of death and hell cannot persuade them to do otherwise. They show that they knew more than their masters did, for they always knew how to be loyal. They have industry, they have temperance, they have all the good qualities of citizens, they have bravery, they have culture, they have power, they have eloquence. And who shall say that they shall not have what the Constitution gives them—equal rights?"

The Speaker: "The pending motion is that made by the gentleman from Massachusetts (Mr. Butler), that the pending bill and proposed amendments thereto be recommitted to the Committee on the Judiciary."

The motion to recommit was agreed to.

Mr. Vance of North Carolina, said: "Mr. Speaker: Having been unable to obtain the floor on the civil-rights bill, I propose to devote a portion of my time to the discussion of that subject; and I think I can do so without prejudice and without subjecting myself truthfully to the charge of hatred toward the colored race. In the will of my grandfather (who was one of those who struggled for liberty upon the heights of King's Mountain) he enjoined it upon his children and his grandchildren to treat kindly the colored people upon the plantation. I hope never to forget a sentiment so noble and so worthy of obedience. In fact, as a Southern man, as one who has sympathized from my earliest time of knowledge with the South in all the great principles and struggles which have interested her, I have felt it my duty to advance in every laudable way the interests of the colored race in this country. I have even taught a colored Sunday-school of one hundred and fifty scholars. I have endeavored in every way possible to advance the interests of that race. I feel, therefore, that I can speak upon this subject without prejudice.

"The charge has been made against the people of the South that their opposition to such measures as the civil-rights bill has arisen from prejudice and hatred. This charge is unfounded; it is untrue. Before the war—in the days past and gone—in the days when there were 4,000,000 slaves in the South, the churches of the South sent missionaries into the cotton plantations, and down into the orange-groves, and out upon the rolling prairies of Texas. Into all parts of the country where great numbers of colored people were collected the churches sent their missionaries, and held up there the standard of the Cross, instructing them in the sublime principles which relate to questions vastly more important than mere earthly things

"I have yet to meet the Southern man (and I thank God for it) who does not in his heart rejoice that the colored man is free. In my intercourse with the people of my own land, in my travels through the 'sunny South,' I have found the feeling everywhere one of gratitude and thankfulness that the chains of the colored man have been broken; that he is now permitted to walk the earth a free man.

"Sir, the people of the South were not to blame for the introduction of slavery among them. It came from elsewhere, and became incorporated as a part of our institutions. The old colored women nursed the white children of the South, while kindness and friendship were maintained between the two races. Such an institution could not be readily abolished. It could probably only be done by the shock of arms.

"Every Southern man who will call to mind the fact that after the thunder of artillery had

ceased, when the clang of arms was no more heard in the country, the Southern people rallied and took the oath to support the proclamations of Mr. Lincoln, in order that the colored man might be free. Those proclamations, Mr. Speaker, were regarded at the time as unconstitutional; yet the Southern people were willing that the colored man should enjoy his freedom, and all over the South they came forward and took the oath to support those proclamations.

"Following hard upon that, the conventions of the Southern States assembled, and by a solemn act ratified the freedom of the colored man, confirming it forever by statute upon the records of their governments.

"What else did they do? They went to work and secured the colored man in all his civil rights, or what may properly be termed civil rights. The people there consented that he should vote; they consented he should hold office; they consented he should serve upon juries; they consented that he should hold property, and that he should be a witness in court. All the real rights properly known as civil rights were guaranteed to the colored man in that section; and the charge cannot justly be made against this people that they are opposed to according civil rights to the colored man on account of any prejudice or hatred, for it is not in their hearts.

"Why, then, do we oppose the civil-rights bill? That is the question; and speaking as I do, and feeling as I speak, without prejudices, I will show what is the real objection to the bill known as the civil-rights bill. I think gentlemen of the committee will bear me out when I say the title of the bill we had before us ought to be changed, and made to read thus: 'A bill to protect the colored people in their social rights.' That is the way it should read.

"Now, Mr. Speaker, the distinguished gentleman from Massachusetts (Mr. Butler) laid down the law, and it has not been controverted, that all men are entitled under the law to the right to go to an hotel, to ride in a public railway-carriage, to interment, and to be taught in the public school sustained by moneys raised by taxation.

"It is laid down as the common law of the land. Now, let us see for a few minutes, Mr. Speaker, how the case stands. There is no railway-car in all the South which the colored man cannot ride in. That is his civil right. This bill proposes that he should have the opportunity or the right to go into a first-class car and sit with white gentlemen and white ladies. I submit if that is not a social right. There is a distinction between the two. Now, there is not an hotel in the South where the colored man cannot get entertainment such as food and lodgings. That is his civil right. The bill of the committee provides that there shall be no distinction. Even if he is allowed to go into the dining-room, and is placed at a separate table because of his color, it will be a violation of this law. Placing him, therefore, at the table with the whites is a social right.

"Now, sir, provision has been made for free schools in my own native State of North Carolina. We have cheerfully taxed ourselves there for the education of our people, including the colored race; but separate schools are organized for the instruction of the latter. One of the civil rights of the colored man undoubtedly is the right to be educated out of moneys raised by taxation. His children, under the law, have that right; but this bill goes further, and provides that colored children shall go into the same school with white children, mixing the colored children and the white children in the same schools. I submit to the committee whether that is not a social right instead of a civil right. Therefore it is I say this bill ought to be changed, or rather its title ought to be changed. The real objection, then, to civil rights, so called, is that it is not best for both races; that in fact it will be detrimental to the interests of both races.

"Now, Mr. Speaker, I propose to show briefly how that will be. In the first place, the true policy in regard to the intercourse of mankind all over this broad earth is in the recognition of the fact that such intercourse is one made up of mutual interests. It is the interest of the hotel-keeper to entertain his guests, it is the interest of the railway company to transport passengers; the interests are mutual; and that is the true policy all the world over. But whenever you undertake to force persons of color into their social rights, then, in my judgment, you have done the colored man a serious damage. Let the people of the South alone, sir, and this thing will adjust itself. It will come out all right. In coming to this city the other day, colored men were sitting in first-class cars with their wives, where they were admitted by the managers of the road; and I am told in this city one of the first hotels admits colored men as guests. It will adjust itself if let alone; but if you undertake to coerce society before it is ready, you will damage the colored man in all his interests, and at the same time do damage to the white race.

"There are between four and five millions of colored people in the South, whose interests are intimately and closely connected with those of the white people. The one cannot well do without the other. Where does the colored man get his place to live, where does he obtain employment? In a great measure from the white men of the country, and almost entirely from those opposed to this bill. And I tell the committee now, through you, Mr. Chairman, that the great majority of the people of the Southern States, of all political shades of opinion, are opposed to any thing like force in this matter.

"This bill, Mr. Speaker, will, more or less, bring about an antagonism of the races; and that state of things would not be best for the colored man. I submit it in good faith, that if

the question is ever presented in the South, 'Shall this country be ruled by white men or ruled by colored men?' the colored man is not able to stand any such antagonism as that; he will necessarily, sir, go down. I ask, What race has ever been able to stand before the Caucasian? Look at the history of the world. Where is the Indian? Why, sir, less than two centuries ago on this spot the Indian reared his wigwam and stood upon these hills and looked upon the broad, beautiful Potomac, or his eye swept over the hunting-grounds of the West; and he had the title to this magnificent country. Where is he now? He has gone back, step by step, before the advancing march of the white man. No race, sir, in the world has been able to stand before the pure Caucasian. An antagonism of races will not be good for the colored man."

Meantime the subject was taken up in the Senate, and the bill presented on the first day of the session by Mr. Sumner, of Massachusetts, was considered and referred to the Committee on the Judiciary.

On April 30th the Committee on the Judiciary reported the bill with an amendment, which was to strike out all after the enacting clause, and in lieu thereof to insert the following:

That all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land or water, theatres, and other places of public amusement; and also of common schools and public institutions of learning or benevolence supported, in whole or in part, by general taxation; and of cemeteries so supported: subject only to the conditions and limitations established by law, and applicable alike to citizens of every race and color, regardless of any previous condition of servitude.

SECTION 2. That any person who shall violate the foregoing section by denying to any citizen, except for reasons by law applicable to citizens of every race and color, and regardless of any previous condition of servitude, the full enjoyment of any of the accommodations, advantages, facilities, or privileges in said section enumerated, or by aiding or inciting such denial, shall, for every such offense, forfeit and pay the sum of $500 to the person aggrieved thereby, to be recovered in an action on the case, with full costs; and shall also, for every such offense, be deemed guilty of a misdemeanor, and, upon conviction thereof, shall be fined not less than $500 nor more than $1,000, or shall be imprisoned not less than thirty days nor more than one year: *Provided*, That the party aggrieved shall not recover more than one penalty; and when the offense is a refusal of burial, the penalty may be recovered by the heirs at law of the person whose body has been refused burial: *And provided further*, That all persons may elect to sue for the penalty aforesaid or to proceed under their rights at common law and by State statutes; and having so elected to proceed in the one mode or the other, their right to proceed in the other jurisdiction shall be barred. But this proviso shall not apply to criminal proceedings, either under this act or the criminal law of any State.

SEC. 3. That the district and circuit courts of the United States shall have, exclusively of the courts of the several States, cognizance of all crimes and offenses against, and violations of, the provisions of this act; and actions for the penalty given by the preceding section may be prosecuted in the territorial, district, or circuit courts of the United States wherever the defendant may be found, without regard to the other party. And the district attorneys, marshals and deputy-marshals of the United States, and commissioners appointed by the circuit and territorial courts of the United States, with powers of arresting and imprisoning or bailing offenders against the laws of the United States, are hereby specially authorized and required to institute proceedings against every person who shall violate the provisions of this act, and cause him to be arrested and imprisoned or bailed, as the case may be, for trial before such court of the United States or territorial court as by law has cognizance of the offense, except in respect of the right of action accruing to the person aggrieved; and such district attorneys shall cause such proceedings to be prosecuted to their termination as in other cases: *Provided*, That nothing contained in this section shall be construed to deny or defeat any right of civil action accruing to any person, whether by reason of this act or otherwise. And any district attorney who shall willfully fail to institute and prosecute the proceedings herein required shall, for every such offense, forfeit and pay the sum of $5,000 to the person aggrieved thereby, to be recovered by an action on the case, with full costs, and shall, on conviction thereof, be deemed guilty of a misdemeanor, and be fined not less than $1,000 nor more than $5,000.

SEC. 4. That no citizen possessing all other qualifications which are or may be prescribed by law shall be disqualified for service as grand or petit juror in any court of the United States, or of any State, on account of race, color, or previous condition of servitude; and any officer or other person charged with any duty in the selection or summoning of jurors who shall exclude or fail to summon any citizen for the cause aforesaid shall, on conviction thereof, be deemed guilty of a misdemeanor, and be fined not more than $5,000.

SEC. 5. That all cases arising under the provisions of this act in the courts of the United States shall be reviewable by the Supreme Court of the United States without regard to the sum in controversy, under the same provisions and regulations as are now provided by law for the review of other causes in said court.

The amendment was agreed to.

The bill was reported to the Senate as amended.

The president *pro tempore:* "Will the Senate concur in the amendment made as in Committee of the Whole?"

Mr. Frelinghuysen, of New Jersey, said: "Mr. President, the Committee on the Judiciary have devolved on me, on whom it should not have been imposed, the duty of presenting and explaining this bill, which I shall do in the most concise manner, even pruning from my remarks such comment as a measure having for its object the civil rights of all might naturally inspire in the councils of a free people.

"I invoke for the bill a calm, impartial, and unpartisan consideration, and ask its adoption only as it commends itself as consistent with the permanent interests of the nation, with the Constitution, and with justice to all classes of citizens. Would that the author * of the measure was here to present and defend it! To our views it would have been becoming that he who was in the forum the foremost leader of the grandest victory of the nineteenth century

* Mr. Sumner, deceased.

in the Western Hemisphere, the victory of freedom over slavery, should have placed the cap-stone on the structure he was permitted to be an efficient instrumentality in aiding to erect. But it was otherwise decreed.

"I call the attention of the Senate to but two sections of this measure—the first section and the fourth section of the amendment; the other parts of the bill being mere machinery to carry those into effect. The first section provides:

That all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land or water, theatres, and other places of public amusement; and also of common schools and public institutions of learning or benevolence supported, in whole or in part, by general taxation; and of cemeteries so supported: subject only to the conditions and limitations established by law, and applicable alike to citizens of every race and color, regardless of any previous condition of servitude.

"The fourth section provides:

That no citizen possessing all other qualifications which are or may be prescribed by law shall be disqualified for service as grand or petit juror in any court of the United States, or of any State, on account of race, color, or previous condition of servitude; and any officer or other person charged with any duty in the selection or summoning of jurors who shall exclude or fail to summon any citizen for the cause aforesaid shall, on conviction thereof, be deemed guilty of a misdemeanor, and be fined not more than $5,000.

"It is the one purpose of this bill to assert, or rather to reassert, 'freedom from all discrimination before the law as one of the fundamental rights of United States citizenship.' If, sir, we have not the constitutional right thus to legislate, then the people of this country have perpetrated a blunder amounting to a grim burlesque over which the world might laugh were it not that it is a blunder over which humanity would have occasion to mourn. Sir, we have the right, in the language of the Constitution, to give 'to all persons within the jurisdiction of the United States the equal protection of the laws.'

"This bill when enacted, it is believed, will be a finality, removing from legislation, from politics, and from society, an injurious agitation, and securing to every citizen that proud equality which our nation declares to be his right, and which is a boon in defense of which most men would die.

"The colored citizens ask this legislation, not because they seek to force themselves into associations with the whites, but because they have their prides and emulations among themselves, and wish *there* in those associations to feel that there is no ban upon them, but that they are as fully enfranchised as any who breathe the air of heaven.

"I ask you, should the colored citizens be content to demand less than full and equal enfranchisement; should they say, 'We are content that we and our children shall wear forever the badge of political inferiority,' would they not thereby prove themselves to you to be unfit for the high dignity to which the nation has called them? Let us not doubt the foundation principle of our Government; it has always proved true. Give equality to all. Our confidence will not be abused.

"This bill applies alike to the white citizen and to the colored citizen.

"I am aware that the majority of the Supreme Court in the Slaughter-house case (16 Wallace), giving construction to the thirteenth, fourteenth, and fifteenth amendments in the light of the history which called them into being, make them apply especially, though not exclusively, I think, to the enfranchisement of the colored race. There can be no doubt they apply equally to all races.

"The court, in the case of The Live-stock Association *vs.* The Crescent City Live-stock Company (1 Abbot, page 38), undoubtedly give the true construction to the amendments as to their application. The court say:

It is possible that those who framed the articles were not themselves aware of the far-reaching character of their terms. They may have had in mind but one particular phase of social and political wrongs which they desired to redress. Yet if the amendment as framed and expressed does in fact bear a broader meaning, and does extend its protecting shield over those who were never thought of when it was conceived and put in form, and does reach social evils which were never before prohibited by constitutional enactment, it is to be presumed that the American people in giving it their imprimatur understood what they were doing, and meant to decree what has in fact been decreed.

"This bill therefore properly secures equal rights to the white as well as to the colored race.

"Again let me say that this measure does not touch the subject of social equality. That is not an element of citizenship. The law which regulates that is found only in the tastes and affinities of the mind; its law is the arbitrary, uncontrolled human will. You cannot enact it.

"This bill does not disturb any laws, whether statute or common, relating to the administration of inns, places of public amusement, schools, institutions of learning or benevolence, or cemeteries, supported in whole or in part by general taxation (and it is only to these that it applies), excepting to abrogate such laws as make discrimination on account of race, color, or previous servitude.

"Inns, places of amusement, and public conveyances, are established and maintained by private enterprise and capital, but bear that intimate relation to the public, appealing to and depending upon its patronage for support, that the law has for many centuries measurably regulated them, leaving at the same time a wide discretion as to their administration in their proprietors. This body of law and this discretion are not disturbed by this bill, except when the one or the other discriminates on account of race, color, or previous servitude.

"As the capital invested in inns, places of

amusements, and public conveyances, is that of the proprietors, and as they alone can know what minute arrangements their business requires, the discretion as to the particular accommodation to be given to the guest, the traveler, and the visitor, is quite wide. But as the employment these proprietors have selected touches the public, the law demands that the accommodation shall be good and suitable, and this bill adds to that requirement the condition that no person shall, in the regulation of these employments, be discriminated against merely because he is an American or an Irishman, a German or a colored man.

"I have called attention to inns, places of amusements, and public conveyances, separately from schools, institutions of learning and benevolence, and cemeteries, supported in whole or in part by general taxation, because the condition of the existence of the former, to wit, inns, places of amusements, and public conveyances, differs from that of the latter, to wit, schools, institutions of benevolence, and cemeteries. I assume that no one can question that schools, institutions of learning and benevolence, and cemeteries, which are supported by the taxation of all, should be subject to the equal use of all. Subjecting to taxation is a guarantee of the right to use. Even as to these institutions, which are the fruit of taxation, the bill does not disturb the established law, statute or common, or the discretion of their managers, except so far as the one or the other, in violation of the fundamental principles of our Government, discriminates against some one under our jurisdiction because of his blood, because of his complexion, or because of the cruel wrong of slavery which he may have suffered.

"Uniform discrimination may be made in schools and institutions of learning and benevolence on account of age, sex, morals, preparatory qualifications, health, and the like. But the son of the poorest Irishman in the land, who has sought our shores to better the condition of his offspring, shall have as good a place in our schools as the scion of the chief man of the parish. The old blind Italian, who comes otherwise within the regulations of an asylum for the blind supported by taxation, shall have as good a right to its relief as if he were an American born.

"There is but one idea in the bill, and that is, the equality of races before the law.

"The inquiry may arise whether this bill admits of the classification of races in the common-school system; that is, having one school for white and another for colored children. That subject has been discussed somewhat in the courts. In a case in 24 Iowa Reports, page 267, it was directly considered. There the court held that—

> The constitution and statutes in force effectuating it provide for the education of all the youths of the State, without distinction of color; and the board of directors have no discretionary power to require colored children to attend a separate school. They may exercise a uniform discretion, operative upon all, as to the residence or qualification of children to entitle them to admission to each particular school, but they cannot deny a youth admission to any particular school, because of his color, nationality, religion, or the like.

"The law of Iowa goes further than the law proposed in this bill. Here there is no prohibition as to a discrimination on account of religion or of morals. It does not say that all youths shall have this right. The only prohibition in this bill is one which prevents discrimination on account of race. The same subject was considered in the case of The State on the relation of Garnes *vs.* McCann and others, in 21 Ohio Reports, page 198. There the court held:

> That the act authorizing such classification on the basis of color does not contravene the constitution of the State, nor the fourteenth amendment of the Constitution of the United States, and that colored children residing in either of the districts for white children, are not, as of right, entitled to admission into the schools for white children.

"The constitution and laws of Iowa provide for the 'education of all the youths of the State without distinction of color.' In Ohio the statute expressly provided for separate schools for white and colored children. Therefore the decisions of those courts afford no precedent for the construction of this bill when enacted. The language of this bill secures full and equal privileges in the schools, subject to laws which do not discriminate as to color.

"The bill provides that full and equal privileges shall be enjoyed by all persons in public schools supported by taxation, subject only to the limitation established by law, applicable alike to citizens of every race and color, and regardless of previous servitude.

"The bill does not permit the exclusion of one from a public school on account of his nationality alone.

"The object of the bill is to destroy, not to recognize, the distinctions of race.

"When in a school-district there are two schools, and the white children choose to go to one and the colored to the other, there is nothing in this bill that prevents their doing so.

"And this bill being a law, such a voluntary division would not in any way invalidate an assessment for taxes to support such schools.

"And let me say that, from statements made to me by colored Representatives in the other House, I believe that this voluntary division into separate schools would often be the solution of difficulty in communities where there still lingers a prejudice against a colored boy, not because he is ignorant, or untidy, or immoral, but because of his blood.

"It is claimed that the enactment of the bill would be in violation of the Constitution, because the regulation of inns, public conveyances, and places of amusement, common schools, institutions of learning and benevolence, and cem-

in the Western Hemisphere, the victory of freedom over slavery, should have placed the cap-stone on the structure he was permitted to be an efficient instrumentality in aiding to erect. But it was otherwise decreed.

"I call the attention of the Senate to but two sections of this measure—the first section and the fourth section of the amendment; the other parts of the bill being mere machinery to carry those into effect. The first section provides:

That all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land or water, theatres, and other places of public amusement; and also of common schools and public institutions of learning or benevolence supported, in whole or in part, by general taxation; and of cemeteries so supported: subject only to the conditions and limitations established by law, and applicable alike to citizens of every race and color, regardless of any previous condition of servitude.

"The fourth section provides:

That no citizen possessing all other qualifications which are or may be prescribed by law shall be disqualified for service as grand or petit juror in any court of the United States, or of any State, on account of race, color, or previous condition of servitude; and any officer or other person charged with any duty in the selection or summoning of jurors who shall exclude or fail to summon any citizen for the cause aforesaid shall, on conviction thereof, be deemed guilty of a misdemeanor, and be fined not more than $5,000.

"It is the one purpose of this bill to assert, or rather to reassert, 'freedom from all discrimination before the law as one of the fundamental rights of United States citizenship.' If, sir, we have not the constitutional right thus to legislate, then the people of this country have perpetrated a blunder amounting to a grim burlesque over which the world might laugh were it not that it is a blunder over which humanity would have occasion to mourn. Sir, we have the right, in the language of the Constitution, to give 'to all persons within the jurisdiction of the United States the equal protection of the laws.'

"This bill when enacted, it is believed, will be a finality, removing from legislation, from politics, and from society, an injurious agitation, and securing to every citizen that proud equality which our nation declares to be his right, and which is a boon in defense of which most men would die.

"The colored citizens ask this legislation, not because they seek to force themselves into associations with the whites, but because they have their prides and emulations among themselves, and wish *there* in those associations to feel that there is no ban upon them, but that they are as fully enfranchised as any who breathe the air of heaven.

"I ask you, should the colored citizens be content to demand less than full and equal enfranchisement; should they say, 'We are content that we and our children shall wear forever the badge of political inferiority,' would they not thereby prove themselves to you to be unfit for the high dignity to which the nation has called them? Let us not doubt the foundation principle of our Government; it has always proved true. Give equality to all. Our confidence will not be abused.

"This bill applies alike to the white citizen and to the colored citizen.

"I am aware that the majority of the Supreme Court in the Slaughter-house case (16 Wallace), giving construction to the thirteenth, fourteenth, and fifteenth amendments in the light of the history which called them into being, make them apply especially, though not exclusively, I think, to the enfranchisement of the colored race. There can be no doubt they apply equally to all races.

"The court, in the case of The Live-stock Association *vs.* The Crescent City Live-stock Company (1 Abbot, page 88), undoubtedly give the true construction to the amendments as to their application. The court say:

It is possible that those who framed the articles were not themselves aware of the far-reaching character of their terms. They may have had in mind but one particular phase of social and political wrongs which they desired to redress. Yet if the amendment as framed and expressed does in fact bear a broader meaning, and does extend its protecting shield over those who were never thought of when it was conceived and put in form, and does reach social evils which were never before prohibited by constitutional enactment, it is to be presumed that the American people in giving it their imprimatur understood what they were doing, and meant to decree what has in fact been decreed.

"This bill therefore properly secures equal rights to the white as well as to the colored race.

"It is claimed that the enactment of the bill would be in violation of the Constitution, because the regulation of inns, public conveyances, and places of amusement, common schools, institutions of learning and benevolence, and cem-

in the Western Hemisphere, the victory of freedom over slavery, should have placed the cap-stone on the structure he was permitted to be an efficient instrumentality in aiding to erect. But it was otherwise decreed.

"I call the attention of the Senate to but two sections of this measure—the first section and the fourth section of the amendment; the other parts of the bill being mere machinery to carry those into effect. The first section provides:

That all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land or water, theatres, and other places of public amusement; and also of common schools and public institutions of learning or benevolence supported, in whole or in part, by general taxation; and of cemeteries so supported: subject only to the conditions and limitations established by law, and applicable alike to citizens of every race and color, regardless of any previous condition of servitude.

"The fourth section provides:

That no citizen possessing all other qualifications which are or may be prescribed by law shall be disqualified for service as grand or petit juror in any court of the United States, or of any State, on account of race, color, or previous condition of servitude; and any officer or other person charged with any duty in the selection or summoning of jurors who shall exclude or fail to summon any citizen for the cause aforesaid shall, on conviction thereof, be deemed guilty of a misdemeanor, and be fined not more than $5,000.

"It is the one purpose of this bill to assert, or rather to reassert, 'freedom from all discrimination before the law as one of the fundamental rights of United States citizenship.' If, sir, we have not the constitutional right thus to legislate, then the people of this country have perpetrated a blunder amounting to a grim burlesque over which the world might laugh were it not that it is a blunder over which humanity would have occasion to mourn. Sir, we have the right, in the language of the Constitution, to give 'to all persons within the jurisdiction of the United States the equal protection of the laws.'

"This bill when enacted, it is believed, will be a finality, removing from legislation, from politics, and from society, an injurious agitation, and securing to every citizen that proud equality which our nation declares to be his right, and which is a boon in defense of which most men would die.

"The colored citizens ask this legislation, not because they seek to force themselves into associations with the whites, but because they have their prides and emulations among themselves, and wish *there* in those associations to feel that there is no ban upon them, but that they are as fully enfranchised as any who breathe the air of heaven.

"I ask you, should the colored citizens be content to demand less than full and equal enfranchisement; should they say, 'We are content that we and our children shall wear forever the badge of political inferiority,' would they not thereby prove themselves to you to be unfit for the high dignity to which the nation has called them? Let us not doubt the foundation principle of our Government; it has always proved true. Give equality to all. Our confidence will not be abused.

"This bill applies alike to the white citizen and to the colored citizen.

"I am aware that the majority of the Supreme Court in the Slaughter-house case (16 Wallace), giving construction to the thirteenth, fourteenth, and fifteenth amendments in the light of the history which called them into being, make them apply especially, though not exclusively, I think, to the enfranchisement of the colored race. There can be no doubt they apply equally to all races.

"The court, in the case of The Live-stock Association *vs.* The Crescent City Live-stock Company (1 Abbot, page 38), undoubtedly give the true construction to the amendments as to their application. The court say:

It is possible that those who framed the articles were not themselves aware of the far-reaching character of their terms. They may have had in mind but one particular phase of social and political wrongs which they desired to redress. Yet if the amendment as framed and expressed does in fact bear a broader meaning, and does extend its protecting shield over those who were never thought of when it was conceived and put in form, and does reach social evils which were never before prohibited by constitutional enactment, it is to be presumed that the American people in giving it their imprimatur understood what they were doing, and meant to decree what has in fact been decreed.

"This bill therefore properly secures equal rights to the white as well as to the colored race.

"Again let me say that this measure does not touch the subject of social equality. That is not an element of citizenship. The law which regulates that is found only in the tastes and affinities of the mind; its law is the arbitrary, uncontrolled human will. You cannot enact it.

"This bill does not disturb any laws, whether statute or common, relating to the administration of inns, places of public amusement, schools, institutions of learning or benevolence, or cemeteries, supported in whole or in part by general taxation (and it is only to these that it applies), excepting to abrogate such laws as make discrimination on account of race, color, or previous servitude.

"Inns, places of amusement, and public conveyances, are established and maintained by private enterprise and capital, but bear that intimate relation to the public, appealing to and depending upon its patronage for support, that the law has for many centuries measurably regulated them, leaving at the same time a wide discretion as to their administration in their proprietors. This body of law and this discretion are not disturbed by this bill, except when the one or the other discriminates on account of race, color, or previous servitude.

"As the capital invested in inns, places of

amusements, and public conveyances, is that of the proprietors, and as they alone can know what minute arrangements their business requires, the discretion as to the particular accommodation to be given to the guest, the traveler, and the visitor, is quite wide. But as the employment these proprietors have selected touches the public, the law demands that the accommodation shall be good and suitable, and this bill adds to that requirement the condition that no person shall, in the regulation of these employments, be discriminated against merely because he is an American or an Irishman, a German or a colored man.

"I have called attention to inns, places of amusements, and public conveyances, separately from schools, institutions of learning and benevolence, and cemeteries, supported in whole or in part by general taxation, because the condition of the existence of the former, to wit, inns, places of amusements, and public conveyances, differs from that of the latter, to wit, schools, institutions of benevolence, and cemeteries. I assume that no one can question that schools, institutions of learning and benevolence, and cemeteries, which are supported by the taxation of all, should be subject to the equal use of all. Subjecting to taxation is a guarantee of the right to use. Even as to these institutions, which are the fruit of taxation, the bill does not disturb the established law, statute or common, or the discretion of their managers, except so far as the one or the other, in violation of the fundamental principles of our Government, discriminates against some one under our jurisdiction because of his blood, because of his complexion, or because of the cruel wrong of slavery which he may have suffered.

"Uniform discrimination may be made in schools and institutions of learning and benevolence on account of age, sex, morals, preparatory qualifications, health, and the like. But the son of the poorest Irishman in the land, who has sought our shores to better the condition of his offspring, shall have as good a place in our schools as the scion of the chief man of the parish. The old blind Italian, who comes otherwise within the regulations of an asylum for the blind supported by taxation, shall have as good a right to its relief as if he were an American born.

"There is but one idea in the bill, and that is, the equality of races before the law.

"The inquiry may arise whether this bill admits of the classification of races in the common-school system; that is, having one school for white and another for colored children. That subject has been discussed somewhat in the courts. In a case in 24 Iowa Reports, page 267, it was directly considered. There the court held that—

> The constitution and statutes in force effectuating it provide for the education of all the youths of the State, without distinction of color; and the board of directors have no discretionary power to require colored children to attend a separate school. They may exercise a uniform discretion, operative upon all, as to the residence or qualification of children to entitle them to admission to each particular school, but they cannot deny a youth admission to any particular school, because of his color, nationality, religion, or the like.

"The law of Iowa goes further than the law proposed in this bill. Here there is no prohibition as to a discrimination on account of religion or of morals. It does not say that all youths shall have this right. The only prohibition in this bill is one which prevents discrimination on account of race. The same subject was considered in the case of The State on the relation of Garnes *vs.* McCann and others, in 21 Ohio Reports, page 198. There the court held:

> That the act authorizing such classification on the basis of color does not contravene the constitution of the State, nor the fourteenth amendment of the Constitution of the United States, and that colored children residing in either of the districts for white children, are not, as of right, entitled to admission into the schools for white children.

"The constitution and laws of Iowa provide for the 'education of all the youths of the State without distinction of color.' In Ohio the statute expressly provided for separate schools for white and colored children. Therefore the decisions of those courts afford no precedent for the construction of this bill when enacted. The language of this bill secures full and equal privileges in the schools, subject to laws which do not discriminate as to color.

"The bill provides that full and equal privileges shall be enjoyed by all persons in public schools supported by taxation, subject only to the limitation established by law, applicable alike to citizens of every race and color, and regardless of previous servitude.

"The bill does not permit the exclusion of one from a public school on account of his nationality alone.

"The object of the bill is to destroy, not to recognize, the distinctions of race.

"When in a school-district there are two schools, and the white children choose to go to one and the colored to the other, there is nothing in this bill that prevents their doing so.

"And this bill being a law, such a voluntary division would not in any way invalidate an assessment for taxes to support such schools.

"And let me say that, from statements made to me by colored Representatives in the other House, I believe that this voluntary division into separate schools would often be the solution of difficulty in communities where there still lingers a prejudice against a colored boy, not because he is ignorant, or untidy, or immoral, but because of his blood.

"It is claimed that the enactment of the bill would be in violation of the Constitution, because the regulation of inns, public conveyances, and places of amusement, common schools, institutions of learning and benevolence, and cem-

eteries, supported by taxation, are under the regulation of the States, and not of the General Government. The bill proposes to leave them under State control, and expressly says that all persons are to have the full and equal enjoyment of inns, etc., subject to the conditions and limitations established by law—State statutes and common law—with the exception that such laws must be applicable alike to citizens of every race and color, and regardless of previous servitude.

"Is it constitutional for the General Government to legislate to prevent discrimination on account of race, etc.? We maintain that the General Government has this right under three different grants of power:

"1. Under the thirteenth, fourteenth, and fifteenth amendments, considered together and in connection with the contemporaneous history;

"2. Under the provision of the fourteenth amendment, which prohibits a State from enforcing any law which abridges the privileges and immunities of citizens of the United States; and also,

"3. Under the provision of article fourteen, which requires a State to give to every person within its jurisdiction the equal protection of the laws; and under the general power given Congress to enforce these provisions by appropriate legislation.

"I cannot more forcibly nor with greater brevity show that these amendments were intended to do away with slavery—to wipe out every consequence of it; to prevent State legislation of every kind that discriminated on account of race, color, etc., and make the race formerly in servitude equal in all respects to other citizens—than by reading a portion of the opinion of the majority of the court in the Slaughter-house cases (16 Wallace, 67, 68, and 69):

But within the last eight years three other articles of amendment of vast importance have been added by the voice of the people to that now venerable instrument.

The most cursory glance at these articles discloses a unity of purpose, when taken in connection with the history of the times, which cannot fail to have an important bearing on any question of doubt concerning their true meaning.

Nor can such doubts, when any reasonably exist, be safely and rationally solved without a reference to that history; for in it is found the occasion of the necessity for recurring again to the great source of power in this country, the people of the States, for additional guarantees of human rights; additional powers of the Federal Government; additional restraints upon those States. Fortunately, that history is fresh within the memory of us all, and its leading features, as they bear upon the matter before us, free from doubt.

The institution of African slavery as it existed in about half the States of the Union, and the contests pervading the public mind for many years between those who desired its curtailment and ultimate extinction and those who desired additional safeguards for its security and perpetuation, culminated in the effort, on the part of most of the States in which slavery existed, to separate from the Federal Government, and to resist its authority. This constituted the war of the rebellion, and, whatever auxiliary causes may have contributed to bring about this war, undoubtedly the overshadowing and efficient cause was African slavery. In that struggle slavery, as a legalized social relation, perished. * * *

The proclamation of President Lincoln expressed an accomplished fact as to a large portion of the insurrectionary districts, when he declared slavery abolished in them all. But, the war being over, those who had succeeded in reëstablishing the authority of the Federal Government were not content to permit this great act of emancipation to rest on the actual results of the contest or the proclamation of the Executive, both of which might have been questioned in after-times, and they determined to place this main and most valuable result in the Constitution of the restored Union as one of its fundamental articles. Hence the thirteenth article of the amendment of that instrument. Its short sections seem hardly to admit of misconstruction, so vigorous is their expression, and so appropriate to the purpose we have indicated:

1. Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States or any place subject to their jurisdiction.

2. Congress shall have power to enforce this article by appropriate legislation.

To withdraw the mind from the contemplation of this grand yet simple declaration of the personal freedom of all the human race within the jurisdiction of this Government—a declaration designed to establish the freedom of four millions of slaves—and with a microscopic search endeavor to find in it a reference to servitudes, which may have been attached to property in certain localities, requires an effort, to say the least of it.

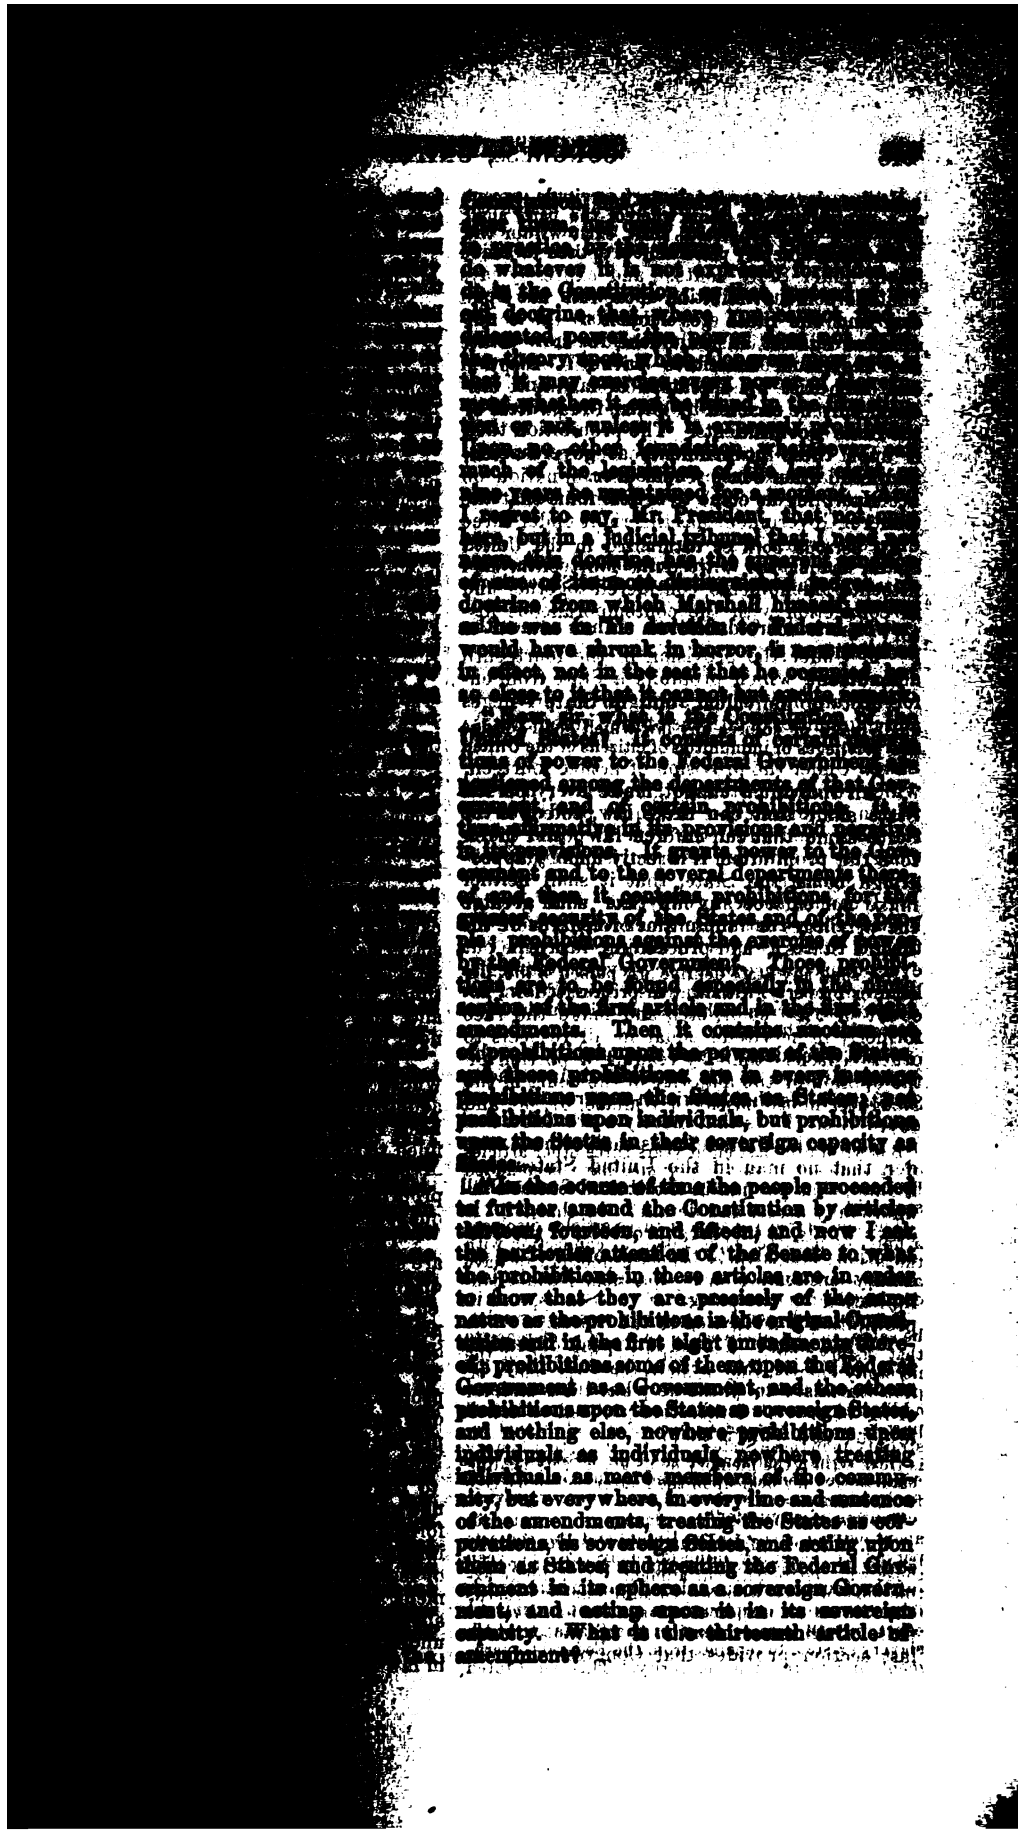
"You see that the court hold that slavery caused the war; that the war in fact destroyed slavery; that in order that its permanent destruction might not be questioned in after-times, the thirteenth amendment was adopted; and that this is a fact so apparent, that you need not, to see it, look with a microscope.

"If the discrimination against that race for whose benefit chiefly the amendments were adopted is because of their having recently been slaves—and as the discrimination is confined to that race, is not that the cause of it?—then we are authorized to pass all laws appropriate to efface the existence of any consequences or residuum of slavery.

"The fourteenth and fifteenth amendments are stated by the court to have had the same origin.

"How is the United States, how are we, to protect the privileges of citizens of the United States in the States? We cannot deal with the States or with their officials to compel proper legislation and its enforcement; we can only deal with the offenders who violate the privileges and immunities of citizens of the United States.

"By so doing, so far as this bill goes, we do not interfere with the States passing and enforcing just such laws as they see proper as to inns, public conveyances, schools, institutions of learning and benevolence, places of amusement, and cemeteries—they may modify or abolish them at pleasure; but, as no State under the old Constitution could discriminate in law against a citizen of another State as to



Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

"There is a prohibition upon both the Federal and the State governments. It is not directed against an individual, for how could any individual constitute slavery? Slavery can only exist by operation of law, and law could only be enacted by either the Federal or the State governments. The prohibition then is upon these governments as governments, and in no other sense whatsoever.

"Now, let us come to article fourteen, section 1:

All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside.

"That is mere definition. Then comes the prohibition:

No State—

"Not 'no individual,' but 'no State'—

shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

"An individual cannot make law; it is the State alone that can make law, and it is the State alone that can enforce law; and therefore the prohibition is directly upon that sovereign being, the State, that it shall neither make nor enforce any law that 'shall abridge the privileges or immunities of citizens of the United States;' and proceeding, it says:

Nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

"Mr. President, is not that plainly a prohibition directed to the States in their capacity as States? Is that provision a mere statute of murder, etc.? Is that merely a provision that no man in the United States shall commit murder, that no man in the United States shall kidnap, that no man in the United States shall unlawfully arrest and detain? Is that it? In other words, is this great provision of the Constitution degraded to the mere office of an ordinary criminal code? No, sir; but it is a limitation on the power of the States, and its prohibition is addressed to the States.

"What next? I need not speak of sections 2, 3, and 4 of that article, because they are not necessary to illustrate what I am endeavoring to prove. I therefore proceed to article fifteen; and what is that?

The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude."

Mr. Morton, of Indiana, said: "The Senator states that the prohibitions in the first section of the fourteenth amendment are addressed to the States as corporations and not to individuals. Calling his attention to the fact that the last section provides that Congress may enforce the amendment by appropriate legislation, I ask him how Congress may enforce the prohibitions against a State?"

Mr. Thurman: "Just precisely as it enforces the prohibition against a State that it shall not pass any law impairing the obligation of contracts, contained in the original Constitution. It enforces it by providing for the making of a case for the judicial tribunals of the United States, in which that law impairing the obligation of contracts may be declared to be null and void. So, too, any law which any State may pass or enforce in violation of the thirteenth, fourteenth, or fifteenth amendments may be declared void in precisely the same way; and the only proper and constitutional mode in my judgment for Congress to adopt, is to provide for bringing any such cases that it seems proper to provide for decision before the judicial tribunals of the Federal Government. That was the mode under the Constitution before these amendments were adopted; and it is the proper mode yet.

"The Constitution is not so imperfect an instrument as some seem to suppose. It provides not simply for an executive and legislative department, but also for a judicial department, and provides that the judicial power shall extend to all cases arising under this Constitution or the laws and treaties made in pursuance thereof. That gives the judicial power ample cognizance of every case that can possibly arise that brings into discussion the validity of any State law which is said to be in contravention of the Constitution of the United States, or the laws of Congress passed in pursuance thereof.

"And now, in regard to this clause that 'Congress shall have power by appropriate legislation to enforce this article,' Congress would have exactly the same power if that clause were not in the Constitution at all. That does not add one iota to the power of Congress.

"The section is.

The Congress shall have power to enforce this article by appropriate legislation.

"That does not add, as I say, one iota to the power of Congress; and if it were stricken out of each of the thirteenth and fourteenth and fifteenth amendments, the power of Congress would be precisely what it now is. For what is 'appropriate legislation?' It is the very same thing that is provided for by the eighth section of article one, as construed by the Supreme Court in McCulloch *vs.* Maryland, the well-known and familiar provision as to the power of Congress to make necessary laws, and which reads:

The Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

"That provision covers the amendments

adopted afterward, just as much as it covers the powers conferred by the original Constitution.

"The judicial power extends to 'all cases' —you must have a case made before you can have a decision that a State law or a State decision is unconstitutional. The function of Congress is to provide by law for the making of the case, and then the judicial power intervenes and decides upon the validity or invalidity of the State law.

"The provision at the close of section eight of article one, 'that Congress shall have power to make all laws,' etc., applies to all provisions of the Constitution that may be in it in all time to come. It is a standing, speaking power that continues for all time as long as the Constitution shall endure, and reaches every particle of it, however it may be added to by amendment. We all know perfectly well that that provision 'to make all laws which shall be necessary and proper for carrying into execution the foregoing powers,' and so on, is wholly and absolutely unnecessary. It was so declared—and no man ever contradicted it—in the *Federalist*, and proved to be wholly unnecessary, and it was put in only out of abundant caution. In no debate whatever, either in the Federal Convention or in the conventions of the States, have I ever seen, nor do I believe that it has ever been found, the position that that was a substantive, independent power of Congress. It was nothing but putting in words, in the form of an express grant, that power which would have resulted by necessary implication even if those words were stricken out of the Constitution; and so it is expressly stated in the *Federalist*. There is no question about that.

"Now, whence come these words, 'appropriate legislation?' They come from the language of Marshall in deciding the case of McCulloch *vs.* The State of Maryland. It had been argued that Congress could not pass laws under this provision 'which may be necessary and proper for carrying into execution the foregoing powers,' etc., unless the measure adopted by Congress was one that was 'absolutely necessary,' and by 'absolutely necessary' was meant one which if it were not enacted would leave an express power without execution; that it was one which must be enacted in order that the express power could be executed at all, and therefore it must be one upon which the very existence of the express power in practice must depend. Otherwise it was not necessary legislation. We know with what power Marshall reasoned that down; and, going perhaps to the other extreme, he said that it was sufficient that the legislation was a natural and proper mode of effecting the end to be accomplished; that if the end was within the competency of Congress under the Constitution, then Congress had the power to adopt any means which are 'appropriate' and proper. 'Appropriate' was the very word he used, and it was from that decision, using that word, that Congress had the power to adopt any legislation which was in its judgment appropriate, that the last section in each of the thirteenth, fourteenth, and fifteenth amendments was derived. It was taken right from that decision, showing conclusively that nothing more was meant by this clause, 'Congress shall have power to enforce by appropriate legislation the provisions of this article,' than was meant by the last clause in the eighth section of the first article of the Constitution, which says that Congress may make all laws which shall be necessary and proper for carrying into execution the foregoing powers, etc. They mean precisely the same thing; and therefore if this provision upon which so much has been based, and which the Senator from Indiana over the way (Mr. Pratt) seems to think overrides every thing in the Constitution and allows us to legislate whatever we please, whatever we may deem to be appropriate on the subjects provided for in these amendments to the Constitution, were stricken out of these articles, their provisions would not be weakened one single particle; not by the weight of a hair would they be weakend; they would be precisely the same. Nay, if the last clause were stricken out of section 8 of article 1, the Constitution would be precisely what it is.

"I have said that these are prohibitions upon the powers of the States. But what does this bill undertake to do? Does this bill undertake to treat with laws made or enforced by States that deprive any citizen of the United States of any privileges or immunities of a citizen of the United States, or that deny him the equal protection of the laws? Does it do any such thing as that? Let us see. Mark it, this bill must rest, if it have any constitutional warrant at all, upon these words: 'No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.' And again: 'Nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.'

"'No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.' Does this bill deal with any such law of a State? No, sir; it does not profess to do so. It is not aimed at any law of a State. It is aimed against the acts of individuals; it is aimed against keepers of theatres, keepers of circuses, keepers of hotels, managers of railroads, stagecoaches, and the like. There is not one single sentence in the whole bill which is leveled against any law made or enforced by a State. The Constitution says that no State shall make or enforce any such law. This bill says to a State: 'Althongh you do not make any such law, although you do not enforce any such law, although your law is directly the opposite, al-

[illegible] you punish every man who does any [illegible] acts mentioned in this bill, and punish him twice or severely, yet the Congress of the United States will step in and under that clause of the Constitution which says that you, the State, shall not make or enforce any such law as the Federal power will make the man whom you have punished for this very act, and will punish him again; for we will treat the keeper of a theatre as the State; we will treat the retail liquor as the State; we will treat the railroad conductor as the State; we will treat the stage-driver as the State; and although you may have punished each and every one of them not for the very acts enumerated in this bill, yet under the pretense that the State do make or enforce a law which deprives a citizen of his equal privileges and immunities, will seize the citizen again and subject him to a double punishment for the offense for which he has already suffered. That is what this bill is; and no sophistry can make it any thing else.

"Take the case of Louisiana. If I am rightly informed—and if I am not the Senator from Louisiana can correct me—there is not one single act or provision in this bill which is not already punishable in Louisiana under her State [illegible]. And now, sir, you are to go with the military power into the State of Louisiana and there, pretense that that State has made and enforced laws which violate the fourteenth amendment, when every law that she has made and every law that she does enforce is in strict consonance and accordance with that amendment, you are to go there and seize her citizens who have already been punished by the State authority and punish them a second time by the Federal arm!

"Why, sir, if it is constitutional reasoning that supports this bill, then I confess that all my studies of the Constitution have been wholly in vain. If this is justice, then I confess that forty years and more of study of the law have all been thrown away upon me. If this is not monstrous, if this is not inhuman, if it is not a violation of the first principles of right, if it is not a violation of the spirit of that provision in the Constitution that no man shall be put in jeopardy twice for the same offense, if it is not legislation utterly disgraceful to a civilized people, then I confess, Mr. President, that I am not able to see correctly what is the scope or purpose of this legislation, or what are the principles of right and justice that should prevail under a civilized government."

Some verbal amendments were made to the report of the committee, after which it was adopted as a substitute for the original bill, and passed by the following vote:

YEAS—Messrs. Alcorn, Allison, Boutwell, Buckingham, Chandler, Edmunds, Flanagan, Frelinghuysen, Hamlin, Harvey, Howe, Ingalls, Mitchell, Morrill of Vermont, Ogleby, Patterson, Pease, Pool, Ramsey, Robertson, Sargent, Scott, Spencer, Stewart, Waddleigh, Washburn, West, Windom, and Wright—33.

NAYS—Messrs. Begy, Boreman, Carpenter, Cooper, [illegible]

[illegible] The Lynch board [illegible]

[illegible] showed that the Lynch board, so called, never had a legal existence; that Long[illegible] and Hawkins, who pretended to be [illegible] of that board, never were elected; that [illegible] disqualified, because on the day [illegible] of that election [illegible] to contest the persons claiming to be [illegible] of that board were enjoined from canvassing any thing but the official returns; [illegible] that the board was abolished by the act of November 30, 1872; [illegible] that this board never had the returns before them;

That they had no warrant of law, even supposing that they were a legal board, for doing what they pretended to do—that is, inquire at large into the result of the election; that all that even the legal board could do was to canvass the legal returns;

That, if the board had been duly elected, had not been enjoined, and if it had not been abolished, and had the official returns, and had been authorized by law to depart from the returns and inquire at large to ascertain the result of the election, still their proceedings were corrupt and fraudulent, as admitted and sworn to by the members of the board, to such extent as to invalidate their proceedings; to such an extent as would nullify the effect of the judgment of a judicial court clothed with jurisdiction to make such inquiry.

Now let me refer to the report of the committee, drawn and presented by the Senator from Indiana (Mr. Morton), to see how far it sustains the objections I have made to the canvass by the Lynch board. The subject being considered was the result of the election as

though you punish every man who does any one of the acts mentioned in this bill, and punish him never so severely, yet the Congress of the United States will step in and under that clause of the Constitution which says that you, the State, shall not make or enforce any such law, we, the Federal power, will seize the man whom you have punished for this very act, and will punish him again; we will treat the keeper of a theatre as the State; we will treat the hotel-keeper as the State; we will treat the railroad conductor as the State; we will treat the stage-driver as the State; and although you may have punished each and every one of these men for the very acts enumerated in this bill, we, under the pretense that the States do make or enforce a law which deprives a citizen of his equal privileges and immunites, will seize that citizen again and subject him to a double punishment for the offense for which he has already suffered.' That is what this bill is; and no sophistry can make it any thing else.

"Take the case of Louisiana. If I am rightly informed—and if I am not the Senator from Louisiana can correct me—there is not one single act or omission in this bill which is not already punishable in Louisiana under her State statute. And now, sir, you are to go with the Federal power into the State of Louisiana and under pretense that that State has made and enforced laws which violate the fourteenth amendment, when every law that she has made and every law that she does enforce is in strict consonance and accordance with that amendment, you are to go there and seize her citizens who have already been punished by the State authority and punish them a second time by the Federal arm!

"Why, sir, if it is constitutional reasoning that supports this bill, then I confess that all my studies of the Constitution have been wholly in vain. If this is justice, then I confess that forty years and more of study of the law have all been thrown away upon me. If this is not monstrous, if this is not inhuman, if it is not a violation of the first principles of right, if it is not a violation of the spirit of that provision in the Constitution that no man shall be put in jeopardy twice for the same offense, if it is not legislation utterly disgraceful to a civilized people, then I confess, Mr. President, that I am not able to see correctly what is the scope or purpose of this legislation, or what are the principles of right and justice that should prevail under a civilized government."

Some verbal amendments were made to the report of the committee, after which it was adopted as a substitute for the original bill, and passed by the following vote:

YEAS—Messrs. Alcorn, Allison, Boutwell, Buckingham, Conkling, Edmunds, Flanagan, Frelinghuysen, Hamlin, Harvey, Howe, Ingalls, Mitchell Morrill of Vermont, Oglesby, Patterson, Pease, Pratt, Ramsey, Robertson, Sargent, Scott, Spencer, Stewart, Wadleigh, Washburn, West, Windom, and Wright—29.

NAYS—Messrs. Bogy, Boreman, Carpenter, Cooper, Davis, Hager, Hamilton of Maryland, Johnston, Kelly, Lewis, McCreery, Merrimon, Norwood, Ransom, Saulsbury, and Stockton—16.

ABSENT—Messrs. Anthony, Bayard, Brownlow, Cameron, Chandler, Clayton, Conover, Cragin, Dennis, Dorsey, Fenton, Ferry of Connecticut, Ferry of Michigan, Gilbert, Goldthwaite, Gordon, Hamilton of Texas, Hitchcock, Jones, Logan, Morrill of Maine, Morton, Schurz, Sherman, Sprague, Stevenson, Thurman, and Tipton—28.

In the House, the bill was considered and referred to the Committee on the Judiciary, where it remained, together with the House bill, at the close of the Session.

In the Senate, on March 4th, the bill to restore the rights of the State of Louisiana was considered.

Mr. Carpenter, of Wisconsin, said: "Mr. President, I shall endeavor to show that the admitted facts warrant the passage of the bill now under consideration. Those facts are summed up in the preamble to this bill, which I will ask the Clerk to read."

The Chief Clerk read as follows:

Whereas, There is no Governor, Lieutenant-Governor, Secretary of State, Attorney-General, Auditor of Public Accounts, or Superintendent of Education in the State of Louisiana, holding said offices, respectively, under an election by the legal voters of the State of Louisiana, in pursuance of the constitution and laws of said State; and whereas there is not in said State any Legislature elected by the legal voters of said State, according to the constitution and laws thereof; and whereas there is no provision in the constitution or laws of said State for the election of a Governor, Lieutenant-Governor, Secretary of State, Attorney-General, Auditor of Public Accounts, or Superintendent of Education, until the next regular election, to be held in November, A. D. 1876; and whereas the offices of Governor, Lieutenant-Governor, Secretary of State, Attorney-General, Auditor of Public Accounts, and Superintendent of Education are now filled *de facto* by persons claiming the right to hold said offices in virtue of a pretended canvass of the votes given at the last general election in said State, on the 4th day of November, A. D. 1872, by John Lynch and others, but which canvass has been shown to be fraudulent and void; and whereas a body of men in said State now claim to be the members of, and to constitute, the Legislature of said State, and were organized as a Legislature in pursuance of illegal orders issued by a judge of the Circuit Court of the United States for the District of Louisiana; and whereas the President of the United States, in May, A. D. 1873, did issue his proclamation recognizing the person now holding *de facto* the office of Governor of said State as legal Governor of said State, and the persons now holding *de facto* the offices of Lieutenant-Governor, Secretary of State, Attorney-General, Auditor of Public Accounts, and Superintendent of Education in said State as legal officers of said State government, which proclamation was issued upon representations made by said persons holding said offices, or on their behalf, but it now appears that said persons holding said offices are not legal officers of said State; and whereas said pretended Legislature is now in session, pretending to enact laws for said State, which said pretended Governor is pretending to approve, under which pretended laws it will be claimed rights have vested, so that the people of said State may be oppressed and involved in vexatious and expensive litigation before the next general election, under the constitution and laws of said State, in A. D. 1876; and whereas the

public peace in said State is at present preserved, and can only be preserved during the existing state of things in said State, at the expense of the United States, and by retaining a part of the army in said State: Therefore, to quiet the discontent and restore the State to its full rights, and give it officers of its government which shall be chosen by the legal voters of said State.

Mr. Carpenter: "This preamble sets forth the general propositions which I claim result from the facts of this case either conceded or clearly established by the evidence. My first purpose is to establish this, and, if I succeed in doing so, I think it will not be very difficult to satisfy the Senate that Congress ought to apply some remedy. I shall then contend that a new election is the only adequate remedy for such a case; that, when the people of a State have been defrauded of the result of an election, and all the State officers and the Legislature are usurpers, the proper remedy is to give the people another opportunity to elect their officers.

"In the first place, let it be borne in mind that the general election in that State, for the election of presidential electors, Governor and other State officers, half of the Senate, and all the members of the lower House of the Legislature, was held on the 4th day of November, 1872.

"I ask the attention of the Senate to the fact that, at this election, electors of President and Vice-President ought to have been elected, because I claim that the decision of both Houses of Congress rejecting the vote of the electors of that State, and denying Louisiana any voice whatever in the election of President and Vice-President, is an adjudication by Congress that no result was accomplished by the pretended election of November 4, 1872. If any thing was accomplished at that election, then presidential electors, a Governor and other State officers, and a Legislature, were elected. But, if no presidential electors were elected, then no election of Governor and other State officers and members of the Legislature was effected. Congress having decided that the election was void as to presidential electors, it follows that the election of State officers and members of the Legislature held at the same time, and subject to the same objections, must be void also.

"Let us consider this election, the canvass of votes, and the subsequent determination of Congress in the premises.

"The election passed off quietly; no riots or violence interfered with its progress; and the returns were generally made to the Governor of the State in conformity with the statute law of the State. But these returns were never canvassed, except by the De Feriet board, appointed by Governor Warmoth under the act of November 20, 1872, and the Foreman board, appointed by the pretended McEnery Legislature. The result of both these canvasses was to declare that McEnery and his associates on the State ticket were elected by about 9,906 majority.

"The Lynch board never made a canvass of the returns, because they never had the returns before them; but, in a manner wholly unwarranted by any law, and in open defiance and flagrant violation of the law under which they pretended to act, entered into an investigation at large to estimate the result of the election. This board certified that a certain number of persons, who may be designated the Grant electors, were duly elected; that Kellogg and his associates on the State ticket were elected; and that members now constituting the Kellogg Legislature were also duly elected at that election.

"The validity of the election as respects presidential electors was necessarily involved in the question whether their votes for President and Vice-President should be counted. The subject was referred to the Committee on Privileges and Elections; and I shall refer the Senate to the unanimous report of that committee, made by its chairman, the Senator from Indiana (Mr. Morton), as bearing upon that subject. Before doing so, however, permit me to refer to the objections which I have made against the validity of the canvass by the Lynch board, the only canvass relied upon to establish the right of Kellogg and his associates to hold the offices of that State:

"1. I. showed that the Lynch board, so called, never had a legal existence; that Longstreet and Hawkins, who pretended to be members of that board, never were elected; and that Bovee was disqualified, because he was a candidate at that election.

"2. That the persons claiming to be members of this board were enjoined from canvassing any thing but the official returns.

"3. That the board was abolished by the act of November 20, 1872.

"4. That this board never had the returns before them.

"5. That they had no warrant of law, even conceding that they were a legal board, for doing what they pretended to do—that is, inquire at large into the result of the election; that all that even the legal board could do was to canvass the legal returns.

"6. That, if the board had been duly elected, had not been enjoined, and if it had not been abolished, and had the official returns, and had been authorized by law to depart from the returns and inquire at large to ascertain the result of the election, still their proceedings were corrupt and fraudulent, as admitted and sworn to by the members of the board, to such extent as to invalidate their proceedings; to such an extent as would nullify the effect of the judgment of a judicial court clothed with jurisdiction to make such inquiry.

"Now let me refer to the report of the committee, drawn and presented by the Senator from Indiana (Mr. Morton), to see how far it sustains the objections I have made to the canvass by the Lynch board. The subject being considered was the result of the election as

to presidential electors. After setting out the election law of 1870, and the circumstances under which it is claimed the Lynch board and the Warmoth board were elected and organized, the report proceeds as follows:

The election for presidential electors, members of Congress, State officers, and members of the Legislature, was held in Louisiana on the 4th of November, and the returns of the election in the various parishes were sent to the Governor by the Supervisors of Registration, as required by law. The Governor refused to act with the board known as the Lynch board, or to open and lay before that board the returns of the election from the various parishes; but opened them and prepared to make the count before what is known as the Wharton board, which was then enjoined from further proceedings by Judge Durell. The official returns which had been sent to the Governor were by him withheld from the Lynch returning board, and never at any time came into the possession or under the examination of that board. The Legislature of Louisiana, at its session in the winter of 1872, passed an act abolishing the returning or canvassing board, as created by the act of 1870, and authorizing the State Senate to elect a returning board, to have the same powers as the former, and making other changes in the mode of conducting the elections; and on the 20th of November, 1872, the Governor, who had not signed this act, but kept it in his possession during the pendency of these proceedings in the Circuit Court of the United States, and also proceedings of a like character commenced in the eighth district court of the State, signed the bill and published it as a law.

"This is the act which abolished the Lynch board. Again the report says:

Some two or three days preceding the 4th of December, the Lynch board officially declared that M. F. Bonzano, J. Lanabere, C. H. Halstead, L. C. Croudanez, A. R. Johnson, Milton Morris, J. Taylor, and John Ray, whom we shall designate as the Grant electors, had received a majority of all the votes in the State for electors of President and Vice-President, and the Secretary of State *de jure*, Mr. Bovee, not then in possession of the office of Secretary of State or the State seal, but who had been decided by the Supreme Court of the State a few days before to be the lawful Secretary, made a certificate of election to the persons so declared chosen as electors, and on the 4th of December they met and cast their votes for President and Vice-President, according to the requirements of the act of Congress. They did not, on that day, however, seal up their vote, but kept it open for several days until Mr. Bovee, the Secretary of State, got possession of the State seal, so as to attach it to their certificates of election. The Secretary of State had no right, under the law, to make any certificate upon the subject, unless for the information of the Governor, and his certificate constitutes no legal evidence of the election of the persons therein named—the Lynch board.

"And I call attention to the language of the Senator from Indiana in this his first report from the committee, which was unanimous:

The Lynch board, in making the count and declaration as to the election of electors, did so without having before them any of the official returns of the election as made out by the officers of the election under the laws of the State, and had no legal evidence before them at all upon which they could count the votes, but their count was made upon documents, affidavits, and statements, *ex parte* in their character, having no legal validity, and which could not, in the nature of things, form the basis of an accurate and reliable declaration of the result of the election.

"There, Senators, is the judgment passed by the Senator from Indiana upon the validity of the canvass by the Lynch board.

"Mr. President, bearing in mind that the Senator, in this report, was speaking of the election of November 4, 1872, for the election of presidential electors, State officers, and Legislature, and that the same objections exist to the validity of the election of State officers and Legislature as in regard to presidential electors; that the election for all was held at the same time, under the same election laws, and that the returns for all these officers were made in the same way; that the canvass by the Lynch board was made in the same manner as to all these officers, and that, if one is invalid, so also is the other, am I not justified in saying that the Senator from Indiana, by this report, in effect determined that the election failed as to State officers and Legislature, as well as in regard to presidential electors? What we call an election consists of several parts. There is, first of all, a registration of voters. Secondly, the casting of ballots. Thirdly, the counting and canvassing of votes. Each step in this process must be performed according to law to secure the legal result which we call an election.

"It will be seen, by carefully examining this report, that the fact that the votes were not legally canvassed and certified was regarded as conclusive that the election as to presidential electors was void.

"The two Houses of Congress adopted, or at least acted upon, the doctrine of this report, and decided that the so-called Grant electors had not been duly elected, and therefore the votes cast by them for President and Vice-President could not be counted.

"Now, Mr. President, it is clearly established that the election of the Kellogg government was subject to all the objections and afflicted with all the infirmities which both Houses of Congress held conclusive against the election of presidential electors. It will bear repetition that the election of the Kellogg government was, at the same time, in the same manner, surrounded by the same circumstances, canvassed by the same board, and in the same manner, and, in every particular affecting its validity, identical with the election of the Grant electors, which both Houses of Congress have declared to be absolutely void.

"Therefore, am I not warranted in declaring that Congress has already, in effect, declared that the Kellogg government never was elected?

"In connection with this report, I should add that the decision of the Supreme Court of Louisiana was made before that report.

"Notwithstanding the decision of that court, now relied upon by the Senator from Indiana to establish the validity of the election of the Kellogg government, because it held that the Lynch board was the legal returning board, the Senator from Indiana regarded the pre-

tended canvass by that board as absolutely void, in consequence of the irregularity of their proceedings, and the fact that the returns never were before them; which objections exist in full force, and must be equally fatal, in regard to the election of the Kellogg government.

"Let me say that, although this report was made as a preliminary report by the committee, yet all the testimony subsequently taken by the committee tends to increase rather than lessen the objection to the validity of that election.

"Congress will stand in an unenviable attitude before the country if in regard to an election for several officers, held at the same time and conducted in the same manner as to all, it shall decide that as to one it is void and as to the other valid; if it shall hold that as to presidential electors it was void, and yet as to State government it was valid.

"Assuming the case as I claim it to be, two questions arise in regard to the bill now under consideration for holding a new election in that State under Federal authority: first, has Congress the power to pass such a bill? and, second, if it has the power, is it expedient to exercise it?

"I shall first consider the question whether Congress possesses such power. Many of our friends, for whose judgment I have great respect, doubt its existence; and we all agree that, if the power does exist, it is one of the most delicate attributes of this Government, and ought not to be exercised except in case of necessity. But I maintain that, if the necessity exists, it is our imperative duty to exercise this power discreetly, prudently, but so as fully to meet the existing case and remedy the existing evil.

"The Constitution makes it our duty to guarantee to the State of Louisiana a republican form of government. What does the phrase, 'republican form of government,' mean? I answer, it means a republican kind of government, or a republican government; and that the essential element of a republican government is that its offices shall be held by persons chosen for that purpose by the people; that no government is republican, within the meaning of the guarantee clause, the powers of which are administered by persons not chosen by the people. To construe the Constitution so as to hold that as long as a State government observes the form it may depart from the reality of republican government, is to render the guarantee clause utterly worthless. The Supreme Court has often declared that the Constitution must be so construed as to secure the substantial results contemplated by its framers; that forms and fictions are not enough.

"All history demonstrates that the greatest danger to free government is from the usurpation of rulers and the perversion of forms. The cunning hypocrisy of Augustus established a despotism in Rome after the sword of Julius Cæsar had failed. Augustus established the empire in the name of the republic; and long after his power was complete, and the imperial government in full operation, maintained republican *forms;* that is, it was 'republican in form,' but imperial in fact. Napoleon, the first consul, gradually ripened into the emperor, We have recently seen the Republic of Spain, without any change of form, assuming and exercising imperial power. The pretended election of Napoleon III. was, in form, republican; in fact, a fraud. And illustrations might be multiplied indefinitely. If republican governments on this continent are ever overthrown, it will be accomplished by employing the forms of a republic to mask departure from its substance. The literature of 1789 shows that our fathers were keenly alive to this fact; and it would be strange, indeed, if in framing a constitution designed, as its preamble declares, to insure domestic tranquillity and secure the blessings of liberty to themselves and their posterity, and in establishing a government to preside over and protect the States, no provision was made to guard them against the greatest and the most common danger that besets free institutions; and yet it will be conceded that no such provision was made unless it is contained in the clause under consideration.

"If I am right in saying that it is the vital element of republican government that its rulers are chosen by the people, it follows that the present government of Louisiana, lacking this, is not a republican government. And in regard to the *power* of Congress to interfere at this time, it is evident that, if such power does not exist, it would not if in 1876 Kellogg and his associates should run again and be defeated by 20,000 majority, and Durrell should set them up; and in 1880 the same thing should take place, and be repeated in 1884, and so on during Kellogg's natural life. These repetitions would make the outrage more manifest, but would not increase the power of Congress. If Congress cannot interfere in the first year of such a usurpation, it cannot in the fiftieth; because our power is derived from the Constitution, which is the same at all times; and what we cannot do at once, we cannot do ultimately. If Kellogg and his associates should be thus continued in power for twenty years, and avow the purpose of remaining during their lives by the use of the same means, would it be contended that the State had a republican government? It might, indeed, be said that the State had a government republican in form, but it would be true that the form was used to continue a despotism. There is nothing in the Constitution, taken as a whole, nor in the literature of that day, which will justify us in saying that the framers of the Constitution were sticklers for form, and intended to provide that in usurping the functions of free government, and transforming the States into despotisms, in fact the usurpers should be confined to a particular method of accomplishing that result, namely, an observance of the forms of a repub-

lican government. It was intended to preserve not the form merely, but the reality; not the fiction, but the fact of free government, republican government, a government elected by the people; and that, too, not occasionally, and after long interruptions, but at all times. And if Congress ascertains that at any time such government does not exist in a particular State, its duty is imperative to take the proper steps to give such a government to the State. And what laws may Congress pass in such a case? The Constitution answers this question. 'The Congress shall have power to make all laws which shall be necessary and proper for carrying into execution all the powers vested by this Constitution in the Government of the United States'—one of which is the power to guarantee to every State a republican form or kind of government.

"Now, in the case before us, what law is necessary and proper to confer upon the State of Louisiana a government chosen by its people? Evidently a law which shall authorize the people of that State to fill the State offices with persons of their own choice in place of the present usurpers. The constitution of that State is republican, the judges of the Supreme Court are properly in their places, but the political department of the government is held by usurpers. The extent of our legislation in a given case should be measured by the evil to be corrected. In 1865 you found that State without any government whatever, and then you took the proper steps to establish a republican government there. You provided for a convention to frame a State constitution. You provided for an election by the people to fill the State offices and the Legislature. It was necessary at that time to do these things, because there was no government and no part of a government intact in that State. Now it is necessary to do only a part of these things. It is not necessary to frame a constitution, for the State has one adopted by the people. It is not necessary to provide for the election of judges, because the judicial department of that government has not been usurped. But it is necessary to provide for the election of State officers and a Legislature, because those places are held by usurpers, and because the government is not republican in kind, unless its political department, its law-making power, is held by persons who have been elected by the people. I do not see how any one who supported the reconstruction acts of Congress can question the constitutionality of this bill. As certainly as the whole includes its parts, so certainly, if Congress has the power to set up a whole government, and authorize an election to fill all its offices, it has the power to reclaim one department of the government from usurpers and restore it to the people.

"It is said that this bill is in conflict with the theory of State rights; but what right can be dearer to a State than the right of self-government? The people have been deprived of this right, and this bill proposes to restore it. The people of every State have a right to demand that the United States shall guarantee to them a government, and a whole government, of their own choosing, and shall rid them of a government which exists only by usurpation. They secured this right by the adoption of the Constitution of the United States, vesting the power in us, and thereby casting the duty upon us, to do this thing. And if any State, at any time, is compelled or permitted to submit to a usurping government, it is because we fail to perform the duty imposed upon us. And whether we fail from timidity, or from party prejudice or policy, it is equally a disregard of our duty.

"If I am right in asserting that it is the duty of the United States to guarantee a republican government to every State, and right in saying that a government held by usurpers is not a republican government, then it is impossible to deny the constitutionality of this bill; because, if we have the power to interfere at all, the manner of interference is a matter entirely within the discretion of Congress. The powers conferred upon this Government are sovereign powers; that is, powers unlimited, save as the Constitution regulates their exercise; and they override all State constitutions and laws. This power to guarantee a republican government to the States is an absolute and sovereign power, and its exercise wholly unrestricted by the Constitution. Congress is authorized to do a certain thing, and the mode of doing it is committed entirely to the discretion of Congress. We may do in every case just what the case requires; and in this case it is evident that what this bill proposes is the only remedy, the only way, to give that State for the next two years a government of its own choosing."

Mr. Ferry, of Connecticut, said: "I do not wish to interrupt the Senator, but I should like to ask a question. Who is to decide whether the officers exercising the governing power in a State have been chosen by the people of that State?"

Mr. Carpenter: "Ultimately, no doubt, we must decide it."

Mr. Ferry: "Then I understand that in all cases where the officers exercising the governing power of a State have not been elected, or are alleged not to have been elected by the people of that State, Congress has the right to inquire, decide, intervene, and order a new election?"

Mr. Carpenter: "I say undoubtedly, as a question of power. My friend is seeking to force me upon what he thinks the great objection to this power; but let me suggest to him that I am discussing the power itself, and not the propriety of exercising it in every case; and that the objection suggested by his question is more properly directed against the exercise of the power improperly than against its existence. It is undoubtedly true that this power might be abused; but the same is true

Democrats carried their State election and the Legislature, while Republicans sought to have changed the result said in effect, 'Not so fast on that; if Governor Washburn had said to his successor, "True, you were elected, but I think I will stay in;" and the members of the Legislature had said, "We don't like to see Democrats in our place; we will hold over the government thus administered would have been republican in form, if the Senator from New Jersey is right, and would have satisfied the requirements of the Constitution. If this be so, the States of this Union are the helpless prey of fraud and violence, and the guarantee of the Constitution is utterly worthless. A construction of that instrument which gives the people of a State over to the usurpation of their rulers, and denies them all remedy, is, to say the least of it, not wisely devised to insure the domestic tranquillity or to secure the blessings of liberty to ourselves and our posterity."

Mr. Frelinghuysen: "I think that the Senator from Wisconsin strikes out of the Constitution the word 'form,' and makes the Constitution read that there shall be a republican government. I think that word 'form' has great significance. I think the two things that were guaranteed are a republican form of government and tranquillity, peace, government. If the people of a State have a republican form of government, and if the United States maintains order and peace and tranquillity so that the people can correct their own errors, their own mistakes, I think that then we have done all that we ought to do; and that for the United States to intervene and force an election upon them is taking from them a republican form of government."

Mr. Carpenter: "The word 'form' is in the Constitution, but the question is, What does it mean? I think it is synonymous with 'kind' or 'class,' and the phrase is equivalent to 'republican government.' There is no doubt that the objection intended to be secured by this provision was to compel the States to remain republics, and prevent their becoming monarchies; to perpetuate government in which the people should enjoy the right of self-government by electing their officers, and to forbid governments in which the people should be governed either under the pretext of divine right or by usurpation; and any construction of the Constitution under which it fails to accomplish this end must be a misconstruction. Such a construction does injustice to the memory of the fathers; it is trifling with the whole subject to say that so long as usurpation and despotic power observe republican forms in administration they are protected by the Constitution."

Mr. Thurman: "Will the Senator allow me to interrupt him for a moment?"

Mr. Carpenter: "Certainly."

Mr. Thurman: "I wish to make this suggestion: There is nothing in the Constitution of the United States that requires that a State

shall have a written constitution. Its constitution may be like that of Great Britain, without one word of writing. Now if the word 'form' be taken in its most narrow sense, pray what is the guarantee worth in a case where there is no written constitution of a State?"

Mr. Carpenter: "That well illustrates what I was trying to illustrate in another way, and it comes back to this: the question is, whether by that article of the Constitution it was intended to guarantee something to a State, or nothing; whether it was meant to deal with the reality of the thing, or with the mere fiction and form?"

Mr. Norwood, of Georgia, said: "Before the Senator passes from that point, I wish to ask him a question; and I will state in advance to the Senator that my object is to get light on this subject: because it is in my opinion the main point in the case, and the one in regard to which I have felt greatly embarrassed. I wish him to state whether he thinks there is but one remedy where a republican form of government has been destroyed or overthrown? The remedy he proposes is, by act of Congress to order a new election. Does he consider that a better remedy than for Congress, if it ascertains, as he says it can, by a review of an election in the State, that a minority has overthrown the majority and taken possession of the government, to determine that the majority shall have control of the government; and, if necessary, to authorize the Executive to see that the majority shall be installed?"

Mr. Carpenter: "The Senator, of course, is aware that I do not think that McEnery was in fact elected, although the returns show that he was."

Mr. Norwood: "I understand that. I am merely asking the Senator whether he thinks it is better to order a new election than to have those put in power who the returns show were elected."

Mr. Carpenter: "If I believed that McEnery was in fact elected at that election, the logic of the situation would dictate that Congress, if that were necessary, should recognize his government. But in the first place I do not believe that the McEnery government has any more right than the Kellogg government. In the second place the McEnery government never had an existence in fact.

"Mr. President, these interruptions (of which I do not complain) have drawn me somewhat away from the line of argument I intended to pursue, compelled me to interrupt the order in which I intended to discuss the topics involved, so that in returning to my subject I may repeat some things I have said. But I will resume, as well as I can, the thread I had in hand when I was interrupted.

"In the first place, if the present state of things in Louisiana amounts to a usurpation, then Congress may prescribe a remedy, or it can prescribe no remedy in case of any usurpation in a State. I had supposed that it was universally conceded that this article of the Constitution was intended to vest this power in the General Government, that the guarantee of republican government was intended to protect the people against usurpation, and that the guarantee against domestic violence was intended to protect the State government against turbulence within the State; and that the jurisdiction to determine whether the state of things existing in a State authorized the General Government to interfere for the purpose of executing the first of these guarantees was vested exclusively in the General Government, not in the State; and I have read from the writings of Mr. Calhoun, the great champion of State rights, in support of this view.

"And when it is conceded, as it is by the Senator from Connecticut, that the only existing government in Louisiana is, 'root and branch, a usurpation,' I supposed Congress had the power, and was obliged, to provide some suitable remedy; and the bill under consideration seems to me to provide the only suitable remedy.

"But what seems to me a very important element of this case is, that we are not now considering in the first instance whether the Federal Government ought to interfere. The fact is, the Federal Government has already interfered through its judicial department. A Federal judge acting not only without jurisdiction, but in confessed violation of an act of Congress, has organized this usurpation; and the question is whether Congress has the power to undo the wrong he has done, by restoring to the people of that State the right of which he has deprived them. Can it be maintained that a Federal judge, in open defiance of Federal law, may take a State government from the hands of the people, confer it upon usurpers, and that Congress is powerless in the premises? It may be said the judge might be impeached. This would punish him, but would not redress the wrong. The Kellogg government would still exist, protected by Federal troops, unless Congress should interfere; and I can imagine no form of interference that would redress the wrong, except to restore to that people, as this bill proposes, the right they have been deprived of, to choose their own rulers. And I shall be curious to hear the Senator from Connecticut point out any other remedy. For that, however, I must wait until he shall see fit to reveal it.

"I understand that the Supreme Court of the State is in collusion with Kellogg, has already corruptly decided many cases in his favor, and will continue in the same course. There can be no judicial remedy in that State, and the remedy of force is forbidden by the Constitution of the United States. This State government will not inaugurate any movement to overthrow itself. The people of the State cannot; because, first, the Constitution of the United States forbids it; and, second, because, if they should attempt it, they would be con-

fronted with Federal bayonets. Now, sir, what is the device locked up in the mind of the Senator from Connecticut which will meet this case?

"Let me return once more to this question of power, from which I have been so often drawn to answer the questions that have been put to me. The Constitution provides that the United States shall guarantee to every State a republican government. The State of Louisiana has not such a government at present. What remedy may we employ? I answer, in the language of the Constitution, any proper and necessary remedy; and we are the exclusive judges of the means proper to be employed, provided we possess the power to do any thing in the premises. I deny that any power conferred by the Constitution upon the United States is subject to the consent, or falls by the dissent, of any State. The powers conferred upon this Government are sovereign powers; they are unlimited, except where the Constitution itself has regulated their exercise. Where the Constitution confers power over a given subject, and does not regulate the exercise of the power, the power of this Government is as absolute as the power of the Czar of Russia. Take the power to declare war. Has not this Government as much power in that respect as the Czar of Russia or the Sultan of Turkey? Take the power of taxation. In certain particulars it is restricted by the Constitution; but, excepting those restrictions, it is an unlimited and arbitrary power. We may declare war to-morrow, with or without cause, against any nation or all mankind. We may, by the power of taxation, withdraw the last dollar from the pockets of the people and place it in the Treasury. We may put every man, woman, and child, into the army. Take the power to establish post-offices and post-roads. This is one of the unlimited powers conferred by the Constitution, and Congress may establish as many or as few as it pleases, and provide such method as it pleases for carrying the mails.

"The Constitution of the United States was intended to classify and distribute the powers of sovereignty between the General and State governments. It enumerates the powers which shall be possessed by the General Government, but does not, like a code of procedure, prescribe the mode, manner, or extent of their execution. All that is committed to the discretion of Congress. What is proper to be done within the limits of reason is for Congress to determine. The Constitution says nothing about a military academy; but it authorizes Congress to raise and maintain armies. How they shall be raised, whether by encouraging volunteering or by draft, how they shall be armed, disciplined, and regulated, all that is committed to Congress by that provision of the Constitution which empowers Congress 'to make all laws necessary and proper' to raise and maintain armies. Congress has deemed it advisable to establish a school of instruction at West Point as a means of securing suitable officers of the army.

"Now, take this power to guarantee a republican government to a State, and assuming, as the Senator from Connecticut agrees, that the existing State government is a usurpation, and assuming, as I maintain, that a republican government is a government by the people, and that a government by usurpation is not a republican government, and that the United States are bound to correct this evil, no man can deny the constitutionality of this bill, because it provides one, if not the best, remedy for the evil. In other words, if the United States have the power to interfere in this case, the mode in which that interference shall be made is entirely within the discretion of Congress; and by passing this bill we shall determine that this is a proper mode. Those who deny the power of Congress to pass this bill deny the power of Congress to interfere at all; deny—if they concede, as my friend from Connecticut does, that this is a case of usurpation—the power of Congress to interfere in case of any usurpation of a State government. If this be a sound doctrine, then the Constitution of the United States secures to the people of a State not 'the blessings of liberty,' but the evils of usurpation and despotism. The people cannot by force overthrow such usurpation, because the government *de facto* will appeal to the President, as this government has done, and will be supported by him, as this is. It must be presumed that the clause of the Constitution under consideration was inserted for some purpose; and if not for a case like this, for what purpose was it inserted? To deny that it authorizes Congress to interfere in the most flagrant case of usurpation, is to deny that it has any effect whatever; and if it applies to a flagrant case of usurpation, it applies to every case of usurpation.

"But the great objection which this bill encounters is as to its expediency. It is said that to pass this bill would be a dangerous precedent. What is meant by saying that this would be a dangerous precedent? It is a dangerous precedent to hang a man, and it might be argued that if a government were clothed with power to hang a murderer, it might abuse that power, or make a mistake, and hang a man for murder who had not committed that offense. Calomel is a dangerous remedy, and it might be argued that to allow physicians to administer it would set a precedent for them to administer it where it was unnecessary. But all this class of argument merely tends to show that, if the power to pass this bill were conceded, it might encourage the passage of a similar bill in a case where it was unnecessary; in other words, the power might be abused. But if this is a satisfactory argument against this power, it would be against every other power conferred by the Constitution. Chief-Justice Marshall said, in a case long ago, that there was no power conferred upon the Government that might not be

abused; therefore, that a particular power might be abused was no argument against its existence. This power is undoubtedly one of the most delicate of those conferred upon this Government, and its abuse would be attended with wide-spread and disastrous results; but it was thought necessary to confer it in order to prevent revolutions in the States, which would be likely to result in monarchy. It was said in the *Federalist* the existence of such a power would in most cases render its exercise unnecessary. And so it has proved. For nearly a century no other case has arisen that called for its exercise. But, now that the case has arisen, to deny the existence of this power would encourage the repetition of such wrongs to an extent that cannot be foreseen. We may well wish the necessity for our decision had not arisen; but it has without our fault. If you were crossing Long Bridge, prudence would dictate that you should avoid running off on the right-hand side; but if to avoid this accident you should drive so far from that side as to go off on the other, your very prudence would cause your calamity. So here it is as dangerous not to act when the case calls for action as it is to act when the case does not call for it. And I cannot resist the unpleasant conclusion that for Congress to refuse to act in a case like this, and to deny its power to do so, would be setting a precedent to be followed by fatal results."

Mr. Sherman, of Ohio, said: "Every Senator in the whole body will admit that the Senator from Wisconsin has redeemed his pledge faithfully, eloquently, and ably. No one will gainsay that; but I think it is equally clear, if any one will read not only the newspapers but the indications that we have from persons from Louisiana—and I have also been on the ground in Louisiana and heard from both sides—that a large majority of the people of Louisiana have acquiesced in the existing condition of affairs. It is as plain, as palpable to me as the light of day, that it is wise that they have so acquiesced. They will have an opportunity at the next election in November to redeem their State government, if it has fallen into the hands of usurpers. The power will be again restored to them, and I think it is the wisest thing in the world to pass in silence all that has occurred in Louisiana, with the certainty that the people themselves will correct any evils that have been done there.

"I sympathize with my friend from Wisconsin, but at the same time I do not believe he is pursuing the course best for the people of the United States or for the people of Louisiana. I believe Congress had better attend to their ordinary legitimate business, leaving matters in Louisiana to right themselves, and they are now being rapidly righted, and at the next election we may probably have a Legislature elected by the consent of the governed, ready to pass laws to suit their wishes without difficulty. The very election law now pending has been passed, perhaps by the general consent of all, and is declared to be a fair law. There is no practical difficulty in the Louisiana matter. If we let things alone in Louisiana, the popular will as expressed in a legal election will undoubtedly prevail. The only result of this movement now to overthrow the government of Louisiana will be to derange and disorder the condition of affairs there, and turn out of office two or three State officers whose terms happen to extend beyond next fall."

Mr. Saulsbury, of Delaware, said: "Mr. President, I do not know that I shall vote for the bill of the Senator from Wisconsin when it comes before the Senate; but I think it is right that he should have the privilege of bringing that question before the Senate whenever he sees proper to do so. I concur with him that no more important question can be presented at the present session of Congress than the question involved in the condition of affairs in Louisiana. I am surprised at the enunciations of Senators on this floor that there has been a general acquiescence on the part of the people of Louisiana in the present condition of affairs in that State. Why, sir, it is known to every Senator on this floor that if the Federal power was withdrawn, if the troops of the United States were removed from Louisiana and a proclamation made that the people of Louisiana should settle this matter for themselves, the Kellogg government would vanish out of existence in less than one month. The people of Louisiana have protested against such proceedings in every way that it was possible for them to resort to. They have been before the Committee on Privileges and Elections at the present session protesting; they have appealed to the President of the United States, but have been turned away; and now are they to be turned away from this Hall of Congress? Are we to spurn their appeals for relief simply on the ground that because they do not resist the Federal authority they are supposed to acquiesce in the present condition of affairs?"

Mr. West, of Louisiana, said: "I will say one word to those gentlemen who are crying about the people of Louisiana, who are here beseeching Congress to come to their relief. Who are they? The disappointed office-holders, the disappointed expectants of office; and the men who have countenanced assassination and murder in my State. Sir, the opportunity will come to reply to these men. I do not shirk it. I shall not move to lay the Louisiana bill on the table, but I shall stand here and I shall show to this Senate, if I have the power, that the rightful government of the State is now exercised there.

"Sir, it is a fallacy to suppose that Mr. Kellogg cannot maintain himself. Where are the United States troops in Louisiana to-day, and how many have you got? Less than five hundred men there, and less than you have had

there for the last ten years—five hundred men distributed all throughout that State to preserve tranquillity there, in a State where lawlessness has predominated to the extent that we all know of, and where lives almost innumerable have been sacrificed by the men who are now here seeking to get another chance to have possession of that government.

"I only desired to say that much to the men who claim that the people of Louisiana are here asking for relief. The people of Louisiana are quietly pursuing their industrial avocations, and the government of their choice exercises the functions that they have conferred upon it. The Senate and the House are in possession of no information that will at all warrant action. But let the question come up and let it be debated whenever the Senate is ready."

Mr. Frelinghuysen: "Mr. President, having rather incidentally than by deliberate purpose taken some subordinate part in the discussion of this question when it was before the Senate on a former occasion, I propose now to submit concisely my views on two propositions: First, that the President of the United States was authorized by the Constitution, standing alone, and that he was also authorized by the statutes of the country, to send armed protection to Louisiana; and second, that Congress is not authorized to order a new election in that State.

"And I may here say that while I cannot agree with the conclusions of the Senator from Wisconsin (Mr. Carpenter), I trust I do not violate delicacy in stating that I admire the marked ability with which he has presented his views. He has so presented the case that he may properly demand and not petition for it a serious and careful consideration. It is to the labors of that Senator and the Senator from Indiana (Mr. Morton) that we and the country are indebted for an understanding of this somewhat complicated subject.

"I submit that the President was authorized by the Constitution, standing alone and not enforced by any statute, to send the protection he did to Louisiana. Mr. Kellogg was the Governor *de facto* of that State. The President told us that he had so recognized him, and that he would continue so to do unless Congress directed to the contrary, and we purposely did nothing. Kellogg was therefore Governor *de facto*, recognized by the President and by the silent acquiescence of Congress; and on the 13th of May, 1878, he sent the President this communication:

SIR: Domestic violence existing in several parishes of this State which the State authorities are unable to suppress without great expense and danger of bloodshed, and the Legislature not being in session, and it being impossible to convene the Legislature in time to meet the emergency, I respectfully make application, under the fourth section of article four of the Constitution of the United States, for a sufficient military force of the United States Government to enable the State authorities to suppress insurrection and domestic violence.

Very respectfully, your obedient servant,
WM. P. KELLOGG, Governor of Louisiana.

To his Excellency U. S. GRANT, President of the United States.

"If the President was satisfied that domestic violence existed, on being called upon by the Governor for a force to suppress it, he was bound under the provisions of the Constitution to do so, whether there was or was not any statute imposing that duty upon him. That disorder existed in that State cannot be questioned, because the preamble of the bill introduced for a new election truly declares in these words:

Whereas, The public peace in said State is at present preserved and can only be preserved during the existing state of things in said State at the expense of the United States and by retaining a part of the army in said State.

"That the demand upon the President was made according to the constitutional requirements (whether in compliance with the statutes or not) cannot be questioned, after reading the foregoing application.

"Sir, the Constitution carefully distributes the powers of government into three branches, the legislative, judicial, and executive. Article one, section 8, declares the powers of Congress in eighteen different clauses. Article three, section 1, declares that the judicial power shall be vested in one Supreme Court and in such inferior courts as Congress may ordain and establish; and article two, section 1, declares that the executive power shall be vested in the President of the United States. This distribution of power is essential to republican liberty. The aggrandizement of all power in one body, whether it consists of many individuals or of a unit, is despotism. The question is, to which of these three divisions of government the duty under the Constitution attaches to protect a State from domestic violence? The Constitution says that it is 'the United States' that is to give this protection. We are here told that saying the 'United States' shall give the protection is equivalent to saying that Congress shall give it. To that I cannot agree. If the Constitution had intended that Congress, as contradistinguished from the Executive or judiciary, should give this protection, it would have enumerated this power among those conferred upon Congress in the eighth section of the first article. In that enumeration of the powers of Congress it is provided that Congress may suppress insurrection and repel invasion; but a general insurrection is a very different thing from domestic violence in a State. That term includes insurrection, but it comprehends much more that does not amount to insurrection. Neither can it be claimed that this power is given to Congress by the last clause of the eighth section of the first article, which says Congress shall have power 'to make all laws necessary and proper to carry into execution the forego-

ing powers,' because this protection against domestic violence is not a foregoing power, not being mentioned until we come to the fourth section of the sixth article, while this provision as to making all laws, etc., is found in the eighth section of the first article; and besides, where the question is whether the President's power is restricted to the execution of a statute, rather than to the execution of the Constitution, it does not settle any thing to say that Congress may make laws when necessary and proper. That is the very question. When not necessary they need not, and when not proper they may not pass the law. I say that Congress need not pass a law to give authority to the President to afford this protection; not that they may not.

"The term 'United States' includes all three, of the divisions of the Government, and that division of the Government is to act to which the duty appropriately belongs. If a State should pass a law tending to create an aristocracy, as that a State judgeship should be hereditary, then it would be the province of the judiciary to fulfill the guarantee and to declare such law void. In that case the judicial power is 'the United States.' If all law and all form of government in a State have been destroyed by a rebellion, so that it is necessary to have a new organization of government, then it is the legislative power that must fulfill this guarantee by setting up new governments, and then Congress is 'the United States.' And here is where Andrew Johnson violated his duty and departed from his proper and legitimate powers, by undertaking as the Executive to exercise legislative functions. If there exist domestic violence, disorder, and obstruction to the laws, then it is the province of the Executive on being called upon to fulfill the guarantee of the Constitution, and the Executive is 'the United States.'

"Mr. President, this provision of the Constitution contemplates a sudden emergency, when violence has subjected and trampled down the law, and when, without waiting for the Legislature, the Governor is to call upon the President for protection. Every other year Congress is for nine months not in session, and when in session the introduction of a bill, its reference to a committee, its report upon it, its being three times read and thus passing each House, and then to be subjected to the approval of the President, is a process inconsistent with the demands of the emergency as contemplated by the Constitution. I know Congress may delegate some of its powers; but when the duty is such that Congress cannot perform and that the Executive must, and the power is omitted in enumeration of the powers of Congress, and the power is carefully stated to belong not to Congress but to the United States, then we are to infer that the Constitution intended to confer the power on the Executive, and not that the duty was to be performed either by the President, or by any one else, by virtue of a delegation of power from Congress.

"Again, the President of the United States is by the Constitution invested with all the power necessary to perform this duty. He is, by article two, section 2, made the Commander-in-Chief of the Army and Navy; and then the Constitution, having given him this power, expressly declares that 'the President shall take care that the laws be faithfully executed,' and requires him to swear 'that he will faithfully execute the office of President.' There has never been any act passed requiring him to perform this constitutional duty. The Constitution need not be enacted into law to be enforced. It is itself the highest law. There might or there might not be an act of Congress authorizing the President to repel invasion; that is merely accidental. His duty is the same. If a fleet should come up the Potomac, is the President to stand like a cowardly dotard, with the Army and Navy at his control, until the White House is in ashes and the Capitol in ruins, waiting for a declaration of war by Congress, or authority to act from them? The Constitution has made him the custodian of the nation, the protector of its laws; it has given him the means to execute his high office, and he must perform it.

"We claimed that the Rio Grande was the western boundary of Texas. Mexico disputed it; and President Polk sent General Taylor there in 1845 to protect our interests, and war existed for months before it was declared by Congress.

"We obtained possession of Louisiana in 1803; of Florida in 1819; and there were frequent occasions when the President sent our fleet to guard the disputed territory between the Mississippi River and the Perdido.

"It is true that it is the laws of the United States, and not of the States, that the President, under the Constitution, is to see are faithfully executed; but under our system of government the laws of the United States and the laws of the States are in their execution so inseparably interwoven and interlaced that it is impossible that the former can be executed and enforced in a State where anarchy exists; and consequently, under the provision that the President is to see the laws of the United States faithfully executed, he must see to it that anarchy does not exist in the State.

"I do not see that we have on this question any thing to do with the propriety of Durell's decisions. The President is intrusted with the Army, not to enforce any man's views or opinions; he is intrusted with the duty of enforcing the laws; he enforces the writ which speaks in the name of the United States, and is tested by the Chief-Justice, and must be obeyed. To hold the President responsible for unjust decisions because he insists that the process of the United States shall be respected, would be to hold that he must sit in judgment to approve or disapprove the findings of the Federal courts, and would be a commingling of the executive with the judicial functions of greater absurdity,

perhaps, than the merging of the powers of Congress with those of the Chief Magistrate as insisted on in this case.

"I then submit, Mr. President, that protection from 'domestic violence' under the fourth section of the fourth article appeals to the arm, the force, of the nation in an emergency, and is an appeal to the President, because the executive power is vested in him and it is executive power that is required; and because he is Commander-in-Chief of the Army and Navy, he is bound to see the laws faithfully executed; and because it is the United States and not 'Congress' that guarantees against domestic violence, Congress cannot take that power from the President. It is his. Congress may regulate it, may say he shall or shall not use the militia, he shall or shall not use the Army or the Navy; it may take from him all means of performing his constitutional duty, but when he has the means he must perform it.

"I do not dispute that Congress may also execute this guarantee. There is, under the Constitution, a mixture as well as a division of powers. The President acts legislatively when he approves or vetoes a bill; the Senate acts judicially in impeachments; the House of Representatives acts as an inquest in its presentation of an impeachment; and the Senate shares the executive power in the matter of appointments and treaties; but the President in his sphere is as independent of Congress as Congress is of him. He may nominate, and with the advice of the Senate appoint, to office; he may convene Congress, and under certain circumstances may adjourn it; he may receive public ministers; he may make treaties, subject to ratification by the Senate; he must see to it that the laws are executed, and he must fulfill the guarantees of the Constitution when that duty appropriately belongs to him.

"These powers cannot be taken from him.

"Congress has sometimes attempted to encroach upon these powers. It tried to limit the pardoning power, but the Supreme Court sustained the President. In the case known as *Ex parte* Garland, found in 4 Wallace, 880, the court says:

> Congress can neither limit the effect of *his* pardon, nor exclude from its exercise any class of offenders. The benign prerogative of mercy cannot be fettered by any legislative restriction.

"And again in 13 Wallace, 128, in a case arising under what is known as Drake's amendment, the court holds a similar doctrine. The House of Representatives, in 1796, attempted to limit the President's power to make treaties, and by a resolution declared that where a treaty depended for the execution of any of its stipulations on an act of Congress, it was the right of the House to deliberate on the expediency or inexpediency of carrying such treaty into effect. The case in question was a treaty with Great Britain.

"Washington, in a message of March 30, 1796, denies such power; and Kent (volume i., page 286) says: 'The House of Representatives is not above the law, and has no dispensing power. The argument in favor of the conclusive efficacy of every treaty made by the President and Senate is so clear and palpable as to carry conviction throughout the community.' We must be careful, if we intend to preserve this Government, how the legislative branch, which is by far the most powerful, encroaches on the executive or on the judiciary.

"Governor Kellogg was right in making his application for aid to rest on the Constitution rather than upon any statute.

"But I submit that it is perfectly clear that the President was by statute also authorized to afford this protection. The statute of 1795 authorizes the President to use the militia in case of an insurrection in any State against the government thereof on the application of the Governor or Legislature.

"The act of 1807 substitutes the Army for the militia, and goes further than the act of 1795, and authorizes the President to use the Army not only in cases of 'insurrection,' but in cases of 'obstruction of the laws either of the United States or of any individual State.' This certainly was a case of obstruction of the laws of an individual State. I have that confidence in the legal judgment of the Senator from Wisconsin, that I am induced to believe that he will agree with me that the statute of 1807 applies directly to this case.

"Now let me consider the second proposition, namely, that the United States is not authorized to order a new election in Louisiana. The Constitution provides that the United States shall guarantee to each State government peace, tranquillity, freedom from anarchy, and disorder; second, its guarantee is that each State shall have a government in form republican; that it shall not be in its framework an aristocracy, where authority is vested in a privileged order; that it shall not be a democracy, where the people in person exercise the sovereign power; the government shall not be a despotism, where the absolute power is exercised by a man or men without constitutional restraint; but that the government shall be in form republican, where the supreme power is intrusted to representatives elected by the people.

"The Constitution says—and whether right or wrong we are controlled by it, and it is beyond all argument—that we are only to guarantee a republican form of government with order and tranquillity; and when we insist that full and accurate significance shall be given to the word 'form' as it occurs in this provision of the Constitution, we are not sticking in the bark, we are not superficial, but we are going to the very root of the matter. We are claiming that the Federal Government only has to do with the form, leaving the substance, the administration of the form of government, to the people of the States. Those who would ignore this word 'form' from the restricted

grant of power given by the States under the constitutional compact to the Federal Government would usurp the very substance to the Federal Government, and leave only the 'form' or shell of republican government to the States.

"The Senator from Wisconsin submitted this well-considered sentence to the Senate:

If I am right in saying that it is the vital element of republican government that its rulers are chosen by the people, it follows that the present government of Louisiana, lacking this, is not a republican government.

"I do not object to his definition. Republican government is one the vital element of which is that rulers are elected by the people. Ten years ago a majority of the people of Louisiana had no voice in electing the rulers. Was it a republican government? I do not say that it was. It certainly was not, under the definition stated. But as Congress had no right except over the form of government, it was never claimed that under the guarantee clause of the Constitution Congress could give the right to vote to the disfranchised majority of the people of that State. It required an amendment to the Constitution before that could be effected.

"This word 'form' is not a matter of chance as it occurs in this Constitution. The people of the Southern States, when they entered into this compact, knowing that large portions of their populations were disfranchised, and not intending that they should have a voice in the election of rulers, would never have agreed to insert in the Constitution that the Federal Government should see to it that their State governments should not only be republican in form, but also should see to it that the rulers were elected by the people. They stipulated that all the people should be considered and counted in the apportionment of representation, but not so in the election of rulers."

Mr. Carpenter: "I want not to answer the Senator, but simply to ask him a question, as he did me, so that I may distinctly understand him. Does he maintain that in case the three branches of government in Louisiana to-day, that is, the men holding those three branches of government, shall collude together, the court to decide all questions in favor of the other two, the other departments to administer every thing in their common interest, to keep themselves in power under the present existing republican constitution of that State during their natural lives, and they should do so for fifteen years, would Congress have any power to interfere, the form—that is, the constitution—being conceded to be republican."

Mr. Frelinghuysen: "That is not a case before us."

Mr. Carpenter: "It is two years before us."

Mr. Frelinghuysen: "I think I will show the case supposed is not before us at any time. It is difficult to solve questions put in this manner out of the order of debate; but my answer is: That if after repeated trials in a State where we have performed our duty of giving them order and government, and of seeing to it that it is republican in form, it should turn out that the people were so depraved, ignorant, and degraded, so unfit for the blessings of republican government, that they abused all their privileges, I suppose it would then be incumbent upon us to fulfill that guarantee of the Constitution *pro tanto*, to fulfill it just as far as we could, and to give them government, even if it was under a military commission. But, sir, we will never be called upon to resort to that extreme measure, unless the extreme case which my friend has supposed, of the executive, legislative, judicial branches of government, and the people themselves, all combining in one dire conspiracy to destroy themselves."

Mr. Carpenter: "Let me correct my friend as to the effect of my question. My question meant this: Where the judges of the Supreme Court, the members of the Legislature and the executive department, the Governor and the other officers, should combine among themselves to hold the people under their government, and the people should be of course resisting that, and the government should apply to the President to sustain it, and the President should interfere, and then the question should be presented to us whether, after that thing had continued for ten years, and they had avowed their purpose of continuing for life, we should have any power whatever to interfere? The particular case is only put to test the Senator's argument of the distinction between our guaranteeing a republican government and what he calls a republican form of government."

Mr. Frelinghuysen: "I think I have answered that question. I say that we are bound to carry out the guarantee of the Constitution. If the people are so entirely unfit for a republican government, we must still give them government, even if it is a military commission. But no such state of things will exist. You can suppose a condition of things which will prove that any government is inefficient and unfit for the purposes for which it is inaugurated.

"Mr. President, if the Federal Government can, in the exercise of its arbitrary discretion—a discretion from which there is no appeal, and to which there is no review, not even by the people, for we are not responsible to the people of Louisiana for the votes given here—if the Federal Government can, in the exercise of its arbitrary power, set aside the election of Governors and Legislatures of the States, then there is an end of the independent government of the States. I submit that the procedure here contemplated is without precedent in the General Government, and without analogy in any of the State governments.

"As a matter of necessity, deliberative assemblies must be the judges of the qualifications of their own members. We judge of the

qualifications of Senators, and the House of those of Representatives. But, further than this necessity extends, was it ever heard of that an election of a State officer, a Governor, a State Treasurer, a controller, was set aside by a political body? An election is never set aside even by the judiciary. It is submitted to a dispassionate and impartial tribunal of justice, not to set aside an election, but to determine whether the claimant was ever elected.

"Order a new election in Louisiana, and you have established a precedent that must impair elective government. Excited parties enter upon a strongly-contested election; the one party in harmony with the dominant party in Congress (perhaps a Senator is to be elected by the Legislature); that party seeks by violence and fraud to obtain success, and when it fails comes to Congress and makes that very fraud and violence the pretense for covering their defeat and for having the election set aside, and for having a second trial with the adverse party who were successful damaged and disgraced by having their victory set aside. No, sir; better far let the States suffer for their own misdeeds, even the innocent with the guilty; their suffering will lead them to cure the evil. Admonished by the evil results of a vicious election, in the calm periods that intervene between elections all parties will unite in devising and adopting safeguards to secure honest elections. Registry laws. poll-lists, proper places for the polls, police regulations, and severely penal statutes, will be adopted as the means of preventing the repetition of the evil. We had better adhere to the Constitution and do what it says, which is that we shall guarantee to the several States government—which we did with Louisiana when we sent our troops there preserving order and tranquillity—and that we shall guarantee to them a republican form of government, which we did when we approved the constitution of Louisiana, under which form that government is now carried on.

"If there are frauds in elections or usurpations in office, let the remedy be found in the courts of the States or by means of impeachment, or by the frequently-recurring popular elections. But let us adopt the theory that we are under the guarantee clause of the Constitution to interfere with States further than to secure to them order and tranquillity and a republican form of government, and that we are to see to it that the proper persons are in power, still I insist that Congress is not to order a new election in Louisiana. If Congress is to interfere, and there is one who we know has been duly elected and who under the constitution of Louisiana is entitled to the office of Governor, Congress surely is not to interfere by ordering a new election, but by placing the one entitled to the office by election and by the Louisiana constitution in power."

Mr. West, of Louisiana, said: "The only conclusion that Congress has come to in regard to the vote of Louisiana is the conclusion that I want to hold you to to-day, that you do not know how the election has gone in Louisiana, and until you do know you have no right to interfere with it.

"We are told that the Kellogg government is a gross usurpation, and that dire consequences are to result to the dominant party in Congress, and in the country, and that we as Senators will be grossly derelict of our duty unless we apply a remedy which it is alleged exists under the instruction of the Constitution that the United States *shall* guarantee to every State in this Union a republican form of government.

"This proposition has so far mainly been urged upon us by the Senator from Wisconsin. In the bill which he has introduced to restore the rights of the State of Louisiana he has assumed an existing state of facts in regard to affairs there from which I totally dissent, and which assumption I contend and shall endeavor to show to the Senate is not at all warranted by the information in its possession.

"In the first place, let me ask what is our right of interference? That right must be based upon two general grounds: first, whether it is conferred upon us by the Constitution upon any given state of facts; and, second, whether that state of facts exists.

"I shall leave the argument on the first of these propositions to the more experienced members of this body, whose views will interest, instruct, and enlighten the Senate to a degree that I should be entirely without expectation of equaling, and I shall confine myself altogether to the proposition that the Senate has not been informed, nor attempted to inform itself, as to whether a state of facts exists growing out of the election of 1872 in Louisiana that either requires or even justifies Congress in interfering. I assert and maintain that the Senate does not know that William P. Kellogg was not elected Governor at that time; that the information laid before the Committee on Privileges and Elections of the Forty-second Congress related entirely to what was done by certain returning boards, to what occurred through an order issued by a judge of a Federal court, and that the examination held by that committee scarcely touched upon what, if we are to exercise our right of interference, is the true subject of inquiry: *How did the people of Louisiana vote on the 4th of November*, 1872? for which person of the two then seeking their suffrages for the office of Governor on that day did they actually vote? With the exception of myself, and I do not know that I ought even to except myself, nobody has given greater attention to this matter than the Senator from Wisconsin. He, after spending these weeks elaborating his report and studying that testimony, admits in the Senate that he does not believe Mr. McEnery was elected. Now, we know perfectly well that there were two men voted for on that day. The Senator from Wisconsin says:

I do not think that Mr. McEnery was in fact elected.

"Now, can there be an election without a result? If he does not think that in fact Mr. McEnery was elected on that day, he must think in fact the other man was. That is the question for Congress to determine, it seems to me, before it is called upon to determine whether it has the right constitutionally to interfere.

"In a case somewhat analogous, the New Jersey case of 1840, known most generally as the Broad Seal case, Congress took a direct and thorough method of ascertaining the facts connected therewith, as my friend from California (Mr. Hager) very well knows, for he was counsel in the case. It may with some truth be contended that neither the acts of a returning board nor the order of a Federal judge can impose a government upon the people of a State, and that a government established by either of such means is no more republican in form than were it established by force of arms, however it might subsequently rigidly comply with the written form of a republican constitution.

"It is the voice of the people alone that constitutes a government under our institutions. That 'governments derive their just powers from the consent of the governed' is an axiom too familiar to be forgotten, and I contend that Congress has not in its possession any evidence worthy of regard that Mr. Kellogg is Governor in violation of the consent of the governed; and until it is so informed, it can do no greater wrong, can in no manner more widely depart from its obligation as one of the coördinate branches of the Government of the United States to *guarantee* to Louisiana a republican form of government, than unjustifiably to set aside the present government in that State and impose upon her people the necessity of making another choice through the bill of the Senator from Wisconsin.

"William P. Kellogg is to-day Governor of the State of Louisiana. He is recognized as such by your Chief Executive, by your coördinate branch of Congress who have admitted to seats upon their floor members properly certified by him to have been elected. He is recognized as such also by the Supreme Court of that State, and Congress ought to be satisfied, before it undertakes to overthrow him as the Governor of one of the sovereign States of the Union, that he holds the office contrary to the desires, contrary to the expressed wish and intention of the people governed. They should know that, and they should know what the people of Louisiana willed in 1872, and what their wish is to-day, before they undertake to interfere with him. There is not a particle of evidence of that kind here. If he holds the office by the wish and according to the intention of the people governed, then his government is republican in form under the constitution of that State, and as all the evidence goes to show that he does so hold it, those who would oust him from his position are compelled to show proof to the contrary."

Mr. Bayard, of Delaware, said: "Mr. President, in rising to discuss so grave and important a question as the one now before the Senate, I must confess myself oppressed by the scene the Senate-Chamber now presents. We have just heard a most sincere, a most feeling and able speech by a member of this body upon a subject which he has truly declared to be second in importance to none which could be brought before the Senate. He has truly said it not only involves the present and the prospective welfare and happiness of a large body of our own fellow-citizens, but the questions involved in the consideration of their case enter into and affect the existence of our federal form of government; and yet we have seen upon the Administration side of the Chamber scarce as many Senators as there are fingers upon a single hand, and even upon this side of the Chamber but few interested auditors. Nevertheless it is not the part of a true man to hesitate for want of success. Duty and duty alone should he consider, and leave the consequences to that Higher Power who in his own good time will cause the right to prevail.

"Mr. President, in the amendment which I have offered to the bill introduced by the Senator from Wisconsin (Mr. Carpenter) I have recited a series of facts relating to that community which we term the State of Louisiana. To recapitulate these facts—not to take the time of the Senate by having the amendment read again, as it is fresh in our memory—I will merely state them, as follows: First, that an election was held in the State of Louisiana on November 4, 1872, in accordance with the constitution and laws of that State, whereby certain named persons comprising what was known as the fusion or McEnery ticket were elected to the offices which constitute the government of the State of Louisiana, according to the actual count and the official returns of all the votes cast at that election; second, that the persons so elected did organize in their respective official capacities and did assume the functions of office so devolved upon them according to the constitution and laws of Louisiana and the election held thereunder; third, that the defeated candidates at this election did by the unauthorized and illegal interference of the Federal authorities, civil and military, obtain and hold armed possession of the State-House of the State of Louisiana and dispossess and exclude the rightful officers therefrom; fourth, that this usurpation by force of Federal power continues in defiance of the will of the people of Louisiana, as expressed at their election, and in violation of the constitution and laws of the State of Louisiana and of the United States. And the deduction from these recitals is that it is the duty of the Congress of the United States to repair, so far as is possible, the wrong and injustice done aforesaid to the people of Louisiana, and protect that people against this

usurpation, and to maintain them in the enjoyment of their chosen government.

"These are the recitals of facts which I will simply say are thoroughly sustained by the reports of the committee to whom this question was submitted, and who by a voluminous report accompanied by more than a thousand pages of testimony have stated to the Senate the result of the investigation, elaborate and thorough, of the proceedings in that election. I do not propose to reiterate, prove anew, these allegations. I simply content myself by saying they are reported to the Senate by indubitable authority. But one member of the committee has been found in his report to deny the existence of these facts, and even he—I refer to the honorable Senator from Indiana (Mr. Morton) admits that the action of the United States court under which the government of Kellogg was placed in possession of the offices of Louisiana was an act of flagrant usurpation. So far even he goes. But the rest of the committee, the four Senators who signed the majority report, the Senator who drew that report whose able and thorough demonstrations of the facts on which that report was based is so fresh in our memories, the able statesman who unfortunately is no longer a Senator, Mr. Trumbull, of Illinois, and the then Senator from Georgia (Mr. Hill), all concurred in stating as true the facts which I have alleged in the preamble to this amendment.

"I do not desire to weary the Senate by recapitulating their proof, but simply aver that they are all sustained by the debates, by the report, by the testimony taken. The Senate is spared any further necessity of examining into these facts. We have had as careful an inquiry into them, as full a report upon them, as any one could desire for the elicitation of truth. The speech we had from the Senator from Kentucky (Mr. McCreery) was memorable for its ability, for that mingling of logic, wit, and truth, which marked his utterances. The speech of the Senator from Wisconsin (Mr. Carpenter) and that of the Senator from Maryland (Mr. Hamilton), within a few days, all have gone to substantiate these facts as recited in the amendment, and to render it a work of supererogation for me to introduce new authority further to sustain these recitals of fact.

"Mr. President, the issue before the Senate of the United States is no mere question of party triumph. We are not sitting here as a court to hear and try the contested election of Kellogg or of McEnery. In my opinion, we have and can have no such jurisdiction, and our decision, even if backed by the military force of the United States, would be void in law and without authority in morals. The issue before the people of the United States in this case of Louisiana is nothing less than the preservation of our form of government, whether it now is or whether it is to be a Federal Union of equal States or a consolidated power of unlimited rule by a central government over outlying provinces.

"This question is all-important to Louisiana to-day. It may be equally important to New York to-morrow, or to Massachusetts or to Indiana. Let no man suppose that the violation of a great constitutional principle of government can be committed, can become a precedent, without its evils reaching those who set it on foot. This is no claim simply for the right to hold and enjoy the powers and emoluments of an office. It is the cry of a sister State for relief from a foul usurpation set on foot and maintained by unlawful exercise of power by Federal authorities, civil and military. Let the people of Louisiana speak for themselves, they who are before the Senate for relief, whose petitions are signed by thousands, whose language is entirely respectful, nay, in my opinion, almost too humble for American citizens to use in addressing their public representatives. The people of Louisiana in whose behalf the measure which I have proposed is offered are not office-holders. They are not interested in the emoluments of office under the government of Louisiana. They truly describe themselves as follows:

> They take the liberty to say that they have had no connection with these suits as parties or attorneys—

"That is to say, the suits in the courts of Louisiana, or the Federal courts, for possession of the various offices in the State of Louisiana—

> neither do they claim any of the offices in dispute. They have not heretofore been concerned in the controversies among the political classes which have endangered the peace of, and brought scandal upon, the State. They affirm that, during the last four years, there has not been good government in Louisiana. There have been extravagance, prodigality, dishonesty, and waste in the public expenditures. The public debt has been enormously increased, with but little corresponding benefit. The credit of the State has been given to speculating corporations, for personal aims. The taxes on property have assumed such proportions that they might appropriately be called rents paid by the proprietors to the State for its occupation and use. The taxes upon business oppress the commercial and laboring classes. The laws to control elections, corporations, and public institutions, stimulate these excesses of office-holders, and the consequence is universal depression and discontent. The State needs an honest, faithful, and responsible government, conducted to attain public objects, and not to enrich its members or to perpetuate their power. There was an earnest effort to obtain such a government at the last election, but a political conspiracy has unfortunately defeated it.

"That is why they are here. Nay, further, a report—and I prefer to let these people speak by their own voice—the report of a committee of two hundred citizens of the resident population of New Orleans, made in March, 1873, states—

> That the people of the United States are divided among States, and the humiliation and degradation of a State of the Union to the level of a province, deprived of the rights of self-government, can only be the harbinger of similar woes to themselves.
>
> We have asked nothing of the American people, of their President, Congress, or judges, in any intemperate, immodest, or minatory form of address.

We have not asked them to execute any vengeance upon any person or party in our behalf. We have submitted to them whether it is not proper for them to uphold their own Constitution, to require fidelity and honor from their own officers in performance of duties they have imposed upon them, and whether it does not behoove them to maintain the covenants of union among the States, and to maintain the stability of State governments and the privileges of local self-government, so that tranquillity, justice, and liberty, be maintained.

"These, Mr. President, are the demands of our fellow-citizens of Louisiana, not a low squabble for official emolument or power, but a demand for the exercise of those principles upon which our Government was founded, and upon the existence and perpetuation of which we alone can expect its honest and happy continuance.

"I do not propose that, so far as I can prevent it, either the people of the United States or the Senate should be misled by the specious statements of the Senator from Indiana, who has inveighed against the measure proposed by the Senator from Wisconsin, on the ground that it would invade the rights of a State. Sir, the Senator from Wisconsin well said that when we heard the Senator from Indiana pleading for the rights of the State of Louisiana it was difficult to listen to him with a grave countenance. What, sir, after this State has been trodden to the earth by the foot of Federal power; after the Senator is willing, nay, anxious, that foot should be kept there; after this State has been throttled on the highway by Federal power aiding and backing up the footpads who are called the present government of Louisiana, and it is proposed that relief should be given, the Senator from Indiana assures us that it would be invasion of the rights of a State! Sir, he is no fit guardian of the rights of a State. I lately saw a picture of a wolf who had killed the shepherd, had possessed himself of his garments, his hat, cloak, and crook, and was employed in watching the unwary lambs who soon were to become his prey; and when I have heard the Senator from Indiana, turning to those of us in this Chamber who do profess to regard the rights of the States and who follow our profession by practice, warn us against interference in this case lest the rights of a State might be endangered, then, sir, again does that picture rise before my mind's eye, and I recognize what manner of shepherd the Senator from Indiana is where State rights are concerned.

"Mr. President, the issue for the people of the United States to consider is, shall this conspiracy, as the people of Louisiana have justly termed it, this conspiracy to overthrow a State, be successfully accomplished? Can an Attorney-General of the United States concoct and carry into effect a scheme with his party confederates to invade a State, ride rough-shod over her constitution and laws, prearrange with a corrupt and reckless judge of a district court of the United States for a violation of law, an unwarranted usurpation, an assumption of jurisdiction which was known to the Attorney-General and known to the judge and known to all men to be unwarranted in law and to be a usurpation, and to use this dishonestly-assumed power as a pretext for the use of the armed forces of the United States Government to thrust down and keep down the lawful government of a State?

"Sir, this is a case beyond mere technical pleadings and mere forms. Law is silent before arms. Law disappears and the constitution of the State and of the United States disappears before the breath of the Attorney-General and his associates in this business. The pretense of law by Kellogg is a mockery; it is a bold, shameless, unmitigated fraud from beginning to end. The whole history of the means whereby even the forms of government were followed in Louisiana—the installation of Pinchback, the instant abolition of the courts of the State, the supply of the bench with new men and interested candidates to whose sole jurisdiction of these very questions was by special statutes given—all these things are such a tangled web of fraud that pretense of law or fair dealing nowhere can be found among them."

Mr. Merrimon, of North Carolina, said: "Mr. President, the Senator from Wisconsin (Mr. Carpenter), who introduced the pending bill, has labored earnestly in its support, and his ability and zeal command my cordial respect and admiration. But, with all due respect for him, I cannot support his bill—because, in the first place, as I have shown, McEnery is Governor; because, in the second place, if, as he says and insists, there was no election in 1872, then Warmoth, by the express words of the Constitution, is Governor; and because, in the third place, even if there were no State authorities there, the bill goes a bow-shot, in providing for an election, beyond what I think Congress has power to do under the Constitution and our system of government. There is, in my judgment, no power in Congress arising by express provisions of the Constitution, by reasonable construction or by necessity, under our system of government, State and Federal, which authorizes it to pass the pending bill.

"And I wish I had time to enlarge somewhat on this point. I am willing to concede that in one contingency Congress may pass a law authorizing the people to reorganize a State. If by possibility (and there is such a possibility) a State government in the Union should be absolutely deprived of State officers, so that the government of the State shall be left without officers to operate its government, in that case I contend that Congress could grant the people relief. But how? Simply by passing a law authorizing the people of the State to hold an election *according to their own constitution and laws*. That is all that Congress can do; it is all that Congress is bound to do; and it has that power by the tenor and spirit of the Con-

stitution, not by its express letter. The power arises by the tenor of the Constitution and by the nature and theory of our Government; and I wish I had time to enlarge upon this idea. I repeat, in the contingency I have mentioned, Congress could pass a law authorizing the people of a State thus deprived of State officers to hold an election in pursuance of their own constitution and laws, under the auspices of their own local authorities, to supply officers to the State government until the next regular election.

"This bill, however, provides that an election shall be held under the auspices of the United States, and provides in all respects an election law without reference to the laws of the State. It proposes to send a military Governor into the State of Louisiana, and virtually to reconstruct the State of Louisiana after the manner of the reconstruction acts. I cannot subscribe to that doctrine, and I have many reasons why I cannot, upon which time will not allow me to enlarge now.

"I can support the proposition of the honorable Senator from Delaware (Mr. Bayard). I do not like that proposition as well as I might some others. In my judgment the proper course for Congress to take in this case is to pass a joint resolution declaring that according to the constitution and laws of the State of Louisiana McEnery and his associates are the properly ascertained officers of the State of Louisiana and recognizing them as such, and that it is the duty of all the authorities of the United States to uphold and sustain them according to the Constitution and laws of the United States. If Congress should pass such a resolution as that, I have no doubt the President would approve it and be governed by it. I do not suppose that he has any motive to keep Kellogg there longer than he can ascertain the will of Congress. If he withdraws the troops and McEnery is acknowledged to be Governor, it will be easy for him to make a requisition on the President to prevent domestic violence, if need be, and the destruction of that State and the whole machinery of its government. If such a resolution were passed the Louisiana troubles would be settled in twenty-four hours, constitutional government would be restored, and law and right would triumph over faction and usurpation."

The bill was discussed at considerable length without any final action upon it in the Senate.

In the House, on May 27th, Mr. Poland, of Vermont, from the Committee on the Judiciary, reported a bill, conferring jurisdiction upon the Criminal Court of the District of Columbia, and for other purposes, which was read a first and second time.

The bill provides that the Criminal Court of the District of Columbia shall have concurrent jurisdiction with the police court of the District, of all crimes and misdemeanors committed in the District.

The second section provides that the provisions of the thirty-third section of the judiciary act of 1789 shall apply to courts created by act of Congress in the District.

Mr. Poland: "I will take no time in explaining this bill unless some gentleman desires it."

Mr. Speer, of Pennsylvania, said: "Does the bill apply to pending cases? It should not do so."

Mr. Poland: "It has no effect upon pending cases in any way. I will state in a word the necessity for this bill. Three or four years ago Congress established a police court in this District, giving it exclusive jurisdiction over certain classes of crimes and misdemeanors. Very grave doubts are entertained as to the constitutionality of that law; and it is understood that the Supreme Court of the District has made a decision which squints in the direction of deciding that the police court has constitutionally no such jurisdiction. If that should be so held, there would be no criminal court in this District having jurisdiction over those offenses. Therefore we provide in this bill that the Criminal Court of the District of Columbia shall also have jurisdiction over the same cases."

Mr. Speer: "Does this bill affect the Buell libel case in any way?"

Mr. Poland: "Not in the slightest degree."

The bill was ordered to be engrossed and read a third time; and, being engrossed, it was accordingly read the third time, and passed.

Mr. Poland moved to reconsider the vote by which the bill was passed; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

In the Senate, on June 16th, Mr. Frelinghuysen, of New Jersey, said: "I will ask the Senate to pass a bill providing for a criminal court in this District. It has been examined carefully by the Committee of the Judiciary, and it is very necessary that it should pass."

There being no objection, the bill conferring jurisdiction upon the Criminal Court of the District of Columbia, and for other purposes, was considered as in Committee of the Whole.

An amendment was reported by the Committee on the Judiciary to strike out in line four of section 1 the word "concurrent" before the word "jurisdiction," and, after the word "jurisdiction" in the same line, to strike out the words "with the police court of said District," and, at the end of the section, to insert "not lawfully triable in any other court, and which are required by law to be prosecuted by indictment or information."

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The amendment was ordered to be engrossed, and the bill to be read a third time. The bill was read the third time, and passed.

In the House on June 20th, the amendments

of the Senate were concurred in, two-thirds voting in favor thereof.

The bill, as passed, was as follows:

"*An act conferring jurisdiction upon the Criminal Court of the District of Columbia, and for other purposes.* Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Criminal Court of the District of Columbia shall have jurisdiction of all crimes and misdemeanors committed in said District, not lawfully triable in any other court, and which are required by law to be prosecuted by indictment or information.

"SECTION 2. That the provisions of the thirty-third section of the judiciary act of 1789 shall apply to courts created by act of Congress in the District of Columbia."

The question of "transportation" was a prominent subject at this session of Congress. It related to increased facilities and reduced prices for the transportation of agricultural products from the fertile fields of the Western States to the seaports on the Atlantic coasts. Vast quantities of these products were practically without a market, owing to the cost of transportation. In the Senate the subject was referred to a special committee, of which Mr. Windom, of Minnesota, was chairman. The committee made a very lengthy report, of which the substance is stated in a speech of Mr. Windom, delivered in the Senate on April 24th. It presents such a complete view of the whole question, with such a variety of important facts, that it has been inserted in this volume under the title of PUBLIC DOCUMENTS, to which the reader is referred.

This session of Congress was closed, by adjournment, on June 23d.

CONNECTICUT. The Democratic party of this State assembled in convention at New Haven on the 3d of February, 1874, for the purpose of nominating their candidates for Governor and the other State officers, at the general election in April. A considerable proportion of the delegates were Liberal Republicans, who made common cause with the Democrats. Charles R. Ingersoll was nominated for Governor, and the incumbents of the other State offices were renominated.

The following platform was unanimously adopted by the convention:

Resolved, That this convention does hereby declare and make known the following to be its principles of action; and to the support of them it invites the hearty coöperation of all honest men:

1. We declare our unfaltering devotion to the Constitution of the United States and to the Union of the States thereby established; and we affirm that the people of the several States have the sole and exclusive right of governing themselves as free, sovereign, and independent States, subject only to the limitations of the Constitution; and all the powers not therein expressly granted to the national Government are reserved to the States respectively.

2. We affirm that the greatest danger with which we are now threatened is the corruption and extravagance which exist in high official places; and we do declare as the cardinal principle of our future political action, that retrenchment, economy, and reform are imperatively demanded in all the governments of the people—Federal as well as State and municipal—and we here proclaim ourselves the uncompromising foes of all salary-grabbers, ring-politicians, and land-monopolists, whoever they may be, and wherever they may be found, whether they are in office or out; and we appeal to honest men everywhere, without regard to past political affiliations, to join us in branding as they deserve these corrupt leeches on the body politic, and in assisting us to purge official stations of their unwholesome and baneful presence.

3. The present Federal Administration—by its utter inability to comprehend the dignity or responsibilities of the duties with which it is charged; by its devotion to personal and partisan interests; by its weak and incompetent management of the national finances; by its unwarranted interference with the local self-government of the people, by its support of the corrupt governments which it has imposed, by its power, upon several of the States of the Union; by its complicity with corrupt practices and scandals in various quarters; and by its appointment of notoriously incompetent men to high official positions—has justly brought upon itself the condemnation of the American people.

4. The procuring of *money* from a notoriously corrupt "ring" of Washington politicians, for use in this State, in controlling our elections, is so marked an evidence of political corruption, that it deserves the severest rebuke; and we call upon the people of Connecticut in the coming election to enter such a protest against so gross an abuse of official trust as will secure punishment for the present, and afford adequate protection for the future.

5. We recognize in the present stringency of the money-markets—the panic which led thereto—the general prostration of business, and the consequent suffering of the working-classes, the direct fruits of that policy which, while it pretends to advance the interests of the country, is in reality plunging us into national and individual bankruptcy and ruin. And as an offset to this policy, we demand, and we call upon the people to inaugurate, a speedy return to *specie payments*, as called for alike by the highest considerations of commercial morality and honest and economical government.

6. While we are in favor of all just and equal taxation necessary to sustain our Government and our public institutions, we are opposed to all unjust and unequal systems of taxation which tend to favor one class at the expense of other classes of the people.

7. The public domain of the United States is the property of the people, and as such should be preserved for the people; and we condemn the policy of wholesale grants to speculative corporations for the benefit of the few to the exclusion of the many.

8. We are opposed to all monopolies, which operate for the especial benefit of privileged persons or classes, and to all combinations or corporations made to effect purposes hostile to the best interests of the people.

9. That we recognize the grievances of which the industrial classes complain, and we favor a governmental policy that shall impose such restraints and prohibitions upon grasping corporations and stock-gamblers as will prevent those financial fluctuations which have ever resulted in a debased currency, official defalcations, bankrupt employers, and starving working men and women.

10. That we are in favor of such action by the Legislature of our State as will bring the question of calling a Constitutional Convention directly before the sovereign people of this State, for their adoption or rejection, as they shall deem best.

11. We point with pride to the manner in which the affairs of this State have been administered during the past year; to the watchful economy with which all departments of the State government have been conducted; to the dignity and impartiality with which the Executive duties have been performed;

and we pledge ourselves to use our most earnest efforts to secure the reëlection of the men who have so worthily and capably discharged the important trusts confided to them.

The Republicans held their State Convention at Hartford, on the 11th of February, 1874. The attendance was large. Henry B. Harrison, of New Haven, was nominated as the Republican candidate for Governor, by acclamation.

The candidates for the other State offices were, respectively, as follows: for Lieutenant-Governor, John T. Wait, of Norwich; for Secretary of State, John G. A. Stone, of Killingly; for Controller, E. Perry Parker, of Coventry; for State Treasurer, David P. Nichols, of Danbury.

The following resolutions were reported from the appropriate committee:

The Republican party of the State of Connecticut, in convention assembled, declare that the true end of government is to secure equal and exact justice to all its citizens, with as little infringement as possible upon individual freedom; that the government of the people by the people and for the people, interpreted and foreshadowed by the Declaration of Independence, is the true American idea; that this idea can only be realized by the election of honest and capable men to public office, and by conducting public affairs with strict prudence and in accordance with the sound and approved maxims of business and political economy.

Resolved, That, in accordance with these principles, the States should be left to regulate their own internal affairs without interference, and this convention gladly indorses the course of the national Administration in reference to the recent election in Texas.

That good administration and freedom from temptation to official dishonesty can be best secured by such an organization of the civil service as shall insure a competent body of civil officers who shall be undisturbed by the changes and temptations of active politics.

That there ought to be no further increase of the paper currency of the country, and that the people expect from the present Congress the adoption of such measures as will forward the early resumption of specie payments.

That there should be no more subsidies of public lands in the interest of private corporations; that taxation should be equal, and be laid in such a manner as least to interfere with the general prosperity, and so as to encourage the various industries.

That we expect of our State Legislature and State officers the strictest integrity and economy, the largest possible relief from the burden of taxation, the maintenance of public education, the preservation of the purity and freedom of the ballot-box, the continuance of such registration laws as shall invite all who are entitled to the precious right of suffrage to participate in it, and shall at the same time exclude all from fraudulent voting.

That the sessions of the General Assembly should be short, and its legislative acts few and general.

That in making judicial and other legislative appointments, character and capacity should be the only qualifications considered, and that all bargains and trades for these appointments are abusive of the health of the Commonwealth and destructive of the interests of the people.

That the rightful interests of labor, in view of the present condition of the industrial classes, and their relations to capital and the great corporations of the country, demand the careful solicitude and attention of the Legislature.

That we recognise the wisdom and necessity of obtaining reliable statistics in regard to the condition of the laboring classes, upon which to base proper legislation, and we believe that an impartial bureau for that purpose is demanded alike by humanity and the best interests of the State.

That party organizations are useful and necessary, but that, while we are proud of the birth and history of the Republican party, we recognize no such allegiance to political associations as shall prevent our fair and candid criticism of the acts of all public men; and that every case of negligence, wastefulness, or dishonesty, on the part of any having control of public moneys, ought to be promptly and severely punished without fear or favor.

That the question, whether or not a convention ought to be called to revise our present constitution, should be submitted by the General Assembly to the people of the State for their decision.

With these declarations we present to the people of Connecticut the names of the Hon. Henry B. Harrison for Governor, and of his associates upon the ticket for their several offices, with pride.

The resolution concerning a revision of the organic law of the State gave rise to a lengthy discussion, in which several delegates took part; some of them arguing for the removal of that plank from the platform, others for its retention. The sentiment of those who were in favor of passing the resolutions as reported by the committee finally prevailed, and the platform was adopted in full.

At the election, on the 6th of April, 1874, the candidates on the Democratic ticket were reëlected by considerable majorities. The whole number of votes polled for Governor was 91,578; which is 4,716 more than the aggregate votes cast for Governor in 1873. Of that number, 46,689 were given to the Democratic candidate, 40,011 to the Republicans, and 4,859 to the candidate presented by the Temperance party. On the one-capital question, all of the votes cast had been 67,529—yeas, 36,731; nays, 30,298. The political complexion of the Legislature was as follows: In the Senate—Democrats 17, Republicans 4; in the House of Representatives, Democrats 142, Republicans 97, Independent 2; which gave the Democrats a majority of 18 votes over the Republicans in the Senate, of 45 in the Lower House, and of 58 on joint ballot.

The Legislature assembled at New Haven on the 6th of May, 1874.

The financial condition of the State appears to be remarkably prosperous. Her bonded debt, which at the close of the late civil war amounted to $10,000,000, is now reduced to $5,014,500; the rate of interest to be paid on it being six per cent. per annum. Its reduction during the last fiscal year was $207,210.27. The amount of State bonds purchased within the same period was $81,000; and at the end of it there was in the Treasury a balance on hand of $863,988.33; which is $126,000 in excess of the balance on hand one year before. No floating debt exists.

The public revenue, collected during the last fiscal year on account of the civil list, amounted in the aggregate to $1,762,427.96, derived almost entirely from the following four sources:

From the one-mill tax on the towns, $422,953.56; tax on savings-banks, $507,103.30; tax on railroad companies, $298,421.04; and tax on mutual-insurance companies, $327,020.08.

The entire value of all taxable property in Connecticut amounts at present to $354,099,707; showing an increase of more than $5,000,000 over the amount in the preceding year.

It is estimated that the current income of the State, notwithstanding the reduction of the State tax from two mills to one mill, will be sufficient to meet all the ordinary expenditures of the government, and cover also the extraordinary appropriations required for the new State-House now in course of erection at Hartford.

The capital of the public-school fund in Connecticut amounts to $2,044,190.81. Of the interest which annually accrues on it, and which is devoted to educational purposes, a corresponding portion is distributed among the children of school-age *per capita*, at the rate of one dollar each.

Seventy-nine savings-banks were in operation in the State on the 1st of January, 1874, the total sum of their deposits amounting to $70,769,407,95; showing an increase of very nearly two and a quarter millions over their total at the beginning of the previous year. The assets of these banks had an increase of $2,406,187.85 within the last year. In their loans and investments in personal property during that period, there was a decrease of about $2,000,000; while the amount of their loans on real estate increased by some $4,000,000 within the same time. This result is attributed to the reduction of the tax on loans secured upon property of the last-named description.

The whole number of persons who severally owned the money deposited in the savings-banks at the beginning of 1874 was 204,741; their classification in respect to the amounts belonging to them, respectively, being as follows: Depositors of sums less than $500 numbered 158,371, the total amount of their deposits being $21,896,685; depositors of sums between $500 and $1,000, 28,324, all their deposits amounting to $15,907,016; and depositors of sums exceeding $1,000, 18,046, their aggregate deposits making a total of $32,965,706.

The owners of these larger sums represent less than one-eleventh part of all the depositors in regard to number, yet absorb nearly one-half of the amount of all the deposits taken together. Governor Ingersoll called the attention of the General Assembly to that fact, saying that "in this the true idea of a savings-bank seems to have been lost sight of, and the institutions, to that extent, operated as trust companies for the investment of surplus capital;" adding that "the very large number of small depositors shows that the mass of the public, dealing with these institutions, have done so upon the faith that they are what they were only chartered to be, institutions for savings." Upon which he says that "any legislation in regard to them should, in the first place, and before any other consideration, be directed to the security of the deposits there made." The better to guard the interests of those small depositors against loss, he suggested that the General Assembly should keep a watchful eye upon the operations of the savings-banks, and surround them with such salutary restraints by legislative enactments as were best calculated "to keep that fact constantly before the eyes of their officers."

A special commission was appointed by an act of the Legislature at the previous session to examine into the condition of the savings-banks in the State. The report presented by this commission recommended the restriction of the loans by savings-banks on personal security to forty per cent. of their deposits on hand.

Public instruction seems to progress very satisfactorily. As regards the number of persons who partake of its benefits in proportion to the population, Connecticut is claimed to stand first among the States in the Union. The number of children who attended schools of all kinds during the last year was 123,386; and all of them, except 8,329, attended the public schools. There are 1,648 public schools in the State, and the number of teachers employed was about 2,500.

In the Normal School there were 43 graduates during the year, the whole number of students in attendance, from April 1, 1873, to the same date in 1874, having been 210.

In the Sheffield Scientific School there are 30 free scholarships at the disposition of the State, which are said to be now eagerly sought after, and have all been granted in accordance with the requirements of the statute. Under the acts previously passed by the Legislature, the income of the fund held by the School Fund Commissioner under the Federal land grant, for the promotion of scientific education, amounting to $8,100, is paid to the Sheffield Scientific School.

The aggregate receipts from all sources, for the support of the public schools in 1873, exceeded $1,500,000, derived from the following sources:

From district and town taxes	$1,098,436 63
From State tax	199,272 00
From school fund	133,848 00
From town deposit fund	45,453 58
From local funds	12,196 45
From voluntary contributions	7,172 42
From other sources	47,119 12
Total	$1,542,499 20

The various charitable institutions of the State are well provided for, although the Hospital for the Insane, at Middletown, is the only one of these institutions that is under the absolute control of the State. The better to secure the efficiency of their management, and realize from them the objects for which they have been severally established, an act was passed by the General Assembly at the last session, creating a State Board of Charities, composed

of six members, to be appointed by the Governor, three gentlemen and three ladies, whose duty it is personally to visit such institutions, inspect the manner in which they are conducted, and ascertain their condition in all respects, with a view to provide for their wants, and report to the Legislature on the result of its operations. This board has accordingly been organized, and presented its first report to the General Assembly.

The whole number of patients under treatment in the Hospital for the Insane, at the beginning of May, 1874, was 394; of whom 35 only were regarded as curable. This is said to be due in a great measure to the chronic condition of that large number of patients who have been removed to the institution from the almshouses of the towns, where the treatment necessary to their cure could not be had; their recovery having been rendered by long delay more difficult, if not impossible. As these chronic patients cannot be discharged to make room for new ones, the necessity of enlarging the hospital-building at no distant day is apparent, although it is capable at present of accommodating some 50 patients more than it actually contains. Of 896 patients admitted in the hospital since its beginning, 799 have been beneficiaries of the State. The income of the hospital last year amounted to about $92,000, and the expenditures to $87,000.

The number of pupils at the School for Imbeciles, at Lakeville in Salisbury, is 64. Twenty-nine of these are State beneficiaries, all orphans except two.

At the American Asylum for the Deaf and Dumb, at Hartford, 66 scholars have received State aid during the year; the expense for that purpose having been $9,279.23. The State has also aided 15 blind children at the Perkins Institute in Boston.

The number of discharged soldiers who have been under medical and surgical treatment at the hospitals of New Haven and Hartford was 182, at a total cost to the State of $18,000; the services rendered for that purpose by the medical profession in either city having been gratuitous.

For the support of soldiers' children in the different towns, the State appropriated last year nearly $90,000. About $2,700 were also appropriated for the support of such paupers as do not belong to any town.

The inmates of the Industrial School for Girls, at the end of April, 1874, numbered 76, sent thither from forty-three towns in the State. Henceforward, these girls will be not unprofitably occupied in the details belonging to a box-factory which has recently been established in connection with the school. It is anticipated that the institution will thereby become financially independent.

In the State Reform School there were 311 boys kept under correction. During the year 190 of them had been received into the school, and 190 discharged.

With reference to persons arrested for drunkenness and kindred offenses, the General Assembly, at the last session, passed an act appointing a commission to inquire into their penal treatment, and also into the expediency of establishing a State Asylum for Inebriates. The report of this commission was made.

A bill was also passed by the Legislature at the session of 1874, incorporating the State Inebriate Asylum, to be called "The Connecticut Reformatory Home." An additional bill has also been passed, entitled "An act concerning inebriates, dipsomaniacs, and habitual drunkards," approved July 25, 1874, which provides for their reception into the asylum, their treatment, and discharge; its first section being as follows:

SECTION 1. Whenever any person shall have become an habitual drunkard, a dipsomaniac, or so far addicted to the intemperate use of narcotics or stimulants as to have lost the power of self-control, the Court of Probate for the district in which such person resides, or has a legal domicil, shall, on application of a majority of the selectmen of the town where such person resides, or has a legal domicil, or of any relative of such person, make due inquiry, and if it shall find such person to have become an habitual drunkard, or so far addicted to the intemperate use of narcotics or stimulants as to have lost the power of self-control, then said court shall order such person to be taken to some inebriate asylum within this State, for treatment, care, and custody, for a term not less than four months, and not more than twelve months; but if said person shall be found to be a dipsomaniac, said term of commitment shall be for the period of three years: *Provided, however*, That the Court of Probate shall not, in either case, make such order without the certificate of at least two respectable practising physicians, after a personal examination, made within one week before the time of said application, or said commitment, which certificate shall contain the opinion of said physicians that such person has become, as the case may be, a dipsomaniac, an habitual drunkard, or has, by reason of the intemperate use of narcotics or stimulants, lost the power of self-control, and requires the treatment, care, and custody of some inebriate asylum, and shall be subscribed and sworn to by said physicians before an authority empowered to administer oaths.

In the State penitentiary there were 181 convicts in confinement at the beginning of May, 1874; all males except two—one white, and one colored woman. Twenty-nine of the whole number were foreign-born. The convicts are employed in remunerative work. Notwithstanding a reduction in the price of prison-labor, necessitated by the prostration of business during the winter of 1873–'74, a net income of $2,114.80 has been received into the Treasury from the prison.

The General Assembly of 1874 continued its session eighty-two days, and was adjourned on the 25th of July. A large number of acts were passed on subjects not only of a local or private interest, but more of a general character and importance. Among these last named are the following: The license law already existing has been so amended that, while its general features have suffered no change, alterations have been made in it calculated to secure an impartial and thorough enforcement of its

provisions. The usury-law, which was enacted in 1872, has also been revised and amended "by striking out the word *six* in the said act wherever it occurs, and inserting in lieu thereof the word *seven*;" this being now fixed as the limit of the annual rate of interest to be paid or received on money loans in Connecticut.

The greatest importance appears to have been attached by the people to the acts passed this year in regard to elections and naturalization. The two previously existing laws on these subjects had been enacted in 1868, when both bills were vetoed by Governor English, and both passed over his objections by the Legislature. At the present session both of them have been repealed, or rather considerably modified, by great majorities, though not without considerable opposition. Concerning elections, all the provisions of the former law calculated to protect the freedom of voting and guard the integrity of the ballot-box against abuse or fraud, have been retained in the new. Those portions of it which might seem to have a tendency to restrict the right of the electors to vote, or put obstacles in the way of its lawful exercise, have been repealed.

With a view to accommodate the working-classes by enabling them to exercise their right of suffrage with the least inconvenience, a provision has been inserted in the new law, compelling the boards of selectmen to hold evening sessions for the admission of votes; thus relieving workmen from the necessity of losing, for that purpose, any portion of their working-hours during the day.

With regard to naturalization, the authority of receiving applications and issuing certificates for it was confined by the law of 1868 to one court in the state—the Superior Court. The new law generalizes that authority, by empowering the courts of Common Pleas and the city courts—all the courts of record in the State, except the Courts of Probate, to make records of naturalization, and issue certificates of it.

Early in the session the Legislature elected William W. Eaton United States Senator for the term of six years from March 4, 1875, in the place of Wm. A. Buckingham. Three vacant seats on the benches of the Supreme and Superior Courts in the State were also filled by this Legislature. Besides the usual appropriations, the General Assembly appropriated $10,000 "for a triangulated survey of the State."

The number of fire, fire and marine, and marine insurance companies, doing business in Connecticut, is 120; representing a cash capital of about $30,000,000, with gross assets of $77,000,000.

The life and accident insurance companies are 29; of which 10 are home companies. The assets of these last-named companies amount in the aggregate to nearly $65,000,000, the assets of the other State companies being about $191,000,000. There was a total increase of about $25,000,000 over the assets of the preceding year.

There are 22 railway companies in the State. Their aggregate length measures 1,197 miles, of which 896 are within the State. Twenty-eight of these have been built during the last year.

Some details respecting these roads are exhibited in the following official statement:

They have transported during the year 10,542,821 passengers, being an increase over the preceding year of 408,188, without fatal injury to any passenger, except in two instances, resulting from incaution of the passenger on leaving a train. Other instances of injury, to the total number of 110, have occurred, of which 59 resulted in death. Of the whole number of cases of injury, except of passengers or employés, almost two-thirds were of persons walking or lying on the track.

The total cost of these roads and equipment was $54,659,029.82, represented by a total nominal capital of $44,690,700, of which $36,068,694.62 has been paid in.

The gross earnings of all the companies for the year ending September 30, 1873, were $12,037,956.33, of which about one-half was received from passengers. The total net income amounted to $2,586,463, of which all but about $50,000 has been paid in dividends by nine corporations.

The work of the State Board of Fish Commissioners, to whom the care of this interest has been committed since 1865, when that board was created, appears to have been crowned with success. From June 21 to August 21, 1873, 44,000,000 shad were hatched at Holyoke. Forty millions of these were put into the Connecticut River. In four years the shad, of good size, will reappear in the Connecticut. The catch of shad in 1873 was not so large as in the previous year, because none were planted in 1869. The black bass has been introduced into 87 ponds and reservoirs in different parts of the State. From 1868 to 1871 inclusive, 2,981 of these fish were placed in the ponds and reservoirs, and the commissioners find that they have increased and done so well that they deem it best not to distribute any more of them. Two hundred and forty-four thousand young salmon were placed in the various rivers of the State last year, 115,000 of them in tributaries of the Connecticut. The commissioners have concluded to unite with the commissioners of Massachusetts, Vermont, and New Hampshire, in stocking the Connecticut river with salmon—all their efforts for the present being devoted to that river. Eight hundred and fifty thousand young salmon will be placed in the tributaries of the Connecticut this year. About 50,000 California salmon have also been placed in the rivers of the State. Some thousands of the fresh-water, or land-locked salmon, have been hatched at the hatching-houses in Westport, where the young fish are at present.

In compliance with the act passed by the Legislature of 1873, for the establishment of a Bureau of Labor Statistics, consisting of a chief and his deputy, both of these officers were appointed by Governor Ingersoll in October of that year.

The whole number of births which took

place in Connecticut during the year 1873 was 14,087, or 282 more than in 1872, and 42½ per cent. in excess of the births returned in 1863. Of the 13,984 births, in which the sex was stated, the proportion was 110 males to 100 females. The illegitimate births numbered 152. Of colored children there were 247 births.

The entire number of deaths in the State was 9,822, which is 148 less than in 1872. The deaths in the colored population were 207, or 40 less than the births.

The marriages contracted in 1873 were 4,841, or 182 less than in the preceding year. The marriages, where both parties were of American birth, numbered 2,768; where both were foreigners, 1,313; and where one party was American the other foreigner, 575.

The marriages contracted among the colored population were 141, including one mixed.

The number of divorces granted in 1873 was 457. The applications for divorce were made, in 274 cases, by the wife, and in 183 by the husband.

The construction of the new State-House at Hartford has been steadily progressing.

At the election on October 5th the constitutional amendment was approved by a large majority.

STATE-HOUSE, HARTFORD.

CORNELL, Ezra, a philanthropist and benefactor of education; born at Westchester Landing, Westchester County, N. Y., January 11, 1807; died at his home in Ithaca, N. Y., December 9, 1874. His father, who belonged to the Society of Friends, was engaged in the making of pottery, and the son worked at this occupation at Tarrytown, and afterward in Madison County, his laborious youth limiting his educational opportunities. He had no more than a common-school education, but in addition to native shrewdness and sound judgment manifested at an early age a desire for knowledge and a mind liberal in the reception of new ideas. In 1826 he left home and obtained employment at Homer, whence, two years after, he removed to Ithaca, where he obtained a place, at rather scanty wages, in the machine-shop attached to the cotton-mill of Otis Eddy, which stood on the site now occupied by one of the stately buildings of Cornell University. Mill-work and agriculture took up his time by turns for fifteen years, when in 1843 he became connected with the construction of the first telegraphic line established in this country. He formed the acquaintance of F. O. J. Smith, Representative from Maine, and chairman of the Committee of Commerce of the House, who was owner of one-fourth interest in the invention of Prof. Morse; and also of Prof. Morse himself. The plan of laying the telegraphic wires in pipes underground was determined upon for the experimental line between Baltimore and Washington—as this method had been used successfully in England—and Mr. Cornell, who had an inventive turn of mind, had devised a machine for laying the pipes. He was engaged to superintend the work at the modest salary of $1,000 per year. The wires were covered with cotton and imperfectly insulated with bitumen. It soon became known to Prof. Morse that the

plan would not succeed, and Mr. Cornell, to afford the opportunity for a change of plans, purposely disabled his machine, and subsequently put up the wires on poles as is now done. Mr. Cornell now devoted his whole attention and energy to the prosecution of the telegraphic business, being more than once reduced to great straits from the want of means. After the Government relinquished its connection with the telegraph as unprofitable, in 1845, it took a new start as a private enterprise, and began to prove profitable. When the line was extended to New York in 1845, Mr. Cornell was appointed to superintend it, and also to supervise the construction of lines from New York to Philadelphia. In 1846 he constructed a line to Albany, and another in the following year from Troy to Montreal. Being confident of the success of these projects, he invested extensively in telegraphic stocks, and realized large profits from them. His good fortune did not end with his business successes, for in 1863 he was elected member of the Assemby from his district, and in the year following of the State Senate, and was reëlected for the next term. In 1862 he was chosen President of the State Agricultural Society, and while in London that year he sent several soldiers from England to this country to join our army, paying all their expenses. He had some years before made his home at Ithaca, and finding that there was a need of a public library there he erected a fine building for it, and gave it an endowment of $25,000, which he subsequently increased to $50,000, and finally to $100,000, for the purchase of books and the support of the librarian. His wealth was now rapidly increasing, and having tasted the luxury of giving, he began to plan larger benefactions. In 1862, Congress had passed the Agricultural Land Grant Act, giving to the States, under certain conditions and restrictions, 30,000 acres of government lands for each Senator and Representative of the State in Congress. Certain parties in the State of New York had been instrumental in procuring the passage of this act, and when it was passed, and New York was found to be entitled to 990,000 acres of land, those parties, who had founded the People's College at Ovid, N. Y., and the Agricultural College at Havana, N. Y., asked for this landed endowment to be granted by the State to their institutions. It was granted to them under the conditions required by the act, but both institutions found themselves utterly unable to fulfill these conditions, and consequently the grant lapsed. Meantime, Mr. Cornell, then a member of the State Senate, had been an attentive observer of their efforts, and had formed the purpose of founding a university that would not fail. In 1865 he asked of the Legislature a charter for a university which he proposed to found and endow with the sum of $500,000. The charter was passed, but with two stipulations not greatly to the credit of the lobby or the Legislature in that stage of the proceedings. One was that, as a condition of receiving this charter, he should pay over to Genesee College, Lima, N. Y., over and above his endowment of Cornell University, $25,000. This was subsequently refunded to Mr. Cornell by a Legislature which had the grace to be ashamed of the acts of its predecessor, and by him immediately donated to Cornell University. The other stipulation was that provision should be made for the free tuition of one student from each Assembly district in the State. Mr. Cornell complied with both, and immediately put into the hands of the designated trustees of the new university securities to the amount of $500,000. The next year, the People's College and the Agricultural College having both collapsed, Mr. Cornell made application for the land grant for his university, which he had further endowed with $260,000 more in land, money, and a valuable mineralogical and geological collection. He obtained the grant, and, taking counsel of judicious friends, he laid the foundations of his university course broad and deep, and proceeded to erect the buildings for it. He also contracted with the State for the purchase of the entire Agricultural College land-scrip, in order to locate it more advantageously for the university. The buildings were so far completed at Ithaca that, on the 7th of October, 1868, the university was formally opened, nearly 500 students being in attendance. Many other liberal gifts were made to the university subsequently, and it is now one of the most prosperous seats of learning in the country, with a prospect, when its lands are all sold, of being, perhaps, the richest of American colleges. It accomplishes the union of liberal and practical education contemplated by its founder as well as by Congress when public lands were granted to the States. It has also realized Mr. Cornell's idea of offering instruction to any person in any study; and, added to all these advantages, it allows the fullest freedom of religious belief among its Faculty as well as among its students. The pressure to sell agricultural college land-scrip by so many States at the same time had materially depreciated its value, and made the location of these lands proportionately more difficult. Mr. Cornell had been very successful in locating the scrip, purchasing largely timbered lands, but the sales of these lands were delayed by the financial condition of the country, and other causes, and some persons were ready to attribute to Mr. Cornell the design to enrich himself at the expense of the university. He demanded an investigation, which was made as thorough and searching as possible, and resulted in his triumphant vindication. He had been infirm for several months, owing to an attack of pneumonia in the spring of 1874, but his final illness was brief, and his death sudden. Few men have been so widely and sincerely mourned.

COSTA RICA (República de Costa Rica), one of the five independent states of Central

America, situated betweeen latitude 8° and 11° 5′ north, and longitude 81° 20′ and 85° 53′ west; and bounded on the north by Nicaragua, on the east by the Caribbean Sea, on the southeast by the United States of Colombia, and on the south and west by the Pacific Ocean. The question of limits, still pending with Nicaragua, will probably be amicably disposed of before the end of the present year, both Governments evincing a readiness to come to terms. A more difficult question is that with Colombia, a boundary-line with which republic was proposed by the Colombian minister, but rejected by the Costa Rica Congress, who did not see fit to surrender the whole of Admiral's Bay on the Caribbean Sea. The Government, apparently aware of the exaggerative proportions of the estimate of 1873, now estimates the population of the republic at 185,000, comprising 5,000 civilized and 10,000 uncivilized Indians, 120 Africans, and some 600 Chinese. It has been remarked that Costa Rica possesses a larger number of inhabitants of unmixed European blood than any of the Hispano-American states. The territory, which comprises an area of 21,493 square miles, is divided into the five provinces of Alajuela, Cartago, Guanacaste, Heredia, and San José, with the two districts of Limon and Puntarenas. The President is General Tomás Guardia, who had resigned for a time in favor of Señor Salvador Gonzales.

The first *Designado* (first Vice-President) is Señor Rafael Barroeta; and the second, Dr. Vicente Herrera, whose functions embrace also those of the Departments of the Interior, Justice, War, and the Navy, and who is provisional Minister of Foreign Affairs and Public Instruction; Minister of Public Works, Señor Salvador Lara; and Minister of Finance and Commerce, Señor Joaquin Lizano.

The national Congress, by the terms of the Constitution of 1871, is composed of a single Chamber, the members of which (deputies) are elected for four years. Speaker, Señor Manuel A. Borrilla.

The president (*regente*) of the Supreme Court is Señor Vicente Saenz.

The commander-in-chief of the army is the President of the Republic.

The consul-general of Costa Rica in New York is Señor J. M. Muñoz.

The armed force comprises 16,370 militia, being the number of male inhabitants between the ages of eighteen and thirty years; 900 of whom perform active service and may be said to constitute the regular army; and a reserve corps, 18,819 strong, made up of the male inhabitants between the ages of thirty and fifty-five years: total military strength, 35,189.

The main sources of the national revenue are the customs receipts, amounting to about one-third and sometimes to nearly one-half of the entire income, and the tobacco and spirit monopolies. The following tables exhibit the income and expenditure for the year 1873–'74:

INCOME.

Proceeds of the National Bank	$141,746 00
State lands	19,239 00
Customs receipts	1,151,865 00
Spirits monopoly	831,379 00
Tobacco monopoly	421,420 00
Gunpowder monopoly	8,741 00
Sale of salt	4,698 00
Stamp-duties	23,719 00
Licenses	23,008 00
Court of Justice fees	25,146 00
Post-Office	25,522 00
Telegraphs	5,616 00
Fines	2,745 00
Proceeds of loans	18,293 00
Deposits	94,000 00
Sundries	79,553 95½
Total	$2,812,584 95½

EXPENDITURE.

Ministry of the Interior	$191,973
Police	22,956
Ministry of Finance, etc	138,719
Ministry of Justice, etc	72,529
Ministry of War, etc	350,005
Ministry of Public Works	178,711
Public Instruction	72,138
Public Worship	17,696
Charities	3,000
Navy	20,533
Foreign Affairs	33,066
Custom-houses	30,365
Administration of monopolies	403,695
Deposits	59,960
Commissions, etc., on loans	179,220
Exchange, etc	181,381
Instalments on preferred notes	73,375
Expenses of Costa Rica Railway	2,127,380
Interest and instalments on six per cent. loan	114,450
Subsidies to various municipalities	27,119
Sundries	76,886
Total	$4,898,597

Here, then, is a deficit of no less than $1,516,010, or considerably more than one-half of the entire revenue of the republic; a state of affairs rather at variance with the recent calculations of a native economist, who affirms that "with good management the revenue could easily be raised to leave a surplus of $200,000 per month outside of the expenses of the administration, or, in other words, to bring the total income to $4,000,000 per annum." Without attempting to disprove the feasibility of such an increase, it is only necessary to observe that, even in the event of its realization, there would still be a yearly deficit of from $500,000 to $1,000,000 (as is shown by the foregoing table), at least while the outlay on the railway continues at the rate above registered—$2,127,380. The revenue for the fiscal year above referred to is, however, some $800,000 in advance of that of the preceding year.

Important reforms, tending to secure more economical management in the customs department, were recommended, and the transferring the customs office of the south to the capital, where it would be under the immediate supervision of the Government.

A steady growth in the receipts of this department is attested by the following figures:

Years.	Receipts.	Years.	Receipts.
1868–'69	$210,294	1871–'72	$622,135
1869–'70	278,595	1872–'73	921,758
1870–'71	332,436	1873–'74	1,151,865

Other progressive branches are the spirits and tobacco monopolies, which show, in 1873–

'74, as compared with the year before, an increase of nearly $200,000 and $100,000 respectively.

The national debt of Costa Rica amounts, as stated in the ANNUAL CYCLOPÆDIA for 1873, to $23,100,000, made up as follows: British loans, $17,000,000; indebtedness to Peru, $100,000;* and home debt, $6,000,000 (inclusive of floating obligations). That is to say, this, one of the smallest states in America is burdened with onerous liabilities at the rate of about $125 to each inhabitant, a proportion much larger than that of the indebtedness of England, France, or Holland; and, worst of all, she now finds that, in spite of her natural resources, she has been borrowing too fast. When, in 1871, her commerce was in a prosperous condition, and promised to become still more so with improved means of transportation for her products from the interior to the coast, and the construction of piers in her seaports, a first loan of £500,000 was ventured upon; shortly afterward, in the same year, another loan of £500,000 was offered for public subscription, and was floated at the rate of 74, with interest at six per cent. By May, 1872, the first loan had reached a high premium, and the credit of the republic seemed to be satisfactorily established at the London Stock Exchange, so that a third and a much larger loan of £2,400,000, brought out at so favorable a juncture and under the auspices of influential bankers, was received with full confidence, and bonds for the whole amount save £178,000 were at once applied for. This loan was to bear interest at seven per cent., with a sinking-fund of but one per cent.; to the payment of the coupons were hypothecated the spirit, tobacco, and coffee taxes; and, for the final extinguishment of the loan, the year 1903 was fixed upon. The first two payments were duly made; the bondholders were quite satisfied, and some of the stock actually went to a premium; but not so the third coupon, and Costa Rica is registered in default since April 1, 1874, in the sum of £2,362,800. At a meeting of bondholders, held on August 7th, at London, a resolution was adopted for the appointment of agents in Costa Rica to receive the proceeds of the revenues forming the special guarantee of the loan, and confidently regarded as adequate to cover the entire claim. No doubt was entertained of the willingness of the Government to redeem the credit of the republic rather than allow its name to figure side by side with those of Honduras, Venezuela, Santo Domingo, and others hopelessly insolvent.

The item standing for public instruction in the table of expenditure shows that the cause of education is receiving more attention than heretofore; some of the school-buildings in process of building in 1873 have been completed, and a few others have been commenced.

The commerce still continues steadily on the increase. The total value of the imports in 1873 was $3,500,000, and that of the exports $3,775,196; of which $3,933,181 was for coffee (25,167,975 lbs); $48,576 for hides; $17,758 for India-rubber; $12,920 for deer-skins; and $37,872 for mahogany, cedar, and other woods.

The coffee-crop is reported as having been very small; but the deficiency in quantity was compensated for by an unprecedented rise in price, as much as $23 and even $24 per 100 lbs. having been obtained at Puntarenas. The following crop was likely to be very abundant; the total yield was calculated at 400,000 quintals—60,000,000 lbs.—and the probable price at Puntarenas at $20 per quintal. The shipping at the port of Puntarenas was 95 vessels entered, with an aggregate of 15,464 tons; while at Limon the number entered was 82, with 11,221 tons; and the number cleared 79, with a total of 10,054 tons. Puntarenas was visited besides by 91 mail-steamers and one whaler, and Limon by 10 mail-steamers.

The railway progresses steadily and, it is said, satisfactorily, though rather slowly, and a new contract with Meiggs which has been talked of would at once dispel all doubt as to the ultimate completion of the line.

Trains already run from Alajuela, the inland terminus, to Cartago, a distance of 26½ miles; and from Limon, on the Atlantic, to near the Rio Matina, say 21 miles, there are 38 miles more in course of preparation; and it was expected that, with the number of workmen employed, and the appliances at their disposal—500 men, and machine-shops and machinery sufficient for a road 1,000 miles in length—the track would, by the end of the year, be completed to Pacuaré, about 45 miles from Limon. There are at the latter port, besides the machine-shops, a car-shop, a government-house, storehouses, and dwelling-houses for officials, and several frame buildings were to be put up before the end of the year. Indeed, since the Government took charge of the railway, no effort has been omitted to secure dispatch and the utmost economy in the construction of the line. The sum monthly expended for keeping the road in good condition is $3,233.75.

No new telegraph has been constructed during the year; but it is now proposed to submerge a cable from Limon to Aspinwall, and to establish telegraphic communication between Costa Rica and Nicaragua, San Salvador, and Guatemala.

In January occurred one of those massacres of coolies which commonly mark the building period of railways in the Spanish-American republics of the Pacific coast.

The only event to really disturb the public peace during the year was an abortive attempt to overthrow the Government. The leader of the outbreak, which took place at Puntarenas in October, was one Joaquin Fernandez. The President declared the republic in a state of siege, and decreed that all who

* Incorrectly set down at $136,000 by a statistical publication for 1874.

[illegible] so long formed one nation."

Political factions in the interior, whose discontent with the administration had been manifested in attempts at insurrection, were put down by the strong arm of the law, while the encouragement they received were drawn from the majority of the people. The condition, history, and prospects of the railway—"which is to make or mar the republic"—were referred to at length; as were also the resolve on the part of the Government to carry on the work under its own guidance, and in spite of all pecuniary or other difficulties that might stand in the way, and its determination to submit to any sacrifice rather than let the national credit suffer a breath. A public library was to be established at the [illegible].

The port of Lima was gradually taking on the aspect of a lively and flourishing town.

COTTON. According to the annual report of the cotton crop of the United States for the year ending September 1, 1874, made by the *Commercial and Financial Chronicle*, of New York (and the work which is here postponed until put by this journal is of the highest value to the public), the production of 1873 is that of the three largest crops ever raised in the United States; the total number of bales being 4,170,388, while the yield of 1871 was 4,352,317, and that of 1860 4,669,770 bales. In 1874, 2,640,961 bales were exported, and 1,385,348 were taken by home-spinners, leaving a stock on hand, at the close of the year (September 1st), of 108,189 bales. The tables which follow show the whole movement for the twelve months. The first table includes the stock at each port September 1st of the last two years, and the export movement for the past year (1873–'74) in detail, and the totals for 1872–'73:

Year ending September 1, 1874.				Stock.	
	France.	Other Foreign.	Total.	September 1, 1874.	September 1, 1873.

ports this year have been 3,804,290 bales, against 3,651,346 bales last year. If, now, are added the shipments from Tennessee and the

Philadelphia, for the year ending August 31, 1874, are given elsewhere.

where direct to manufacturers, the result is the following crop-statement for the two years:

	Year ending September 1, 1873-'74.	Year ending September 1, 1872-'73.
	Bales.	Bales.
Receipts at the shipping-ports.	3,804,290	3,651,346
Add shipments from Tennessee, etc., direct to manufacturers..	237,572	141,500
Total.....	4,041,862	3,792,846
Manufactured South, not included in above.....	128,726	137,662
Total cotton-crop for the year..	4,170,588	3,930,508

Of the total exports (2,840,981 bales) above given, 1,807,584 bales were shipped to Liverpool, 368,577 to Havre, and 200,705 to Bremen; 1,147,314 were exported from the port of New Orleans, 132,367 from Mobile, 274,388 from Galveston, 247,866 from Charleston, 429,571 from Savannah, 485,596 from New York, 41,528 from Baltimore, and 82,350 from other ports.

The greater portion of the crop was shipped in vessels directly from Southern ports, but no small amount was sent North by railroad. The total amount thus carried overland was 497,083 bales, while the overland movement direct to manufacturers reached 237,572 bales. This latter amount was doubtless increased in consequence of the Southern floods, which forced some cotton over Northern routes, which would otherwise have passed through a Southern port. The details of the entire overland movement are shown in the following statement:

			Bales.
Shipments for the year from St. Louis.....			92,196
Carried North over Illinois Central Railroad from Cairo, etc.....			4,600
Carried North over Cairo & Vincennes Railroad.			18,783
Carried over the Mississippi River above St. Louis.....			6,148
Carried North over St. Louis & Southeastern, less deductions.....			6,604
Carried North over Evansville & Crawfordsville, less reshipments.....			27,749
Carried North over Jeffersonville, Madison & Indianapolis Railroad.....			134,097
Carried North over Ohio & Mississippi Branch..			83,630
Shipped through Cincinnati by Louisville, Cincinnati & Lexington Railroad.....			31,775
Receipts at Cincinnati by Ohio River.....			71,501
Shipped to mills adjacent to river and to points above Cincinnati.....			21,000
Total carried overland.....			497,083
Deduct—Receipts overland at New York, Boston, Philadelphia, etc.....		251,962	
" Shipments from Mobile and other outports by rail.....		140,112	
Less deducted at New Orleans.....	107,188		
Less deducted at Savannah.	21,508		
Less deducted at Charleston.....	3,917	132,563	7,549
Total to deduct.....			259,511
Leaving the direct overland movement not elsewhere counted.....			237,572

The distribution of the crop by States, together with the estimated weight of the bales, is given in the table below. According to this statement, it will be seen that the total gross weight of the latest crop reaches 1,956,742,297 pounds, and that the average weight of the bales is 469 pounds.

CROP OF—	Number of Bales.	Weight, lbs.	Average Weight.
Texas.....	389,045	186,852,535	479
Louisiana.....	1,221,696	564,424,476	462
Alabama.....	299,578	147,991,582	494
Georgia.....	625,857	294,126,983	469
South Carolina..	436,194	205,074,792	468
Virginia.....	505,876	233,298,836	461
North Carolina.....	57,895	25,879,063	447
Tennessee.....	632,245	299,684,130	474
Total crop 1873-'74..	4,170,388	1,956,742,297	469
Total crop 1872-'73..	3,930,508	1,834,930,093	464

The following statement will afford a comparison between the crop of this year and those of former years:

Years.	Bales.	Years.	Bales.
1873-'74.....	4,170,388	1847-'48.....	2,347,634
1872-'73.....	3,930,508	1846-'47.....	1,778,651
1871-'72.....	2,974,351	1845-'46.....	2,100,537
1870-'71.....	4,352,317	1844-'45.....	2,394,503
1869-'70.....	3,154,946	1843-'44.....	2,030,409

1849-'50.....	2,096,706	1826-'27.....	957,281
1848-'49..... ...	2,728,596		

The crop of Sea-Island cotton this year amounted to 19,912 bales, of which 8,825 were the production of Florida, 1,408 of Georgia, 8,759 of South Carolina, and 920 of Texas. Including the 1,667 bales on hand at the beginning of the year, the total supply of this kind of cotton was 21,577 bales. As the stock on hand at the end of the year, September 1st, was 593 bales, the total amount distributed was 20,986 bales, of which 18,878 were exported to foreign ports, leaving 2,113 bales as the amount consumed (or otherwise to be accounted for) in the United States. The total crop of Sea-Island cotton, in 1873, was 26,289 bales.

Full returns of the cotton-manufacturing industry of the United States for the year ending July 1, 1874, were also presented in the *Chronicle*. These results were formerly obtained and published by the "National Association of Cotton Planters and Manufacturers," an organization which existed during the years of 1868, 1869, and 1870, and which published the first authentic statement of the actual consumption of cotton by the mills of this country. This association has not been in existence since 1870, but the statistics published this year have been prepared by its former secretary. The annual consumption of cotton by American mills in recent years has been as follows:

	Bales.	Bales.	Bales.	Bales.	Bales.
	806,860	1,053,255	977,540	1,053,628	1,177,[illegible]
	90,000	91,240	120,000	127,568	120,[illegible]
	896,860	1,109,196	1,097,540	1,301,197	1,[illegible]
	.....	80,759	.....	.....	[illegible]
	33,975	.....	40,000	50,000	[illegible]
	930,735	1,019,446	1,137,540	1,351,197	1,[illegible]

and other States, there are many mills which only weave the yarns which other mills have spun; they, therefore, consume no cotton. The number of spinning-mills, with the number of looms and spindles, the amount of cotton consumed, and other items of importance, for the year ending July 1, 1874, was as follows:

		No.	Weeks.	Pounds.	Pounds.	
	[illegible]	95.89	50.71	50.67	26,478,547	[illegible]
	[illegible]	93.62	51.46	62.69	59,722,492	[illegible]
	[illegible]	93.75	48.84	44.24	3,764,177	[illegible]
	[illegible]	93.92	50.69	51.96	203,822,000	[illegible]
	[illegible]	95.82	48.10	43.51	89,140,000	[illegible]
	[illegible]	91.40	48.45	50.43	49,514,615	[illegible]
	[illegible]	88	47.70	42.98	24,598,540	[illegible]
	[illegible]	88.89	51	53.89	8,978,649	[illegible]
	[illegible]	91.61	48.89	54	37,888,736	[illegible]
	[illegible]	89.84	49.05	65.14	3,174,174	[illegible]
	[illegible]	91.80	47.85	174.24	13,000,000	[illegible]
	[illegible]	91.53	52.90	52.46	1,200,604	[illegible]
	[illegible]	14.56	47.44	150	3,077,307	[illegible]
	2,400	3	58	99.41	596,000	[illegible]
	[illegible]	93.56	49.88	56.86	507,700,000	[illegible]
	[illegible]	10.80	49.88	112.22	6,400,670	[illegible]
	[illegible]	13	51	121.69	122,000	[illegible]
	[illegible]	12.71	47.77	122.57	[illegible]	[illegible]
	[illegible]	6.36	49.94	276.66	[illegible]	[illegible]
	[illegible]	13	47.09	66.51	1,304,500	[illegible]
	[illegible]	11.38	50.36	76.47	[illegible]	[illegible]
	[illegible]	10.75	49.05	122.35	2,651,978	[illegible]
	[illegible]	12.02	46.12	122.12	[illegible]	[illegible]
	[illegible]	12.36	50.07	112.25	7,124,550	[illegible]
	[illegible]	12.35	51.40	122.23	[illegible]	[illegible]
	[illegible]	13	47.09	127.80	1,978,120	[illegible]
	[illegible]	16	47.57	95.38	[illegible]	[illegible]
	497,699	12.5	47.09	126.53	59,798,774	[illegible]
	[illegible]	93.56	49.88	56.86	507,700,000	[illegible]
	497,699	12.5	47.09	126.53	59,798,774	[illegible]
	[illegible]	27.73	48.96	60.29	[illegible]	[illegible]

States on the 1st of July, 1874, was 9,415,868, against 7,114,000 at the same date of 1870, and 6,768,557 at the same date of 1869, as follows:

LOCATION.	Looms.	Spindles.	Time Average.	Av. per Spindle.
North, 1874.....	176,490	8,927,754	93.56	56.86
South, "	10,485	497,699	12.05	126.53
Total, 1874.....	186,975	9,415,868	97.73	60.29
North, 1870.....	147,699	6,851,779	93¾	50.67
South, "	5,858	262,221	12¼	124.56
Total, 1870.....	153,584	7,114,000	93¾	53.93
North, 1869.....	.....	6,532,494	93	60.76
South, "	.....	236,063	12½	128.69
Total, 1869.....	.....	6,768,557	97½	64.66

The above records a very rapid progress since 1870, being about 33 per cent. in the number of spinning-spindles.

The kinds and quantities of goods produced during the year ending July 1, 1874, were as follows:

KINDS OF GOODS.	New England States.	Middle and Western States.	Total Northern States.	Total Southern States.	Total United States.
Threads, yarns, and twines (lbs.)	82,000,000	99,000,000	131,000,000	18,000,000	149,000,000
Sheetings, shirtings, and similar plain goods (yards)	520,000,000	90,000,000	610,000,000	97,000,000	707,000,000
Twilled and fancy goods, osnaburgs, jeans, etc. (yards)	204,000,000	80,000,000	284,000,000	22,000,000	306,000,000
Printed cloths (yards)	481,000,000	107,000,000	588,000,000	.....	588,000,000
Ginghams (yards)	80,000,000	3,000,000	83,000,000	.....	83,000,000
Ducks (yards)	14,000,000	16,000,000	30,000,000	.....	30,000,000
Bags (number)	5,000,000	1,000,000	6,000,000	.....	6,000,000

Besides the above, there is a large production of hosiery and knit goods, made of cotton by itself, or mixed with wool, of which we are able to give no satisfactory statement.

A review of prices and actual cost of production shows that the year under consideration was not a profitable one to American spinners. This is the result not mainly of the panic, but of some of the causes that produced the panic. Our figures are peculiarly instructive, as shedding special light on one part of this subject. It has been shown that the productive power of our mills has increased one-third since 1870. Then they were reported at 7,114,000 spindles; now they have reached 9,415,383 spindles. Nor have these spindles been idle. Each year they have been producing at a pretty full rate, augmenting the cotton consumption of the mills at about the same ratio. This would seem to be an excessive or unnatural increase, unless there has been some change going on during the same time in our foreign trade. That is to say, our own consumption of goods could not increase to that extent in the four years; and therefore an over-production was a necessity, unless a demand (outside our own country) would absorb a portion. No such foreign outlet has existed. The following statement shows the imports and exports of manufactured goods at all the ports of the United States each year of the period referred to:

EXPORTS OF COTTON MANUFACTURES.

YEAR ENDING JUNE 30.	1874.	1873.	1872.	1871.	1870.
Colored goods, yards	4,600,447	3,585,629	2,843,888	5,083,923	6,064,715

It appears that no material change has taken place in the foreign movement. Our exports have remained almost nominal, while at the same time our imports, instead of decreasing, have increased largely. The last year's figures (1874) are exceptional, because the evil we have referred to had then begun to assert itself—we produced somewhat less and imported less, while we increased our exports slightly. It was an effort under natural laws to correct an oversupply; and even had the panic been averted, the goods-trade must have been unsatisfactory.

What, then, is the remedy for this unfavorable condition of prices, as compared with the cost of production? Most certainly it can be found alone in the removal of the cause—that is, production must either be decreased or our own circle of consumers enlarged. We cannot accept of the former alternative—we have not too many spindles; we should have twice as many, considering our favorable situation for manufacturing. But it is evident we have too many for our home market, and our goods cost too much for competition with other manufacturing peoples in markets common to both. This ought not to be with our cheaper and better cotton, and would not be, but for our own high cost of living, rent, fuel, provisions, and supplies to mills. We have not the space now to point out the causes of these unfavorable conditions; they are easily determined, and it becomes our manufacturers to see that the proper remedies are applied, so that our field for seeking customers may be enlarged by permitting us to compete with England and Holland in the markets of the world. There is no reason why, in all but the finest goods, this much-desired end should not be reached. Turning to the period before the war, the comparison is not at all favorable. Notwithstanding our experience, and knowledge and capabilities for manufacturing cheaply are now so much greater than then, we exported in 1874 of our cotton manufactures only a value of $3,000,000 currency, against about $11,000,000 gold in 1860, the movement for 1860 and 1859 being as follows:

velopment of our ... the cost of production ... customers can take our surplus ...

wich, N. H., October 13, 1810; died at Salem, Mass., April 17, 1874. He received his early training for college at Gilmanton and Phillips (Exeter) Academies, and entered Dartmouth College at the early age of thirteen. He graduated in 1827, and after teaching for a year was recalled to Dartmouth as a tutor, where he remained for three years, and then entered on his theological course at Andover. In 1833 he was licensed to preach, and the same year chosen Latin and Greek Professor at Dartmouth. Four years later, the professorship was divided, and Prof. Crosby took the Greek Language and Literature, and retained it till 1849, when he resigned, to devote himself to the preparation of collegiate text-books. Dartmouth did herself honor in retaining his name on her Faculty as *Emeritus* Professor. For the next six or seven years his leisure time was devoted to the promotion of popular edu-

cation as a lecturer at the teachers' institutes, and from 1854 to 1857 as agent of the Massachusetts Board of Education. In 1857 he became Principal of the Massachusetts State Normal School at Salem, where he continued till 1865, being remarkably successful. From 1865 to 1867 he edited as a recreation a weekly paper called *The Right Way*, but the engrossing character of his studies led him to abandon every thing else for them. He had published a "Greek and General Grammar," "Greek Tables," "Greek Lessons," an edition of "Xenophon's Anabasis," "Eclogæ Latinæ," "First Lessons in Geometry," and had been engaged for ten years or more on a Greek Lexicon on a different plan from those already published, and to which he was devoting all the resources of his thorough and profound scholarship. His excessive intellectual labors brought on the disease of the brain which caused his death.

CRUVEILHIER, JEAN, M. D., a French physician, professor, and author, born at Limoges, February 9, 1791; died in Paris, March 11, 1874. After obtaining a good classical education in his native city, young Cruveilhier came to Paris to study medicine, where he was a pupil of Dupuytren, and devoted himself to the study of his profession with great assiduity and enthusiasm. He received his medical degree in 1816, reading on the occasion a thesis of remarkable originality and ability on pathological anatomy. He returned for a time, from family reasons, to Limoges, and practised his profession there. As soon as possible, however, he came back to Paris, and in a public competition achieved the first place among the teacher-pupils. About 1820 he was called to Montpellier, to be a professor in the famous medical school there. In 1822 he published the first volume of his "Treatise on Operative Surgery, illustrated by Anatomy and Physiology." In 1825 M. Frayssinous, the Grand-Master of the University of France, wishing a successor to Beclard, who had just died, made choice of M. Cruveilhier, and he was thus called back to Paris. In his new position he devoted himself with the utmost zeal to the study of anatomy, and in 1826 reorganized the old Anatomical Society. His course of lectures on anatomy and physiology to his classes was the result of almost incredible labor and research, and it attracted a very large attendance. Under his vivid and accurate descriptions these usually dry sciences assumed a new and deep interest. This "course" was published in four volumes, 8vo, 1834–1838. Meanwhile the immense resources of material which were opened to him in the great hospitals of La Maternité, La Salpêtrière, and La Charité, constantly drew his attention more and more to the subject of his earlier studies, pathological anatomy. Sparing no labor or research, he prepared in the course of eleven years (1829–1840) the crowning work of his life: "The Pathological Anatomy of the Human Body; or, a Description, with Colored and Lithographic Illustrations, of the Various Morbid Alterations of which the Human Body is susceptible" (two thick and large folio volumes, with 233 plates). This great work demonstrated his fitness to fill the chair of Pathological Anatomy, founded by Dupuytren, and he was installed as professor in August, 1835. M. Cruveilhier's other published works were: "An Address upon the Duties and the Morals of the Physician," 1837; "Life of Dupuytren;" "The Anatomy of the Nervous System of Man," illustrated by plates of life-size, folio, 1845; "A Treatise on Descriptive Anatomy," 1851; "A Treatise on General Pathological Anatomy," 5 vols., 8vo, 1849–1864; and numerous papers and memoirs in the bulletin of the Academy of Medicine, of which he was one of the most distinguished members. He was made a commander in the Legion of Honor in 1863.

CURTIS, BENJAMIN ROBBINS, LL. D., an eminent jurist, for six years one of the Associate Justices of the Supreme Court of the United States, born in Watertown, Mass., November 4, 1809; died in Newport, R. I., September 15, 1874. He entered Harvard College in 1825, and was one of the most accomplished scholars of the famous class of 1829, graduating with high honors, and immediately entered the law-school, where his great abilities were speedily recognized. Admitted to the bar in 1832, he began the practice of law at Northfield, Mass., but soon removed to Boston, where he attained eminence in his profession and acquired extensive business. In early life he was a member of the Whig party, and throughout Mr. Webster's career he was a devoted follower of that statesman. In September, 1851, Justice Woodbury being dead, Mr. Curtis was appointed by President Fillmore to fill his place on the bench of the United States Supreme Court. In the case of Dred Scott he dissented from the decision of the court, and made a powerful argument in support of his conclusions. He upheld the right of Congress to prohibit slavery, and declared his dissent from "that part of the opinion of the majority of the court in which it is held that a person of African descent cannot be a citizen of the United States." On this memorable occasion only one other justice of the seven coincided with the opinion of Judge Curtis. Finding his salary insufficient, Judge Curtis retired from the Supreme Court in the autumn of 1857, and resumed the practice of his profession in Boston.

In 1854 Judge Curtis published "Reports of Cases in the Circuit Courts of the United States." This was followed by a more important work containing the decisions of the Supreme Court of the United States, with notes and a digest comprising the cases reported by Dallas, Cranch, Peters, and Howard. The plan of this valuable compilation, the old series of which filled fifty-eight volumes, was

December 15, 1874. He was appointed to the Naval Academy from New York, September 24, 1857, and resigned in 1859; but in May, 1861, was reappointed acting-midshipman, and immediately went into service at Hampton Roads, and on the day of his arrival captured and brought into port a tobacco-schooner, the first prize of the war. In November, 1862, he was ordered in the steamer Ellis to capture Jacksonville, Fla., and destroy the salt-works at New Juliet. He accomplished both tasks, but his steamer being aground, he fired her, and escaped in a small boat. At Fort Fisher he proceeded, under a constant and heavy fire, to buoy out the channel in a small skiff, and continued the work for six hours till he had completed it. At the final assault on Fort Fisher he accompanied the force of sailors and marines, in a "forlorn hope" attack on the sea-front of the fort, and amid an unceasing fire at short range, which cut down his men in rapid rows, he crossed a hundred yards of the bare and glittering sand, unharmed and apparently unconcerned, rallied his men, and lent such efficient assistance to the struggling troops, that before midnight the fort was surrendered. His most remarkable exploit, and the most remarkable and daring act of the whole war, was the destruction of the Confederate ram Albemarle at her wharf at Plymouth, N. C., while she was carefully guarded and many miles within the enemy's lines. The gallant officer received for this daring feat a vote of thanks from Congress, and a complimentary letter from the Secretary of the Navy, as well as a prompt promotion to the rank of lieutenant-commander. Since the close of the war Lieutenant-Commander Cushing had served in the Pacific and Asiatic Squadrons, being in command of the steamer Lancaster in 1866–'67, and of the Maumee, in the Asiatic Squadron, in 1868–'69. On the return of the Maumee to the United States, Lieutenant-Commander Cushing was advanced to the rank of commander, being much the youngest officer of that rank in the navy. He was allowed leave of absence, and his health, which had been impaired by his over-exertions, failed completely in the last few months.

D

The expedition, which was under the command of General Custer, consisted of ten companies of the Seventh Cavalry, one company of the Twentieth Infantry and of the Seventeenth Infantry, with a battery of three Gatling and one 8-inch Rodman gun, and a detachment of Indian scouts, guides, etc. The scientific men accompanying the expedition comprised, among others, William Ludlow, Captain of Engineers, U. S. A., and Chief-Engineer of the Department of Dakota; Prof. N. H. Winchell, of the University of Minnesota,

as geologist; Mr. G. B. Grinnell, as paleontologist and zoologist; and Dr. Williams, as chief medical officer.

The expedition left Fort Lincoln July 2d, and returned to that place August 30th, with a loss of four men—three from sickness, and one killed in a quarrel. During this trip of nearly 1,000 miles, no hostile Indians were met. The route pursued led up the south side of Heart River, thence in a west-southwest direction, across the Cannonball, and up the north fork of Grand River; thence southwesterly to a point which was named Prospect Valley, in about latitude 45° 30′, and longitude 103° 40′; thence up the east side of the Little Missouri River; and southerly to the north fork of the Cheyenne River, Belle Fourche. This point was reached on July 18th, in about longitude 104°, after sixteen marches and 300 miles of travel. Hitherto the country had much resembled other portions of Dakota—an open prairie; wood scarce, and only found in river valleys; water not always to be met with in sufficient quantity, and frequently impregnated with salts, making it both disagreeable and injurious; but still, a fair amount of grass, and no serious difficulties were presented. All the country bordering on Heart River is good, that on Cannonball is fair; Grand River country is poor, as well as that near the head-waters of the Moreau or Owl River.

All the streams flow eastward, and head close up to the Little Missouri, which, running northward at right angles to the others, has but a narrow and barren belt tributary to it on the east side. Its main support is from its branches heading in the Powder River range of hills. The expedition came in view of Slim Butte (which is rather a high steep coteau than a butte), of Slave and Bear Buttes, and many others not hitherto located. The Black Hills, as they were approached, looked very high and dark under their covering of pine-timber.

The expedition crossed the Belle Fourche on July 20th, and found themselves in a new country. The whole character of the surroundings was changed. There was an abundance of grass, timber, small fruits, and flowers, and what perhaps was better appreciated than all, an ample supply of pure cold water. These advantages, with a few exceptions, were enjoyed until the Black Hills were left for the return-journey. The course now lay up the valley of the Redwater—a large branch of the Belle Fourche—to Inyan Kara, thence easterly and southeasterly into the heart of the hills. Valley leads into valley, to the beautiful park country, always until now marked "unexplored" on the maps. After arriving near Harney's Peak—a lofty granite mass, over 8,000 feet above the sea, and surrounded with craggy peaks and pinnacles—a rapid reconnoissance was made to the south fork of the Cheyenne, nearly due south, with five companies of cavalry, and the exit from the interior was ascertained to be not difficult on that side.

Returning, the course lay northerly and northeasterly, looking for an exit near Bear Butte. From Bear Butte the return-journey led back past Slave Butte, touching the head-waters of the Moreau, crossing the down trail in Prospect Valley, thence tapping the head of Grand River and following roughly the east side of the Little Missouri northward and eastward to where the trail of the Yellowstone expedition crosses it, and thence into Lincoln, on the north side of Heart River. The return-route was a much better one for a large force than the other. There was no difficulty in finding good camps, with plenty of water and grass. The country passed over, tributary to the Moreau, is barren, but the river valley itself is more favorable, and at the head of Grand River is much better country than lower down. From Grand River to above Heart River the grass had been thoroughly burned by the Indians.

The limited time occupied in the exploration gave little opportunity for study. The preliminary reports made represent the Black Hills as a region admirably adapted to settlement, abounding in timber, in grass and flowing streams, with springs of pure cold water almost everywhere. The valleys of South Slope are ready for the plough, the soil of wonderful fertility, as evidenced by the luxuriance of the grass and the profusion of flowers and small fruits; the climate entirely different from that of the Plains, giving evidence of being much more agreeable—cooler in summer, and more moderate in winter; not subject to drought, for the nightly dews are very heavy; not liable to excessive snow-fall, for, in narrow valleys containing a large creek, no indications of overflow could be detected.

No coal was found. Extensive deposits of iron-ore of good quality exist. Immense beds of gypsum were met with. Specimens of gold were washed from the soil in the vicinity of Harney's Peak, and quartz in bed and bowlder was visible in large quantities. Plumbago also was found in small quantities. Large amounts of excellent building-stone, limestones, sandstone, and granite, were present. Some of the limestones, particularly in the vicinity of Inyan Kara, were fine enough for marbles and handsomely colored. The timber is mainly red pine and spruce of large size. Oak, ash, and elm, are found on the exterior slopes. Game is abundant; bear, elk, and deer of two kinds were found, and many killed. On the prairies, antelopes were found in large numbers.

The complete report, accompanied by the reports of Prof. Winchell, Mr. Grinnell, and Dr. Williams, will be prepared, together with a map showing the route pursued, with bordering country, from Fort Lincoln and return, and a special map on a larger scale of the Black Hills proper.

As a game-region, the Black Hills will compare very favorably with any locality in the country. Deer of two species are most abun-

dant, the white-tailed deer especially being so numerous about the head-waters of Elk Creek that 100 were killed by the command in a single day. Elk, from indications, are numerous, although only a few were killed. Several bears were secured, and not a few exciting incidents occurred during their capture. No mountain-sheep were obtained, although there were many indications of their presence, and a single female was seen. Almost all the streams which were passed were dammed in many places by beaver, and fresh tracks and signs were very plenty.

Game-birds are well represented by several species of geese and ducks, which are to be found along the various water-courses in and about the Hills, and by at least two species of grouse, the sharp-tailed and the ruffed. The former are numerous along the open valleys and in the sparsely-wooded hill-sides, and the latter among the dense pines of the higher land. Altogether, the Black Hills offer to the sportsman an abundance and variety of game, and, if opened to the white man, will be as much esteemed as a hunting-ground by him as they now are by the Indian.

The visit of the expedition caused great excitement among the Sioux Indians. The accounts of rich mines and agricultural lands created an eagerness among many persons to proceed to the favored land in search of gain, and exploring and mining expeditions were formed for this purpose; but measures were taken by the War Department to prevent any intrusion into the Territory. Notwithstanding this prohibition, private expeditions were fitted out at Yankton, Bismarck, and other points, with the purpose of proceeding to the Black Hills. Some of them were driven back by the Indians with loss of life and property.

DELAWARE. The Republican State Convention met in Georgetown, July 28th, and after nominating Dr. Isaac Jump, of Dover, for Governor, and renominating Hon. James R. Lofland for Representative in Congress, adopted the following platform:

The Republican party of Delaware, in State Convention assembled, congratulating the people of this State upon the assuring prospect which the coming canvass presents of relief from the mismanagement, abuses, and extravagance, which the Democratic party, for years past, have entailed upon us, and of obtaining such practical and important reforms, and such wise and judicious economy, as the spirit of the times and the present necessities of our people demand in the governmental policy of our State, do resolve:

1. That we reiterate and reaffirm our adherence to the principles of the Republican party of this State, as heretofore officially announced, and our confidence in it as the only party that will give us retrenchment and reform.

2. That we regard representation according to population, coupled with a district system, as a cardinal principle of republican government, and that we are in favor of adopting such measures as will speedily and substantially effect the practical application of this principle to the legislative department of our State government, to remedy the unjust and unequal provisions of our present system.

3. That as a means of securing the reforms that are so much needed in the organic law of the State, and of keeping pace with the enlightened progress of the age, and with our sister States, a Constitutional Convention is imperatively demanded, and we hereby declare our intention, if invested with the power, to provide for the early organization of such a convention.

4. That the laws of this State allowing the wages of labor to be attached for debt are oppressive upon those whose daily sustenance is dependent upon their daily toil, and we are in favor of their repeal, and that, in harmony with the liberal policy of other States, we are further in favor of exempting from execution a reasonable portion of the property of a debtor, not only as affording relief to his family, but as better securing the creditor, and tending to elevate all classes of a common citizenship.

5. That we are in favor of repealing the laws passed by a Democratic Legislature which lay heavy burdens of taxation upon our people in compelling them to pay taxes upon the wages of productive labor, mortgages, and upon savings and houses, acquired through the commendable medium of building and loan associations.

6. That we regard the law, passed by the last Democratic Legislature in reference to the duties of assessors and collectors, as a base attempt to disfranchise that class of our voters and citizens who are not owners of real estate, in order to accomplish party purposes, and as a measure which, unless prevented by the vigilance of good citizens, will cheat the counties out of their taxes, and the people out of their votes; and further as an unjust discrimination against the poorer classes, by giving improper influence to property alone.

7. That the Delaware volunteers, having been among the first in the field and among the last to leave, during the late war, and with few exceptions having received no bounties, we hereby instruct our Representative in Congress to use his influence in favor of the law now pending in Congress, providing for the equalization of bounties.

8. That while we do not advocate mixed schools for the education of the children of this Stste, we do contend that the party in power here has demonstrated its opposition to public education by its constant refusal to adopt and legalize measures looking to the improvement of our school system; that it has committed itself thoroughly against popular education; and a reform in this direction which shall place the blessings of good schools within the reach of all can only come through the success of the Republican party.

9. Recognizing the rightful claim of labor to equal chances with capital, we assert the right of the laborer to such remuneration for his labor as shall guarantee the comfort of himself and family and the education of his children, and we declare our opposition to the present property tests for holding office in Delaware, as repugnant to the spirit of the age, and insulting to the working-men of the State.

10. That the proper measure of taxation is the sum necessary to an economical administration of the government; that this principle has been grossly violated by the Democratic party of this State; that under its administration the public burdens have become odious and oppressive, that reform is imperatively demanded, and experience has shown that it can only be accomplished by displacing those who have abused the trusts confided to them, and substituting in their stead others who will have a proper regard for the rights of the people.

11. That we recognize in our able representative in Congress, Hon. John R. Lofland, a faithful public servant, whose attention to the wants and interests of our people, and whose constant and unassuming performance of his duties, deserve our unqualified commendation.

The Democracy assembled in State Conven-

tion in Dover, August 27th, and nominated John P. Cochran for Governor, and James Williams for Congress. The resolutions adopted were as follows:

The Democratic party of the State of Delaware, in convention met, renew their ancient and unbroken allegiance to the constitutions of their State and General Governments, and point with pride and satisfaction to the just, honest, economical, and reputable administration of the affairs of the State of Delaware under Democratic rule, whereby safety to person and property has been maintained, and the financial and political credit of the State sustained upon an equality with the best governed and most favored of her sister States.

Resolved, That the welfare of all classes of our population, the rich and the poor, the white and the black, in the future as in the past, can and will be best conserved by a continuance of that strict obedience to constitutional limitations upon official power; that respect for established laws; that absence of class-influence and legislation; that due regard for the rights of the community as a whole, which have characterized the administration of government by the Democratic party, and which formed the chief guarantees of a free and stable government.

Resolved, That the continued example of utter and flagrant disregard of the most sacred and essential rights of local self-government by President Grant and his associates, as established in the wanton invasion and overthrow of the lawful government of the State of Louisiana, the retention in office and personal favor of the guilty officials through whose action, aided by the army of the United States, this gross outrage was perpetrated, fills us with indignation and alarm, and that against it all we utter our solemn protest.

Resolved, That the course of the radical administration has brought great loss and sorrow to our people, and shame and discredit to the name of republican government, by the encouragement shown to the delegation of public robbers from the State of South Carolina, and the rudeness exhibited to her most meritorious and suffering citizens by the selection and retention in office, all over the country, of men notoriously dishonest, corrupt, and unworthy; by allowing the lowest and most virulent partisanship to control appointments to the highest offices; by a refusal to punish dishonesty in office where exposed; by issuing and maintaining an unconstitutional currency without intrinsic value, whose fluctuations are the constant profit of speculators at the cost of the laboring-classes, and which demoralizes and unsettles commerce in all its branches.

Resolved, That the lamentable condition of the States of South Carolina, Mississippi, and Louisiana, continues to excite our kindest and strongest sympathies for the men of our own race who, by the lawless exercise of armed Federal power, are placed and kept under the galling rule of ignorance and crime, and we fervently hope that an awakening sense of the whole people of the Union may soon relieve these evils of radicalism and negro government.

Resolved, That we denounce the wild, cruel, and reckless measure called the Civil Rights Bill, as grossly violative of the letter and spirit of the Federal and State constitutions, and only calculated to sow new seeds of discord between the States and people; that it is an undisguised attempt to enforce a social equality between negroes and white people, and to encourage, if not compel, an intermingling of those races whose essential differences have been marked and established by Almighty God.

Resolved, That the course of Hon. Jas. R. Lofland, as a Representative in Congress from this State, in relation to this Civil Rights Bill, has been in defiance of the intelligence and decency of the entire community, and deserves and will receive the scorn and opposition of any right-thinking inhabitant of Delaware.

Resolved, That the act passed at the last session of Congress, enlarging the jurisdiction of the Federal Courts of the District of Columbia, is a base attempt to muzzle the public press, and to shield the corrupt and unscrupulous officers of the Government from just criticism.

Resolved, That we contemplate with just pride the national reputation and commanding rank and influence won for our State in the Senate of the United States, and that we hereby extend our grateful thanks to our faithful Senators, Hons. T. F. Bayard and Eli Saulsbury, for their constant opposition to the infamous Civil Rights Bill, and every other pernicious and tyrannical radical measure, and for their manly defense of constitutional government, the freedom of the press, the cause of the oppressed, and the rights and honor of their race and native State.

Resolved, That we cordially invite all honest citizens to unite with us in the election of the worthy candidates whom we this day present for their suffrages, believing that good private and public character are inseparable, and that just, economical, and honest rule can only be expected from those whose private lives have given such assurance.

The election, held on the 3d of November, resulted in the choice of Cochran for Governor by a majority of 1,239, and Williams as Representative in Congress by a majority of 1,646. The total vote in the several counties was as follows:

FOR GOVERNOR.

NAMES.	New Castle.	Kent.	Sussex.	Total.
Cochran	5,796	3,178	3,514	12,488
Jump	5,615	2,751	2,883	11,249
Majority for Cochran	181	427	631	1,239

FOR CONGRESS.

NAMES.	New Castle.	Kent.	Sussex.	Total.
Williams	5,891	3,244	3,558	12,693
Lofland	5,498	2,683	2,846	11,027
Majority for Williams	393	561	712	1,666

In 1872 James R. Lofland was elected to Congress by a majority of 862 in a total vote of 22,392, he having received 11,377 votes.

John P. Cochran, who is now Governor of Delaware, is a citizen of Middletown, about sixty-five years of age. He is an extensive farmer and land-owner in New Castle County, and has one of the largest peach-orchards on the peninsula. He is of Dutch descent, and has always been a Democrat. Hon. James Williams, who was elected as Representative, is a farmer of Kent County, has been a Representative in the State Legislature for several terms, and also Speaker of that body.

The entire public debt, January 1, 1875, was $1,250,000. A large portion of this was created for the payment of volunteers, and the relief of persons drafted into the military service during the war; but more than $500,000 was incurred in aid of the construction of the Junction & Breakwater and the Breakwater & Frankford Railroads. In reference to the future policy of the State in extending aid to these or other railroad companies, Governor Ponder says:

Without intending to express any opinion upon the propriety of the action of the Legislature in aiding the construction of these roads, I respectfully suggest that no further increase of the public debt, for similar purposes, ought to be authorized by the General Assembly. The credit of the State ought not to be placed in jeopardy by any further issue of bonds, nor should the revenues derived from taxation, or otherwise, be applied to any other purposes than the ordinary expenses of the government and the reduction of the present liabilities of the State.

I do not know that any application will be made to the Legislature, at its present session, for aid in the construction of railroads or other works of internal improvement; but from a firm conviction that any policy which would further connect the State with railroad improvements would be hazardous to its credit, I deem it an imperative duty to urge the necessity of guarding carefully against any augmentation of the State debt, and the consequent increased measure of taxation which such augmentation would necessarily entail upon the people of the State.

Whatever local advantages might be anticipated from the construction of additional railroads, it is certain that they would not justify an increase of present liabilities, or compensate for the injury which would be inflicted by additional taxation rendered necessary thereby.

It is to be hoped that a sincere desire to preserve untarnished the credit of the State, and to protect our citizens from further taxation, will prevent the Legislature, at its present session, or hereafter, from authorizing any further issue of State bonds for any purpose whatsoever.

The whole sum of the assets of the State, including investments appropriated to the school-fund, amounts to $1,128,189. The amount of liabilities over all assets is $100,811, and over assets not appropriated to the school-fund, $576,950. This latter amount may be regarded as the real debt of the State over available assets. The revenues under existing laws are ample for any present or anticipated demands upon the Treasury. The ordinary expenses of the government have been met, the interest on the public debt promptly paid, and the principal of that portion of the debt created by the exigencies of the war reduced $388,000 within the last four years. This has been accomplished from the ordinary receipts of the Treasury, without postponing the payment of any claim against the Treasury.

The annual receipts into the Treasury from all sources average about $207,872; and the expenditures, including $75,000 interest on the public debt, an appropriation of $3,000 to Delaware College, and one-half of the biennial expenses of the Legislature, about $111,025. A large part of the revenue is derived from taxes paid by railroads and other corporations, and from fees for licenses granted by the State.

Within the past year an important case, in which Delaware, though not nominally, was in reality a party, has been decided in the Supreme Court of the United States. The case was that of William Minot, Jr., a stockholder in the Pacific Western & Baltimore Railroad Company, against William J. Clarke, late State Treasurer, and William M. Ochletree, a collector of State taxes under the law of 1869. The bill filed in the Circuit Court prayed for an injunction to restrain such officers from proceeding to collect from the railroad company certain taxes imposed by said law upon railroad corporations in this State, upon the assumed ground that the law was unconstitutional and void for various reasons, and among others that it impaired the obligation of a contract alleged to exist between the State and the company, exempting the latter from taxation.

The decree of the Circuit Court sustained the constitutionality of the law and the right of the State to tax the corporation, and, upon an appeal from the decree, taken by complainant, was affirmed by the Supreme Court.

It would be difficult to over-estimate the value of this decision to the State. It disposes effectually of the claim on the part of the principal railroad corporation existing within its limits to exemption from taxation, and, by maintaining the constitutionality of the law referred to, relieves the State from any possible liability for the amount of taxes paid by the company under protest.

The school system of Delaware is substantially the one adopted forty-five years ago. The State has no Superintendent of Public Instruction. All questions relating to schools are left in the hands of the inhabitants of the school districts into which the State is divided. They decide whether there shall be a school or not; a certain amount of school-tax must, however, be raised by each district in order to entitle it to its *pro rata* share of the school-fund. A superintendent for each county is annually appointed by the Governor; the former, however, has exceedingly limited powers, and receives no pay other than traveling expenses. The State law makes no provision for the education of colored children. Material aid, however, for the instruction of this class is rendered by "The Delaware Association for the Moral Improvement and Education of the Colored People," and the Freedmen's Bureau. In 1873 a bill was introduced into the Legislature, providing for a thorough supervision of the schools, for annual reports to the Governor or Legislature, and for giving to the colored population their *pro rata* share of the school-fund. This, however, failed to become a law. The State school-fund is derived from the income of Delaware's share of the "surplus revenue" distributed by the United States to the several States, together with a portion of the proceeds accruing from certain State fees and licenses. A portion of the fund is apportioned equally among the counties, and the balance according to the white population.

The peach season of 1874 closed about the 1st of October. The net receipts of the crop are estimated at $669,775. The season was very little shorter than usual, it beginning about as early and continuing about as late, but the daily shipments were much below the average of the several preceding years, and the aggregate of the crop was considerably

lessened thereby. The bulk of the crop was moved to market by rail, the region of growth being mostly confined to a small area lying on both sides of the Delaware Railroad, and extending about twenty or thirty miles with its length. Only a limited quantity of peaches for market was grown along the bays and numerous water-courses of the peninsula, and the shipments from some of them were very meagre indeed. The aggregate of the shipments (by baskets) both by rail and water was as follows:

By rail, northward	620,000
By rail, from Middletown to Dover	7,669
Total by rail	627,669
By water, to Baltimore	54,550
By water, to Philadelphia	155,000
Aggregate shipment by water and rail	837,219

The shipments of strawberries were estimated at 667 car-loads, containing 186,760 crates, or 7,470,400 quarts. This is the heaviest crop yet sent to market from the peninsula, and will in all probability be the largest for years to come. It exceeds the estimated crop of last year (5,000,000 quarts) 2,470,400 quarts, but it is very doubtful if this year's crop has brought to the peninsula the amount of money of last year, which was estimated at $500,000.

DENMARK, a kingdom in Northern Europe. Reigning sovereign, Christian IX., fourth son of the late Duke William of Schleswig-Holstein-Sonderburg-Glücksburg, and of Princess Louise of Hesse-Cassel; appointed to the succession of the Danish crown by the Treaty of London, of May 8, 1852, and by the Danish law of succession of July 31, 1853; succeeded to the throne on the death of King Frederick VII., November 15, 1863; married, May 26, 1842, to Louise, daughter of Landgrave William of Hesse-Cassel. Heir-apparent, Prince Frederick, born June 3, 1843; married, July 28, 1869, to Princess Louisa, only daughter of the late King Charles XV. of Sweden; offspring of the union are two sons, Christian, born September 26, 1870, and Charles, born August 3, 1872. The King has a civil list of 500,000 rigsdalers, and the heir-apparent 60,000 rigsdalers. The new ministry, appointed on June 14, 1874, consisted of the following members: President of the Council and Minister of Finance, C. A. Fonnesbech; Minister of War, General P. F. Steinmann; Minister of the Interior, F. C. H. E. Tobiesen; Minister of Public Education and Ecclesiastical Affairs, J. J. A. Worsaae; Minister of Justice and for Iceland, C. S. Klein; Minister of the Navy, N. F. Kavn. The area of Denmark proper, inclusive of lakes, is 14,753 square miles; of European dependencies (Faroe Islands and Iceland), 40,268 square miles; of American possessions (Greenland, St. John, St. Thomas, and St. Croix), 759,900 square miles. In the following table we give the population of the kingdom and its dependencies according to the latest dates:

	Census of 1870.	Official Calculation, 1874.
DENMARK.		
City of Copenhagen	181,291	193,000
Islands	815,331	842,000
Jutland	788,119	826,000
	1,784,741	1,861,000
DEPENDENCIES.		
Faroe (17 inhabited islands)	9,992	10,500
Iceland (inhabitable)	69,763	70,900
Greenland (exclusive of the glaciers)	9,825	9,800
St. Croix, St. Thomas, St. John, in the W. Indies	37,821	37,700
	127,401	128,900

Nearly the entire population of Denmark proper, namely, 1,769,583, or 99.15 per cent., is connected with the Lutheran Church; of the remainder, 1,433 are Reformed; 1,857 Catholics; 3,223 Baptists; 1,211 Free Congregationalists; 2,128 Mormons; 4,290 Jews; 260 Methodists; 349 Irvingites; 74 Anglicans; 28 Friends; 12 Greek Catholics; 88 of various other sects; 205 without definite creed. The number of emigrants from Denmark was, in 1873, 7,200; in 1872, 6,893; in 1871, 3,906; in 1870, 3,525; in 1869, 4,360: nearly all the emigrants went to the United States. The actual revenue and expenditure of the state for the two years 1871–'73 (the financial year ending March 31st) were as follows:

	Revenue—Rigsd's.	Expenditure—Rigsd's.
1871–'72	23,516,916	20,565,183
1872–'73	24,944,985	23,678,013

In the budget for the year 1874–'75 the revenue was estimated at 23,024,226; the expenditures at 22,799,200; the surplus, 225,026 rigsdalers. The public debt, on March 31, 1873, amounted to 110,425,552 rigsdalers, of which 81,032,889 were home debt, and 29,392,663 foreign debt. The state assets were 53,227,148, leaving 57,198,404 as the real amount of the indebtedness of the state. The debt has been in the course of reduction since 1866, when it amounted to 132,000,000 rigsdalers. It was expected that in the spring of 1875 this debt would be reduced to 93,000,000 rigsdalers, and that when, on March 31, 1875, the English loans would be paid off, the foreign debt would only amount to 13,000,000 rigsdalers. Five and a half million rigsdalers of the foreign debt were again to be paid in 1877.

The commerce of Denmark, which is mainly carried on with Germany and Great Britain, was, from 1869 to 1873, as follows (value expressed in rigsdalers):

YEAR.	Imports.	Exports.
1869–'70	20,100,000	9,040,000
1870–'71	21,740,000	11,390,000
1871–'72	23,600,000	9,720,000
1872–'73	21,880,000	11,080,000

The precise amount of the commercial transactions is not known, as the official returns since 1863 have not given the declared or real value of the imports or exports, but only their weight.

The movement of shipping in 1871 and 1872 was as follows:

HOME NAVIGATION.

YEAR.	Vessels.	Tons.	Foreign vessels.
1871-'72	46,110	599,157	1,007
1872-'73	48,071	638,988	1,085

OUTWARD NAVIGATION.

YEAR.	Vessels.	Tons.	Foreign vessels.
1871-'72	39,341	1,214,532	21,568
1872-'73	42,612	1,276,575	24,068

The commercial navy, on March 31, 1873, was composed of 2,629 sailing-vessels, with an aggregate of 175,657 tons, and 109 steamers, with 21,602 tons; total, 2,738 vessels, with 197,259 tons.

The army, in time of peace, numbers 15,258 men; and on the war-footing, 52,656. The navy, in 1874, comprised 32 steamers, 7 of which are iron-clads, and 2 sailing-vessels. It was manned by 800 men, and officered by 1 admiral, 15 commanders, 34 captains, 47 lieutenants, and 20 sub-lieutenants.

On January 1, 1874, there were 5,567 miles of railroad in operation. A new railroad on the island of Laaland was opened on June 24, 1874. The length of telegraph-lines, in 1873, was 4,370 miles; that of the wires, 1,578 miles. The post-office forwarded, in 1872–'73, 14,958,402 letters, and 13,781,803 newspapers.

The Folkething (lower branch of the Legislature) had closed the year 1873 by the adoption of an address to the King, expressing the wish that the administration of the country be changed. When the Folkething, after the expiration of the Christmas vacation, reassembled, on January 6, 1874, a reply to the address was received, which declared that, however much the misproportion between the length of the session and the accomplished work was to be deplored, and however desirable a solution of the conflict between the Government and the Legislature, and the removal of the agitation prevailing throughout the country, might be, the Government must decline a change of administration, but must rather appeal to the patriotism of the parties, and expect from them the work of reconciliation. The official *Berling Gazette*, which, on January 1, 1874, entered its one hundred and twenty-sixth year, published on that day a warning article on the serious condition of the country, which, according to the issue of the pending conflict, might either expect a quiet and gradual development of its material and spiritual interests, or an imminence of the trials and dangers so indissolubly connected with the absolute rule of elective majorities. The ministry, immediately after the adoption by the Folkething of the address to the King, expressing want of confidence in the administration, had offered its resignation, but the King, in a letter dated January 2, 1874, replied that the ministry must remain in office, as it consisted of the best men in the country, who possessed his entire confidence, and whose character was a guarantee that the fundamental law would be defended against any encroachment. The United Left now adopted the course of referring all drafts laid before it to a committee instead of passing them to a second reading. The army bill was thus disposed of by a vote of 47 against 40 votes. After a debate which lasted several days, an order of the day, with preamble, was adopted by 57 votes against 31, condemning the publication by the ministry of the autograph letter written by the King on the 2d of January, in reply to an address passed by the Folkething in December. The resolution protests against the course taken by the ministry, on the ground that the King is thereby drawn into party conflicts. During the discussion the Government declared that the adoption of this order of the day would have no practical results. As, according to the fundamental law, an electoral district is not to have more than 16,000 inhabitants, and as the electoral districts of Copenhagen, owing to the rapid increase of population, exceeded this number, the Government proposed the creation of four new electoral districts. As the United Left, which has its chief strength in the country, fears that the increase of city districts will add to the strength of the Liberal party, it rejected the proposition of the Government, as it had already rejected a similar bill two years ago. A motion to forbid the manufacture of phosphor-matches was adopted by both Houses. A Government bill for raising the salaries of Government officers was rejected in the Folkething by 52 against 42 votes. The Landsthing, which does not agree with the Folkething, declined, by 31 against 11 votes, a bill passed by the latter to establish in the provincial towns special dwellings for the houseless poor. The Landsthing granted and the Folkething denied the Danish indigenate to the grandchildren of the late Danish state minister, Count Carl von Moltke (died in 1866) on the ground that their father, Count Adam von Moltke, had until recently resided in Austria, and had, in 1864, belonged to the Austrian army operating against Denmark; that, therefore, no guarantee was given that the children, who were born in a foreign country (a daughter ten years old, and a son four years old), would be educated as patriotic Danes. The merits of the grandfather were not taken into account, on the ground that, as Danish minister, he was a representative of Holstein. The Folkething, in discussing the budget estimate, rejected the proposed construction of a new iron-clad, as well as the construction of new barracks in Odense, for which the Government had demanded an allowance of 51,300 rigsdalers. On the other hand, the pay of private soldiers in the army and navy was raised at the rate of two shillings a day. With the modifications moved and carried by the opposition, this budget was, at length, unanimously

passed. The election of the Minister of Justice, Klein, in the district of Aalborg (by 850 against 841 votes) was declared by the Folkething invalid (by 58 against 26 votes). On April 1st, the Diet was closed.

On April 26th the Minister of Justice, Klein, whose election as member of the Folkething has been declared by the Folkething invalid, was reëlected over the candidate of the Left, by 1032 votes against 894.

In June the Minister of Finance, Krieger, offered his resignation, and after a protracted ministerial crisis, lasting for several weeks, the offered resignation of the entire ministry was accepted, and a new cabinet formed, under the presidency of Fonnesbech, hitherto Minister of the Interior. Of the members of the old cabinet, the Minister of Foreign Affairs, Baron von Rosenörn-Lehn, the Minister of Justice, Klein, and the Minister of the Navy, Ravn, remained. Tobiesen, hitherto president of a section in the ministry of the Interior, was appointed, in place of Fonnesbech, Minister of the Interior; Privy Councillor Worsaae, a celebrated writer on antiquities, Minister of Instruction and Public Worship; and the Minister of the Navy, Ravn, assumed, *pro tempore*, the ministry of War. Subsequently, General Steinmann was appointed for this position. General Steinmann is a native of Schleswig, who has never taken an active part in politics; he was commander of the troops on Alsen when this island was occupied by the Prussians.

The relations of Denmark to Germany appeared to be, on the whole, of a friendly character. In May, the public funeral of Herr Günther, a German engineer at Copenhagen, who had lost his life in an attempt to rescue a drowning man, called forth a grand demonstration, several ministers and other high authorities, with an immense crowd of people of all classes, taking part in it. The German minister had an audience of the King to convey to his Majesty the thanks of the Emperor of Germany for the sympathy evinced on the occasion. He has also thanked the Danish authorities, in the name of the Emperor, for their presence at the funeral. Subsequently, the good understanding between the two Governments seemed to be somewhat disturbed by the expulsion of some Danish subjects from Schleswig. The *National Gazette*, of Berlin, admitted that Danes had been expelled from North Schleswig, and explained that this was due to the continuous system of agitation carried on by certain Danish electors. The measure, it added, was not general, but individual, in its application, and could not give rise to diplomatic negotiations, it being lawful for Germany to expel foreigners from her territory without explanation. It was intimated, moreover, that the relations between the two Governments were of the most friendly character.

On October 5th King Christian opened the new session. In his speech from the throne his Majesty said that he had felt himself bound personally to convey to the members the greetings of the inhabitants of Iceland and the Faroe Islands. He expected that the new cabinet and the Parliament would harmoniously coöperate in their deliberations upon the proposed reforms. To carry out the measures necessary for the defense of the kingdom and the improvements of the public service, fresh grants would be required. With foreign powers the relations were amicable. The political situation would not yet allow of a settlement of the North-Schleswig question, but the Government still maintained the hope that a satisfactory solution would be arrived at, which was the desire of both himself and the Danish people. The Queen of Denmark, the Crown Prince and Princess of Denmark, the Princess of Wales, and the Princess Thyra, were present at the ceremony. The hope of the new ministry to effect a reconciliation with the United Left was disappointed, and at a large political meeting J. A. Hansen, in the name of the United Left, announced that the new ministry would be opposed by his party as much as the old, especially on account of the finance law and a ministerial bill on preachers' salaries. In the North-Schleswig question the party deprecated a hostile attitude toward Prussia, but expected more from the Prussian sense of justice. On November 10th, the Folkething, after a debate lasting five hours, by a vote of 54 against 28, expressed its continuing want of confidence in the ministry, on the ground that the police had interfered with the right of meeting by suppressing an assembly of Mormons. A motion to express want of confidence in the Minister of Public Instruction for having reproved a school-teacher who had used toward the King the words "the man who calls himself King," was almost unanimously negatived. A motion, by one of the prominent leaders of the United Left, Berg, deputy for the town of Kolding, to abolish all diplomas of nobility, titles, and orders, was, notwithstanding the protests of the ministers, passed by 55 against 11 to a second reading. On January 18th the Diet adjourned to January 6, 1875.

On January 5th the King sanctioned the new Constitution of Iceland, which substantially agrees with the fundamental law of Denmark. A special minister will in future be responsible for guarding the Constitution of Iceland. The Governor of the island is appointed by the King. The Althing will consist of 6 members appointed by the King and of 30 elected by the people.

On July 15th the King, attended by his son, Prince Waldemar, the Minister of Justice Klein, and the Minister of Public Instruction Worsaae, left Copenhagen in order to embark for Iceland, where a millennial anniversary of the settlement of the island was to be celebrated with unusual solemnities. On his voyage to Denmark he also visited the Faroe Islands, where he was received with great en-

thusiasm. An appalling incident occurred in connection with this visit. The King, on landing, was received on the pier by the governor of the town, M. Finsen, and the local officials, who delivered to his Majesty a loyal address in the name of the people of the Faroe Islands. The royal party then proceeded up the pier, a short distance beyond which a triumphal gateway was erected, where the president of the municipality received his Majesty, and presented an address on the part of the townspeople of Thorshavn. The concluding words of the address had hardly been spoken when the greatest consternation was caused among those present by the president dropping down dead on the spot. It was ascertained that he had been in feeble health for a long time, and a fatal termination was hastened by the excitement of the occasion. This untoward event cast a gloom over the King's visit to the Faroe Islands, and created a painful impression.

Immense enthusiasm welcomed the King when he landed, on July 30th, in Iceland, where the celebration of the anniversary was a grand success (*see* ICELAND). On August 10th the King reembarked to return home by way of England, where, on his landing at Leith, in Scotland, on August 16th, he was received by his daughter, the Princess of Wales, who accompanied him to Edinburgh.

The President of the Folkething, J. A. Hansen, received, on his sixty-eighth birthday, from his many friends, a villa near Copenhagen, called "The People's Gift," as a recognition of his great merits in behalf of ameliorating the condition of the peasantry.

The aggregate national wealth of Denmark is estimated at 2,000,000,000 rigsdalers.

In January, the socialist Pihl, who in November, 1873, had avowed an intention to march at the head of the socialistic laborers to the royal palace, and to extort from the King an amnesty for three imprisoned socialists, was sentenced to eight months of forced labor.

In February, the Supreme Court of Denmark suppressed the International Workingmen's Union throughout the kingdom.

On August 15th, the new port of Esbjerg, in Jutland, was opened to commerce.

DE WITT, Rev. THOMAS, D. D., a venerable, accomplished, and eloquent clergyman of the Reformed (Dutch) Church, born in Kingston, Ulster County, N. Y., September 18, 1791; died in New York City, May 18, 1874. He was of pure Dutch and Huguenot stock, and of the best blood in New York. He was a cousin of the late Governor De Witt Clinton. He graduated from Union College in 1808, before he completed his seventeenth year; studied theology with Rev. Dr. Freligh, of Schraalenburgh, N. J., and Rev. Dr. Brodhead, of Rhinebeck, and entered the first class of the Theological Seminary at New Brunswick in 1810, graduating there in 1812. The same year he was ordained as pastor of the combined congregations of Hackensack and Hopewell, Dutchess County, N. Y., where he remained until 1827, when he accepted a second call (having rejected the first) to the Collegiate Dutch Church of New York City, of which he was the senior clergyman for nearly forty-seven years. He was a man of faith, of learning, and of power; thoroughly indoctrinated in the theology of his Church, and believing it with his whole soul; yet having no trace of bigotry or exclusiveness in his nature; possessing a fluent and eloquent delivery, great clearness in argument, an unblemished purity of life, and a gentle, modest, and genial manner, which won all hearts. He was for many years a zealous student, especially in historical matters, was Vice-President and President for many years of the New York Historical Society, and an active director of the Bible, Colonization, Tract, and Sunday-school Societies, as well as the boards of his own church. He had published very little, even his sermons being generally unwritten, yet he wrote with great vigor, force, and elegance.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. The relations of the United States with other nations have been peaceful during the year, and the correspondence with their representatives contains few points of importance.

The rights of naturalized citizens of the United States when returning to their native country are subject to some conditions, as appears by the following letter, dated October 5th, from Acting-Secretary J. L. Cadwalader to Mr. Jay, at the capital of Austro-Hungary:

> The right to enjoy such privileges as may attach to a citizen of the United States is properly proved by the production of a passport legally issued.
>
> In every case where the action of a diplomatic or consular officer of the United States is invoked, on behalf of a person claiming to be a citizen of the United States, it is incumbent on such officer not only to carefully and zealously guard and protect the rights of all *bona-fide* citizens, but also to carefully abstain from committing this Government to a demand for protection on behalf of a person presenting a false or fraudulent claim to citizenship.
>
> Naturalized citizens, who have become such solely to avoid the duties and burdens attached to a residence in and allegiance to their own country, and who have returned to their native country without intention to reside in the United States, or to assume the duties or burdens common to its citizens, who, in other words, are desirous of enjoying all the benefits and immunities common to citizens of each country, and of avoiding all corresponding duties in each, may be held to have forfeited all right to the protection of the United States. Particular instructions will be found on these questions in section 30 of the personal instructions lately issued.
>
> The attention of the Department has also been called, on several occasions, to applications for passports in foreign countries, founded on certificates of naturalization, which, upon their face, bear conclusive evidence that they have been illegally or fraudulently obtained. In such cases a passport should be refused and the fraudulent certificate forwarded to this Department.

Relative to American citizens enlisting in the military service of foreign nations, Mr. Williams, at Peking, writes to Secretary Fish,

under date of May 29th, stating the particulars of a conversation with the Chinese officials, of which the following is an extract:

They then inquired if, in the event of hostilities arising between China and Japan, Americans who were engaged in the ranks of the enemy should be killed by Chinese troops, what notice would be taken of it by their own Government?

I answered that all Americans who entered the military service of the Japanese did so at their own risk, and that the American Government would take no notice of their death under such circumstances; all persons composing a hostile force could only be regarded as enemies by China.

The reply of Secretary Fish, under date of July 29th, was as follows:

You state in your dispatch that you had informed certain officials in this conversation that the Americans entering into the military service of China or Japan did so at their own risk, and that the Government would take no notice of their death under such circumstances. Your answer goes further than the Department feels justified in approving.

In case such American citizens should be killed in battle, in the ordinary course of civilized warfare, no notice would be taken thereof; but the United States will expect that no unusual or inhuman punishment be inflicted upon any of its citizens who may be taken prisoners, but that they shall be treated according to the accepted rules of civilized warfare.

Where the exercise of a commission or the enlistment in a foreign service is not prohibited by law, the fact that a war arises between the country in whose service a citizen of the United States may be and another nation, with which the United States are at peace, does not, in the opinion of this Department, create an obligation "to refuse to serve or to leave the flag thus employed."

Such fact is of not infrequent occurrence. Citizens of all nationalities were engaged on both sides during the rebellion, and such has frequently been the case with European nations.

I fail to perceive that the doctrine of exterritoriality affects the question of the rights of citizens of the United States to engage in the service of foreign powers when not prohibited by law, or that it becomes unlawful because of the engagement being made with a non-Christian power. China has not infrequently availed herself of the services of Americans, as in the case of Ward and Burgevine, and it is not for her to take exception against this Government that it refuses to interfere to prevent its citizens from entering into foreign military service which may not be prohibited by law.

On January 9th Mr. Bancroft writes from Berlin to Secretary Fish, denying the desire of the Government of Germany to obtain the island of St. Thomas. He says:

As to St. Thomas, Germany does not want it, would not accept it as a gift; has no hankering after that or any other West India colony; from principle avoids them; wishes at most a coaling-station in Asiatic seas, and that only in case it can be enjoyed in security without being made a military post. This statement I have had often from every member of the government that could by any possibility have charge of any negotiation made for the acquisition of territory. They have said it to me over and over again. This much in answer to a telegram received night before last through General Schenck.

Again, on January 12th, he writes:

Further, in time past I am very certain that the idea has never been entertained on either the side of Denmark or of Germany to transfer St. Thomas to the latter power. As to the present, I cannot find the slightest reason to believe that any such negotiation is on foot or even in contemplation.

The decisions in the Alabama case respecting the extent to which a neutral power may furnish coals to a war-ship of a belligerent have naturally brought home to the German Navy Department a sense of the feebleness of their position in foreign seas in the event of a war, and so may have given rise to the wish for the possession of coaling-stations, especially in the Eastern Asiatic seas. But it does not change their general policy not to hold in foreign seas posts that would but be new points for attack for a fleet in time of war.

Mr. Fish replies:

DEPARTMENT OF STATE,
WASHINGTON, *February* 11, 1874.

SIR: Referring to your No. 562, of the 16th ultimo, relating to the final denial by the proper authorities of reports concerning negotiations between Germany and Denmark respecting the cession of the Danish West Indies, I have to request you to be watchful in case any negotiation of that character should occur.

I am, etc., HAMILTON FISH.

The mission of Mr. George Bancroft to Berlin was closed during the year by his resignation. Mr. J. C. Bancroft Davis was appointed minister to fill the vacancy. The following letter is the last official act of Mr. Bancroft:

AMERICAN LEGATION, BERLIN, *June* 30, 1874.

SIR: My last act of public duty before leaving Berlin shall be to ask you to express to the President my grateful sense of the honor which he has done me in the language which he used in granting me my discharge from the public service. I can receive it with a good conscience, for I have never, so far as I know, missed an opportunity of carrying out the instructions of the Department, and promoting, to the best of my ability, the honor and the welfare of the country. You in Washington can hardly conceive the degree of comfort secured to our German fellow-citizens by the peaceful security which they obtain for their visits in Germany by the treaty of naturalization. From 10,000 to 15,000 of them come yearly to their mother-country now, without suffering the least anxiety, where before many of them, in order to see their friends, were obliged to remain on the other side of the frontier or come into Germany stealthily, running the risk of arrest every hour.

During the war between Germany and France, great efforts were made to turn the current of opinion and the feeling of the German Government against the United States on account of sales of arms to one of the belligerents. It was to me a very great source of satisfaction that complaints were happily prevented. Our happy coöperation in the San Juan arbitration led to the most pleasing and satisfactory results. Take it for all in all, my mission to Berlin has rounded off in the pleasantest manner the years of my life that have been devoted to the public service, and I may say that my unsolicited appointment by Mr. Johnson and my new commission from Mr. Grant have made to me the years of my great old age the flower of my life.

Yours, etc., GEORGE BANCROFT.

The vagrancy of Italian children, which attracted attention in the United States during the year, has been made the subject of special legislation in the Italian Parliament. The Italian minister at Washington thus speaks of the law, in a letter addressed to Secretary Fish:

LEGATION OF ITALY,
WASHINGTON, *April* 27, 1874.

SIR: Your Excellency is aware that public attention in the United States has for some time been seriously occupied with the subject of foreign vagrancy

in this country, especially that of children, who are induced by false promises to leave their native land, and who are subsequently reduced to a condition of the utmost wretchedness. The Italian Parliament long since took this state of things into consideration, with a view to the complete suppression of this odious traffic. It has now just passed a law which was promulgated December 21, 1873, whereby a number of acts connected with the matter are made criminal offenses, and corresponding penalties are provided therefor. It hopes by this means to prevent, or at least considerably to diminish, the traffic in question.

The efficacy of this law would, however, be considerably increased if foreign governments would cooperate in its execution.

I am aware of the difficulties which present themselves to these states when it seems desirable to extend the powers of the central Government. I nevertheless feel confident that your Excellency will be pleased to give some attention to this subject, in order to see if there is any means of coming to an agreement in relation to the matter. The Government of the King would be happy to take into serious consideration any proposition that the Government of the United States might think proper to make to it, either for the adoption of additional articles to the extradition treaty now in force between the two countries, or for any thing else.

I have, to this effect, the honor to inclose to your Excellency the text of the law in question, and I beg you to accept the assurances of my very high consideration. L. CORTI.

During the year Mr. Daniel E. Sickles resigned as minister to Spain, and Mr. Caleb Cushing was appointed as his successor. The instructions to Mr. Cushing were given in the following letter from Secretary Fish:

DEPARTMENT OF STATE,
WASHINGTON, *February* 6, 1874.

SIR: Whatever general instructions you may need at the present time for your guidance in representing this Government at Madrid have reference entirely to the actual state of the island of Cuba and its relation to the United States as well as to Spain.

It is now more than five years since an organized body of the inhabitants of that island assembled at Yara, issued a declaration of independence, and took up arms to maintain the declaration. The movement rapidly spread, so as to occupy extensive regions of the eastern and central portions of the island, and all the resources of the Spanish Government have been exerted ineffectually to suppress the revolution and reclaim the districts in insurrection to the authority of Spain. The prosecution of the war on both sides has given rise to many questions, seriously affecting the interests and the honor of the United States, which have become the subject of diplomatic discussion between this Government and that of Spain.

You will receive herewith a selection, in chronological order, of the numerous dispatches in this relation which have passed between the two Governments. From these documents you will derive ample information, not only respecting special questions, which have arisen from time to time, but also respecting the general purposes and policy of the President in the premises.

Those purposes and that policy, as indicated in the accompanying documents, have continued to be substantially the same during the whole period of these events, except in so far as they may have been modified by special circumstances, seeming to impart greater or less prominence to the various aspects of the general question, and thus, without producing any change of principle, yet, according to the particular emergency, to direct the action of the United States.

It will suffice, therefore, on the present occasion, first, briefly to state these general views of the President; and, secondly, to show their application to the several incidents of this desperate struggle on the part of the Cubans to acquire independence, and of Spain to maintain her sovereignty, in so far as those incidents have immediately affected the United States.

Cuba is the largest insular possession still retained by any European power in America. It is almost contiguous to the United States. It is preëminently fertile in the production of objects of commerce which are of constant demand in this country, and, with just regulations of reciprocal interchange of commodities, it would afford a large and lucrative market for the productions of this country. Commercially, as well as geographically, it is by nature more closely connected with the United States than with Spain.

Civil dissensions in Cuba, and especially sanguinary hostilities, such as are now raging there, produce effects in the United States second in gravity only to those which they produce in Spain.

Meanwhile our political relation to Cuba is altogether anomalous, seeing that for any injury done to the United States or their citizens in Cuba we have no direct means of redress there, and can obtain it only by slow and circuitous action by way of Madrid. The Captain-General of Cuba has, in effect, by the laws of Spain, supreme and absolute authority there for all purposes of wrong to our citizens; but this Government has no adequate means of demanding immediate reparation of such wrongs on the spot, except through a consul, who does not possess diplomatic character, and to whose representations, therefore, the Captain-General may, if he chooses, absolutely refuse to listen. And grievous as this inconvenience is to the United States in ordinary times, it is more intolerable now, seeing that, as abundantly appears, the contest in Cuba is between Peninsular Spaniards on the one hand and native-born Spanish-Americans on the other; the former being the real representatives of Spanish force in Cuba, and exerting that force, when they choose, with little, if any, respect for the metropolitan power of Spain. The Captain-General is efficient to injure, but not to redress, and, if disposed to redress, he may be hampered, if not prevented, by resolute opposition on the part of the Spaniards around him, disobedient alike to him and to the supreme Government.

In fine, Cuba, like the former continental colonies of Spain in America, ought to belong to the great family of American republics, with political forms and public policy of their own, and attached to Europe by no ties, save those of international amity, and of intellectual, commercial, and social intercourse. The desire of independence on the part of the Cubans is a natural and legitimate aspiration of theirs, because they are Americans. And while such independence is the manifest exigency of the political interests of the Cubans themselves, it is equally so that of the rest of America, including the United States.

That the ultimate issue of events in Cuba will be its independence, however that issue may be produced, whether by means of negotiation, or as the result of military operations, or of one of those unexpected incidents which so frequently determine the fate of nations, it is impossible to doubt. If there be one lesson in history more cogent in its teachings than any other, it is that no part of America, large enough to constitute a self-sustaining state, can be permanently held in forced colonial subjection to Europe. Complete separation between the metropolis and its colony may be postponed by the former conceding to the latter a greater or less degree of local autonomy, nearly approaching to independence. But in all cases where a positive antagonism has come to exist between the mother-country and its colonial subjects, where the sense of oppres-

sion is strongly felt by the latter, and especially where years of relentless warfare have alienated the parties, one from another, more widely than they are sundered by the ocean itself, their political separation is inevitable. It is one of those conclusions which have been aptly called the inexorable logic of events.

Entertaining these views, the President at an early day tendered to the Spanish Government the good offices of the United States for the purpose of effecting by negotiation the peaceful separation of Cuba from Spain, and thus putting a stop to the further effusion of blood in the island, and relieving both Cuba and Spain from the calamities and charges of a protracted civil war, and of delivering the United States from the constant hazard of inconvenient complications on the side either of Spain or of Cuba. But the well-intentioned proffers of the United States on that occasion were unwisely rejected by Spain, and, as it was then already foreseen, the struggle has continued in Cuba with incidents of desperate tenacity on the part of the Cubans, and of angry fierceness on the part of the Spaniards, unparalleled in the annals of modern warfare.

True it is that now, when the war has raged for more than five years, there is no material change in the military situation. The Cubans continue to occupy, unsubdued, the eastern and central parts of the island, with exception of the larger cities or towns, and of fortified points held by the government, but their capacity of resistance appears to be undiminished, and with no abatement of their resolution to persevere to the end in repelling the domination of Spain.

Meanwhile this condition of things grows, day by day, more and more insupportable to the United States. The Government is compelled to exert constantly the utmost vigilance to prevent infringement of our law on the part of Cubans purchasing munitions or materials of war, or laboring to fit out military expeditions in our ports; we are constrained to maintain a large naval force to prevent violations of our sovereignty, either by the Cubans or the Spaniards; our people are horrified and agitated by the spectacle, at our very doors, of war, not only with all its ordinary attendants of devastation and carnage, but with accompaniments of barbarous shooting of prisoners of war, or their summary execution by military commissions, to the scandal and disgrace of the age; we are under the necessity of interposing continually for the protection of our citizens against wrongful acts of the local authorities of Spain in Cuba; and the public peace is every moment subject to be interrupted by some unforeseen event, like that which recently occurred, to drive us at once to the brink of war with Spain. In short, the state of Cuba is the one great cause of perpetual solicitude in the foreign relations of the United States.

While the attention of this Government is fixed on Cuba, in the interest of humanity, by the horrors of civil war prevailing there, we cannot forbear to reflect, as well in the interest of humanity as in other relations, that the existence of slave-labor in Cuba, and its influence over the feelings and interests of the Peninsular Spaniards, lie at the foundation of all the calamities which now afflict the island. Except in Brazil and in Cuba, servitude has almost disappeared from the world. Not in the Spanish-American republics alone, nor in the British possessions, nor in the United States, nor in Russia—not in those countries alone, but even in Asia, and in Africa herself—the bonds of the slave have been struck off, and personal freedom is the all but universal rule and public law, at least to the nations of Christendom. It cannot long continue in Cuba, environed as that island is by communities of emancipated slaves in the other West India Islands and in the United States.

Whether it shall be put an end to by the voluntary act of the Spanish Government, by domestic violence, or by the success of the revolution of Yara, or by what other possible means, is one of the grave problems of the situation, of hardly less interest to the United States than the independence of Cuba.

The President has not been without hope that all these questions might be settled by the spontaneous act of Spain herself, she being more deeply interested in that settlement than all the rest of the world. It seemed for a while that such a solution was at hand, during the time when the Government of Spain was administered by one of the greatest and wisest of the statesmen of that country, or indeed of Europe, President Castelar. Before attaining power, he had announced a line of policy applicable to Cuba, which, though falling short of the concession of absolute independence, yet was of a nature to command the approbation of the United States.

"Let us," he declared, on a memorable occasion, "let us reduce to formulas our policy in America.

"1. *The immediate abolition of slavery.*

"2. Autonomy of the islands of Porto Rico and Cuba, which shall have a parliamentary Assembly of their own, their own administration, their own government, and a federal tie to unite them with Spain, as Canada is united with England, in order that we may found the liberty of those states, and at the same time conserve the national integrity. I desire that the islands of Cuba and Porto Rico shall be our sisters, and I do not desire that they shall be transatlantic Polands."

I repeat, that to such a line of policy as this, especially as it relates to Cuba, the United States would make no objection; nay, they could accord to it hearty coöperation and support, as the next best thing to the absolute independence of Cuba.

Of course, the United States would prefer to see all that remains of colonial America pass from that condition to the condition of absolute independence of Europe.

But we might well accept such a solution of present questions as, while terminating the cruel war which now desolates the island and disturbs our political intercourse, should primarily and at the outset abolish the iniquitous institution of slavery, and, in the second place, should place Cuba practically in the possession of herself by means of political institutions of self-government, and enable her, while nominally subject to Spain, yet to cease to be the victim of Spanish colonial interests, and to be capable of direct and immediate relations of interests and intercourse with the other states of America. * * *

In these circumstances, the question what decision the United States shall take is a serious and difficult one, not to be determined without careful consideration of its complex elements of domestic and foreign policy, but the determination of which may at any moment be forced upon us by occurrences either in Spain or in Cuba.

Withal the President cannot but regard *independence*, and emancipation, of course, as the only certain, and even the necessary, solution of the question of Cuba. And, in his mind, all incidental questions are quite subordinate to those, the larger objects of the United States in this respect.

It requires to be borne in mind that, in so far as we may contribute to the solution of these questions, this Government is not actuated by any selfish or interested motive. The President does not meditate or desire the annexation of Cuba to the United States, but its elevation into an independent republic of freemen, in harmony with ourselves and with the other republics of America.

You will understand, therefore, that the policy of the United States in reference to Cuba at the present time is one of expectancy, but with positive and fixed convictions as to the duty of the United States when the time or emergency of action shall arrive. When it shall arrive, you will receive specific instructions what to do. Meantime, instructed as you now are as to the intimate purposes of the Government, you are to act in conformity therewith in the

absence of any specific instructions, and to comport yourself accordingly in all your communications and intercourse, official or unofficial, with persons or public men in Spain.

In conclusion, it remains to be said that, in accordance with the established policy of the United States in such cases, as exemplified in the many changes of government in France during the last eighty years, and in the Mexican Republic since the time of its first recognition by us, and in other cases which have occurred in Europe and America, you will present your credentials to the persons or authorities whom you may find in the actual exercise of the executive power of Spain.

DISCIPLES OF CHRIST. The *General Christian Missionary Convention* met at Cincinnati, Ohio, October 20th. About six hundred delegates were present; Isaac Essett was chosen president. A quarter-centennial address was delivered by W. K. Pendleton, in which was given an historical sketch of the convention. Progress was reported by the general secretary in the organization of Sunday-schools in the States of Kentucky, Missouri, Ohio, Indiana, New York, Pennsylvania, Virginia, West Virginia, Illinois, Iowa, Wisconsin, and Michigan. Seventy-five Sunday-schools had been organized in Kentucky since November, 1873. A normal Sunday-school institute had been held in Ohio, and a great Sunday-school convention in Indiana. The committee to whom the report of the general secretary was referred, recommended that his work be continued, and that each State desiring his services be asked to become responsible for the expense of the work done within its bounds. An essay was read on the subject of home missions; it elicited a general discussion: the conviction was expressed that efforts should be made to furnish the churches with better pastoral care, to give assistance to weak and declining churches, to look more carefully after the freedmen, to secure the preaching of the gospel to the foreign population coming into the country, and to build up the cause of the denomination in the cities. The general board were instructed by the convention: 1. To employ four evangelists to work wherever the board might suggest. 2. To endeavor to receive and appropriate moneys as follows: to the establishment of missions among the freedmen, $3,000; for the Bible-school at Louisville, Ky., $1,000; for missions in Nebraska, $2,000; for missions in Kansas, $2,000. 3. To have personal appeals for funds made through the corresponding secretary, and to appoint such other agents as may be necessary to promote the foregoing objects. The committee appointed at the previous meeting of the General Convention to make arrangements to have the Disciples of Christ appropriately represented at the celebration of the centennial anniversary of American Independence, in 1876, reported that to set forth in a proper manner the various features which it would be desirable to have represented on the part of the Disciples, embracing their literature, their history, the statistics of their churches, colleges, and their journalism, would cost not less than $25,000. The subject was laid on the table.

The report of the Board of Missions presented an encouraging view of the work of the year just passed in Ohio, Kentucky, Nebraska, Michigan, Indiana, Kansas, Illinois, Virginia, West Virginia, Pennsylvania, New York, Colorado, Wisconsin, and Missouri. Sixty-four new places had been visited, thirty-seven churches organized, 288 weak churches helped, 4,497 persons added to the churches, and the sum of $64,045.97 contributed to the purposes of the board. The board represented that a chief obstacle to their more complete success lay in a provision of the constitution which authorized donors to disburse their own contributions. The operation of this rule was regarded by the board as such as practically to destroy "church coöperation," and they recommended such amendment as would obviate its objectionable features. The board advised that some measure be adopted by which the State treasurers should be enabled to pay regularly whatever may be due to the general board; that each county in a State be made a district, with an advisory committee of three to promote Sunday-school institutes, to make provision for churches desiring ministerial labor, to hold mass meetings, to see that contributions are promptly forwarded to the general board, and to act as a medium of communication between the county and State boards. The convention instructed the general board to establish one or more foreign missions. A meeting of women was held during the session of the convention at which a "Woman's Christian Missionary Society" was organized. Delegates were present from nine States. The announcement was made that the society started with a fund of $391 in its treasury. A formal reception was given it by the convention, when addresses were made by Mrs. Goodwin on the "Undeveloped Talent of the Church," and by Mrs. S. E. Pearre on "Woman's Board Missions." The convention gave recognition and approval to the new society, and pledged coöperation with it. A committee who had been commissioned to bear the friendly greetings of the convention to the General Conference of Free-will Baptists at Providence, R. I., made a report of their proceedings. The Rev. C. M. Graham, of Chicago, visited the convention as a fraternal delegate from the Free-will Baptists. He asked the appointment of a committee to confer with a similar committee of that denomination on the subject of union. He represented that the Free-will Baptists were quite favorable to union. A committee of conference on the subject was appointed, consisting of five members.

The general annual meeting of the churches of the *Disciples of Christ, in England, Scotland, Ireland, and Wales*, took place August 11th, at Carlisle. The reports of the stations

were incomplete. Eighty-two out of one hundred and nine churches made returns. Sixty-one churches reported an increase of one hundred and twenty-nine members since 1873. The treasurer's statement showed his receipts to have been £813 13*s.* 6*d.* and his ex-expenditures £931 16*s.* 4*d.*

DISTRICT OF COLUMBIA. In January, petitions were introduced into the Senate of the United States and the House of Representatives, signed by the citizens of the District of Columbia, praying that an investigation into the affairs of the District be ordered. The chief cause of complaint was directed against the action of the Board of Public Works, which had entered upon an extensive system of public improvements which was bringing financial embarrassments upon the District, and grievous burdens upon the inhabitants. It was further alleged that the proceedings of the board had been attended with irregularities and corrupt practices.

Congress proceeded at once to appoint a joint committee, consisting of Senators Thurman and Boutwell (the latter, in consequence of illness, was succeeded by Senator Allison), and Messrs. Stewart, Wilson, Hubbell, Bass, Jewett, and Hamilton, of the House of Representatives. The first meeting of the committee was held on February 11th, and on the 5th of March the investigation was begun. After an immense amount of testimony had been taken, a report was made on the 16th of June. The committee reached the following conclusion:

> Your committee are of opinion that the present embarrassments of this District, and the serious complications which now environ its finances and affairs, are primarily chargeable to the attempt early made by the authorities placed over it to inaugurate a comprehensive and costly system of improvements to be completed in a brief space of time, which ought to have required for its completion several years.
>
> A system of improvements, covering more than a hundred miles of streets, contemplating a system of sewerage and of other expenditures which were to extend over almost every street and avenue in the cities of Washington and Georgetown, as well as of the roads in the county, and to be undertaken at a single stroke, without the preliminary organization of the various details of engineering work, and plats, plans, and estimates, in a community situated as was this at the time, could not well be otherwise than pernicious. It made but little difference in some respects what plan of letting contracts was adopted; any plan under these circumstances would have been found defective. And in contemplation of the fact that, when the Board of Public Works entered upon the execution of this plan of improvements which, as it was originally designed, involved the expenditure of not less than $6,000,000, it, from one cause or another, so changed and enlarged the plan as to involve an expenditure of $18,000,000 instead, it is not surprising that we find that the difficulties and embarrassments which might be expected to attend the lesser scheme were proportionately increased; and while your committee join in the general expression of gratification at beholding the improved condition of the national capital, the embellishments and adornments everywhere visible, they cannot but condemn the methods by which this sudden and rapid transition was secured.
>
> Taking into consideration the expense involved in the comprehensive plan before referred to, and enlarged as stated, your committee are of opinion that the board adopted an erroneous and, in its results, a vicious method of letting contracts for this work, viz., without competition open to the public; and that the method adopted by the board resulted in the payment of an increased price over and above what would have been paid if open, fair, and free competition had been invited.
>
> After the passage of the loan act of $4,000,000, the Board of Public Works invited proposals and bids for work to be done in pursuance of said plan, and on the 1st of September opened all these various bids, giving notice afterward to the bidders that none of the bids would be accepted, but that the board would fix a scale of prices for the various classes of work, and let contracts at their discretion, upon this scale of fixed prices. This opened the way for favoritism in the letting of contracts, and for a system of brokerage in contracts which was demoralizing in its results, bringing into the list of contractors a class of people unaccustomed to perform the work required, and enabling legitimate contractors to pay large prices in order to secure contracts, and, in the opinion of your committee, was the beginning of nearly all the irregularities disclosed in the testimony in the letting of contracts. Any system which would enable an adventurer to come from a distant city, and, in the name of a contracting firm, make proffers of fifty cents per yard to any person having, or supposed to have, influence with the board, whereby a paving contract could be secured, and, after persistent effort, succeed in securing a contract, and actually binding his principals, the contractors, to pay $97,000 for a contract of 200,000 yards of pavement, after an effort of five months to secure it, the gross amount to be received being only about $700,000, in its nature must be vicious, and ought to be condemned.

The committee called attention to discrepancies in the measurements for work done as made by an engineer appointed by the committee contrasted with those certified to by the board, and criticised the absolute power vested in the vice-president, Shepherd, and also the reckless manner in which the functions of treasurer and auditor had been performed. The committee "unanimously arrived at the conclusion that the existing form of government of the District is a failure; that it is too cumbrous and too expensive; that the powers and relations of its several departments are so ill-defined that limitations intended by Congress to apply to the whole government are construed to limit but one of its departments; that it is wanting in sufficient safeguard against maladministration and the creation of indebtedness; that the system of taxation it allows opens a door to great inequality and injustice, and is wholly insufficient to secure the prompt collection of taxes; and that no remedy short of its abolition and the substitution of a simpler, more restricted and economical government will suffice."

As the session of Congress was near its close, the committee recommended the appointment of a commission to manage the affairs of the District under limited and restrained powers; and that a committee should be appointed to devise a new frame of government to be submitted to Congress at its next session.

In accordance with this recommendation, a

bill was passed by Congress, and approved June 20th, providing for the appointment of commissioners to wind up the affairs of the District, and of a committee comprising two Senators and two members of the House, to prepare a suitable form of permanent government. The report of the committee was submitted to Congress December 7th, through the chairman, Senator Morrill. The plan submitted was, that Congress should exercise that exclusive legislation over the District with which it is invested by the Constitution, and provide for the general superintendence of its affairs, and the enforcement of the laws through officers and agents directly amenable to the supreme executive authority of the United States. The form of government recommended by the committee was as follows:

As to a frame of government, observing their instruction and the constitutional limitations on the appointing power, and having regard to proper efficiency of administration and of official responsibility, the committee have deemed it necessary to make the new government for the District a department in the Government of the United States strictly limited to the affairs of said District. At the head of this department shall be a board of general control, designated "a Board of Regents," of three persons, to be appointed by the President and confirmed by the Senate, with a certain tenure of office, and removable only for cause, who are to exercise the chief executive authority, always acting as a public body and with limited and defined powers. Within this department and subject to its supervision are distinct subdivisions of bureaus, the head of each of which is a Board of Coöperative Control, whose duties and powers are also defined, and whose doings are open to proper inspection. These boards are appointed by the regents, except as to the Board of Education, a portion of the members of which are to be elected by the inhabitants, and except, also, as to the Bureau of Public Works, the head of which is to be detailed by the President from the Engineer Corps of the army, have a certain tenure of office, and are removable by the regents for cause. They relate to and embrace the entire civil service of the District, except such as falls under the executive departments and the courts, and are denominated the Boards of Health, Education, Police, Excise, Public Works, Fire, and Buildings.

With the view of relieving Congress of embarrassing details of strictly municipal affairs, it has been thought desirable to present a framework of government that could be administered with as infrequent appeals to its authority as the nature of the case would allow. To accomplish this it was necessary to confer sweeping, ill-defined, discretionary authority, or to enter into details as to the extent and manner of exercising authority, and accordingly the latter course has been adopted, and, the committee trust, will be found to have secured thereby a desirable publicity of official action, certainly as to method, responsibility for abuses, efficiency in the public service, and protection to individual rights. Authority to make suitable and necessary ordinances and regulations in harmony with the laws of Congress has been conferred upon those charged with the executive administration as extensive as the local interests are likely to require.

The militia system has been revived, and a limited and comparatively inexpensive force provided for, deemed adequate, however, to any demands for its service which may be anticipated.

The judicial courts, standing upon the basis of statutes of the United States, quite independent of local control, are not deemed necessarily to fall within the scope of the authority of the committee, and have received no share of its attention, except as to the Police Court, in regard to which certain provisions are made with the view of efficiency and dispatch in the transaction of its business. The establishment of a Municipal Court is also provided for, having exclusive civil jurisdiction of matters noncognizable by justices of the peace, and thus superseding the office and jurisdiction of said justices; and in addition thereto it is provided that any Judge of said Municipal Court may, under such regulations as may be prescribed by the Supreme Court of the District, be designated by the Chief-Justice of said court to hold a term and sessions of the Police Court, with the view of facilitating the business therein.

Provision is made for the assessment and collection of a tax upon the real and personal estates of the inhabitants of the District, except such as are exempt by law, at the supposed medium rate of $2 on the $100, the valuation for such taxation being the true value thereof, as upon a just appraisement between debtor and creditor. The assessors are to be appointed by the regents, and may be by them removed for cause. The taxes are to be payable to the Collector of Internal Revenue for the District, collected by him and paid into the United States Treasury, and all sums provided for from any source whatever are to be collected and paid into the Treasury of the United States in like manner, and all payments for salaries and compensations and for other purposes are to be made by the Treasurer of the United States upon appropriations by Congress, and all vouchers and accounts are to be audited by, and all warrants and requisitions are to pass under the control of, the proper officers of the Treasury of the United States.

Annual reports are to be made by the regents to the President, to be transmitted to Congress with a particular statement of the public service for the past year, the application made of all public moneys, with detailed statements of the expense of each bureau and separate office of said government.

The net debt of the District of Columbia, less securities on hand and available, was thus reported by President Grant in his annual message at the opening of Congress: Bonded debt issued prior to July 1, 1874, $8,883,940; 3.65 bonds, act of Congress, June 20, 1874, $2,088,-168.78; certificate of the Board of Audit, $4,-770,533.45; total, $15,742,667.61—less special improvement assessments chargeable to private property in excess of any demand against such assessments, $1,614,054.37; less Chesapeake & Ohio Canal bonds, $75,000, and Washington & Alexandria Railroad bonds, $59,000; in the hands of the sinking-fund, $1,748,054.37, leaving the actual debt, less said assets, $13,-994,613.24. In addition to this, there are claims preferred against the government of the District amounting in the estimated aggregate reported by the Board of Audit to $3,147,-787.48, of which the greater part will probably be rejected. This sum can with no more propriety be included in the debt account of the District government than can the thousands of claims against the General Government be included as a portion of the national debt, but the aggregate sum thus stated includes something more than the funded debt chargeable exclusively to the District of Columbia. The act of Congress of June 28, 1874, contemplates an apportionment between the

were incomplete. Eighty-two out of one hundred and nine churches made returns. Sixty-one churches reported an increase of one hundred and twenty-nine members since 1873. The treasurer's statement showed his receipts to have been £813 18*s.* 6*d.* and his ex-expenditures £931 16*s.* 4*d.*

DISTRICT OF COLUMBIA. In January, petitions were introduced into the Senate of the United States and the House of Representatives, signed by the citizens of the District of Columbia, praying that an investigation into the affairs of the District be ordered. The chief cause of complaint was directed against the action of the Board of Public Works, which had entered upon an extensive system of public improvements which was bringing financial embarrassments upon the District, and grievous burdens upon the inhabitants. It was further alleged that the proceedings of the board had been attended with irregularities and corrupt practices.

Congress proceeded at once to appoint a joint committee, consisting of Senators Thurman and Boutwell (the latter, in consequence of illness, was succeeded by Senator Allison), and Messrs. Stewart, Wilson, Hubbell, Bass, Jewett, and Hamilton, of the House of Representatives. The first meeting of the committee was held on February 11th, and on the 5th of March the investigation was begun. After an immense amount of testimony had been taken, a report was made on the 16th of June. The committee reached the following conclusion:

> Your committee are of opinion that the present embarrassments of this District, and the serious complications which now environ its finances and affairs, are primarily chargeable to the attempt early made by the authorities placed over it to inaugurate a comprehensive and costly system of improvements to be completed in a brief space of time, which ought to have required for its completion several years.
>
> A system of improvements, covering more than a hundred miles of streets, contemplating a system of sewerage and of other expenditures which were to extend over almost every street and avenue in the cities of Washington and Georgetown, as well as of the roads in the county, and to be undertaken at a single stroke, without the preliminary organization of the various details of engineering work, and plats, plans, and estimates, in a community situated as was this at the time, could not well be otherwise than pernicious. It made but little difference in some respects what plan of letting contracts was adopted; any plan under these circumstances would have been found defective. And in contemplation of the fact that, when the Board of Public Works entered upon the execution of this plan of improvements which, as it was originally designed, involved the expenditure of not less than $6,000,000, it, from one cause or another, so changed and enlarged the plan as to involve an expenditure of $18,000,000 instead, it is not surprising that we find that the difficulties and embarrassments which might be expected to attend the lesser scheme were proportionately increased; and while your committee join in the general expression of gratification at beholding the improved condition of the national capital, the embellishments and adornments everywhere visible, they cannot but condemn the methods by which this sudden and rapid transition was secured.
>
> Taking into consideration the expense involved in the comprehensive plan before referred to, and enlarged as stated, your committee are of opinion that the board adopted an erroneous and, in its results, a vicious method of letting contracts for this work, viz., without competition open to the public; and that the method adopted by the board resulted in the payment of an increased price over and above what would have been paid if open, fair, and free competition had been invited.
>
> After the passage of the loan act of $4,000,000, the Board of Public Works invited proposals and bids for work to be done in pursuance of said plan, and on the 1st of September opened all these various bids, giving notice afterward to the bidders that none of the bids would be accepted, but that the board would fix a scale of prices for the various classes of work, and let contracts at their discretion, upon this scale of fixed prices. This opened the way for favoritism in the letting of contracts, and for a system of brokerage in contracts which was demoralizing in its results, bringing into the list of contractors a class of people unaccustomed to perform the work required, and enabling legitimate contractors to pay large prices in order to secure contracts, and, in the opinion of your committee, was the beginning of nearly all the irregularities disclosed in the testimony in the letting of contracts. Any system which would enable an adventurer to come from a distant city, and, in the name of a contracting firm, make proffers of fifty cents per yard to any person having, or supposed to have, influence with the board, whereby a paving contract could be secured, and, after persistent effort, succeed in securing a contract, and actually binding his principals, the contractors, to pay $97,000 for a contract of 200,000 yards of pavement, after an effort of five months to secure it, the gross amount to be received being only about $700,000, in its nature must be vicious, and ought to be condemned.

The committee called attention to discrepancies in the measurements for work done as made by an engineer appointed by the committee contrasted with those certified to by the board, and criticised the absolute power vested in the vice-president, Shepherd, and also the reckless manner in which the functions of treasurer and auditor had been performed. The committee "unanimously arrived at the conclusion that the existing form of government of the District is a failure; that it is too cumbrous and too expensive; that the powers and relations of its several departments are so ill-defined that limitations intended by Congress to apply to the whole government are construed to limit but one of its departments; that it is wanting in sufficient safeguard against maladministration and the creation of indebtedness; that the system of taxation it allows opens a door to great inequality and injustice, and is wholly insufficient to secure the prompt collection of taxes; and that no remedy short of its abolition and the substitution of a simpler, more restricted and economical government will suffice."

As the session of Congress was near its close, the committee recommended the appointment of a commission to manage the affairs of the District under limited and restrained powers; and that a committee should be appointed to devise a new frame of government to be submitted to Congress at its next session.

In accordance with this recommendation, a

bill was passed by Congress, and approved June 20th, providing for the appointment of commissioners to wind up the affairs of the District, and of a committee comprising two Senators and two members of the House, to prepare a suitable form of permanent government. The report of the committee was submitted to Congress December 7th, through the chairman, Senator Morrill. The plan submitted was, that Congress should exercise that exclusive legislation over the District with which it is invested by the Constitution, and provide for the general superintendence of its affairs, and the enforcement of the laws through officers and agents directly amenable to the supreme executive authority of the United States. The form of government recommended by the committee was as follows:

As to a frame of government, observing their instruction and the constitutional limitations on the appointing power, and having regard to proper efficiency of administration and of official responsibility, the committee have deemed it necessary to make the new government for the District a department in the Government of the United States strictly limited to the affairs of said District. At the head of this department shall be a board of general control, designated "a Board of Regents," of three persons, to be appointed by the President and confirmed by the Senate, with a certain tenure of office, and removable only for cause, who are to exercise the chief executive authority, always acting as a public body and with limited and defined powers. Within this department and subject to its supervision are distinct subdivisions of bureaus, the head of each of which is a Board of Coöperative Control, whose duties and powers are also defined, and whose doings are open to proper inspection. These boards are appointed by the regents, except as to the Board of Education, a portion of the members of which are to be elected by the inhabitants, and except, also, as to the Bureau of Public Works, the head of which is to be detailed by the President from the Engineer Corps of the army, have a certain tenure of office, and are removable by the regents for cause. They relate to and embrace the entire civil service of the District, except such as falls under the executive departments and the courts, and are denominated the Boards of Health, Education, Police, Excise, Public Works, Fire, and Buildings.

With the view of relieving Congress of embarrassing details of strictly municipal affairs, it has been thought desirable to present a framework of government that could be administered with as infrequent appeals to its authority as the nature of the case would allow. To accomplish this it was necessary to confer sweeping, ill-defined, discretionary authority, or to enter into details as to the extent and manner of exercising authority, and accordingly the latter course has been adopted, and, the committee trust, will be found to have secured thereby a desirable publicity of official action, certainly as to method, responsibility for abuses, efficiency in the public service, and protection to individual rights. Authority to make suitable and necessary ordinances and regulations in harmony with the laws of Congress has been conferred upon those charged with the executive administration as extensive as the local interests are likely to require.

The militia system has been revived, and a limited and comparatively inexpensive force provided for, deemed adequate, however, to any demands for its service which may be anticipated.

The judicial courts, standing upon the basis of statutes of the United States, quite independent of local control, are not deemed necessarily to fall within the scope of the authority of the committee, and have received no share of its attention, except as to the Police Court, in regard to which certain provisions are made with the view of efficiency and dispatch in the transaction of its business. The establishment of a Municipal Court is also provided for, having exclusive civil jurisdiction of matters noncognizable by justices of the peace, and thus superseding the office and jurisdiction of said justices; and in addition thereto it is provided that any Judge of said Municipal Court may, under such regulations as may be prescribed by the Supreme Court of the District, be designated by the Chief-Justice of said court to hold a term and sessions of the Police Court, with the view of facilitating the business therein.

Provision is made for the assessment and collection of a tax upon the real and personal estates of the inhabitants of the District, except such as are exempt by law, at the supposed medium rate of $2 on the $100, the valuation for such taxation being the true value thereof, as upon a just appraisement between debtor and creditor. The assessors are to be appointed by the regents, and may be by them removed for cause. The taxes are to be payable to the Collector of Internal Revenue for the District, collected by him and paid into the United States Treasury, and all sums provided for from any source whatever are to be collected and paid into the Treasury of the United States in like manner, and all payments for salaries and compensations and for other purposes are to be made by the Treasurer of the United States upon appropriations by Congress, and all vouchers and accounts are to be audited by, and all warrants and requisitions are to pass under the control of, the proper officers of the Treasury of the United States.

Annual reports are to be made by the regents to the President, to be transmitted to Congress with a particular statement of the public service for the past year, the application made of all public moneys, with detailed statements of the expense of each bureau and separate office of said government.

The net debt of the District of Columbia, less securities on hand and available, was thus reported by President Grant in his annual message at the opening of Congress: Bonded debt issued prior to July 1, 1874, $8,883,940; 8.65 bonds, act of Congress, June 20, 1874, $2,088,-168.73; certificate of the Board of Audit, $4,-770,533.45; total, $15,742,667.61—less special improvement assessments chargeable to private property in excess of any demand against such assessments, $1,614,054.37; less Chesapeake & Ohio Canal bonds, $75,000, and Washington & Alexandria Railroad bonds, $59,000; in the hands of the sinking-fund, $1,748,054.37, leaving the actual debt, less said assets, $13,-994,613.24. In addition to this, there are claims preferred against the government of the District amounting in the estimated aggregate reported by the Board of Audit to $8,147,-787.48, of which the greater part will probably be rejected. This sum can with no more propriety be included in the debt account of the District government than can the thousands of claims against the General Government be included as a portion of the national debt, but the aggregate sum thus stated includes something more than the funded debt chargeable exclusively to the District of Columbia. The act of Congress of June 28, 1874, contemplates an apportionment between the

United States Government and the District of Columbia in respect to the payment of the principal and interest of the 3.65 bonds. Therefore, in computing with precision the bonded debt of the District, the aggregate sums above stated as respects the 3.65 bonds now issued, the outstanding certificates of the Board of Audit, and the unadjusted claims pending before that board, should be reduced to the extent of the amount to be apportioned to the United States Government.

DOMINION OF CANADA. Since our last extended notice of this Confederation, it has been further enlarged by the admission of the old British colony of Prince Edward's Island, situated in the Gulf of St. Lawrence, southern portion, and separated from the main-land by the Northumberland Straits. It is a fertile island, 130 miles long by 34 wide, devoted chiefly to agriculture; but its fisheries are valuable, and ship-building is also prosecuted with some enterprise. Its population, according to the latest census, is 103,000. For some time the inhabitants of the island were more unwilling than otherwise to enter the Union; but serious financial embarrassment arose, and the public mind naturally turned toward Ottawa for relief. In addition to the benefit which Prince Edward's will enjoy in common with the other provinces forming the Confederation, it was provided that the railroad, of 200 miles in length, which the local government had undertaken to construct at a cost of $3,250,000, should become the property of the Dominion. Further exceptional advantage was conferred in the form of aid to steamboat and telegraphic communication with the main-land.

To complete the union of provinces as authorized by imperial authority in 1869, it only remains now to obtain the assent of Newfoundland; and, doubtless, means to that end will soon present themselves.

This being accomplished, the Dominion of Canada will extend from the last-mentioned possession, on the Atlantic Ocean, to Queen Charlotte's Island on the Pacific, extending across the continent in its broadest part, a distance of 80° of longitude, but in high latitude, and occupying the whole of the country north of the territory of the United States. This space appears large on the map, but we are told that "the greater part of it is beyond the limit of the growth of trees, and much of the residue is too cold to constitute a chosen residence for Europeans." Its geographical configuration is also remarkable; denied expansion on the one side by the frozen ocean, and on the other by the United States, it somewhat resembles a mathematical line, having length without breadth.

Recent political proceedings in the Dominion have been of a grave character, arising in the main from what may, in a country of such limited resources, be considered a gigantic railway policy. It will be remembered that, in the parliamentary session of 1872, an act was passed authorizing the construction of a Pacific Railway by a private company, to be subsidized by the Government. On the 5th of February, 1873, a charter was granted for this purpose to Sir Hugh Allan and others, and almost immediately arose suspicions of questionable prearrangements between the Government and Sir Hugh. Charges were accordingly formulated, a parliamentary investigation, and, subsequently, an inquiry by royal commission, were entered into, resulting in such disclosures of monetary transactions between the leader of the Government, Sir John, and the leader of the company, Sir Hugh, as finally caused the complete overthrow of the Macdonald administration. A short time previous to this event Sir Hugh Allan relinquished the charter, having been unable to obtain in England the necessary capital to commence the construction of the road. Alexander Mackenzie, Esq., the leader of the opposition to the government of Sir John A. Macdonald, became the prime-minister of the succeeding administration, formed under command of the Governor-General, the Earl of Dufferin, in November, 1873.

The immediate and pressing question which the new Government had to deal with was the construction of the Pacific Railway, to which, undoubtedly, the Dominion had been pledged by the previous Executive, and in an address to his constituents, the electors of the county of Lambton, issued immediately upon his acceptance of office, Mr. Mackenzie is thus explicit:

> We must meet the difficulty imposed on Canada by the reckless arrangements of the late Government with reference to the Pacific Railway, under which they pledged the honor and resources of this country to the commencement of that gigantic work in July, 1873, and to its completion by July, 1881. That compact has already been broken. Over a million has now been spent in surveys, but no part of the line has yet been located, and the bargain is, as we always said it was, incapable of literal fulfillment. With a view to obtain a speedy means of communication across the continent, and to facilitate the construction of the railway itself, it will be our policy to utilize the enormous stretches of magnificent water communication which lie between a point not far from the Rocky Mountains and Fort Garry, and between Lake Superior and French River on the Georgian Bay, thus avoiding for the present the construction of about 1,800 miles of railway, estimated to cost from $60,000,000 to $80,000,000, and rendering the resources of the country available for the prosecution of those links of the Pacific Railway which are necessary in order to form a complete line of rail and steamboat communication from east to west.

Recent official reports show that the surveys for this work are rapidly advancing; that the Pembina branch of the road is already under contract; that tenders for the line from Nipissing to Georgian Bay have been called for; the telegraph and wagon-road through British Columbia commenced; and that the premier, availing himself of the favorable state of the markets, has purchased 40,000 tons of steel rails for the purposes of this great national undertaking.

The legislation of the Dominion parliamentary sessions of 1873–'74 has been eminently practical and progressive. An act of the former session, cap. 33, confirms a contract between the Postmaster-General and Sir Hugh Allan (who has been engaged in this service for many years), for a weekly mail-service between Quebec or Montreal and Liverpool in summer, and Portland and Liverpool in winter, for the sum of $126,533.33 per annum—either party having power to end the contract upon giving one year's notice, and the Postmaster-General having said power at any time for non-performance. A stringent law was passed, in which, besides dealing severely with "corrupt practices," is prescribed against the party wrongfully elected, not only the loss of the seat, but incapacity to sit during that Parliament. The ballot has also been introduced, and, so far, has worked successfully. Cases of controverted elections are by another law transferred from parliamentary committees to the Supreme Courts. The operation of this law has been observed to be prompt and effective, it being evident that the grosser forms of bribery must certainly disappear under its strictness and influence. A source of much difficulty between the governments of Ontario and Quebec has been removed by the act, cap. 30, under which the Dominion Government assumes the total debt of those provinces at the time of the Union, viz., $73,006,088, instead of $62,000,000, as laid down in the Act of Confederation (1867). As this change disturbed the monetary arrangements generally, under which the Union took place, proportionate concessions have been made to the other four provinces.

The Minister of Finance, in his official statement, April 1, 1873, gave a good account of the material prosperity of the Dominion. Deposits in banks had increased in five years nearly $37,000,000; the exports in that time had nearly doubled; the increase of imports was still larger. Notwithstanding, he said, the large outlays in constructing the Intercolonial Railway, in purchasing the Northwest Territory, in assuming the debt of British Columbia, and the expenditure on the Pacific Railway survey, the Dominion debt did not amount to one cent more per head than when the provinces were confederated. The revenue of the fiscal year was $20,714,813; the expenditure $17,559,468. By another arrangement of figures, however, the successor to this gentleman, the present Finance Minister, satisfied Parliament that a deficit of not less than $3,000,000 existed when he came into office, to meet which he obtained its consent to raising the duty on general imports from 15 to 17½ per cent., to reimposing a small amount on tea and coffee, to a limited increase of the excise duties, and in other particulars to a readjustment of the tariff.

The railways of Canada, on the 1st of October last, extended over 4,022 miles; the traffic returns, from July to December, amounted to $8,633,759, of which $4,903,759 is set down to the Grand Trunk Company.

The progress of telegraphy has also been rapid in proportion to the population. The position of the Montreal Telegraph Company, on the 17th of October last, will be seen by the following table:

Miles of poles	12,001
Miles of wire	20,267
Miles of cable	12¾
Number of offices	1,288
Sets of instruments	1,612
Messages for the year ending November, 1873	1,734,752
Words to newspapers, nearly	9,000,000

Of the Dominion Telegraph Company it is reported:

Number of offices	300
Miles in operation	6,000
Number of employés	400
Sets of instruments	500

The increase of tonnage and the steady advance of marine and fishery interests in the Dominion are also observable. The official reports of the Department of Marine show high appreciation, on the part of the responsible minister, of the duties devolving upon him. In the Quebec division, for instance, extending to the coasts of Labrador and Newfoundland, there were, at the close of navigation, 35 lighthouses, 5 light-ships with steam fog-whistles, 52 buoys, and 35 beacons. The fisheries of the Dominion are also reported to be much on the increase. A protective system has been adopted in favor of the estuary, river, and inland fisheries. About 1,000 decked vessels, and 17,000 open boats, with not less than 42,000 men, are computed to be engaged in the several provinces. The latest official statement estimates the value of the catch of the year as $9,570,116, showing an increase of thirty-three per cent. in two years.

Much and increased interest is now manifested in Canada in favor of immigration. In the year 1872 the combined expenditure of the Dominion and Provincial Governments for this purpose amounted to $261,963,003. The vote of the Dominion Parliament, alone, last year was nearly $300,000. The return of the numbers settling in the early part of the year 1873 shows 42,000, including a large number of French Canadians who had returned from the United States—a movement which is still continuing, and is being much encouraged. During the past year (1874) the number of immigrants is less than that of the previous report, but it is stated that as a class, consisting chiefly of English agricultural laborers, they are desirable.

The Dominion obituary of the last two years contains many honored names, including those of Sir George E. Cartier, baronet, for many years a distinguished French-Canadian statesman; Hon. Joseph Howe, long known as one of the ablest and most patriotic of the public men of Nova Scotia, and the Governor

of that province at the time of his demise; Right Rev. John Farrell, Catholic Biship of Hamilton, Ontario; Hon. Henry Black, Judge of the Admiralty Court of Quebec, and an able jurist; Hon. J. W. Johnston, Judge of Nova Scotia; Lady Hincks, wife of Sir Francis Hincks; and Judge Armstrong, of Ottawa.

DUPLEX TELEGRAPHY. The progress of the inventions of the method for passing counter-messages simultaneously over a telegraph-wire, which has been brought to perfection and practical availability by Mr. Stearns, an American, is described as follows by the London *Engineer:*

The aim of the duplex system is to send messages in contrary directions at the same moment along the same line without causing any interruption to the transmission in either direction. Of course, it is well known that two currents cannot pass each other on a wire; but, by the various means which will be described below, the effects on the sending and receiving instruments at either end of the line are exactly the same as though the currents really passed one another. It was in 1853 that the first practical application of the duplex system was made by Dr. Gentl, a director in an Austrian telegraph company. By using a second battery, which he called his equating battery, he was enabled to send dispatches in contrary directions at the same time. He employed a relay, the coils of which were wound with two separate wires in contrary directions, one wire being in circuit with the line battery and the other with the equating battery, so that when the key was depressed and the whole current of the line battery passed through the relay it remained perfectly unaffected, since the magnetic effect on either coil was equal and opposite. This is of course true for both stations, so that either can send to the other without the relay of the sending station being in any way affected: and thus the first great difficulty in duplex telegraphy is overcome. The key that Dr. Gentl used was a double-current key with six contacts. In the circuit of the outer coils of the relay are inserted the equating battery and the front and middle contacts of the right side of the key. The inner coils are connected with the middle contact of the left side of the key and the line wire, the front contact on the same side being connected with line battery, and the back contact being to earth. Thus, the circuit of the line battery is through the two back contacts of the left side of the key, the interior coils, and the line wire to the farther station, where it goes through the interior coils and the two front contacts of the left side of the key to earth, and by earth back to the — pole of the line battery. The current from the equating battery at the same time passes through the two back contacts of the right side of the key, the outer coils of the relay, and back to the — pole of the same battery. It will be seen that the only use of the equating battery is to neutralize the effect of the line battery on the relay. If now both stations send currents at the same instant, one current will go as above described through the key and inner coils to the farther station's relay, which records the signal, as the equilibrium maintained by the second battery has been destroyed, and the other current will go by earth to the farther's station's relay, which will also be affected. In short, if A's line current destroys B's, B's equating current registers the signals, and *vice versa.*

This arrangement, which seems so perfect in theory, was found sadly deficient in practice; as it was found quite impossible to keep the currents of the line and equating batteries equal; for the local circuit being so much shorter than the line circuit, and the outer coils of the relay being always thicker and shorter than the inner ones, the tension of the line batteries remained almost constant, while that of the equating ones fell rapidly. Another fault of this arrangement was that, when contact is broken at the middle contacts of the key and made at the back ones, the circuit is for a moment interrupted at the front contact, and thus some signals are lost. Dr. Gentl afterward applied his principle to a chemical telegraph with somewhat better results.

The next system, which was invented by Messrs. Frischen and Halse in the following year, certainly did away with the above faults, as no equating battery nor double key was used. Their method was what may be called a "differential" one. The arrangement was very much the same as that of an ordinary Morse circuit. The relay is constructed in the same way as in the former arrangement; it is connected with the lever of an ordinary Morse key, one of the coils leading to the line and the other through a resistance to earth. This resistance is made equal to the resistance of the other portion of the circuit—viz., the other coils, the line, and one branch of the relay at the distant station—so that when the key is depressed the current has two paths open to it, each possessing equal resistance. Consequently, by the law that "if two circuits are open to a current it will divide itself between them in the inverse ratio of their resistance," half of it will flow through one set of coils, and the resistance, to earth; neutralizing the effect on the home relay of the other half of the current, which will flow through the other coils and line to the farther station. Thus, no signals will be given on the home relay. At the farther station, after producing the signal, the current will pass to earth, either through the earth contact of the key, or else, if the key is depressed, through the other branch of the relay and the resistance above mentioned. If, now, both stations be sending to one another at the same time, one current goes by line to the distant station, and the other current goes by earth.

But, perfect as this system seemed, it did not answer, owing to our defective knowledge of electro-magnetic induction and bad insulation, and nothing was heard of it for many years. Its revival is chiefly due to Mr. Stearns, an American, and it is now much more popular in that country than the old system. To such perfection has it been brought that on one of the most successful lines—that between New York and Chicago—it is stated that as many as 1,600 messages have been got off in ten hours. On this line there is a repeater half-way.

Mr. Stearns's system is also based on the differential arrangement, though slightly different from the last-mentioned plan, as it is based on the difference of potentials and not on the difference of currents. The relays are wound with two coils so arranged that, equal currents being passed through both, equal magnetization will be produced; but if those currents be passed through in opposite directions the relays will remain unaffected. By means of the keys —ordinary Morse—the line is always kept in contact with the earth or battery, except when the key is first depressed, when the battery is for a moment short-circuited. But contact is immediately after broken, which allows the current to flow through two circuits—one through the line and the other through the inserted resistance to earth. A condenser is inserted in the shortest circuit, of such capacity, that the condenser and the resistance coils are equivalent to the whole line. If, now, one circuit be sending, and not the other, a current is sent through both coils of the home relay in opposite directions, so that the instrument remains unaffected. Thence it passes through the line round the inner coils of the distant relay, which causes the instrument to record the signals, and to earth by the earth contact of the key. If both stations be sending at the same time, the line currents neutralize each other; but a current is sent round the outer coils of

each relay, through the artificial line composed of the resistance coils and condenser, and through earth to the distant station, where it passes through the inner coils of the relay, and records the signals. The particular advantage of this last system is, that any instrument, however delicate, may be worked by it. It may be here remarked that a number of small condensers are better than one large one, as small electro-magnetic coils may be inserted between the plates, provided with movable centres, by which the magnetic retardation may be increased or lessened.

E

EASTMAN, Rev. ORNAN, A. M., a Presbyterian clergyman, for forty-nine years an officer, and for forty-two years Secretary of the American Tract Society, born at Amherst, Mass., March 27, 1796; died in New York City, April 24, 1874. He pursued his preliminary studies at Amherst Academy, afterward Amherst College, and entered Yale College, whence he graduated in 1821 with honor. After completing his theological studies at Andover in 1824, he was for a year an efficient agent of the American Board of Commissioners of Foreign Missions; he entered the service of the American Tract Society in Boston, where he remained from 1825 to 1828, when he was transferred to the New York Society, first as General Agent for the Mississippi Valley, and from 1832 as Finance Secretary. In 1870 he withdrew from his more laborious duties, but was continued as Honorary Secretary till his death. Mr. Eastman was a man of wide and thorough culture, of an exceedingly retentive memory, of remarkable financial ability, of a simple but effective eloquence, and of great skill in the presentation of his cause. Few men in this country were more widely known; he had traversed almost every State and Territory of the Union, not only once but many times, and so genial were his manners, and so winning his address, that where he came oftenest he was most heartily welcome. He died after only five or six days' illness, his health all through life having been remarkably good.

ECUADOR (REPÚBLICA DEL ECUADOR), a country of South America, comprised between latitude 1° 5′ north and 5° 30′ south, and between longitude 59° 52′ and 80° 35′; and bounded north by Colombia and Brazil, east by the empire just mentioned, south by Peru, and west by the Pacific Ocean. According to a new estimate, published in 1873, the area is 277,885 square miles, including 29,509 square miles of the insular province of Galápagos; and the population 1,308,082, of whom 200,000 are uncivilized Indians in the province of Oriente. The population of the capital, Quito, is now set down at 76,000. The President of the Republic is Señor García Moreno, and the ministry is the same as that noted in the ANNUAL CYCLOPÆDIA for 1873.

The army is reported to comprise 1,500 men, notwithstanding that, in 1868, when it was but 1,200 strong, the Government announced the intention of taking into consideration plans for its reduction, and perhaps even its ultimate extinction. That the only measure hitherto taken in reference to the armed force of the country has been to increase its numbers will not be a matter of surprise to any who are aware that Señor Moreno's government is essentially a military one.

The financial situation of Ecuador is one of the least promising among all the South American states, save, perhaps, that of Uruguay and Paraguay; this last, however, owes its poverty to a disastrous war, which drained its life-blood almost to the last dregs; but the strenuous efforts of a wise government are directed to improve the condition of the country and reestablish the national credit abroad, and meet the hearty coöperation of the people. Not so in Ecuador, where the public revenue scarcely ever exceeds $1,500,000, while the expenditure is seldom below $2,000,000, though but a small fraction is devoted to the development of that very branch which is the main source of income to the nation, namely, foreign commerce, or more directly the customs.

It may not be out of place to give here a statement of the yield of this latter department during the six years 1868–'73:

Years.	Receipts.
1868	$502,788 61
1869	588,729 16
1870	902,792 69
1871	973,792 69
1872	1,130,128 30
1873	1,187,586 47
Total in United States gold	$5,285,812 92

By comparing the figures of this table with those stated above for the revenue, it will be seen that considerably more than two-thirds of the latter are derived from that source.

The progressive annual increase indicated in the table is attributable to the energy of the merchants of Guayaquil, through which port nearly all the foreign commerce is carried on, and whose mercantile community enjoys, and has ever enjoyed, an enviable reputation abroad.

At the commencement of 1870 the national liabilities were stated to be $16,370,000, made up as follows: British loan, contracted in 1855, $9,120,000, and a home debt of $7,250,000.

Nothing has been done for several years toward the liquidation of this debt, nor have any payments been made on account of interest since 1867, a chronic insolvency which led to the insertion of the name of Ecuador in a list of defaulting republics, published in London last summer, under the title "black-sheep."

It seems somewhat incredible, in the face of such circumstances, that President Moreno attempted to borrow $5,000,000 in February last. Something still more incredible is the ostensible profit of the *Banco del Ecuador*, apparently substantiated by the balance-sheet of that institution, which we here transcribe:

ASSETS.

Cash, in gold and silver coin	$494,939 88
Debts in accounts-current	566,414 77
Bills receivable	493,255 38
Inventory	60,836 43
Government of Ecuador	247,589 90
Shareholders	300,000 00
Loans to the Government	631,341 70
Government, for tithes	59,027 21
Conversion of coins	309,173 41
Branch Bank at Quito	263,946 02
Branch Bank at Cuenca	239,515 96
Shares in the "Banco Hipotecario"	1,700 00
Yaguachi Railway	7,130 61
Sundries	459,253 90
	$4,134,114 11

LIABILITIES, ETC.

Capital	$1,000,000 00
Notes in circulation	2,040,773 00
Credit in accounts-current	187,882 99
Deposits on demand	31,108 19
Interest on transactions not at maturity	5,446 84
Credits	576,527 54
Deposits on time	42,408 61
Profit and loss	124,456 20
Sundries	125,510 84
	$4,134,114 11

This profit of $124,456.20 (in Eucadorian money*) the directors of the bank proposed to apply as follows:

Public works, as per contract with the Government	$10,000 00
For account of inventory	9,456 20
Dividend of 15 per cent. on $700,000 effective capital	105,000 00
	$124,456 20

At a cursory glance, the condition of the institution looks favorable; but a careful analysis of the various items of the balance-sheet shows that all is not gold that glitters.

The item, "interest on transactions not at maturity," $5,446.84, is either due or not due the bank; if due, it should go into the profit-and-loss sheet; and, if not due, it should not figure at all, unless it be for display.

The item $309,173.41, under the title "conversion of coins," which figures as a debt to the bank, loses its virtue by the explanation, that the government of Señor Moreno, desirous to withdraw from circulation a quantity of depreciated coin, directed the bank to effect the redemption, which was done at the current nominal rates of the coins; but which coins, when realized as old metal, left a net loss of $309,173.41. This deficit, or loss, if bearable by the Government, should be incorporated in the account of the Government, else it will be understood that the Government is not responsible for its liquidation. It ought, therefore, to be treated as a profit-and-loss item, and, viewed thus, the statement would stand as follows:

Conversion of coins		$309,173 41
Less the putative profit in the account		124,456 20
Less in reality		$184,717 21
The nominal capital of the bank is displayed as		$1,000,000 00
But the amount owed by the chief shareholders (*socios*)		300,000 00
The effective capital is really but		$700,000 00
On which the 15 per cent. dividend is computed. On the basis of this capital the bank contracts liabilities thus:		
Notes in circulation		$2,040,773 00
Credits (foreign)		576,527 54
Credits in accounts, etc		187,882 99
Sundries		125,510 84
Total		$2,930,694 37

—more than quadruple the amount of the capital.

The Yaguachi Railway is indebted to the amount of $7,130.61, and the enterprise, being a Government one, the indebtedness should be classed as a Government debt.

According to one of the Guayaquil journals, a loan or credit for £80,000 had been furnished the Government for this railway, on the responsibility of the bank. This sum does not appear in the foregoing balance-sheet, but may in part be hidden in the item *sundries*. If, however, it be nowhere in the statement, it is more than likely that, in the present state of depletion of Señor García Moreno's treasury, it may be set down as an additional liability of the bank.

Among the following assets of the bank, some are justly regarded as of doubtful solidity:

The Government of Ecuador	$247,589 90	
Loans to the Government	631,341 70	
The Government, for tithes	59,027 21	
Conversion of coins	309,173 41	
Branch Bank of Quito	263,946 02	
" " Cuenca	239,515 96	
Yaguachi Railway	7,130 61	
Sundries	459,253 90	$2,216,977 71
Which, deducted from the gross assets		4,134,114 11
Leaves		$1,917,136 40
To meet the following liabilities:		
Notes in circulation	$2,040,773 00	
Accounts-current	187,882 99	
Deposits on demand	31,108 19	
Credits	576,527 54	
Deposits on time	42,408 51	
Sundries	125,510 84	3,004,211 07
Deficit		$1,087,074 67

The accounts above stated as due by the Quito and Cuenca branches of the bank may possibly be available, unless the operations of those branches with Señor Moreno's government have been proportionately extensive with those of the present bank at Guayaquil.

Of the assets enumerated in the preceding statement, the Government owes no less than $945,089.42, or nearly one-third more than the entire capital of the institution.

No words could be given that would throw more light upon the present financial situation of the Eucadorian Republic than the hurried sketch here drawn of the chief, if not the only, public institution in the country.

The injurious effects of the unfortunate state of the finances were so visibly felt in commercial circles, that the mercantile community of

* The *peso* of Ecuador is equivalent to 71 cents.

Guayaquil addressed a petition on the subject to the Executive, on the 18th of July. The appeal met with an immediate response, the bank having at once exchanged its notes without any restriction whatever, and drawn bills at 40 per cent.

A Guayaquil paper, evidently echoing the public voice, presented the following complaint: "The monetary crisis, which, for some time back, has been assuming colossal proportions, has sunk the republic into a very painful condition; commerce is uncertain; public expenses are limited; and social ruin is threatened."

The following decree relating to the national debt was sanctioned by the Congress about the beginning of 1874:

ARTICLE 1. In future will belong to the inscribed debt: Notes issued by the offices of public credit, whatever the source of the obligation legitimizing the same; the amounts in arrears for salaries and pensions, whether civil, military, diplomatic, or financial, during the legitimate administrations of the republic, or recognized by the capitulation of the 26th of September, 1861; and the interests for loans decreed and exacted by the Government prior to 1869. Special paragraph: For the amortization of these credits it will be requisite to exchange the documents representing the same against notes of public credit.

ART. 2. The inscribed debt will be amortized (with distinction as to origin) with the product of the tax on the transfer of properties, as established by decree of February 29, 1869. Special paragraph: Dating from January 1, 1874, it will be paid in cash only, at the rate of 4 per cent., until the amortization referred to in the present law is effected. The rate will be reduced to 2 per cent. in cash from the first day of the year following the entire amortization.

ART. 3. Every six months the creditors included in the inscribed debt will be called together; the sum available for distribution among them will then be announced, and paid to those offering the best terms to the Treasury. No proposal exceeding 10 per cent. to be received.

ART. 4. This decree modifies the 1st and 2d Articles of the decree of February 20, 1869, and Articles 2 and 5 of the Law of Public Credit of June 15, 1861.

This decree was followed shortly after by another:

ARTICLE 1. Ten per cent. of the part of the Church revenue (*diezmos*) belonging to the state shall be remitted annually by the Executive to our Holy Father during the embarrassing circumstances with which he is now afflicted, and as an offer of justice, loyalty, and reverence, that the Ecuadorian people make to the head of the Church.

ART. 2. That the present decree shall be considered in force as from the beginning of the present year.

The President, in justification of the decree, adduced the following reasons: "That the Catholic population should contribute to the sustenance of the universal Government of the Church; that this duty is more required at present, when our Holy Father finds himself despoiled by iniquitous usurpations of his lands and incomes, and when no Catholic Government should fear to comply; and that the circumstances of the republic permit it to give in some manner a solemn testimonial of their adhesion to the Holy See."

The chief articles of export, with their value and the quantities thereof shipped in 1873, were as follows:

ARTICLES.	Quantity.	Value.
Cacao	25,181,208 lbs.	$3,021,744
India-rubber	1,636,548 "	654,617
Coffee	729,522 "	182,385
Peruvian bark	1,113,632 "	389,768
Hats	254,000	178,678
Precious metals	.....	267,088
		$4,694,280
Equivalent in U. S. money	.....	$3,382,938 80

EGYPT, a country of Northeastern Africa, nominally a pashalik of the Turkish Empire, but virtually an independent state since 1811. The ruler of Egypt, who has the name of Khedive, is Ismail Pasha, born at Cairo in 1830, second son of Ibrahim, the son of Mehemet Ali, succeeded to the government at the death of his uncle, Said Pasha, January 18, 1863; heir-apparent is the eldest son of the Khedive, Mechmed Tefwick. The territories under the rule of the Khedive are estimated at 659,100 square miles; the Egyptian statistician De Regny (in his work, "Statistique de l'Egypte d'après des Documents officiels," vol. iv., 1873) claims 927,000 square miles. Since then Sir Samuel Baker has proclaimed the annexation of a large portion of Central Africa, extending to the southward as far as the equator, to the dominions of the Khedive; and Colonel Gordon, in 1874, has been sent there at the head of a new expedition, to confirm the Egyptian rule. In addition to these immense tracts of land, the entire kingdom of Darfour was, toward the close of the year 1874, incorporated with the dominions of the Khedive. If, as appears to be probable, the incorporation of these territories with Egypt should be permanent, the Khedive will rule over an empire extending over an area of at least 1,500,000 square miles, with a population of some 20,000,000. At all events it seems probable that Egypt will not only remain as it now is, the most prominent among the native states of Africa, but will become, ere long, one of the largest empires of the globe. The population of Egypt proper is given by Regny as 5,251,757 in 1872; that of the entire Egyptian Empire is estimated at about 8,700,000. The population of Egypt proper was in 1872 divided as follows:

DIVISIONS.	Natives.	Foreigners.	Total.
Cairo, and other seaports	569,047	74,216	643,263
Lower Egypt	2,637,536	4,480	2,642,016
Middle Egypt	604,774	1,000	1,966,478
Upper Egypt	1,360,704		
Total	5,172,061	79,696	5,251,757

The following table shows the strength of the several nationalities to which the foreign population in 1873 belonged:

Greeks	34,000	English	6,000
French	17,000	Germans	1,100
Italians	13,906	Other nationalities	1,390
Americans	6,300		

The population of the large cities in 1872 was as follows: Cairo, 349,883 (19,120 foreigners); Alexandria, 212,054 (47,316 foreigners); Damietta, 29,383 (50 foreigners); Rosetta, 15,002 (10 foreigners); Suez, 13,498 (2,400 foreigners); Port Said, 8,671 (4,210 foreigners); Tanta, 60,000; Zagazig, 38,000 to 40,000; Syoot 27,470; Damanhoor, 25,000.

The public debt, in 1873, amounted to £44,204,000, of which £19,149,000 were consolidated, and £25,055,000 floating debt. The consolidated private debt of the Khedive was, in 1873, £8,910,000; and his floating debt was estimated by the *Economist* at £6,513,000. Early in 1874 the Khedive caused to be prepared a tabular statement of the receipts and expenditures of the last ten years. From a summary of this statement it appears that the revenues of Egypt steadily increased from £4,813,970 in 1864, to £10,571,048 in 1873 (an exceptional rise in 1872 having been consequent on a partial redemption of the land-tax), and that the proceeds of the loans raised during the entire term amounted to £26,949,600, making an aggregate of receipts in the ten years of £98,102,720. On the other hand, the expenditures during the period have been £112,561,784, leaving a deficiency in the shape of floating debt amounting to £14,359,064, which will have to be provided for out of the new loan lately issued, and which loan will cause the total debt of Egypt to stand at £49,000,000 in 7 per cent. stock, requiring annually for interest £3,430,000. Of the receipts during the ten years, sixteen millions sterling are stated to have been absorbed directly or indirectly in the Suez Canal; 900 miles of railway have cost nearly ten millions; two millions and a half have been devoted to improve the steam, postal, and commercial service; five millions have been paid to sufferers by the cattle-plague; and half a million has been the cost of the expedition of Sir Samuel Baker to the White Nile. The Egyptian Government in 1874 concluded to publish full particulars of the actual income in the last financial year, for which the accounts were closed, as well as other details of its financial condition. These particulars are set out in full accounts, which show with great minuteness the sources of the gross and net income from customs, the railway administration, etc., while the details as to the direct taxes specify the yield of each tax per province, as well as the varying yield per head or acre, according to the mode in which the tax is levied. The result is that Egypt, from being a country respecting whose financial position very little was published, already ranks among those which are best known. The general facts are that the revenue at present amounts in round numbers to nearly £10,000,000 annually, against an expenditure of rather less than £9,000,000, including in this latter sum all the interest and charge for the debt, of which a considerable portion is for the sinking-fund. The sources of the revenue are such as to be susceptible of considerable increase. The customs and the railway administration yielded £600,000 and £878,000 respectively in 1872–'73—in both instances an advance upon the previous year; and while a further advance, it is understood, has also taken place in the current year, a large additional sum has been obtained from customs by a new duty on tobacco, estimated to return £500,000. The direct taxes, again, yielded £6,500,000 in 1872–'73, of which £5,500,000 were taxes upon land of various kinds. The cultivated land of Egypt extends to 4,715,000 acres, on which the Government taxes on the average thus amount to about 23*s.* per acre; the average gross produce being estimated at between £5 and £6 per acre. The tax or rent paid to the state is very moderate; in fact, about a third part of the lands is subject only to what are called tithes, and from this portion the yield is about one-third of the above average, so that they are very much under the maximum of what they could afford to pay. About £1,500,000 of the present land taxes—viz., the Moultabala—constitute a terminable charge, but this is set off by the constant diminution of the capital of the debt through the agency of the sinking-fund, while in a question of the real resources of a country the fact that a certain portion of the taxes which can be easily paid legally expires at a certain date does not show that any such loss of revenue need actually ensue. In addition, a quantity of new land is annually brought under cultivation, the increase being from 4,297,000 acres in 1863 to 4,712,000 acres in 1873, or nearly 10 per cent. Altogether the land revenue of Egypt, like the customs and railway receipts, is of a progressive character, and susceptible of considerable increase, so that the actual present surplus of revenue over current expenditure, great as it is, is no sufficient indication of the financial strength of the country.

The foreign commerce of the port of Alexandria during the period from 1863 to 1872 was, on an average, as follows:

COUNTRIES.	Imports.	Exports.
	Piasters.	Piasters.
Great Britain	236,100,000	874,000,000
France	60,400,000	118,600,000
Austro-Hungarian Monarchy	44,900,000	62,700,000
Turkey	72,100,000	17,000,000
Italy	33,600,000	38,900,000
Syria	32,900,000	10,000,000
Barbary	24,500,000	2,600,000
Belgium	3,700,000	1,900,000
Russia	1,300,000	3,700,000
United States	1,800,000	600,000
Other countries	13,900,000	2,300,000
Average, 1863–1872	514,000,000	1,127,300,000
Total, 1873	590,800,000	1,330,500,000
Total, 1871	560,900,000	999,500,000

The exports from Egypt during the years 1853–1872 were as follows, according to official statements (1 piaster = 5 cents):

Year.	Piasters.	Year.	Piasters.
1853	191,000,000	1863	865,000,000
1854	187,000,000	1864	1,404,000,000
1855	275,000,000	1865	1,317,000,000
1856	330,000,000	1866	1,052,000,000
1857	257,000,000	1867	1,003,000,000
1858	208,000,000	1868	1,059,000,000
1859	215,000,000	1869	1,623,000,000
1860	212,000,000	1870	1,028,000,000
1861	291,000,000	1871	1,201,000,000
1862	506,000,000	1872	1,472,000,000

The following table shows the movement of shipping, in the principal ports, in 1872:

ENTERED IN	Mail-Steamers.	Steamers.	Sailing-vessels.	TOTAL. Vessels.	TOTAL. Tons.	War-vessels.
Alexandria	516	356	2,023	2,905	1,238,000	48
Port Said	270	512	526	1,378	856,800	65
Suez	189	400	205	794	666,470	64

The commercial navy, in 1872, consisted of 555 sailing-vessels, of 30,909 tons, and 30 steamers, of 28,965 tons; in all, 585 vessels, of 59,874 tons.

The commerce of Egypt continues to derive great advantages from the construction of the Suez Canal, connecting the Mediterranean with the Red Sea, opened for navigation November 17, 1869. The total expenditures for the construction of the canal and the first arrangements amounted, up to the close of the year 1873, to 458,400,065 francs. The value of the buildings and the inventory belonging to the company was estimated at 21,473,474 francs. The income of the company was, in 1871, 13,276,000 francs; in 1872, 18,825,000; in 1873, 24,831,127. The expenditures were, in 1871, 15,918,000 francs; in 1872, 16,253,000; in 1873, 17,346,109. Surplus in 1872 (the first year which showed a surplus), 2,071,279 francs; in 1873, 7,485,077. The number of vessels passing through the canal from 1870 to 1873 was as follows:

YEAR.	Vessels.	Tons.
1870	486	435,911
1871	765	761,467
1872	1,082	1,439,169
1873	1,173	2,085,073

The following table exhibits the nationality, number, and tonnage of the vessels passing through the Suez Canal in the year 1873:

NATIONALITIES.	Vessels.	Tonnage.
English	813	1,499,792
French	83	221,811
Austro-Hungarian	70	90,967
Netherlandish	36	72,593
Italian	93	59,121
German	28	35,619
Spanish	17	31,299
Turkish	26	20,116
Russian	9	14,361
Norwegian	5	9,299
Belgian	4	6,912
Others	24	20,971

The strength of the Egyptian army, which is raised by conscription, is about 14,000 men, consisting of 8,000 infantry, 3,000 cavalry, artillery, and engineers, and 3,000 negro troops.

In 1873 the aggregate length of the railways which were in operation was 1,193 kilometres (1 kilometre = 0.62 English miles). The telegraph-lines had an aggregate length of 6,486 kilometres, the telegraph-wires of 13,750.

A new railroad to the Soudan has been projected, and is to be built by the engineer John Fowler. Its length is to be about 880 kilometres; it is to be completed within five years, and to cost £1,400,000. About one-half of the expense is to be paid by the revenue derived from the Soudan territory.

Education in Egypt is still backward and limited. The number of those attending primary schools in 1873 was 90,000 (of whom only 3,018 were girls), which, in a population of 5,250,000, represents a proportion of 17 per 1,000, a proportion smaller than in any European country except Russia. The prejudices, difficult to overcome, existing among the Mohammedans as to the education of females, are a great obstacle to the progress of general education. In giving, therefore, a proportional estimate of the number educated, it is fair only to reckon the male population. This would give a proportion of at least 34 per 1,000 who attend school; and though the education given may not be of a high class, nor the previous training and qualification of the teachers up to the European standard, yet the fact that of the whole number only 8,000 are educated at the sole cost of Government, the cost of the others being wholly borne by the parents, without the inducement of food or clothing, shows that there is no unwillingness to benefit by such education as is within their reach. The Khedive is attempting to combat the prejudice regarding female education, and has established a large girls' school at Cairo, where, besides an elementary education, sewing, washing, and dress-making, are taught.

The Khedive has offered the people of Syria generally to receive twenty-five students, irrespective of race or religion, into the Egyptian Medical College, to be educated gratuitously in medical science for the benefit of their native places. Crowds of candidates have offered themselves, some of whom have been admitted, and the remainder directed to stand over till the college should receive them. "We had hoped," writes the editor of the *al Jawaib*, "that some of our Moslem brethren would have availed themselves of the opportunity thus offered to send their sons to this college, but we have been sadly disappointed, for all the candidates were Christians. Does it not occur to the Moslems to remember the apostolical tradition: 'Strive to acquire knowledge, even though you may have to go to China seeking it?'"

Immediately after the return of Sir Samuel Baker from the expedition into the interior of Africa, a new expedition was planned by the Khedive. It started early in March, in 1874, under command of Colonel Gordon. As the mission was intended to be of a pacific character, and the design of further conquest was

disavowed, Colonel Gordon took with him only a small escort, but the governor of Khartoum was ordered to support him if called upon. His artillery force consisted of one mitrailleur, as being more portable than any field-gun. He was accompanied by two young Englishmen, J. Russell, son of Dr. William H. Russell, the well-known correspondent of the London *Times*, and Mr. Anson, son of the English admiral and a relative of Colonel Gordon. The immediate object of the new expedition was believed to be not so much the suppression of the slave-trade, which would be an impossible task in the present condition of the interior, as to obtain a more complete knowledge of that immense territory which may be designated as the district of the head-waters of the Nile. The opening up of this country, the utilization of its resources, and commercial union with or annexation to Egypt, are the grand objects in view, in the carrying out of which the Khedive is more inclined toward conciliatory measures than arbitrary force, and trusts to judicious management rather than to the sword. The disappearance of the slave-trade will be a natural consequence of the enterprise if successful, for, as the country becomes better known, and is brought into more direct communication with the civilized world, so, in a like measure, will the pursuit of the slave-hunter grow more and more precarious, until eventually, when the whole length of the Nile is the scene of busy traffic, it will die away altogether. Colonel Gordon, accompanied by his chief-of-staff, Colonel Long, an American, Lieutenant Hazzan Effendi Wafti, both of the Egyptian army, and a small party —in all less than a score of persons—left Cairo by special train for Suez, whence he embarked on board a private Government steamer for Suakim, at which point he entered Africa and pushed across the Suakim Desert to Khartoum, where he organized his forces and awaited the arrival of the luggage, stores, and ammunition, which left Cairo a few days later in charge of Mr. W. J. Kemp, an English engineer. Including the persons named, the expedition under command of Colonel Gordon consisted of one American and three Egyptian officers, two English engineers, three interpreters, a native doctor for the soldiers, and 250 Egyptian soldiers. The aim of Colonel Gordon was to launch, on the lake Albert N'yanza, one or more of the steamers which were brought up for the purpose by Sir S. Baker, but left by him in the neighborhood of Gondokoro, where they have remained ever since. It was feared they would be found to have suffered considerably from the effects of damp and of marauding natives—more particularly as they were lying in detached pieces at different points of the route—and that much time and trouble would have to be expended to render them again fit for the work for which they were designed. The bulk of the men constituting the expedition, as well as stores, were sent in advance to Gondokoro. In July, Mr. Anson, one of the two young Englishmen accompanying Colonel Gordon, succumbed to the murderous climate. According to reports received by the Egyptian Government in the month of September, Colonel Gordon was then engaged in gaining a firm footing at the mouth of the Sobat, and in securing the control of the navigation on the Sobat, Bahr-el-Gebel, and Bahr-el-Ghasal. The Egyptian Government prepared to send to Colonel Gordon a number of boats made in sections, and to be transported in cases on camels, for the exploration of the lakes Albert N'yanza and Victoria N'yanza, and the final solution of the problem as to the sources of the Nile. The trial of the first of these boats was made in September, at Kasr o' Nil Palace, in presence of the Khedive and a numerous attendance of ministers and officials. This little vessel is made of teak, and consists of sixty-four pieces; she is constructed to be packed in four cases. The boat was constructed in Alexandria, under the direction of Captain McKillop, R. N., who, together with Colonel Gordon's agent, Mr. Curzon Thompson, sailed the little craft across the Nile. The Khedive was much pleased with the result, for this boat was designed entirely by himself, and is an evidence of the deep interest he takes in the Gordon expedition. Some larger boats, built on the same principle, are to follow, one of them a steamer. The little craft, after her trial, was taken to pieces and repacked in her cases (which can be formed into a useful pontoon). The Egyptian Government expects that certain positions through which all trading parties to the interior are obliged to pass will be secured by Colonel Gordon, and that, as the sale of arms and ammunition is forbidden under penalty of death, and none can trade or hunt elephants without a Government license, a very short time may give the Egyptian authorities perfect control in those regions.

The most important event in the history of Egypt during the year 1874 was the war against the Sultan of Darfour, which resulted in the annexation of another large country to the dominions of the Khedive. A full account of the origin of this conflict between the two countries, giving also interesting information on the Sultan and the people of Darfur, is contained in a letter from the celebrated traveler Dr. Nachtigal to Prof. Bastian of Berlin, dated El Obeid, in Kordofan, August 20, 1874.* Dr. Nachtigal had just arrived at El Obeid after his visit to Darfour. The ruler of this country, Sultan Brahim, had been prepared for his arrival in Darfour by letters from Khartoum, which the Egyptian Government had sent at the request of the German consul-general in Alexandria. The Sultan received Dr. Nachtigal kindly, but denied to him the permission to travel in the country, on the ground that the

* Published in Verhandlungen der Gesellschaft für Erdkunde zu Berlin, 1874, No. 8.

inhabitants hated the foreigners, Christians and Turks. During a longer stay in the town of Fasher, Dr. Nachtigal found that the fear of the Sultan was well founded. In none of the many African countries which he had visited had he to suffer so much from the fanaticism of the inhabitants as in Darfour, and even in the very house of the Sultan he was not safe from it. Their hostility to all foreigners, kindled by their religious fanaticism, had become still more intense by the fear of an imminent invasion of their country by the Turks. Many occurrences in the districts south of their country justified this fear. There a certain Zabir had established his rule, and, though he still respected the frontier of Darfour, had subjected or plundered the dependent districts of the Arabic Rézegat and the pagan districts of Telkauna, Kutuváka, Hofva-t-m-nehas, Shale, and Bina. Zabir is a Djalee by descent, and a man of considerable learning, who several years ago had left Khartoum, where he was employed as a clerk, in order to associate with the Bakara in the slave-trade. He entered the services of Ali Abu Omori, and subsequently worked for his own account in the vicinity of the Bahr-el-Ghasal, gathering, in the course of time, a large number of fire-arms, and gradually extending the sphere of his activity. In the same territory, another adventurer soon established himself, called the Bulaláwi Mohammed, who was a native of the tribe of the Abu Simmim, the original inhabitants of the Fittri, and also had lived for some time in Egypt. The Bulaláwi Mohammed had insinuated to the Egyptian authorities in Cairo and Khartoum that he was able to conquer the states of the eastern Soudan, between the Nile and the Tsade Lake, and to incorporate them with Egypt. He had consequently received from the Egyptian Government soldiers, arms, ammunition, and money, and it was generally known that he was in the service of Egypt. As the country between the southern frontier of Darfour and the Bahr-el-Ghasal was soon utterly exhausted, a conflict between the two rival adventurers became inevitable. In this conflict the Bulaláwi Mohammed succumbed and was killed. This happened in 1872. The Egyptian Government, which regarded the Bulaláwi Mohammed as being in its employ, desired to punish Zabir, but could not reach him, as he was too far away from Kordofan. Zabir, in his turn, endeavored to conciliate the Egyptian Government by refunding to it the expenses incurred in fitting out the expedition of the Bulaláwi Mohammed, and by giving to it an account of the conflict, which was intended to show its true origin, the absurd character of the plans of his rival, and the utter incompetency of the latter to carry out his plans. He also asserted that he was willing to carry out the plans of the Bulaláwi, so far as they were practicable, if he were placed at the head of the expedition. It seems that at the time it was only promised to incorporate with Egypt the districts south of Darfour; but it is probable that the raising of complications with the Government of Darfour and the annexation of the entire country were already taken into consideration. Zabir also engaged to support the troops confided to him by the Egyptian Government at his own expense, while the latter Government would engage to furnish to him every thing necessary at cost price. Zabir continued, after the death of the Bulaláwi, to cultivate the friendship of the Rézegat Arabs, through whose territory he received men and arms from Kordofan, and exported slaves and elephants' teeth. The tribe of Rézegat Arabs had been for several years under the rule of Darfour, and during the reign of the late King, Mohammed-el-Hassim, they had almost been annihilated. With Zabir they had for some time lived in peace; but, instigated by Darfour, they suddenly became treacherous, and toward the close of 1878 they plundered, at Shegga, a caravan belonging to Zabir, murdering nearly all the persons belonging to it. This act of treachery was soon followed by condign punishment. Zabir surprised Shegga, established there his headquarters, and subjected the greater part of the Arab tribe to his rule. He offered to Egypt the establishment of a new Egyptian mudirate (province) of Shegga, was appointed colonel and mudir, and now received openly the command of Egyptian soldiers. To the Sultan of Darfour he wrote that he had punished the Rézegat for their treason, but had no intention to attack Darfour proper. At the same time he established a military post at Kálaka, a centre of the Habbania, another Arab tribe living west of the Rézegat and subjected to Darfour. If at this time the young King had applied at Cairo or Constantinople for peace, he might have been successful. He preferred, however, to lead an army against Zabir, under command of his vizier, Ahmed Shetta. A lieutenant of Zabir was defeated by Ahmed Shetta; but, three days later, Zabir obtained a complete victory, Ahmed Shetta even losing his life. The Sultan suspected that the Egyptian Government was backing Zabir, and sent an embassador to Cairo to treat for peace.

While on his way from Darfour to El Obeid, in Kordofan, Dr. Nachtigal learned that the Governor-General of the Egyptian Soudan staid at El Obeid, and was on the point of going to Shegga for the purpose of inspecting the new mudirate. When he arrived, however, at El Obeid, he found the Governor-General ready to march at the head of an army against Darfour. His army was but small, numbering about 1,500 men, of whom 1,000 were infantry and 500 cavalry, and three guns; 500 other cavalry troops were expected from Khartoum. Zabir had under his command 8,000 men, with six cannon, and in July had informed the Egyptian authorities that he did not need any more men or cannon, but believed himself strong enough to defeat the Darfourians, and that he was on the point of

marching upon Dara, which is situated from four to five days' journey northwest of Shegga. The Governor-General of Soudan left El Obeid on August 17th, and expected to establish his headquarters in the beginning of September at Omshanga, the chief place of the extreme east of Darfour, situated about six days' journey north-northeast of Shegga, and about seven days east of Fasher. The accounts of the progress of the expedition given in the Egyptian papers slightly differ from the above report, and supplement it in some details. The Egyptian reports state that the hostile attitude assumed by the Darfourians toward the Government of the Khedive, the exactions practised by the Sultan of Darfour on Egyptian subjects, and also his tyranny over his own subjects, had long been a subject of annoyance to the Egyptians. Moreover, Zabir Beg, the mudir over the whole district of the Bahr-el-Ghasal, wrote a letter to Ba-Bakr, his brother-in-law, informing him that the Sultan Ibrahim of Darfour, having collected together an army of 12,000, with horses, fire-arms, and all appliances of war, had placed it under the command of a sultan named Abuna, who had marched to a spot called El Kálaka, the principal station of the Egyptian troops, with the design of attacking them. The threatened attack was made on July 2d by a fierce onset on the part of the Darfourians, the Egyptians standing fast to receive them. The battle soon waxed hot; but the order, discipline, and steadiness of the latter soon told to their advantage, for in less than an hour their antagonists were vanquished and put to flight. The Sultan Abuna was slain, and his sons and a number of his nobles were taken prisoners. One hundred and ten other prisoners were made, some of whom are officers. Among the spoil captured was the horse on which the Sultan rode, his arms and dress, which were forwarded to Egypt. When the Sultan Ibrahim, the sovereign of Darfour, heard of this defeat, and the death of his commander, Abuna, he was greatly chagrined, and went about calling together his nobles, and collecting another army of 50,000 men and horse, which he divided into 50 troops of 1,000 each, and placed it under the command of a renowned general. After supplying them with 65 banners, and distributing muskets and ammunition among them, he ordered that they should fall upon the Egyptian troops in a body. They did so, but were doomed to a disastrous defeat, for the Egyptians again routed the wretched Berbers, capturing 25 flags, 500 muskets, 600 Arab slaves, besides horses and war-material. On hearing of this second repulse, the Sultan of Darfour began levying the remainder of the troops, intending to take the command in person. A telegram, dated Cairo, December 11th, from the Governor-General of the Soudan, announced that the entire kingdom of Darfour accepted annexation to Egypt. The only dissentients were the family of the ex-Sultan, who had fled to the mountains and proclaimed the Emir Hassaballah as Sultan. The Egyptian troops were pursuing the fugitives. The annexation of Darfour to Egypt will cut off one main source of the slave-trade; for, Darfour being close to Wadai, which is one great slave-preserve, its people are the greatest slave-dealers in Central Africa, many of their caravans even making their way across the Sahara, through Fezzan to Tripoli, Bengazi, and the ports on the Mediterranean, and so *via* Malta—it is said—or along the African coast to the different slave-markets. The routes followed by the caravans pass through the oases of the Libyan Desert. Many routes are known only to the Bedouins, but every now and then a party falls into the hands of the Egyptian authorities. It is, however, almost impossible thoroughly to watch the long Nile frontier and prevent slaves from being smuggled into the country. On this subject an Egyptian journal says: "It is indisputable that, if annexed to Egypt, Darfour will become one of the most prosperous and flourishing of countries, for the Khedive will introduce into it colleges and schools, and railroads and telegraphs, arts, science, and commerce, and will rule over it with kindliness, justice, and good-will, so that in the course of a few years it will acquire a high name among states, and become a great field for European commercial enterprise."

The extraordinary rising of the Nile in 1874 created a profound sensation and panic in Egypt, but owing to the personal energy and perseverance of, and the wise precautions taken by, his Highness the Khedive, a great national calamity was averted. Though the commencement of the rising of the Nile is anxiously looked forward to by the Egyptians, as begetting hope of good crops and abundance, yet it is not by any means a criterion of a good Nile, which alone can realize that hope. Thus the Nile of 1873 commenced to rise as early as the 17th of June, and rose fairly well for about twenty days, and then stopped for fifteen days, and ultimately finished off at a rise of 19¼ feet only on the 11th of September, and made a bad Nile. Again, the Nile is subject to make false starts—the Nile of 1869 made five such false starts, and that of 1872 three, both commencing their serious rise on the 1st of July respectively. To show the uncertain and capricious nature of the Nile at the commencement of the rise, that of 1868 commenced on the 1st of July; 1869, on the 10th of June; 1870, on the 30th of June; 1871, on the 7th of July; 1872, on the 15th of June; 1873, on the 17th of June; 1874, on the 15th of June; or between the earliest and latest days a period of twenty-seven days. On the 27th of July, 1874, a very high Nile was foreshadowed; at that date the rise was double that of 1868, nearly one-third more than that of 1873, and in excess of that of 1869, when the Nile rose 29 feet 2½ inches in the Rosetta branch of the Nile, in about the middle of the Delta. of the breakwater outside of Alexandria harbor,

dues at the rate of fourpence per Turkish ton

will be levied on all vessels with cargoes

entering or leaving the port of Alexandria

after the 1st of June. Vessels in ballast will have to pay twopence per ton. War-vessels will be exempt.

ELLIOTT, Rev. DAVID, D. D., LL. D., a Presbyterian clergyman, college president, and theological professor, born in Sherman's Valley, Perry County, Pa., February 6, 1787; died at Allegheny City, Pa., March 18, 1874. He was of Scotch-Irish parentage, and after receiving such advantages as the village schools afforded, he was sent in his fourteenth year to Mifflin County, where he fitted for college under the tuition of Rev. Messrs. Coulter, Russell, and Brown. He entered Dickinson College in the Junior Class, and graduated in 1808; studied theology for three years, was a home missionary for one year, and was settled at what is now Mercersburg, Pa., where he remained for eighteen years, when he was called to Washington, Pa., as pastor, and was also for nearly two years President of Washington College. In 1835 he was called to the professorship of Ecclesiastical History and Church Government in the Western Theological Seminary at Allegheny, Pa. He declined, but the following year, at the urgent solicitation of the directors, he accepted the chair of Systematic Theology in the seminary. He held this position for nearly thirty-five years, and retired in 1870 as Professor Emeritus. He received the degree of D. D. in 1835 from Jefferson College, and that of LL. D. from Washington College in 1847. In 1837, the year of the disruption, he was Moderator of the Presbyterian General Assembly, which divided that year, but lived to see and rejoice in the reunion of 1870–'71, and took part in the exercises of the occasion.

ESPARTERO, Don JOAQUIN BALDOMERO, Duke of Vittoria, Marshal, Grandee of Spain, Senator, and from 1841 to 1843 Regent of Spain, a Spanish soldier and statesman, born at Granatula in La Mancha, in 1792; reported as having died at Logroño, December 21, 1874. He was of humble origin, his father being a poor cartwright, with nine children, of whom Joaquin was the youngest and feeblest, and hence was intended, in accordance with the Spanish proverb, for the priesthood, and in 1806 went with this object to the University of Almagro; but two years later, when the French invaded Spain, he entered the corps of students called the Sacred Battalion, and acquired a knowledge of the art of war. Continuing in the military service, though unable to pass the examination for the corps of engineers, into which he desired to enter, he received a commission in the infantry, and rose rapidly. He went to South America in 1814, where he fought against the insurgents until the Spaniards were expelled in 1824, when he returned to his native land, in company with Narvaez, Maroto, Alaix, Laserna, and others, all of them destined afterward to take a prominent part in Spanish politics. He brought home a considerable fortune, and soon after married a lady of wealth at Logroño. He was stationed for seven years with his regiment on the island of Majorca, but in 1832 declared himself openly in favor of the succession of Isabella II., daughter of Ferdinand VII., and played a leading part in the hostilities which followed the King's death. In August, 1836, he succeeded in saving the city of Madrid from the Carlists, and became successively general-in-chief of the Army of the North, Viceroy of Navarre, and Captain-General of the Basque Provinces. When the army of Don Carlos appeared before Madrid on the 12th of September, 1837, Espartero had again the glory of saving the capital. His successful campaign of 1839 resulted in the expulsion of Don Carlos, and won for him the titles of Grandee of Spain and Duke of Vittoria. In 1840 the Queen-mother Christina was compelled to resign her office of Regent, and on the 8th of May, 1841, Espartero was appointed to supply her place until Queen Isabella should have reached her majority. Espartero governed the country with energy, firmness, and ability, but in 1843 a combination of the Republican and Moderados parties brought about his overthrow. His rival, General Narvaez, came into power, and he retired to England, where he resided for four years, Narvaez having caused him to be declared as a traitor and deprived of all his titles and dignities. In 1848, this decree having been annulled and his rights restored, he returned to Spain, and for a short time resumed his place in the Senate, but soon withdrew and lived quietly at Logroño till 1854, when dissatisfaction with the court caused an insurrection of the people, resulting in the expulsion of the Queen-mother from Spain. In this emergency Espartero was called to the head of the Government and conducted the affairs of the nation for two years. In 1856 he was supplanted by General O'Donnell, and since then had taken no part in political agitation, although it has often been suggested that his services were needed at times in the eventful period which has since elapsed. In 1857 he resigned his dignity as Senator. At the revolution of 1868 General Espartero gave his hearty adhesion to the provisional government, although he took no active part in the events of the period. In May, 1869, during the debates on the policy of reëstablishing the monarchical form of government, Señor Garido, one of the deputies, suggested that Espartero should be chosen King of Spain, but this proposal found no echo from the Cortes. In the subsequent changes he gave King Amadeus a passive support, and regarded the administration of Marshal Serrano with a moderate degree of favor. Though, like all the Spanish leaders, Espartero was found at some times supporting and at others opposing the Queen and Queen-mother, it must be admitted that his career was one of more honesty, integrity, and patriotism, than that of any of his rivals or compeers. He seems to have sought always, though perhaps not in all cases by the most judicious meas-

Egypt, and the Khedive was deposed. The International postal convention, to which Germany had adhered for three years, and every clause of which had been violated by the German authorities, was revised, to develop the terms of the convention, the chief object of the conference being to establish a uniform postage for all countries. (*See* GERMANY.)

The attention of the government and the people of Germany was chiefly directed to a consolidation of the new empire. The principal obstacle to the rapid progress of the work of consolidation must be found in the continuous conflict between the governments of Prussia and other German states and the Roman Catholic Church. The determined refusal of the Prussian bishops to submit to the new laws concerning Church affairs led to the arrest or removal of them, but at the close of the year neither the bishops nor the government showed the least inclination to recede from the position taken. The extraordinary excitement which the consequences of this conflict produced in the Catholic districts led to an attempt upon the life of Prince Bismarck by Kullmann, a young Catholic mechanic. The deed was promptly and energetically denounced by all organs of the German Catholics, but widened the breach already dividing the Catholics from the remainder of the population. The German Reichstag, in which the National Liberals had a large plurality, lacking only a few votes of an absolute majority, vigorously supported most of the bills introduced by the Imperial Government for promoting the consolidation of the empire. A determined opposition was, however, made by the majority of the Reichstag to the army and press laws proposed by the Government; but in either case, the ministerial crisis produced by the clash of opinion was soon ended by a compromise. Prince Bismarck continued to direct the affairs of the empire, supported by the confidence of the Emperor and the majority of the Reichstag; and one of his foremost opponents, Count Arnim, who was German ambassador in France, had dared to disobey the instructions of the imperial chancellor, to counteract his policy, and to take official documents from the archives of the embassy, was promptly brought to trial and sentenced to three months' imprisonment. In Alsace-Lorraine the opposition to a permanent union with Germany remained unsubdued; and the majority of the delegates whom the new Reichsland had elected for the German Parliament returned home after having entered their protest against the reunion with Germany. The Imperial Government feels, however, confident that the reorganization of the public schools, and the obvious advantages of the commercial union of the Reichsland with the other German states, will ere long overcome all opposition. The confidence of the Imperial Government in the final reconciliation of the population of Alsace-Lorraine is so great that it complied with the petition of the three district diets of the Reichs-

land for the establishment of a provincial committee, which in future will be consulted in all questions relating to the administration of the country. (*See* GERMANY.)

The adoption of the new Federal Constitution in Switzerland by the requisite majority of the cantons and of the people, marks a turning point in the history of the oldest European republic. The new constitution greatly strengthens the jurisdiction of the Federal authorities, especially in all questions relating to the Church and schools. The legislation concerning the Catholic Church continued to be much more stringent than in Germany, and in several cantons the utmost efforts were made by the cantonal governments to put the administration of all the Catholic congregations in the hands of Old Catholics. The new laws required for the execution of the Federal Constitution were, at the close of the year, in the course of preparation. (*See* SWITZERLAND.)

In Austria, the new electoral law has as yet not produced the results which the Liberal party expected from it. The difficulties arising from the nationality conflict and the financial distress of the country continued, and the Reichsrath is divided into so many small parties warring against each other that it proved unable to carry any measure against the ministry. The latter continued, in all questions relating to Church matters, to waver between the two parties, not gaining the entire confidence of either. Hungary has the same difficulties to surmount as Cisleithan Austria, and its Diet was even more powerless than that of the other half of the monarchy. (*See* AUSTRIA and HUNGARY.)

The relations between Turkey and Austria, which were formerly of the most friendly character, were greatly changed in 1874. The Sublime Porte suspected the Austrian Government of encouraging the struggle of Roumania and Servia for independence, with a view to the annexation of Bosnia and Herzegovina to the Austrian dominions. It therefore opposed the conclusion of a commercial convention between Austria and the Danubian Principalities, but had finally to abandon its opposition, as Russia and Germany took sides with Austria. The financial embarrassments of Turkey have at length prevailed upon the Government to establish a great banking institution, with the aid of which extensive reforms are to be introduced. For the present, however, the country is at the mercy of the foreign bankers, and a radical improvement cannot be expected until the absolute form of government shall be abolished. (*See* TURKEY.)

The Government of Russia, which is growing in extent with marvelous rapidity, is chiefly intent upon consolidating all the discordant nationalities of the empire into an homogeneous population. It makes, therefore, extraordinary efforts to improve the system of public instruction and to force upon all the use of the Russian language. It finds, moreover, that the difficulties in the [illegible] plan are much greater [illegible] and are [illegible] [illegible] administration, [illegible] great complication [illegible] of the highest [illegible] all the more [illegible]

therefore resolved to dissolve the Parliament and make an appeal to the country for a new proof of its continuing confidence. The general elections resulted, however, in a complete victory of the Conservative party and the appointment of a Tory ministry. Toward the close of the year the country was thrown into great excitement by a pamphlet published by Gladstone on the Vatican Decrees. (*See* GREAT BRITAIN.)

The new elections which took place in Belgium somewhat reduced the majority of the Catholic party in the two Chambers of the Legislature, without, however, destroying it in either. The advantage thus gained by the Liberals was, however, more than neutralized by the widening breach between the more moderate wing of the Liberals and the Radicals. (*See* BELGIUM.)

The Government of the Netherlands did not succeed in bringing the war against the sultanate of Acheen to a close. The Craton, the stronghold of the Achinese on the coast, was occupied, and the commanding general of the Dutch issued a proclamation of annexation, but the brave Achinese, stimulated by religious fanaticism, persisted in a stubborn resistance and compelled the Dutch Government to fit out a third expedition. The thorough discussion of the policy pursued by the Government in the East Indian colonies convinced the Dutch Chambers of the indispensable necessity of sweeping reforms in the administration of the colonies. (*See* NETHERLANDS.)

In the three Scandinavian kingdoms a current of friendly feeling toward the kindred people of Germany appears to have set in and to gather strength. The expulsion of some Danish agitators from Schleswig, by order of the Prussian Government, gave for a time new fuel to the irritation of the Danes who still complain of the non-compliance on the part of Germany with the fifth article of the Peace of Prague, which provides for taking a vote of the inhabitants of Northern Schleswig on the question whether they will belong to Germany or to Denmark. The statistics of the votes cast in Northern Schleswig at the last elections for the German Reichstag show, however, that the German nationality is making rapid progress, and it is likely to be soon in the ascendency. The long conflict between the people of Iceland and the Danish Government was terminated by the royal assent to the new liberal Constitution of Iceland. In the Danish Diet the uncompromising opposition of the majority of the Folkething to the policy of the ministry continued. The principles of the opposition assume more and more a republican character, and may ere long lead to serious complications. (*See* DENMARK and SWEDEN.)

The population of Europe at the close of 1874 was estimated at about 300,921,000 against 301,281,000 in 1873. The apparent decrease is due to a more accurate statement of the population of Turkey, which, according to the concurrent opinion of the best authorities, is not so large as had formerly been assumed. The following table exhibits the area and population of the countries of Europe, arranged according to the number of inhabitants, the indented countries being either dependencies or tributary states so small as to be only nominally independent, and virtually dependent upon the larger country, the name of which precedes theirs:

COUNTRIES.	Square Miles.	Inhabitants.
Russia	1,994,397	69,883,852
Finland	142,368	1,833,188
Germany	208,739	41,060,695
France	204,091	36,102,921
Austria	240,954	35,904,435
Lichtenstein	68	8,890
Great Britain and Ireland	121,607	32,412,010
Malta, Gibraltar, and Heligoland	145	176,213
Italy	114,295	26,801,154
San Marino	22	7,802
Monaco	6	8,127
Spain (inclusive of Balearic and Canary Islands)	195,774	16,835,506
Andorra	144	12,000
Turkey	142,957	8,397,529
Roumania	46,710	4,500,000
Servia	16,817	1,338,505
Montenegro	1,701	120,000
Sweden	171,761	4,297,972
Norway	122,280	1,763,000
Belgium	11,373	5,113,000
Portugal (inclusive of Azores and Madeira)	35,513	4,367,882
Netherlands	12,680	3,716,002
Luxemburg	999	197,528
Switzerland	15,992	2,669,147

Greece	19,353	1,457,891
Total	3,806,051	300,921,000

The number of Catholics is estimated at 147,500,000, or 49.1 per cent. of the total population; the number of Protestants at 71,760,000, or 23.9 per cent.; the number of Greek Catholics at 69,350,000, or 23.1 per cent.; the number of Jews at 5,000,000; the number of Mohammedans at 6,400,000. Included in the number of the Catholics are about 100,000 Old Catholics.

The area and population of the foreign colonies of European states were estimated, at the close of 1874, as follows:

COUNTRIES.	Area.	Inhabitants.
Great Britain	7,963,006	203,618,250
Turkey	1,793,316	24,736,000
Netherlands	675,069	24,401,000
Russia	5,942,089	11,420,000
Spain	117,310	8,093,610
France	457,606	5,540,000
Portugal	739,871	3,258,140
Denmark	46,892	47,500
Sweden	9	2,900
Total	17,755,018	281,217,400

EVANGELICAL ALLIANCE. The British Secretary of the Evangelical Alliance visited the French and the Italian branches of the organization during October, for the purpose, chiefly, of obtaining an expression of their preferences as to the place in which the next General Conference of the Alliance should be

held. He visited Lyons, October 3d; Turin, October 6th; Milan—where a new branch of the Alliance was then formed—October 8th; Venice—where a committee was then formed—October 10th; Rome, October 14th; Florence, October 17th to 19th; Geneva, October 23d; Paris, October 27th. The general opinion of the members of the Alliance at these several places was in favor of holding the next general meeting (which will take place in 1876) in Rome. A meeting, composed of eighteen evangelical clergymen and laymen, was held in Rome in connection with the visit of the British Secretary, October 14th, at which it was decided to form a branch of the Alliance at once. A resolution was passed, declaring that "the time has come when, with the full religious liberty enjoyed in this land, a conference, under wise arrangements, of Christians from different countries, held in the city of Rome, would be not only expedient and practicable, but of the deepest interest, and likely to be largely blessed. The testimony that would be given to the doctrines of evangelical truth, and to the union of all the followers of our Lord, notwithstanding national and ecclesiastical differences, would, in our judgment, eminently serve the cause of truth in this land, and greatly encourage those who seek the increase of the kingdom which is righteousness and peace and joy in the Holy Ghost." The active support of the Christians of Rome was promised, and an invitation was cordially extended to members of the Alliance everywhere to make the city of Rome the seat of the next conference.

The Dominion Branch.—The idea of the organization of a branch of the Evangelical Alliance for the Dominion of Canada was first mooted in the city of New York during the great Conference of the Evangelical Alliance which was held there in October, 1873. The Canadian delegates met under the presidency of the Rev. Anson Green, D. D., of Toronto, when it was proposed, and agreed to unanimously, "that the various branches of the Evangelical Alliance in the Dominion be constituted into an organization; that the head office be in Montreal, and the office-bearers be selected so as to secure a general representation of the Dominion; and that the first general meeting of the Canadian branch be held in Montreal, on some day in October, 1874." The necessary arrangements for the meeting thus provided for was left in the hands of the Montreal branch, whose officers were requested to act as provisional officers on behalf of the *Dominion Evangelical Alliance* until the meeting should take place. In the spring of 1874, invitations to take part in the meeting were sent to distinguished clergymen and laymen in Great Britain, the United States, and the Dominion of Canada. The officers of the Montreal branch, under whose care the provisions for holding the conference were made, consisted of the Rev. Principal Wilde, D. D., President; the Rev. Garin Lacey, Corresponding Secretary; Mr. Ernest Taylor, Recording Secretary; Principal J. W. Dawson, LL. D., F. R. S., Vice-President; Mr. William Clendenning, Honorary Treasurer; and about twenty-three clergymen and other gentlemen who were associated with them as a committee of arrangements.

The conferences were opened on the 1st day of October, by a meeting of welcome, held in the American Presbyterian Church, Montreal, at which Principal J. W. Dawson, of McGill College, presided. An address of welcome was made by the Rev. John Jenkins, D. D., and replies and other addresses were made by several delegates. The Rev. Donald Fraser, D. D., and Major-General Burroughs, R. A., represented the British Branch Alliance; Rev. Mr. Dobbs, of Kingston, Ont., and the Rev. G. Patterson, of Pictou, N. S., spoke for their respective local organizations; and addresses were made by the Rev. Dr. Bliss, of the Syrian branch, the Rev. John Hull, D. D., and the Rev. Philip Schaff, D. D., of New York City, and Mr. H. Thane Miller, of Cincinnati.

The regular discussions of the Alliance began on the second day, Friday, October 2d. At the opening of the meeting on this day, ex-Governor L. A. Wilmot, of New Brunswick, was chosen President of the Conference, and the Rev. Dr. Taylor, of Montreal, Vice-President. A resolution was then adopted that "this Conference does now form a Dominion Branch of the Evangelical Alliance." Letters, responding to invitations to attend the conference, were read from numerous persons, to whom they had been sent, in Great Britain, the United States, and the Dominion.

The subject assigned for the discussion of the day was "Christian Union, and Allied Topics." The first paper was read by the Rev. Dr. John Hall, of New York, and was on "The Present Demands on the Pulpit—just and unjust." The Rev. Dr. Philip Schaff then opened the discussion of the regular subject with a paper on "The Doctrinal Consensus of Evangelical Christendom." At the afternoon session, the Hon. James Ferrier presiding, papers were read on "Christian Union," by the Very Rev. Dean Bond, of Montreal; on "The Scriptural Idea of the Visible Church of Christ as constituted of Denominations of Christians," by the Rev. Dr. R. L. Dabney, of Virginia; on "The History and Principles of the Evangelical Alliance," by the Rev. R. Beems, D. D.; and on "The Work of the Evangelical Alliance," by Major-General Burroughs. An evening meeting was held in the St. James Street Wesleyan Church, at which Principal Dawson presided. The Rev. Dr. Bliss, of the Syrian Branch Alliance, delivered an address on "Education in Syria;" and Mr. H. Thane Miller, of Cincinnati, spoke on the subject "How to win Young Men to Christ."

On the third day, Saturday, October 3d, the general subjects for discussion included "The Church's Work and Worship, and Allied Topics." Papers were read on "The Relation

of Art to Church-Worship," by the Rev. Donald Fraser, D. D.; on "The Hymns of the Church, a Bond of Unity," by the Rev. John Latham, of Halifax; and on "Confessions of Faith, their Use and Abuse," by the Rev. Prof. MacKnight, of Halifax. In the evening a reception was held in the Convocation Hall of McGill College. Addresses were made by Principal Dawson, of McGill College; the Rev. Dr. McCosh, President of Princeton College, N. J.; Prof. Daniel Wilson, LL. D., of Toronto University; the Rev. Dr. Black, of Inverness, Scotland; and general remarks were made by other persons.

Sunday, October 4th, a united communion service was also held in the afternoon at St. Paul's Church. The Anglican Church, the Church of Scotland, the Canadian Presbyterian Church, the Free Church of Scotland, the Wesleyan Methodist Church, the English Presbyterian Church, the Presbyterian Church in the United States of America, and the Congregational and the Baptist Churches, were represented by ministers or laymen participating in the services.

Mass-meetings were held during a part of the day at several churches. One at the First Baptist Church was addressed by the Rev. Dr. Cramp, of Wolfville, N. S., the Earl of Cavan, and Mr. H. Thane Miller. At the St. James Wesleyan Church, the Rev. Dr. Dabney and the Rev. Dr. Fraser spoke. The Rev. Dr. McCosh, Major-General Burroughs, and the Rev. Dr. Black, of Inverness, addressed a meeting at the Zion Church. At a meeting in the Erskine Church addresses were delivered by the Rev. Dr. Bliss, President of the Syrian Protestant College, and ex-Governor Wilmot, of New Brunswick. At a meeting in the Lagauchetierre Street Wesleyan Church, the speakers were the Rev. Mr. Wilson, the Rev. Mr. McEwen, and the Rev. Mr. Grant. Addresses were made before a meeting in the Ottawa Street Wesleyan Church by the Rev. James Bennett, of St. John, N. B., the Rev. D. M. Gordon, D. D., of Ottawa, and the Rev. Mr. Patterson, of Nova Scotia. Another meeting was held at the Cote Street Canada Presbyterian Church, where Mr. Gibson made an address on the subject of "Spiritual Life," and was followed in addresses by Mr. Henry Varley and Prof. Wilson. A meeting of the French-speaking delegates to the conference was held Sunday evening in the French Protestant Church, Monday, October 5th; several papers were read which had been assigned to Saturday, but had not been reached on that day. They were: "The Church of Canada—can such a Thing be?" by the Rev. G. M. Grant, M. A., of Halifax; "The Teaching of our Lord regarding the Sabbath and its Bearing on Christian Work," by the Rev. George Patterson, of Pictou, N. S.; "Reasons why the Distinctive Principles of Protestantism should be inculcated," by the Rev. Dr. Cramp, of Wolfville, N. S.; "Ultramontanism," by the Rev. C. Chapman; and "French Canadian Missions," by Mr. James Court. An address was also made by the Earl of Cavan.

A mass-meeting was held in the evening of this day at the St. James Street Wesleyan Church; addresses were here delivered on "Sunday-school Work," by the Rev. J. H. Vincent, D. D., of New York; on "Spiritual Life—what is it?" by Mr. Henry Varley; and on "God's Work in Scotland during the Last Twelve Months," by the Rev. Dr. Black, of Inverness, Scotland.

A meeting of the French-speaking branch of the Alliance was held at Association Hall on this day (Monday, October 5th). The Rev. J. G. Tanner presided. The following papers were read: "On the French Evangelical Schools of Lower Canada in 1874," by the Rev. Charles Roux; "French Missions among the Roman Catholics of Canada," by the Rev. T. Lafleur; and on "Evangelical Missions among the French Canadians," by the Rev. C. Doudiet. At a public meeting held in connection with the French branch, the Rev. Mr. Tanner made an address on the objects of the Alliance, and a general discussion took place, in the course of which the Rev. R. P. Duclos, of St. Hyacinthe, Pastor Vernon, Prof. Coussinet, the Rev. M. Coté, Pastor Lafleur, and Pastor Doudiet, spoke.

The general subject of "Science, Philosophy, and Literature, in Relation to Christianity," was assigned for Tuesday, October 6th. The discussion was opened by the Rev. Dr. James McCosh, of Princeton, N. J., with a paper on "Grand Truths in Nature, overlooked by Prof. Tyndall." Other papers were read in the morning session, on "Modern Philosophy in Relation to Christianity," by Prof. J. C. Murphy, LL. D., of McGill College, Montreal; and on "Evangelical Rationalism," by the Rev. J. M. Gibson, of Chicago.

In the afternoon the sessions of the conference were held in two sections The first section met in St. Andrew's Church. Papers were read on "French Canadian Missions," by the Rev. Theodore Lafleur; on "An Investigation of the Relations of the Comparative Study of Religions to Christianity," by Prof. Campbell; on "Efforts to meet Skepticism and Infidelity," by Major-General Burroughs, and on "Inspiration," by the Rev. Principal MacVicar, LL. D.

The second section met in the First Baptist Church. Papers were read on "Creation and Development," by the Rev. James Bennett, of St. John, N. B.; on "The Attitude of Religion toward Science," by Prof. Daniel Wilson, LL. D., of the University of Toronto; on "Modern Christianity, from the Stand-point of Modern Science," by Principal J. W. Dawson, LL. D., of McGill College; and on "Modern Literature in its Relation to Christianity," by President Noah Porter, of Yale College, New Haven, Conn.

After the reading of the papers was concluded, a business meeting was held. The

basis laid down by the parent Alliance as the bond of union of the members and branches of the general body was adopted as the constitution of the Dominion branch. The formation of local branches throughout the Dominion was recommended, a report of which should in each case be forwarded to the general secretary. The Hon. L. A. Wilmot, D. C. L., of Fredericton, N. B., was chosen President for the ensuing year, and Vice-President, secretaries, and members of the General Committee were appointed. The latter body were authorized to appoint an Executive Committee out of their number.

The conference closed on Tuesday evening, October 6th, with a farewell meeting in the St. James Street Methodist Church. Short addresses were delivered by President Wilmot, the Earl of Cavan, the Rev. Dr. Black, of Inverness, Scotland, the Rev. Dr. Ryerson, of the Methodist Church of Canada, Mr. Henry Varley, Mr. H. Thane Miller, the Rev. Mr. Grant, of Halifax, N. S., the Rev. Mr. Morton, missionary from Trinidad, Major-General Burroughs, and the Rev. Dr. Fraser, and the benediction was pronounced by the Rev. George Douglas.

EVANGELICAL ASSOCIATION. The following are the statistics of the Evangelical Association for 1874:

CONFERENCES.	Itinerant Preachers.	Local Preachers.	Members.	Churches.
East Pennsylvania....	94	87	14,401	186
Central Pennsylvania..	77	62	10,829	151
New York.....	35	10	3,962	60
Pittsburg.....	55	36	7,068	113
Kansas.....	24	11	1,694	16
Canada.....	33	13	3,856	67
Michigan.....	38	22	3,660	46
Illinois.....	75	71	8,749	101½
Iowa.....	64	26	5,260	50
Wisconsin.....	56	27	8,739	107
Ohio.....	67	58	7,598	133
Minnesota.....	31	7	2,790	29
Indiana *.....	55	42	6,053	109½
Germany.....	31	4	5,445	12
California and Oregon,	3	..	145	3
Total.....	737	476	90,249	1,184

The number of members was 7,054 greater than in 1873. The churches were valued at $2,777,070. Number of parsonages, 330; value of the same, $374,605; number of Sunday-schools, 1,441½; of officers and teachers in the same, 16,406; of scholars, 82,047; number of children baptized, 6,994; of adults baptized, 1,238; of members "newly received," 16,731. Amount of "conference contributions," $4,-702.71; of contributions for missions, $72,-526.91; of contributions for the Sunday-school and Tract causes, $2,380.97.

The anniversary of the *Missionary Society* of the Evangelical Association was held in October. The receipts for the year were reported to have been $70,584.20, and the expenditures $62,897.65. The receipts showed a ratio of contributions of about 80 cents per member of the Church. The debt of the society had been diminished during the year by $2,546.50, and has now $4,121.20. Cash bequests had been received to the amount of $7,132.07. The corresponding secretary reported that $24,000 were in the treasury for the mission among the heathen, and recommended that the question of the place where such a mission should be established be referred to the next General Conference. The number of home and foreign missions was reported to be 270. Twenty-six missions had been struck from the list of missions at various conference sessions, and converted into self-sustaining charges, or connected with such charges. An actual increase of 48 missions had taken place. A resolution was adopted, "that Japan be considered our heathen mission-field; that the bishops and the corresponding secretary be constituted a committee in reference to the men who are willing to be sent; and that we request the General Conference at its next session to appoint two or three missionaries to this field."

* From the report of 1873.

EVANGELICAL SYNOD OF THE WEST. The general meeting of the Evangelical Synod of the West commenced at Indianapolis, Ind., on October 8th. Seventy-five ministers and lay delegates were present, representing five synods, and about three hundred ministers. The Rev. A. Balzer presided. A new division was made into seven synods. The original aim in the formation of the synod was to reproduce in the United States the essential features of the United Evangelical Church of Germany; hence it was called "Evangelical," and denominational peculiarities were held of little account. Its confessional basis is founded upon the *consensus* of the confessions of the Lutheran and Reformed Churches. Either Luther's or the Heidelberg Catechism may be used in the churches, as the majority of the members may prefer. The synod stands in intimate relations with many mission institutions of Germany, as those of Dr. Wickern, and the Missionary or Emigrants' Associations of Berlin, Barmen, Langenberg, and Basle. The synod of Wisconsin was founded under the auspices of the Association at Berlin. Pastor Krummacher manifested a great interest in this body during his visit to the United States. The Evangelical Synod appears to be gradually assuming a more distinctly denominational form. It has now its own hymn-book, catechism, church and Sunday-school papers, educational institutions, and almanac. Its principal publications are the *Friedensbote*, semi-monthly, the *Theologische Zeitschrift*, monthly, and a Sunday-school paper. Its leading educational institutions are a teachers' seminary at Elmhurst and a theological seminary at St. Charles, Mo. The Rev. A. Balzer, President of the General Conference, is also editor of the principal paper, superintendent

of the publication interests, and director of all the synodical machinery. The particular synods meet every year, and the General Conference every three years. A delegate from the General Synod, South, of the Lutheran Church, attended the present meeting. The Evangelical Synod of the West consists exclusively of German-speaking congregations, and numbered, in 1874, 276 clergymen, 250 congregations, and about 40,000 communicants.

EVANGELICAL UNION. The thirty-seventh annual conference of the Evangelical Union of Scotland was held in Glasgow, in September. The conference is composed of the ministers of the several churches and two lay delegates from each church. The Rev. George Gladstone, of the Evangelical Church, was chosen president. Two ministers were reported to have died during the year. Two churches—one in Wishard, with one hundred and eighty-five members, and one in Motherwell, with ninety-seven members—were received into the Union. Two ministers were also received. The report of the Home Mission showed that nineteen churches of the Union were without settled pastors. Several legacies and gifts to various connectional institutions were announced. Favorable reports were made of the condition of the chapel debt and building-fund, of the ministers' augmentation fund, and of the worn-out ministers and ministers' widows' fund. The last fund is supported by contributions from the churches, and the payment by those who become entitled to its benefits of one pound sterling each annually. Such persons, on failure of their health, become entitled to an allowance of at least £40 a year. The widow of a member dying receives a grant of £40. The Union supports an institution called the Academy, at which the theological students are trained. Eighteen such students had been attending the institution at the time the conference met.

F

FAIRBAIRN, Rev. PATRICK, D. D., a clergyman of the Free Church of Scotland, and for twenty years principal of the Free Church College at Glasgow, born in Edinburgh in 1805; died at Glasgow, August 6, 1874. He was educated at the University of Edinburgh, was settled over one of the parish churches of the Scottish Kirk, followed Chalmers and Guthrie and their associates in the Disruption of 1843, and was, of course, obliged to give up his parish and his manse. He became soon after minister of the Free Church parish of Salton, whence he was called, in 1853, to the Free Church College at Glasgow, first as professor, and later as principal. A man of great and varied learning, and one of the ablest writers in the Free Church, he was yet one of the most accessible, simple-hearted, and genial of men, but withal a man of the most untiring industry. His published works have nearly all come to be regarded as standards, for their profound research and their careful accuracy of statement. The following are those best known: "The Typology of Scripture," 2 vols., 8vo (this has passed through many editions); "Exposition of the First Epistle of Peter," 2 vols., 12mo (1836); "Hengstenberg's Commentary on the Psalms," translated by Dr. Fairbairn, 3 vols., 8vo (1845–'48); "Jonah: his Life, Character, and Mission," 12mo (1849); "Ezekiel, and the Book of his Prophecy," 8vo (1851); "Hengstenberg's Revelation of St. John," a Commentary, translated by Dr. Fairbairn, 2 vols., 8vo (1851); "Prophecy," etc., 8vo (1856); "Hermeneutical Manual," 8vo (1858). He was also the editor of the "Imperial Bible Dictionary," not yet quite completed. He was a powerful and eloquent speaker, and had taken a deep interest in the revival work in progress in Scotland, as a result of the American evangelists, Messrs. Moody and Sankey. His death was attributed to heart-disease.

FAIRBAIRN, Sir WILLIAM, Bart., C. E., LL. D., F. R. S., an eminent British civil engineer and iron-worker, born in Kelso, Scotland, in 1789; died at Manchester, England, August 18, 1874. Having learned the rudiments of education at a parish school, and received some instruction from an uncle, he was apprenticed to an engine-wright at a British colliery. When his apprenticeship terminated, he wrought two years in London, and then visited many places in England, Wales, and Ireland, working a short time in each, in order to acquire a general knowledge of mechanical engineering. Eventually, he began business on his own account at Manchester, in 1817, and persevered in it despite many discouraging circumstances. The first important improvement which he introduced was the general substitution of iron for wood in the shafting of cotton-mills, and the use of lighter shafting where metal was already in use. This change reduced the cost of machinery, and enabled the motion to be speeded from forty to one hundred and sixty revolutions per minute. Mr. Fairbairn afterward directed his attention to iron shipbuilding, and was the first in England to construct an iron ship. The construction of iron vessels eventually became one of the principal branches of his business, his firm having built more than a hundred, varying from the smallest size to the war-frigate of 2,600 tons. In 1834–'35, Mr. Fairbairn and Mr. E. Hodgkinson were invited by the British Association to seek out the cause of certain supposed defects in the iron produced by hot-blast furnaces. He and his associate accordingly investigated the sub-

ject, and submitted a valuable report thereon, printed in the "Transactions" of the Association. He also, at the instance of scientific bodies, or for his own information, tested the strength of various kinds of British iron, determined the tenacity of boiler-plates of different thicknesses, and made a long series of experiments on the resistance of hollow tubes or cylinders to outside pressure, leading to valuable practical results. Mr. Fairbairn coöperated with Robert Stephenson in designing and constructing the great tubular bridge across the Menai Strait, the success of which led to the building of many others on the same principle. Stephenson suggested a circular tube supported by chains; but this plan was modified at the instance of Mr. Fairbairn, who made a long series of experiments upon model tubes, and found that a rectangular structure, strengthened by a series of cells at the top and bottom, and suspended without chains or any other support from pier to pier, was best adapted to the stipulated conditions. Sir William (he was knighted in 1869), who was one of the founders and earliest members of the British Association, wrote many able papers on subjects connected with his profession, and published several important works, among which may be noticed "Mills and Mill-Work;" "Iron—its History and Manufacture;" "Application of Iron to Building Purposes;" "The Conway and Brittannia Tubular Bridges;" "The Strength of Hollow Globes and Cylinders when exposed to Pressure from without;" "On Canal Steam Navigation;" "Iron Ship-building," and First, Second, and Third Series of "Useful Information for Engineers." He was a corresponding member of the National Institute of France, of the Royal Academy of Turin, and a Chevalier of the Legion of Honor. He had been President of the British Association in 1861–'62, and had received the honorary degree of LL. D. from the University of Edinburgh.

FEEJEE (FIJI, OR FIDJI) ISLANDS, a group of islands in the South-Pacific Ocean, which, until 1874, were an independent country, when they were annexed to the British dominions. The islands occupy the central portion of Western Polynesia. They lie about midway between Tongan Islands and the French colony and island of New Caledonia, between the meridians of 177° east and 178° west longitude, and between the parallels of 15° 30′ and 20° 30′ south latitude. The number is variously stated, but it is believed to be about 225. They are dotted over an area of ocean extending nearly 300 miles from east to west, and 200 miles from north to south, and it is computed that their aggregate superficies is about 8,034. The principal islands are Viti Levu and Vanua Levu, each of which has a circumference of about 250 miles; in these two islands the principal planters reside. Next in importance and size to these are Kandavu, Taviuni, Rambi, Koro, Ngau, and Ovalau. The Feejee Islands have been divided into eight groups or divisions, viz.: The Ono Group, comprising Ono, Ndvi, Mana, Undui, Yannya, Tuvana-i-tholo, and Tuvana-i-ra; the Lakeba Group, including Vatoa, Tiwutha, Thithia, and thirty-three islands and islets; the Exploring Isles, among which are Mango, Kanathea, Naitumba, Vatuvara, Yathata, and a number of smaller islands; Middle Feejee, containing Matuku, Totoya, Moala, Ngau, Nairai, Koro, Ovalau, and some others; the Vanua Levu Group, comprising Vanua Levu, Taviuni, and the adjoining islands, in number about fifty; Viti Levu, or Great Feejee, in whose boundaries about other fifty islands are encircled; the Kandavu Group, numbering in all about thirteen islands; and the Yasawas Group, including about thirty islands, most of them of small area. Viewed from the ocean, the islands have been described as presenting pictures of almost fairy-like loveliness. The navigation among the islands is not easy, but landing as a rule can be effected safely. The reefs stretch out their arms in all directions, needing great care in their avoidance.

The white population was estimated in December, 1871, according to the official *Feejee Gazette*, at 2,040 persons, the majority of whom are British subjects; some 200 or so are Americans. The native population is believed to be about 146,000, though some think it to be not far short of 200,000. These numbers are distributed over about 140 of the islands, the remainder being, so far as is known at present, altogether uninhabited. The official returns give the following numbers and distribution of the native and European population: Ovalau (in which is situated the port of Levuka)—whites, 450; natives, 2,000. Islands of the Eastern group—whites, 1,000; natives, 10,000. Kandavu—whites, 46; natives, 12,000. Taviuni—whites, 150; natives, 1,000. Vanua Levu—whites, 500; natives, 33,000. Viti Levu—whites, 450; natives, 70,000. Central Islands—whites, 160; natives, 9,000. Yasawas—whites, 58; natives, 8,000. Other islands of the Feejeean Archipelago—whites, 126; natives, 1,000—making a total of 148,040. In 1871 the number of white persons who arrived in the group numbered 887; the departures were 562, leaving a net increase in the population of 325; 2,275 foreign laborers arrived, being 570 in excess of the number of the previous year. The aborigines or Feejeeans are described as a well-made and handsome race of men, of different shades of color, the predominant hue being a dark olive. In character they are described as being full of contradictions, sometimes kind and tractable, at other times relentlessly cruel and obstinate. They are not a brave people, are very unforgiving and ungrateful, are lazy and treacherous, but may withal be managed with tact and firmness. Their dress is of a simple character, and consists of a length of cloth or white *taypa*, called a *sulu*, wound round the waist.

are small, composed [illegible] The number of [illegible] Wesleyan Society at Feejee [illegible]

During the year 1871, the arrivals [illegible] were: At Levuka: 1 ship, 11 [illegible] barks, 10 brigs, 100 schooners, and 37 [illegible] ters; in all, 170. At the Rewa [illegible] vessels of various kinds, making a total [illegible] The aggregate tonnage of the arrivals [illegible] 20,606 tons; of the departures, 20,654 tons. For the financial year ending December 31, 1872, the entrance in the port of Levuka was 126 vessels (1 American); tonnage, 20,276. The imports were valued at $37,000, the exports at $943,000. The value of the exports in 1871 was as follows: Sea-island cotton, [illegible] kidney and short-staple ditto, $19,[illegible] nut oil, $17,890; tortoise-shell, $1,150; [illegible] de-mer, $500; fungus, $600; [illegible] cocoa-nut oil, $5,000; copra, $8,[illegible] $400; sundries, $30,000—making a general total of $452,507. Imports: Drapery, cotton and woollen, $100,585; ironmongery and cutlery, $33,000; wines, beer, and spirits, $[illegible] 180; groceries and provisions, $31,046; [illegible] chinaware, $35,170; furniture and timber, $[illegible] 870; tobacco and cigars, $15,685; books and stationery, $2,340; drugs and medicines, $[illegible] 470; machinery, $24,000; crockery and glassware $5,065; fancy goods, $6,110; horses and cattle, $10,000; sheep, $5,000; total value of imports, $412,920. The estimated revenue for the financial year ending June 30, 1872, was £22,592, the expenditure being computed at £20,431, leaving a surplus of £2,400. The principal receipts are derived from the sale of land, the estimated returns of which for the year are £18,400. The estimated receipts for the year ending June 30, 1872, were $121,824; expenditure, $127,000. The postal service was first organized by the proprietor of the *Feejee Times*, who established an organization called the *Feejee Times* Express, which also included an insular parcels delivery. It subsequently passed into the hands of the Government. There is irregular communication between the various islands, by means of small craft, but arrangements are now in progress for superseding these by the employment of a steamer. There is frequent, though not regular, communication with Melbourne and Sydney, and a monthly service has been arranged between Feejee and Auckland; sailing vessels, too, frequently ply, and the missionary-ship John Wesley also affords a means of reaching the islands. The principal town in the Feejee Islands is Levuka, which may be deemed the commercial capital of the group. It is situated on the east coast of the island of Ovalau, and is distant 2,160 miles from Melbourne, 1,780 from Sydney, and 1,180 from Auckland. The island itself is of no magnitude, being but eight miles long by about seven miles in breadth. It lies about 15 miles due east of Viti Levu. The town, consisting of North and South Levuka, is not by any means

desirably located, being walled in on two sides, and backed by lofty mountains, that render an extension of the boundary difficult for practical purposes. The town is supplied by water procured from Totoga Creek, and is under the control of a municipal council consisting of a mayor and aldermen. The resident population consists of about 806, and there is a floating population of 400 more. The harbor is formed by a barrier reef, peculiar to the South-Sea Islands, which acts as a natural breakwater; inside the reef is good anchorage. Loading and discharging accommodation is afforded by three jetties. Levuka is, and has been for some time, the principal port of the Feejee Islands. It has one Wesleyan, one Anglican, and one Roman Catholic church. Schools are connected with the two former.

The Feejee Islands were, till lately, ruled by two principal chiefs, Thakombau and Maafu, and others of secondary importance, Tui Thakau Ritove, Tui Mbau, Ratu Kini. Thakombau bore the title of King of Feejee, and had the largest territories. He professes Christianity now. Maafu is also a convert, and stands high as a preacher; he is spoken of as being a superior man.

The whole of the group was, some years ago, erected into a kingdom—Thakombau, or Cakombau, as he is now more generally called, being the supreme head, Maafu and also Tui Cakau acknowledging his sovereignty. After the definite refusal by the British Government of the sovereignty of Feejee, an attempt was made by the white settlers, principally for their own protection, to initiate a form of government by which law and order might be maintained. These efforts, however, did not result very successfully, owing to the difficulty of reconciling conflicting interests. About this time the ocean postal service to California was started. The Feejeean settlers made application for the islands to be called at by the steamers. The Australian Steam Navigation Company agreed to this on condition that the port of Levuka should be surveyed, buoyed, and lighted. A meeting of the leading merchants and planters was held, and this condition was unanimously accepted, and a marine surveyor sent for from New Zealand. Lieutenant George Austin Woods undertook the survey, and promptly executed the work. In the course of his labors he was brought into contact with Cakombau, who, highly impressed with his energy and abilities, sent him an autograph letter, asking him to make a government for his people and the white people; at the same time requesting him to mention the names of any gentlemen whom he might wish to be associated with him. To this communication Mr. Woods returned answer he would try, and after a time submitted to Cakombau the names of Messrs. Hennings, Smith, Logan, and Burt. Eventually, the last-named gentleman became the leader of the Feejeean cabinet. This attempt to form a government was, on the whole, favorably received by the white men, and support generally accorded to the King and ministry. The latter thereupon took steps to construct the government. Circulars were issued to the various districts, calling upon them to elect delegates; and in the early part of 1871 elections took place through the islands for delegates to meet in congress, to discuss and frame a constitution. In August, 1871, these delegates met in solemn convention, and, after much deliberation, agreed to a constitution for the creation of the kingdom of Feejee, and to regulations and conditions under which the government of the kingdom should be carried on. The House of Delegates having performed its function, it was in due course dissolved. Returning officers were next appointed, and writs issued for the election of members to serve in the Assembly of Feejee. These elections were duly carried out, and the first Feejean Parliament met under the speakership of Mr. Butters, formerly Mayor of Melbourne. The Constitution Act, framed by the House of Delegates, provided for a government of the whole group, and the establishment of a Constitution from October 1, 1871. It also provided that the form of government should be executive, legislative, and judicial: the Executive to consist of the King and the ministry; the legislative of a Privy Council and a House of Representatives. The judicial was vested in a Supreme Court, consisting of a Chief-Justice and two Associate Judges, one of whom is a native, whose decisions are final. The Privy Council was composed of the native governors of the provinces into which the Constitution Act directed that the kingdom should be subdivided. The House of Representatives was formed of European delegates from the electoral districts proclaimed throughout the islands, the members being elected by white men, from whom the government must be chosen. All measures passed by the House of Representatives were to be submitted to the Privy Council and the King's cabinet, who have not, however, the power of vetoing any measures not meeting with their approval, but simply of referring them back to the Assembly from which they originated. The number of representatives was limited to forty, and not less than twenty. The qualifications of an elector were manhood, payment of taxes, and six months' residence.

The nominal constitution of the kingdom of Feejee was, however, unable to prevent the administration from falling into a most deplorable condition. The finances, especially, appeared to be in hopeless disorder, and, at the beginning of the year 1874, the Treasury was without a farthing to discharge debts. Members of the Feejeean civil service received in payment "certificates of indebtedness," which were held in such disfavor that the Banking Company refused to discount them at any price, while private individuals charged 20 to

25 per cent. for doing so. The desire for the annexation to the British dominion gained, therefore, steadily in strength. The English Government being informed of the unanimous wishes of the white settlers, which were shared by thousands of natives, sent Consul Layard and Commodore Goodenough as commissioners to examine the islands and make a report on the question of annexation. The commissioners addressed the following letter to the King and chiefs:

Commodore Goodenough and Consul Layard are the two chiefs sent out by her Britannic Majesty, the Queen of England to visit Feejee, to inquire and consult with the King of Feejee and the chiefs respecting the government of Feejee. These two chiefs desire to consult with the King and chiefs of Feejee fully and clearly, that they may know what they (the chiefs) desire or prefer—whether the King of Feejee shall govern Feejee, or whether her Britannic Majesty, the Queen of England shall govern Feejee; they (the commissioners) desire to know their (the chiefs') minds. Should it be their true minds (the King and chiefs of Feejee) to give Feejee to England—that it should become the Queen of England's to govern—there is but one object and design sought—Feejee's peace and welfare in all time; that the King and chiefs, with all their people and all the inhabitants of the land, may live in peace and prosperity. This, and this only, is the desire and object. It is no new thing for England to govern islands like Feejee. She owns and governs in several parts of the world a great number of similar islands to Feejee, and it will be very easy for her to govern Feejee also, and preserve its peace and promote the welfare and prosperity of its people. But England will never take Feejee by force or stealth; if the King and chiefs do not wish to give it, if they think they can, and are willing, to govern the land themselves; if the King of Feejee retains the government for himself, that is well, and England will only require of him and place before him one thing—that he shall govern wisely and righteously, with equal justice to natives and British subjects resident in Feejee, at all times. But there is one matter to be considered by the King and chiefs of Feejee; they must know that the number of foreigners in Feejee will greatly increase from year to year, as well as their property, and for these reasons the King and chiefs must think and study well over the matter, whether they will be able to conduct their government in the future under more difficult circumstances or not. There is but one desire on the part of the Government of England respecting Feejee, which is, that its peace, welfare, and prosperity, may be secured, and that each and all of its inhabitants, of both races, may be able to obtain and secure their individual and just rights, whether they be native-born or foreigners—that, and that only.

The King was easily prevailed upon to consent to annexation, when the commissioners declared a readiness to accept it, subject to the ratification of the home government. The Governor of New South Wales, Sir Hercules Robinson, visited the islands, accepted the unconditional cession, and established in them a provisional government complete in all its administrative and judicial details. Subject always to a prudent and economical management, his estimate of revenue was not unfavorable. He imposed taxes, and a tariff based upon that of New South Wales; and he formed a code of civil and criminal law sufficient for present circumstances; and, pending further orders, he retained in his own hands the general supervision of the provisional administration. King Thackombau had his favorite war-club elaborately ornamented in silver, with emblems of peace, and sent it to the Queen with a dutiful message, confiding the interests of his people unreservedly to the justice and generosity of her Majesty. Soon after the ex-King, with his sons, visited Sydney, where, in December, the incorporation of the islands with the British dominions was celebrated by a great banquet.

The Feejee Islands were discovered by the Dutch navigator Tasman, on February 6, 1643, who called them Prince William's Islands, but effected no landing. Captain Cook, by whom they were later sighted, but not touched, named the island now called Vatoa, Turtle Island. In 1789 they were closely passed by Lieutenant Bligh. In 1796 the missionary-ship Duff touched at the islands, and would have landed missionaries but for the hostile attitude of the natives. Perhaps the earliest known settlement made by Europeans was by a party of convicts who escaped from New South Wales in the year 1804 in an open boat, and succeeded in making the islands, where they were received kindly by the natives. Additions to the white population were made from time to time by shipwrecked seamen and by deserters from the whaling-ships, who frequently touched at the islands for water and fresh provisions. About the year 1835 some small traders succeeded in effecting a lodgment on the beach at Levuka.

The American Exploring Expedition, under Lieutenant Wilkes, 1838–'42, first excited the interest of civilized nations in the Feejee Islands. The first British consul was appointed in 1858. The number of white settlers were gradually augmented by other traders and planters, till, in the year 1859, it was estimated that the white population was not far short of 100. In 1866, 26 British and 8 foreign ships were entered, their gross tonnage amounting to 4,314. In the following year the population had nearly quintupled itself; the imports during the year had increased £29,000, and the exports, consisting of cotton, cocoa-nut oil, bêche-de-mer, etc., to £39,969. Much land, too, began to be brought under cultivation, and numerous plantations were opened up in various parts for the culture of Sea-island cotton, for which the soil and climate are eminently fitted. From 1867 to the present time a steady tide of immigration, principally from Victoria, has been setting in. In 1868, 52 ships, of the aggregate tonnage of 6,560, were entered; in the succeeding years 93 ships, of 7,920 tonnage, were entered; and during the years 1870 and 1871 it is estimated that these numbers have been almost doubled. The exports during this time were as follows: In 1868, £45,167, of which cotton alone was valued at £30,915, the next and largest being tortoise-shell, £8,009. In 1869 the exports were £57,020, cotton again being the staple export, amounting to £45,000.

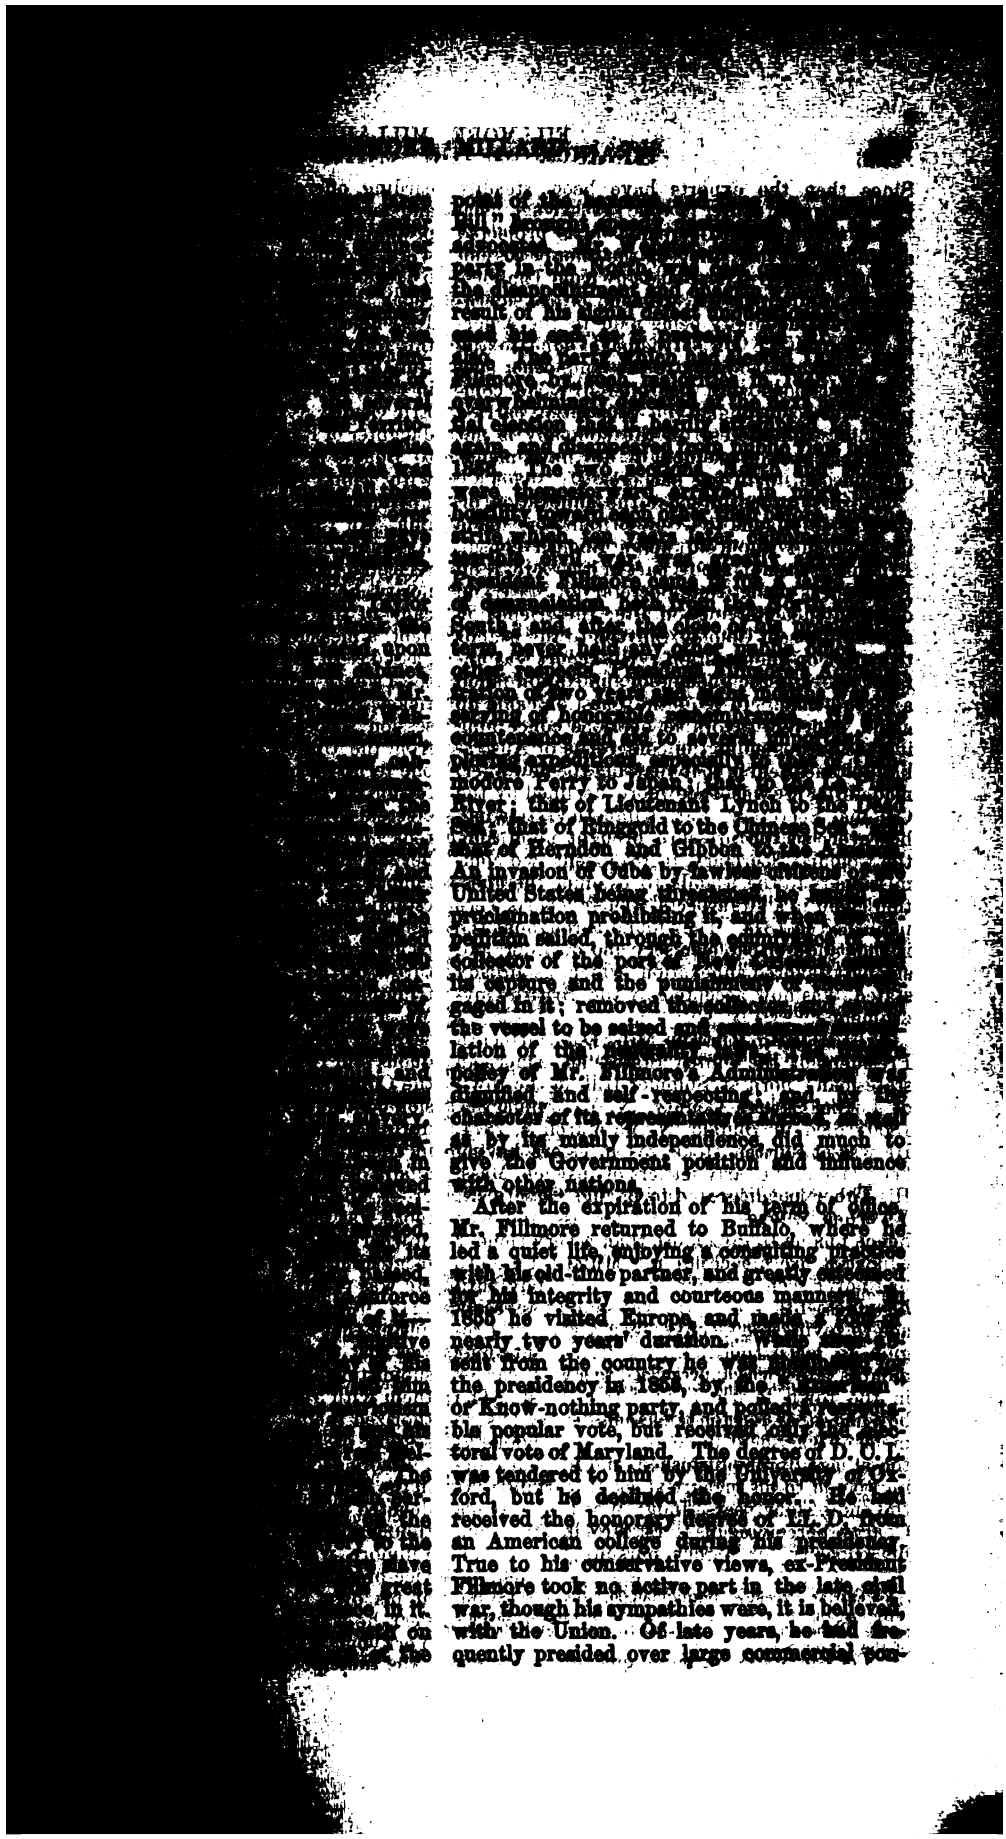
Since then the exports have been steadily rising in value.

The "Polynesian Company" was projected at Melbourne, for taking up the offer of cession of 200,000 acres of land made by King Thakombau to the British Government, on consideration of an indemnity being paid to the American consul for alleged damage done to the consulate. In addition to the land, other special concessions were also offered. The company was formed, and the transaction carried out; but the success of the company is not favorably spoken of, though they have plenty of good land, with fine harbors.

The first proposition for the annexation of the Feejee Islands to Great Britain was made in 1859, and the well-known English consul, Pritchard, took an active part in it. Lord John Russell was at that time Secretary of State, and declined the offer. Soon after the friends of annexation sent Colonel Smythe to the islands to report on the question. His report was unfavorable, and the scheme of annexation failed a second time. In 1870 the question came up again, and very favorable opinions concerning it were expressed at the conference of Australian colonies held in that year, but the new offer, made in 1871, was once more declined by the Colonial Secretary, Earl Kimberley. Owing, however, to the pressure brought upon him, the Colonial Secretary, in 1873, sent two commissioners to the islands to examine the question again in all its aspects. Their reports were published in 1874. They found throughout the islands indescribable misery and disorder, and strongly favored annexation, which, as already stated, was now accepted by the British Government.*

FILLMORE, Millard, LL. D., thirteenth President of the United States, an American statesman; born at Summer Hill, in the town of Locke, Cayuga County, N. Y., January 7, 1800; died in Buffalo, N. Y., March 8, 1874. He was of Puritan stock, his ancestors having been among the early settlers of Ipswich, Mass. His father had migrated to Cayuga County, N. Y., when it was a mere wilderness, and was hence unable to give more than a very slender education to his children. Millard Fillmore had never seen a grammar or geography until his nineteenth year. He was sent at an early age to Livingston County, then a very wild region, to learn the clothier's trade, but, four months later, was apprenticed to a wool-carder in the town in which his father lived. The boy had a passion for books, and every leisure moment was spent in devouring such books as the village library furnished, and in endeavoring to add to his meagre stock of learning. At the end of four years, Judge Wood, of Cayuga County, perceiving his thirst for education, and his capacity for higher pursuits than wool-carding, offered him a place in his law-office, and advanced him the means to prosecute a preliminary course of study. These advantages were promptly and gratefully accepted, and, by teaching during the winter, he was able to repay the judge's advances. In the autumn of 1821 he removed to the county of Erie, and the following spring entered a law-office in Buffalo; was admitted to the bar in that city in 1823, and commenced practice in Aurora, Erie County. He was married, in 1826, to a daughter of Rev. Lemuel Powers. He removed to Buffalo in 1830, and went into partnership with Hon. Nathan K. Hall, afterward his Postmaster-General, who died one week before him. In 1829 Mr. Fillmore was elected to the Assembly of New York from Erie County, and reëlected in 1830 and 1831. Though in a minority, he distinguished himself by his advocacy of the act to abolish imprisonment for debt, a measure which he succeeded in having passed. In the fall of 1832 he was elected to the Twenty-third Congress on the anti-Jackson ticket, and took his seat during the stormy session succeeding the removal of the deposits from the United States Bank. After serving one term, he renewed the practice of his profession till the fall of 1837; he had been again elected to Congress in November, 1836, and took his seat in December, 1837. As a member of the Committee on Elections, in the famous New Jersey "broad seal" case, he established his reputation in the House. The agitation of this election case was among the prominent causes that determined the overthrow of the Democratic party and the Whig triumph in the presidential election of 1840. Mr. Fillmore was reëlected to the Twenty-seventh Congress, and there obtained the arduous and responsible position of chairman of the Committee of Ways and Means. The session continued during a period of nine months, during which he was not absent from his duties in the House a single hour. The financial affairs of the Administration were in great disorder, and the public reputation of Mr. Fillmore was largely advanced at this time by his unwearying industry and the tact and judgment he brought to bear upon national affairs. He was regarded as the author of the Tariff of 1842. One of the most noted measures passed during that session, and through his advocacy, was that which required the departments, in submitting estimates of expenses, to accompany them with references to the laws which authorized them. At the close of the first or long session of the Twenty-seventh Congress Mr. Fillmore declined a reëlection to Congress, and, in the spring of 1841, returned to Buffalo, and devoted himself again to his profession. In the National Whig Convention of 1844 Mr. Fillmore was one of the candidates for the vice-presidency, but his name was withdrawn at his own request. In the fall of the same year he was nominated for Governor of New York, but was defeated by Silas Wright. In

* *See* Williams and Calvert, "Fiji and the Fijians" (new edition, London, 1870); Goodenough and Layard, "Report on the Offer of the Cession of the Fiji Islands to the British Crown" (published in "Foreign Relations of the United States," 1874).



ventions and other public gatherings, being admirably qualified for the control of such assemblages by his thorough parliamentary ability, his widely-extended knowledge, his broad views, and a personal urbanity which nothing could disturb.

FINANCES OF THE UNITED STATES. The financial embarrassment which commenced in the last quarter of the year 1873 continued during 1874. Meantime, the question of expansion or contraction of the currency became prominent in the minds of the people, as involving the remedy demanded. The Government practically maintained a neutral position, and the volume of the currency continued without any important change.

In the annual report of the Secretary of the Treasury, made December, 1873, there was presented a statement of the receipts and expenditures of the Government for the first quarter of the fiscal year ending June 30, 1874, and an estimate of the same for the remaining three-quarters of the fiscal year. The receipts and expenditures of the first quarter above mentioned, ending on September 30, 1873, which is the first of the fiscal year ending June 30, 1874, were as follows:

Customs	$49,195,403 68
Sales of public lands	573,768 07
Internal revenue	25,640,454 41
Tax on circulation, etc., of national banks	3,490,743 66
Repayment of interest by Pacific Railways	198,970 56
Customs' fines, etc	431,514 21
Consular, patent, and other fees	508,941 12
Proceeds of Government property	303,765 32
Miscellaneous sources	1,507,931 21
Net ordinary receipts	$81,853,492 34
Premium on sales of coin	2,350,818 34
Government of Great Britain—payment of the award of the tribunal of arbitration at Geneva	15,500,000 00
Total receipts	$99,704,310 58
Balance in Treasury, June 30, 1873	$131,192,028 50
Total available	$230,896,339 08

The expenditures during the same period were as follows:

Civil and miscellaneous expenses, including public buildings, light-houses, and collecting the revenues		$17,372,293 60
Indians		2,008,715 19
Pensions		8,698,156 58
Military establishment, including fortifications, river and harbor improvements, and arsenals		13,795,053 48
Naval establishment, including vessels and machinery, and improvements at navy-yards		9,792,451 57
Interest on the public debt, including Pacific Railway bonds		37,051,907 79
Total, exclusive of the principal and premium on public debt		$88,718,578 21
Premium, purchased bonds	$1,301,946 78	
Award by Geneva Tribunal, investment account	15,500,000 00	
Net redemption of the public debt	32,986,828 91	
		49,788,775 69
Balance in Treasury, September 30, 1873		92,388,985 18
Total		$230,896,339 08

For the remaining three-quarters of the same fiscal year, ending June 30, 1874, it was estimated that the receipts would be as follows:

Customs	$111,000,000
Sales of public lands	1,500,000
Internal revenue	66,000,000
Tax on national banks	3,200,000
Pacific Railways	300,000
Customs' fines, etc	800,000
Consular, patent, and other fees	1,300,000
Sales of public property	1,000,000
Miscellaneous sources	2,000,000
Total	$187,100,000

It was estimated that the expenditures for the same period would be as follows:

Civil expenses	$15,250,000
Foreign intercourse	1,100,000
Indians	6,500,000
Pensions	21,780,000
Military establishment	34,000,000
Naval establishment	18,000,000
Miscellaneous, civil, including public buildings	24,000,000
Interest on the public debt	70,000,000
Total	$200,630,000

But the moneys received and covered into the Treasury by warrants during the fiscal year ending June 30, 1874, were as follows:

From customs		$163,103,883 69
From internal revenue		102,409,784 99
From sales of public lands		1,852,426 93
From tax on circulation and deposits of national banks		7,080,086 17
From repayment of interest by Pacific Railway Companies		1,028,895 56
From customs' fines, penalties, etc		651,271 76
From labor, drayage, storage, etc		741,435 28
From sales of Indian trust-lands		903,439 50
From fees—consular, letters-patent, and land		1,898,189 74
From proceeds of sales of Government property		1,699,017 63
From marine-hospital tax		372,879 96
From steamboat fees		274,490 91
From profits on coinage, etc		447,970 73
From tax on seal-skins		356,610 42
From miscellaneous sources		1,691,303 70
Total ordinary receipts		$284,441,090 84
Premium on sales of coin		5,037,665 22
Total net receipts, exclusive of loans		$289,478,756 05
Payment by the British Government of the award of the tribunal of arbitration at Geneva	$15,500,000 00	
Excess of net receipts from certificates of deposit of legal tenders, etc., over redemptions	17,207,475 23	
		32,707,475 23
Total net receipts		$322,186,231 29
Balance in Treasury, June 30, 1873	$131,192,028 50	
Amount since received from late depositary, Cincinnati, Ohio	1,033 78	
	$131,193,067 28	
Deduct unavailable balances with depositaries carried to their debits on books of the Register, and to the credit of the Treasurer of the United States	13,730 18	
		$131,179,337 10
Total available cash		$453,365,568 39

EXPENDITURES.

The net expenditures by warrants during the same period were:

For civil expenses	$17,627,115 09
For foreign intercourse	1,508,064 27
For Indians	6,692,462 09
For pensions	29,038,414 66
For military establishment, including fortifications, river and harbor improvements, and arsenals	42,313,927 23
For naval establishment, including vessels and machinery, and improvements at navy-yards	30,992,587 43
For miscellaneous, civil, including public buildings, light-houses, and collecting the revenue	50,506,414 25
For interest on the public debt	107,119,815 21
Total net ordinary expenditures, exclusive of the public debt	$285,798,800 21
Premium on bonds purchased	1,395,073 55
	$287,193,873 76
Award of Geneva Tribunal, investment account	15,500,000 00
Total net disbursements	$302,693,873 76
Balance in Treasury, June 30, 1874	150,731,694 63
Total	$453,365,568 39
It will be seen by this statement that the net revenues for the fiscal year were	$289,478,756 06
And the ordinary expenses	287,193,873 76
Leaving a surplus revenue of	$2,344,882 30

During the months of July, August, and September, on the first quarter of the fiscal year 1874, bonds to the extent of $12,936,450 were purchased.

The receipts during the first quarter of the fiscal year ending June 30, 1875, were as follows:

From customs	$46,651,200 10
From internal revenue	26,314,615 33
From sales of public lands	391,465 88
From tax on circulation, etc., of national banks	3,596,148 23
From repayment of interest by Pacific Railways	217,911 97
From customs' fines, etc	30,540 31
From consular, patent, and other fees	451,257 11
From proceeds of sales of Government property	522,546 77
From miscellaneous sources	1,255,333 57
Net ordinary receipts	$79,431,048 27
From premium on sales of coin	1,453,237 72
Total net ordinary receipts	$80,884,285 99
Receipts from certificates of deposit of legal tenders and coin certificates in excess of redemptions	5,247,068 24
Balance in Treasury, June 30, 1874	150,731,694 63
Total available	$236,863,048 86

The expenditures during the same period were as follows:

For civil and miscellaneous expenses, including public buildings, light-houses, and collecting the revenues	$20,838,410 77
For Indians	3,082,752 93
For pensions	8,918,407 18
For military establishment, including fortifications, river and harbor improvements, and arsenals	11,618,290 99
For naval establishment, including vessels and machinery, and improvements at navy-yards	8,122,728 14
For interest on the public debt, including Pacific Railway bonds	32,787,899 38
Total ordinary expenditures	$85,313,489 42
Balance in the Treasury, September 30, 1874	151,549,559 44
Total	$236,863,048 86

For the remaining three-quarters of the same fiscal year, ending June 30, 1875, it was estimated that the receipts would be:

From customs	$115,350,000 00
From internal revenue	78,784,000 00
From sales of public lands	1,000,000 00
From tax on national banks	3,300,000 00
From Pacific Railways	500,000 00
From customs' fines, etc	200,000 00
From consular, patent, and other fees	1,200,000 00
From sales of public property	1,000,000 00
From miscellaneous sources	2,100,000 00
Total	$203,434,000 00

For the same period, it was estimated that the expenditures would be:

For civil and miscellaneous, including public buildings	$48,060,000 00
For Indians	5,000,000 00
For pensions	21,442,000 00
For military establishment	28,500,000 00
For naval establishment	17,000,000 00
For interest on the public debt	70,000,000 00
Total	$190,002,000 00

Thus, for the fiscal year ending June 30, 1875, from the foregoing account of actual receipts and expenditures for the first quarter, and of the estimates of the same for the remaining three-quarters, the estimates being based on the assumption that Congress would not increase the expenditures by deficiency or other appropriations, it was expected that the revenues would amount to $284,318,285.99, and that the ordinary expenses would be $275,315,489.42; which would leave a surplus revenue of $9,002,796.57 to be applied to the sinking-fund.

The sum of $31,096,545 would be required under the law for this fund; and, therefore, unless the revenues shall increase beyond the amount anticipated, there would be a deficiency in the sinking-fund account for this year of $22,093,748.43.

During the fiscal year the public debt was reduced by the sum of $5,762,447.65, as will appear by the following statement:

Principal of the debt July 1, 1873	$2,234,492,993 20
Interest due and unpaid, and accrued interest to date	42,356,652 82
Total debt	$2,276,839,646 02
Less cash in the Treasury	131,179,337 10
Debt, less cash in the Treasury	$2,145,660,308 92
Principal of the debt July 1, 1874	$2,251,690,468 42
Interest due and unpaid, and accrued interest to date	38,939,087 47
Total debt	$2,290,629,555 90
Less cash in the Treasury	150,731,694 63
Debt, less cash in the Treasury	$2,139,897,861 27
Showing a decrease during the year, as above stated, of	$5,762,447 65
This decrease is represented by the excess of receipts over expenditures	$2,344,882 30
The interest due and unpaid June 30, 1874, was less than June 30, 1873, by	3,417,565 35
	$5,762,447 65

In the following table is given a statement of the outstanding principal of the public debt of the United States on June 30, 1874:

STATEMENT OF THE OUTSTANDING PRINCIPAL OF THE PUBLIC DEBT OF THE UNITED STATES, JUNE 30, 1874.

TITLE.	Length of Loan.	When redeemable.	Rates of Interest.	Selling Price.	Amount authorized.	Amount issued.	Amount outstanding.
Old debt	.....	On demand	5 & 6 p. ct.	....	.....	.....	$57,665 00
Treasury notes prior to 1846	1 and 2 years.	1 and 2 years from date.	1 mill to 6 per cent.	Par.	.....	.....	62,575 35
Treasury notes of 1846	1 year	1 year from date	6 per cent.	Par.	$10,000,000	.....	6,000 00
Mexican indemnity	5 years	April and July, 1849	5 per cent.	Par.	350,000	$306,573	1,104 91

							$2,251,690,468 43

With regard to refunding the national debt, the Secretary of the Treasury makes the following statement:

On assuming charge of this Department, June 8, 1874, the Secretary found the balance of the five per cent. loan authorized by the acts of July 14, 1870, and January 20, 1871, then unissued, to be $178,548,300.

On the 2d day of July a circular was issued by the Secretary, inviting proposals, and in response thereto bids from various parties, at home and abroad, were received, the aggregate amount of which was $75,933,550. Of this amount, $20,933,550 comprised the domestic bids, and $55,000,000 the joint proposal of Messrs. N. M. Rothschild & Sons, of London, and Messrs. J. and W. Seligman & Co., of New York. The domestic bids at par and above, which were accepted by the Department, aggregated $10,113,550, and those at less than par, which were rejected, amounted to $10,820,000.

The proposal for $55,000,000 excluded the acceptance of all other bids, and provided that the parties should purchase $10,000,000 on or before August 1, 1874, and the remaining $45,000,000 at their pleasure, in several successive installments, prior to February 1, 1875; also that they should have the option of the entire balance of the five per cent. loan, $122,688,550, until the expiration of six months from January 31, 1875, and that the Secretary should keep an agent in London to deliver new fives and receive payment therefor. This proposition was modified, and on the 28th day of July a contract was entered into between the Secretary and Messrs. August Belmont & Co., of New York, on behalf of Messrs. N. M. Rothschild & Sons, of London, England, and associates, and Messrs. J. and W. Seligman & Co., of New York, for themselves and associates, for the negotiation of $45,000,000 of the five per cent. bonds, the contracting parties having deposited with the United States Treasury two per cent. of the amount subscribed for, as a guarantee for the fulfillment of

their agreement. The conditions of the contract were substantially as follows:

The contracting parties to have the option of the balance of the loan, viz., $122,688,550, until January 31, 1875; to be allowed one-quarter of one per cent. commission upon the amount taken; they agreeing to subscribe for $15,000,000 of the before-mentioned amount—$45,000,000—on the 1st day of August, 1874, and to subscribe for the remaining amount—$30,000,000—at their pleasure, in amounts of not less than five millions each, prior to the 31st day of January, 1875. The contract also allows the parties the exclusive right to subscribe for the remainder or any portion of the five per cent. bonds authorized by the acts of Congress aforesaid, by giving notice thereof to the Secretary of the Treasury prior to January 31, 1875.

The agreement, on the part of the Secretary of the Treasury, with the parties before mentioned, was to issue calls of even dates with their subscriptions for the redemption of an equivalent amount of six per cent. five-twenty bonds, as provided by the act of July 14, 1870. The subscribers agreed to pay for said five per cent. bonds, par and interest accrued to the date of maturity of each call, in gold coin, United States coin coupons, or any of the six per cent. five-twenty bonds called for redemption; they also agreed to defray all expenses incurred in sending bonds to London, upon their request, and in transmitting bonds, coin United States coupons, or gold coin, to the Treasury Department at Washington, D. C.

On account of the subscriptions of Messrs. Rothschild and Seligman, and their associates, and those of home subscribers, calls for six per cent. five-twenty bonds of the loan of February 25, 1862, were made as follows:

August 1, 1874	$25,000,000
September 1, 1874	15,000,000
October 1, 1874	10,000,000
November 2, 1874	5,000,000
Total	$55,000,000

The excess of subscriptions over calls—viz., $118,550—has been provided for by uncalled bonds which have been received by the Department in payment for that amount.

The larger portion of the bonds subscribed for has thus far been negotiated in Europe, where exchanges are still being made.

Such being the amount and condition of the public debt, the next feature of the finances of the Government to be considered is its revenue. The largest amount of this revenue is collected at the custom-houses. But, during the fiscal year ending June 30, 1874, the decline in these receipts was nearly $25,000,000. The receipts for the last half of the year 1874, being the first two quarters of the fiscal year 1875, were $2,500,000 less than for the corresponding period of the previous year.

The act of June 6, 1872, admitted large classes of manufactures to a reduction of ten per cent. of the duties prescribed by previous statutes, without designating specifically the articles to which the reduction should apply, leaving much room for construction in the practical application of the act to articles of new design or of particular combinations of materials. This act was followed by a system of extreme pressure for reduction, claimed through changes of classification of articles, and advantage was sought to be taken of every doubtful construction of all parts of the act.

During the years 1873 and 1874 there was a good deal effected in the way of reduction of duties through changes in form or component materials of merchandise, intended to answer the same purpose in consumption that articles and fabrics charged with a higher rate of duty had previously answered. Very large substitutions of materials other than wool have been made for fabrics previously paying the duty charged on woolens. Silks, linens, and cottons, have been similarly imitated, while the true rate of duty was avoided in some cases, and sought to be avoided in others, by claiming them as subject to rates of duty prescribed in the acts of 1861–'62 as manufactures of mixed materials.

Some portions of the reductions thus claimed were admitted in the revision of the statutes of 1874, while others were rejected as not properly authorized. It has been ascertained, as the result of careful calculation, that a concession of the reduced classifications claimed in the large number of appeals made to the Secretary during the year 1874 would have reduced the revenues so far as to seriously embarrass the Treasury. This urgency for reduction diminished, and more general acquiescence in reasonable and proper construction of the statutes by those who would at any time be content with an equal administration of such laws followed.

The general depression of business resulting from the panic of September, 1873, was followed by unusual delay in forwarding the crops. Prices in all the markets, foreign and domestic, were not sufficiently high to induce shippers to make the usual investment in moving the crops, and the result was that the demand for consumption of foreign merchandise usual in the West and interior in the fall was held in reserve. As a consequence of this absence of demand for foreign merchandise, purchases for the interior and the West were greatly restricted, and with reasonable caution importers avoided assuming the burden of stocks of goods not likely to be readily taken off their hands for consumption. In what manner or at what time this constraint will be entirely relieved, it is not easy to say; but it would be wholly without precedent to find such abundant production as has marked the year 1874 without remunerative demand for consumption, for any considerable time. It is a reasonable inference that this state of things will yield as the wants of Europe for our surplus crops are developed in the year 1875, and that general commerce, with the revenues to be received from it, will revive accordingly. For the present, it is of the highest importance to protect the revenue provided by law in the most faithful manner.

It is certain that the aggregate amount now received from this source is necessary for revenue to meet demands, which cannot be safely stated at less than $160,000,000 in gold, besides the receipts from internal revenue and

other sources. The impost statements for 1872–'73 show how heavily the revenues from customs were depleted by the reduction of 1872, coffee alone having yielded $10,969,098.77 in 1871, and $7,192,074.91 in 1872. On the importations of coffee, in 1873, the rate of three cents per pound would have yielded nearly $9,000,000, and two cents per pound almost $6,000,000.

The following table exhibits the annual imports of coffee and tea from 1871 to 1874, inclusive, with the total value thereof, and the average price per pound in the countries of their production:

STATEMENT OF IMPORTS OF COFFEE AND TEA DURING THE FOUR FISCAL YEARS (ENDING JUNE 30), 1871 TO 1874, INCLUSIVE.

FISCAL YEARS ENDING JUNE 30.	COFFEE.			TEA.		
	Pounds.	Aggregate Cost at Place of Shipment.	Average Cost per Pound at Place of Shipment.	Pounds.	Aggregate Cost at Place of Shipment.	Average Cost per Pound at Place of Shipment.
1871	317,992,048	$30,992,869	9.74 cents.	51,364,919	$17,254,617	33.60 cents.
1872	298,805,946	37,942,226	12.69 "	63,811,003	22,943,575	36.00 "
1873	298,297,271	44,109,671	15.00 "	64,815,136	24,466,170	37.74 "
1874	285,171,512	55,048,967	19.34 "	55,811,605	21,112,294	37.82 "

This record of foreign prices for coffee tends strongly to the conclusion, making due allowance for the effect of short crops on prices, that the duty repealed by the act of 1872 was added to the selling price abroad, with no advantage to consumers here, while the country, as a whole, has paid more than before for the entire stock. The repeal of the duty on tea caused little or no reduction of prices to consumers here, but an increase of prices abroad.

The decrease from each source of internal revenue for the year ending June 30, 1874, as compared with the fiscal year 1873, appears from the following statement:

SOURCES.	1873.	1874.	Decrease.
Spirits	$53,099,371 78	$49,444,089 85	$2,655,281 93
Tobacco	34,986,306 09	33,942,875 62	1,143,427 47
Fermented liquors	9,324,937 84	9,304,679 72	20,258 12
Banks and bankers	3,771,031 46	3,337,160 67	393,870 79
Penalties, etc	461,653 06	364,316 34	97,436 72
Adhesive stamps	7,702,376 85	6,136,844 64	1,565,532 21
Back taxes under repealed laws	6,329,783 00	764,880 14	5,564,901 86
Total	$114,075,456 08	$102,644,746 98	$11,430,709 10

The decrease in the receipts from spirits is due to the small production of brandy in 1874, in consequence of the partial failure of the fruit-crop in 1873; the earlier collection of special taxes in 1874 than in 1873; the reduction in the value of warehouse, rectifiers', and dealers' stamps by act of June 6, 1872, which reduction operated during the whole of the fiscal year 1874, but during only eleven months of 1873; and the smaller collections from repealed taxes relating to spirits in 1874 than in 1873.

The falling off in the receipts from tobacco is owing chiefly to the abolition of the system of bonded warehouses, under act of June 6, 1872, by which large quantities of manufactured tobacco were placed upon the market during the fiscal year 1873, and to the increased activity given during the early part of the same year to the movement of plug-tobacco by the reduction in the rate of tax from 32 to 20 cents per pound.

The act of June 6, 1872, so far as it relates to a reduction of taxation on banks and documentary stamps, did not go into full operation prior to the last fiscal year.

The number of brewers engaged in the production of fermented liquors during the fiscal years 1873 and 1874, was as follows: In 1873, 8,554; in 1874, 2,524—a decrease of 1,030.

During the fiscal year 1873, over $5,000,000 were collected from income as back taxes, and $500,000 from gas, items no longer taxable, and collections of past-due taxes, under repealed statutes, are of course constantly decreasing.

The receipts from internal revenue for the first quarter of the fiscal years ending June 30, 1874 and 1875, were as follows:

First quarter of 1874	$25,640,454 41
First quarter of 1875	26,314,615 33
Increase	674,160 92

The aggregate receipts for the months of October and November, 1873, were $13,863,029.97, and for the same months of 1874 they were $17,476,202.99.

The comparative coin value of the exports and imports of the United States for the last fiscal year, as appears from official returns to the Bureau of Statistics, may be exhibited as follows:

Exports of domestic merchandise	$569,453,421
Exports of foreign merchandise	16,849,619
Total exports	$586,283,040
Imports	567,406,342
Excess of exports over imports	$18,876,698
Exports of specie and bullion	$66,630,405
Imports of specie and bullion	28,454,906
Excess of exports over imports	$38,175,499
Total excess of exports of merchandise, specie, and bullion, over imports of same	$57,052,197

While these returns are believed to be reasonably accurate as regards the exports by sea, it has been found impracticable to obtain complete statements of our exports to Canada, owing to the fact that manifests, containing the quantities and values of merchandise exported in railway-cars, are not legally requirable. Detailed statements have been received, however, from the Commissioner of Customs of the Dominion of Canada, from which it appears that the coin value of our exports to Canada during the last fiscal year was $10,200,059 in excess of that returned by the United States customs officers, which would increase the exports for the last fiscal year as above stated, by that amount.

Merchandise of the value of $17,878,225 was withdrawn from bond for consumption, in excess of that entered for warehouse, during the year.

The export of coin and bullion was $24,952,188 less than for the preceding year, while the exports of domestic merchandise have increased $63,803,118.

There appears to have been a decrease in importations for the last year of $74,729,868, as compared with the previous fiscal year, and of $59,188,735, as compared with the fiscal year ended June 30, 1872.

The following imports show an increase in value, respectively:

Coffee, $10,941,570; molasses, $1,046,773; salt, $556,127; flaxseed, $147,229; brass and other metals, $475,439; medicinal barks, $418,436; coal, $410,762; hair, $408,826; raw hemp, $828,994; indigo and cochineal, $353,474; unmanufactured wool, $384,810; articles exported, and returned, $1,287,622; opium, $561,726; spices, $586,642; barley, $2,838,672; dress-goods, $1,714,838.

Those exhibiting a decrease in importation are principally unmanufactured wool, $12,183,632; manufactures of wool, $4,149,298; raw silk, $2,606,613; manufactures of silk, $5,893,253; fine linen, laces, and other manufactures of flax, $2,955,636; cotton goods, $7,007,455; kid gloves, leather, and manufactures of leather, $1,107,528; furs, $379,427; hides and skins, $1,281,565; jute and jute butts, $1,471,727; paper-stock, $1,058,297; paper and paper hangings, $734,872; horse-hair, $792,675; old and scrap iron, $5,148,370; copper ingots, $2,347,626; manufactures of copper, $887,836; pig and bar lead, $1,094,240; tin plates, $2,000,727; watches, $900,531; jewelry and precious stones, $876,997; fancy goods and perfumery, $468,986; tobacco, snuff, and cigars, $1,304,002; wines and liquors, $622,000; fruit and nuts, $1,392,044; sugar, $829,490; tea, $3,353,860; dutiable chemicals, $878,711; chemicals, drugs, and dyes, $1,444,919; dye-woods, madder, argols, bleaching-powder, and nitrate of soda, $713,083; soda-ash, $928,448; earthen, stone, and china-ware, $1,133,570; common window-glass, and glassware, $1,899,341; lumber, $2,694,327; crude India-rubber and gutta-percha, $703,821.

There was a falling off in the importation of iron and steel and their products of $20,366,536 in value, upon the following articles: Rails, $8,982,267; steel and manufactures of steel, $3,324,513; pig-iron, $3,915,747; bar-iron, $2,266,170; sheet, hoop, and band iron, $1,169,308; machinery, $400,192; anchors, cables, chains, castings, and hardware, $308,339.

There was also a decrease in the importation of live animals of $702,381, and of provisions of $849,331 in value.

Of domestic products exported, the following articles show an increase in value, in currency: Wheat, $49,969,205; wheat-flour, $9,876,430; rye and rye-flour, $1,440,999; corn and corn-meal, $1,029,829; cheese, $1,400,985; butter, $139,462; pork, $801,677; beef and tallow, $1,576,044; fish, $603,712; leaf-tobacco, $7,710,046; oil-cake, $487,798; horned cattle, $454,900; hogs, $838,435; agricultural implements, $503,839; timber, wood, and manufactures of wood, $2,233,919; coal, $909,675; manufactures of hemp, $691,021; iron and manufactures of iron, $846,197; fire-arms, $1,158,269; sailing-vessels sold to foreigners, $371,407.

The decrease in the exportation of domestic products appears principally in the following articles: Raw cotton, $16,016,489; bacon, hams, and lard, $3,576,025; hides, $1,044,641; furs and fur-skins, $391,185; leather and manufactures of leather, $518,976; sewing-machines, $556,424; crude mineral-oil, $910,354; crude turpentine and resin, $585,565; and silver ore, $969,303.

The most important question relating to the finances which was before the country during the year was on the expansion or contraction of the currency and the payment of specie. The views and action of Congress will be found in the debates on the currency, under the title of Congress, in this volume. The brief veto message of the President to Congress, resisting inflation, will be found in the same part of this volume. The views of the President were still further expressed in a memorandum prepared by himself and made public through the following correspondence:

UNITED STATES SENATE-CHAMBER,
WASHINGTON, *June* 4, 1874.

To the President:

I was so deeply impressed by the clearness and wisdom of the financial views, some of which you have fortunately reduced to writing, recently expressed by you in a conversation in which I had the honor, with a few others, to be a participant, that I cannot dismiss them from my mind. The great diversities of ideas throughout the country upon this subject, and the fact that public opinion concerning the same is still in process of formation, lead me to believe that the publication of these views would be productive of great good. I venture, therefore, to request of you that I may have a copy of the written memorandum to which I have alluded, with your permission that it may be made public.

I have the honor to be, very respectfully, your obedient servant, JOHN P. JONES.

The President replied as follows:

EXECUTIVE MANSION,
WASHINGTON, D. C., *June* 4, 1874.

DEAR SIR: Your note of this date, requesting a copy of a memorandum which I had prepared, expressive of my views upon the financial question, and which you, with others, have heard read, is received, but at too late an hour to comply to-night. I will, however, take great pleasure in furnishing you a copy in the morning, as soon as I can have it copied.

It is proper that I should state that these views were reduced to writing because I had been consulted on this question, not only by some of the members of the Conference Committee, but by many other members of Congress. To avoid any and all possibility of misunderstanding, I deemed this course both justifiable and proper.

With this explanation I inclose you herewith the memorandum referred to.

Very respectfully, U. S. GRANT.

To Hon. J. P. JONES, United States Senate.

The memorandum inclosed was as follows:

MEMORANDUM OF VIEWS ENTERTAINED ON THE SUBJECT OF DESIRABLE LEGISLATION ON THE FINANCES.

I believe it a high and plain duty to return to a specie basis at the earliest practicable day, not only in compliance with legislative and party pledges, but as a step indispensable to lasting national prosperity. I believe, further, that the time has come when this can be done, or at least begun, with less embarrassment to every branch of industry than at any future time after resort has been had to unstable and temporary expedients to stimulate unreal prosperity and speculation, on basis other than coin as the recognized medium of exchange throughout the commercial world.

The particular mode selected to bring about a restoration of the specie standard is not of so much consequence as that some adequate plan be devised, the time fixed when currency shall be exchangeable for coin at par, and the plan adopted rigidly adhered to. It is not probable that any legislation suggested by me would prove acceptable to both branches of Congress; and, indeed, a full discussion might shake my own faith in the details of any plan I might propose. I will, however, venture to state the general features of the action which seems to me advisable, the financial platform on which I would stand, and any departure from which would be in a spirit of concession and harmony in deference to conflicting opinions:

1. I would like to see the legal-tender clause, so called, repealed, the repeal to take effect at a future time, say July 1, 1875. This would cause all contracts made after that date, for wages, sales, etc., to be estimated in coin. It would correct our notions of values. The specie dollar would be the only dollar known as the measure of equivalents. When debts afterward contracted were paid in currency, instead of calling the paper dollar a dollar and quoting gold at so much premium, we should think and speak of paper as at so much discount; this alone would add greatly in bringing the two currencies near together at par.

2. I would like to see a provision that at a fixed day, say July 1, 1876, the currency issued by the United States should be redeemed in coin, on presentation to any assistant treasurer, and that all the currency so redeemed should be canceled and never reissued. To effect this it would be necessary to authorize the issue of bonds, payable in gold, bearing such interest as would command par in gold, to be put out by the Treasury only in such sums as should from time to time be needed for the purpose of redemption. Such legislation would insure a return to sound financial principles in two years, and would, in my judgment, work less hardship to the debtor interest than is likely to come from putting off the day of final reckoning. It must be borne in mind, too, that the creditor interest had its day of disadvantage also when our present financial system was brought in by the supreme needs of the nation at the time.

I would further provide that, from and after the date fixed for redemption, no bills, whether of national banks or of the United States, returned to the Treasury to be exchanged for new bills, should be replaced by bills of less denomination than $10, and that in one year after resumption all bills of less than $5 should be withdrawn from circulation, and in two years all bills of less than $10 should be withdrawn. The advantage of this would be strength given to the country against time of depression resulting from war, failure of crops, or any other cause, by keeping always in the hands of the people a large supply of the precious metals. With all smaller transactions conducted in coin many millions of it would be kept in constant use, and, of course, prevented from leaving the country. Undoubtedly a poorer currency will always drive the better out of circulation. With paper a legal tender and at a discount, gold and silver become articles of merchandise as much as wheat or cotton. The surplus will find the best market it can. With small bills in circulation there is no use for coin except to keep it in the vaults of banks to redeem circulation. During periods of great speculation and apparent prosperity there is little demand for coin, and then it will flow out to a market where it can be made to earn something, which it cannot do while lying idle. Gold, like every thing else, when not needed, becomes a surplus, and, like every other surplus, it seeks a market where it can find one. By giving active employment to coin, however, its presence can, it seems to me, be secured, and the panics and depressions which have occurred periodically in times of nominal specie payments, if they cannot be wholly prevented, can at least be greatly mitigated. Indeed, I question whether it would have been found necessary to depart from the standard of specie in the trying days which gave birth to the first legal-tender act had the country taken the ground of no small bills as early as 1850.

Again, I would provide an excess of revenue over current expenditures. I would do this by rigid economy and by taxation where taxation can best be borne. Increased revenue would work a constant reduction of debt and interest, and would provide coin to meet demands on the Treasury for the redemption of its notes, thereby diminishing the amount of bonds needed for that purpose. All taxes, after redemption begins, should be paid in coin or United States notes.

This would force redemption on the national banks. With measures like these, or measures which would work out such results, I see no danger in authorizing free banking without limit.

The views of the Secretary of the Treasury respecting the resumption of specie payments were briefly expressed in his report, as follows:

While it seems to be very generally conceded that resumption of specie payment is essential to the honor of the Government and to the general welfare, the views of intelligent and well-informed persons as to the best method of resumption are so widely divergent, and the plans that have been suggested so multifarious, that the Secretary feels embarrassment in suggesting a plan, the details of which will commend themselves to Congress. But there are one or two fundamental ideas underlying the subject which, it is believed, must be the basis of any practicable plan for resumption, and are, therefore, submitted for the consideration of Congress.

It is obvious that there can be no resumption by the Government so long as the volume of paper cur-

rency is largely in excess of the possible amount of coin available for that purpose which may come into the Treasury in any year, and while no provision is made for the conversion of this paper-money into any thing having a near relation to coin; nor is it possible for the banks or people to resume so long as the large amount of irredeemable paper now in circulation continues to be by law legal tender for all private debts with reference both to the past and the future. While this state of things lasts gold will continue to flow from us, and find employment where the natural laws of trade, unobstructed by restraining legislation, make its daily use indispensable.

The Secretary, therefore, recommends Congress to provide by law that after an early and fixed day United States notes shall cease to be legal tender as to contracts thereafter made. But this provision should not apply to official salaries or to other ordinary expenditures of the Government under then existing contracts or appropriations. Between the day thus to be fixed and the time of final resumption a sufficient period should elapse to enable the people and banks to prepare for the latter by such gradual processes in business as will neither lead to violent contraction in credit and values, nor suddenly increase the obligations of debtors. The sudden and immediate appreciation of the paper dollar to its par value in gold is not only no necessary element of redemption, but, as far as practicable, should be avoided. If during the period of the war the legal-tender acts operated as a bankrupt law, compelling creditors to give acquittances upon the receipt of less than the full amount of their debts, this is no reason why the law for resumption should now compel debtors at once to pay essentially more than they have contracted to pay. The adoption of such measures as will not suddenly increase the obligations of debtors, will go far to allay and disarm whatever popular opposition to resumption of specie payment may now exist, and, besides, would be but just to the debtor class. The day from which new contracts must be discharged in coin should be fixed sufficiently far in advance to give the people and the banks time to understand it and to prepare themselves for it. It is believed that not many months will be necessary for that purpose; but, to avoid the mischiefs already indicated, this day should precede the day of final resumption by a longer period. The time should not, in the opinion of the Secretary, be extended beyond three years, and might safely be made as much less as in the judgment of Congress would sufficiently protect the interest of debtors and avoid the evils of too sudden contraction.

The law should also authorize the immediate conversion of legal-tender notes into bonds bearing a low rate of interest, which, while inviting conversion, should not be so high as to appreciate the legal-tender notes rapidly, and thereby operate oppressively on the debtor class. As an additional inducement to the conversion of United States notes into these bonds at a low rate of interest, authority should be given for making them security for the circulation of national banks. The law should further provide the means for the redemption of such notes as may be presented for that purpose when the period of resumption shall have been reached. To this end, the Secretary should be authorized to make a loan not exceeding the total amount of notes remaining unconverted at the time of resumption, less the surplus revenue to be made applicable to such resumption. It is probable that the gradual and continued revival of business will so far increase the revenues that a large loan will not be required for this purpose; but it is advisable that the Secretary be authorized to make it in order to meet the contingency of a failure of sufficient surplus revenues. Such a loan should be made by issuing bonds to run for such time as the wisdom of Congress may suggest, and to be disposed of from time to time as the necessities of the case may require. In the opinion of the Secretary, these bonds should run for a long period, and should bear interest at a rate not exceeding the lowest rate which the Government may then be paying in refunding its six per cent. securities. Any substantial or useful movement for resumption necessarily involves supplying the Treasury with increased amounts of coin, either by increased revenues or an adequate loan. The present condition of the credit of the Government, which would be further enhanced by the adoption of measures for return to a specie basis, leaves no room for doubt that a loan for such purpose would be readily taken at a low rate of interest. Measures should also be adopted requiring the banks to hold gold reserves preparatory to resumption on their part.

But the Secretary does not deem it proper to pursue the matter into further detail. If Congress shall conclude, as he earnestly hopes it will, that the time has arrived for the enactment of a law having for its object resumption of specie payments, its own wisdom will supply the necessary methods.

The act of Congress which became a law provides that the amount of United States notes outstanding and to be used as a part of the circulating medium, shall not exceed the sum of $382,000,000, and no part thereof shall be held or used as a reserve. It further provides for the repeal of the reserve required to be held by the national banks upon circulation;

For the redemption of all national-bank notes at the Treasury in legal-tender notes, for which purpose the banks are required to keep on deposit with the Treasurer 5 per cent. of their circulation; which amount is to be counted as a part of the reserve required to be held on deposits;

For the deposit by any national bank of lawful money with the Treasurer, in sums of not less than $9,000, and the withdrawal of the bonds on deposit as security for such circulating notes, provided that the amount of such bonds shall not be reduced below $50,000;

For the withdrawal of $55,000,000 from national banks in States which have received more than their proportion, and its redistribution to national banks in States which have received less than their proportion, upon an apportionment made on the basis of population and of wealth, as shown by the returns of the census of 1870, not more than $30,000,000 of which shall be withdrawn and redistributed during the fiscal year ending June 30, 1875.

Twenty-two hundred national banks have been organized since the establishment of the national banking system, under the act of February 28, 1863. Thirty-five of these banks have failed, and one hundred and thirty-seven gone into voluntary liquidation by a vote of two-thirds of the shareholders, under section 42 of the act, leaving 2,028 banks in existence on the 1st day of November, 1874. During the year, seventy-one national banks have been organized, with an authorized capital of $6,745,500. Three banks have failed and twenty have gone into voluntary liquidation.

The following table exhibits the resources and liabilities of the national banks in operation at corresponding periods for the last five years:

BANKS.	OCTOBER 8, 1870.	OCTOBER 2, 1871.	OCTOBER 8, 1872.	SEPTEMBER 12, 1873.	OCTOBER 2, 1874.
	1,615 Banks.	1,767 Banks.	1,919 Banks.	1,976 Banks.	2,004 Banks.

Totals	$1,510,713,236	$1,730,566,899	$1,755,857,098	$1,830,627,845	$1,877,180,943

The national-bank act authorized the issue of $300,000,000 of national-bank circulation. The act of July 12, 1870, authorized the issue of $54,000,000 of additional circulation. Of this additional circulation there was issued to November 1, 1871, $24,773,260; in the year ending November 1, 1872, $16,220,210; in the year ending November 1, 1873, $7,357,479. During the year ending November 1, 1874, there has been issued $5,817,316; and during the same year there has been withdrawn from circulation and destroyed $2,241,019—showing an actual increase of national bank circulation during the year of $3,576,297.

Two national gold banks have been organized in California during the year, with an authorized capital of $700,000. The total capital of the national gold banks, all of which are organized in the State of California, is $3,650,000, to which banks circulation has been issued amounting to $2,150,000.

The amount of legal-tender notes authorized is $382,000,000; the amount of national-bank notes, $354,000,000. The amount of legal-tender notes, under the act of June 20, 1874, cannot be reduced, but must remain continually in circulation; the amount of national-bank notes, however, may be reduced at the pleasure of the banks. If the value of the paper dollar be determined by the amount of such money in circulation, then the national-bank note is more valuable than the legal-tender note. The national-bank notes outstanding are secured by a deposit of more than $385,000,000 of United States bonds, which are at a premium of more than 12 per cent. If the United States bonds be not of sufficient value to pay the notes, the capital and surplus of the banks, amounting to $622,000,000, as well as their entire assets, are available for that purpose. The stockholders are individually liable for the full amount of their stock, in addition to the amount invested in such shares, and the United States guarantees the final payment of the notes. There are, then, absolute assets for more than three times the amount of the national-bank notes outstanding, available for the redemption of these notes, and, in addition, the contingent liability of the shareholders, and the guarantee of their final payment by the United States.

The amount of gold and silver in the form of coin and bullion in the country is thus estimated: According to the official reports of the Treasurer of the United States and Controller of the Currency, there were held by the Treasury and national banks at the close of the fiscal year ended June 30, 1872:

In coin	$98,389,864 49
Estimated amount of coin in Pacific coast States and Territories at that time	20,000,000 00
And in the hands of bankers and people elsewhere	10,000,000 00
Total specie, fiscal year 1873-'73	$128,389,864 49
Add to this two years' product of United States mines, at $70,000,000	140,000,000 00
Imports of coin and bullion for two years	49,695,343 00
	$318,085,207 49
Deduct amount exported during the two years ended June 30, 1874	151,238,979 00
Total estimated stock, June 30, 1874	$166,846,228 49

The above estimate shows a gain in specie and bullion in the last two fiscal years of $38,456,864, and the stock of specie to be about $166,846,228.

The gold coinage at the mints during the year, including worn pieces recoined, was $50,442,690; silver coinage, $5,983,601; gold bars stamped, $31,485,818; silver bars stamped, $6,847,799.18.

The range in prices at New York for Government securities during the year 1874 has been as follows:

6s Missouri, long bonds	90¾ January 2	99 December 7

The following remarks from the *Financial Chronicle*, relative to railroad bonds, are important:

In no department of financial affairs were transactions attended with greater interest than in the matter of railroad adjustments. In January, 1874, the total amount of railroad bonds on which interest had been passed footed up the large sum of $386,403,668, including a considerable amount of bonds which were in default prior to the panic of 1873. In October, 1874, our statement in the *Chronicle* made the total amount $497,807,660, or about $111,000,000 larger than in January, a large part of this increase having accrued from the default of a few roads for large amounts, such as the Atlantic & Great Western for $23,000,000, the Indianapolis, Bloomington & Western for $12,000,000, the Columbus, Chicago & Indiana Central for $5,000,000, and several other roads for considerable amounts. But it should be clearly understood that the compilation in October was made without any regard to settlements with bondholders which were then pending, and which had progressed so far with many companies that a good part of their coupons had already been funded. As to the actual amount of interest overdue and unpaid at any one time, the maximum was probably reached in July or August, 1874, and the amount has since been steadily diminished by the progress of funding arrangements, while defaults since then have been comparatively insignificant. Of all the roads which were in our lists of defaulted companies in January or October, 1874, we find that at the close of the year seventeen had been foreclosed; thirty were then in litigation; thirty-four had funding propositions, either wholly or partly accepted; thirty-seven were in a condition of "masterly inactivity," or the condition of their affairs was unknown to the public; and one company had resumed payment of its regular interest.

In the New York market it was almost impossible to place any new bonds; in London, however, a very considerable amount of bonds was placed, but these were almost invariably the bonds of the soundest railroad corporations, whose financial standing was above reproach. In the latter part of the year the prices of the best class of railroad bonds advanced materially in New York, and gave indications of a renewed demand for this class of investments among home purchasers. The range of prices for a few of the leading bonds during the year was as follows:

* Range after June 27, 1874.

The highest price of gold was 114¼ on April 15th, and the lowest 109 on July 28th. The fluctuations were less than in previous years, and there was an absence of speculative movements. The export movement of the year was considerable, the total from New York comparing as follows with previous years:

1874	$63,458,440	1869	$32,108,448
1873	49,308,185	1868	70,841,599
1872	71,545,375	1867	51,001,948
1871	68,865,547	1866	62,553,700
1870	58,689,171		

The imports of specie at New York for the year compared as follows with previous years:

1874	$6,264,464	1870	$11,581,771
1873	18,779,929	1869	14,518,725
1872	5,547,311	1868	7,168,071
1871	8,618,290		

The foreign exchanges were undisturbed by any violent shocks, either from political or financial causes, and rates in New York for sterling bills were unusually steady, and during a large part of the year very firm. Under the present method of quoting, the specie shipping point is about 4.90½ for demand bills; and the rates reached this point for a considerable length of time in June and July, and again in November and December, leading to considerable shipments of coin. From the statement of the commerce of the United States for the fiscal year 1873–'74, it will be seen that there was an excess in the exports over imports of $57,171,246, thus placing the "balance of trade" to that extent in favor of this country. The American railroad loans placed in London footed up no inconsiderable amount, and on the other side of the account there was a return movement late in the year of United States Government bonds to this country, which was estimated by some of the most competent judges to amount to about $8,000,000.

The following statistics of local indebtedness were prepared by the Speaker of the Lower House of Congress, James G. Blaine:

There are in the United States sixteen cities having each a population exceeding 100,000, and an aggregate population of 4,500,000. Each is a city with special advantages, which cannot be taken from it; each, in the language of the day, has a large future: each has abundant wealth, and still larger prospective resources. They embrace, when taken collectively, the trade of Atlantic and Pacific, of Gulf and lake coasts, besides all the great interior rivers of the continent, and the converging traffic of thousands of miles of railway. Surely, one would think that each might bide its time and patiently await its well-assured prosperity, without being compelled to borrow largely, in some cases almost recklessly, of the future. And yet, taking these sixteen cities together, we find their municipal debts amount to $350,000,000, being $80 *per capita* for their entire population, and presenting in the aggregate an amount which, prior to our war experience, would have been considered a large burden for the nation. It would be a gross injustice, however, to leave the inference that the average debt of these cities is over $20,000,000; for, indeed, a single city, the commercial metropolis of the nation, presents a debt embracing nearly one-third of the entire amount, while several

of the cities on the list have debts of comparatively insignificant proportions.

The class of cities next in size to those just referred to, those having each a population exceeding 50,000 and less than 100,000, are twelve in number—having an aggregate population of about 750,000. Their total debt does not exceed $30,000,000, which gives about $40 *per capita* for the whole list.

Taking the next class of cities, having each a population exceeding 20,000 and less than 50,000, I find there are in all some fifty-three in the United States, with a total population of something over 1,500,000. Their total debt cannot be less, I think, than $75,000,000, or $50 *per capita*.

Interested as I have been in making these investigations, I included one more class within the scope of my inquiries, and took the cities and towns throughout the United States having populations between 10,000 and 20,000 each, a list which I found to embrace in all 105 cities and towns, whose aggregate population amounts to nearly 1,400,000, and whose aggregate debt is something over $35,000,000, or about $22 *per capita* for the whole.

Adding these four classes together it presents a table which embraces the cities and towns of the United States having over 10,000 inhabitants each—of which there are in all 186—with an aggregate population exceeding 7,000,000, and a total municipal debt of about $490,000,000.

The towns having less than 10,000 inhabitants each I have not been able to classify with the approximate accuracy of those I have given, but I feel well assured that the aggregate of these debts would reach $80,000,000—making the total municipal debt of the country about $570,000,000.

Added to these municipal debts proper, we find the county debts of the entire country amounting to about $180,000,000, and the State debts to about $390,000,000—making a grand aggregate of $1,140,000,000 of public debt of States, counties, cities, and towns.

This sum total is nearly $300,000,000 greater than that given in the census of 1870. The addition, however, has not been made within the four succeeding years, but a part is due, I think, to incomplete returns made to the census officials. I have been at some pains, by original investigation and inquiry, to get at the aggregates of State, county, and municipal indebtedness; and while I do not assume to give details or vouch for absolute accuracy, I think the totals I have given may well be taken as approximate reliable statements. The difficulty in attaining perfect exactness of statement results from the imperfect manner in which statistics are gathered in the several States. I have found, indeed, very few States where the State officers were authorized by law to keep any thing of record in regard to debt except the direct obligations of the State. In Massachusetts, where great attention is paid to accuracy of statistics, I have been enabled to get precise information; and the entire footing of that Commonwealth, of State, county, and municipal debts, shows a grand total of $97,500,000, subject to a sinking-fund deduction of $11,000,000—leaving $86,500,000 as the net debt of that State. A very large burden, it would seem, and yet such is the wealth of the State that the entire debt does not constitute more than 4 per cent. of its valuation, and probably not 2½ per cent. of its actual wealth.

Dunn & Barlow's circular gives the mercantile failures for 1874 at 5,830, and the total number of firms reported is 650,000. The distribution of the failures is given in the following table. In 1873 the number of failures was 5,183, and the amount involved $228,499,000. The noticeable feature is, that there is a marked diminution in the amount of liabilities. Two causes are assignable for this, viz.: 1. That the panic of 1873 caused the failure of an unusual number of large houses, thus raising very much the average amount of liabilities over all previous year; and, 2. That the volume of business had been greatly diminished during 1874, so that, when failures did occur, the liabilities were comparatively light; and further, that the houses which succumbed during the year were in a great degree a smaller class of traders than those of 1873, and than the average of those of several preceding years.

STATES.	No. of Failures.	Amount of Liabilities.
Alabama	48	$963,000
Arkansas	22	406,000
California	68	2,571,000
Connecticut	151	2,286,000
Delaware	27	678,000

Wisconsin	101	2,575,000
Total	5,830	$155,239,000

FISHER, Rev. SAMUEL WARE, D. D., LL. D., an eminent Presbyterian clergyman, college president, and pulpit orator, born in Morristown, N. J., April 5, 1814; died at College Hill, near Cincinnati, January 18, 1874. His father was a distinguished clergyman of the Presbyterian Church, a pastor at Morristown during his boyhood. After thorough preparation he entered Yale College in 1831, and graduated with high honors in 1835. The next year he entered Princeton Theological Seminary, but after two years there he transferred himself to the Union Theological Seminary, New York City, whence he graduated in 1839. Before leaving the seminary he was called to the pastorate of the Presbyterian Church in West Bloomfield, now Montclair, N. J. He remained there three and a half years, and was then called to the Fourth Presbyterian Church in Albany in October, 1843. In his less than four years' ministry there he had achieved a reputation, as a pulpit orator, inferior to no other clergyman of his denomination in the

State. From Albany he was called in 1847 to Cincinnati, as a successor to Rev. Dr. Lyman Beecher, and for eleven years he more than made good the promise of his youth, and gave to the church of which he was pastor more than its former prestige. In July, 1858, he resigned this pastorate, to accept the presidency of Hamilton College, Clinton, N. Y. Here his scholarship, his eloquence, his untiring assiduity, and his great executive ability, infused a new life into the college, led to its more liberal endowment and to its greatly-increased efficiency. In September, 1867, finding his health impaired by his excessive labors, to which had been added the cares and anxieties which came from the civil war, and his great exertions to effect a reunion of the two branches of the Presbyterian Church, Dr. Fisher felt compelled to resign the presidency, and return to the pastorate. He accepted the call of the Westminster Presbyterian Church in Utica, and commenced his work there with much of the power and unction which had characterized his labors at Cincinnati; but in May, 1870, he was stricken with paralysis. From the first attack he so far recovered as to be able to partially resume his duties; but a second attack, which, though apparently not affecting his mind, abridged his powers of speech and locomotion, compelled his resignation of all active duties, and he removed to Cincinnati, where his last days were spent, surrounded by his family. His death was sudden, and was the result of an apoplectic shock. Dr. Fisher, though one of the most elegant writers of our time, had published very little. Only a few sermons, orations, and occasional addresses, remain to testify to an eloquence which has rarely been surpassed in modern times. Some of these were collected, a few years before his death, into a single volume. His discourse before the A. B. C. F. M., in 1860, was one which none who listened to it will ever forget. Dr. Fisher received the degree of D. D. from Miami University in 1852, and that of LL. D. from the University of New York in 1860.

FLORIDA. The Legislature was in session from January 6th till February 16th. Perhaps the most important subject considered was that of amending the constitution of the State. Eleven articles of amendment were agreed upon. Before becoming a part of the constitution, the proposed amendments must be approved by a two-thirds vote of all the members elected to each branch of the Legislature which convened in January, 1875, and be subsequently ratified by the people. First in importance is that which provides for biennial sessions of the Legislature after 1877. Radical changes in the judiciary department of the government are proposed. The amendments, if adopted, will abolish the County Court as a trial-court at common law, distributing its present common-law jurisdiction to the justice and circuit courts. These changes will do away with the costs of jurors and witnesses in those courts, which are now paid by the counties, but will increase, to some extent, this heavy item of expense in the Circuit Courts, which is paid by the State, thus reducing the expenses of the counties and increasing those of the State.

An act was passed to incorporate a company to construct a railroad from Gainesville to some point on the Gulf of Mexico, or some navigable tributary thereof, with further power to construct a railroad from any point on the first-named road to Key West. A company was also chartered to build a railroad from St. Augustine to Jacksonville, to be commenced within one year, and completed within three years thereafter.

To encourage the establishment of manufactories in the State it was enacted that "every person or association of persons, corporation or corporations, who shall engage in the manufacture of cotton-goods, sugar-refining, cotton-seed oil, paper, or salt, shall have so much of their property exempt from taxation as shall be used for such manufactory, including their stock of manufactured goods or raw material on hand, and all buildings and lands used by any such person, association, or corporation, for the period of five years from the establishment of any such manufactory."

The act providing a revenue for the support of common schools was amended so as to read as follows:

The Board of Public Instruction in each county shall, on or before the last Monday in June of each year, prepare an itemized statement showing the amount of money required for the maintenance of the necessary common schools of their county for the next ensuing scholastic year, and shall deliver an official copy of the same to the assessor of taxes on or before the first Monday in July following, and the said amount shall not be less than one-half of the amount received from the State by the apportionment of common-school funds, nor more than one-half of one per cent. of the assessed value of the taxable property of the county, and the assessor shall compute and the collector shall collect the said amount in like manner as other taxes are computed and collected.

An act was passed requiring the Governor "to set apart a portion of the public buildings of the State at Chattahoochee, in Gadsden County, for the purposes of an indigent lunatic asylum, to which all indigent persons who may be found to be insane, lunatic, or *non compos mentis*, by the courts of this State having jurisdiction of the subject, may be confined for safe keeping and treatment."

The Governor made a personal inspection of the public buildings at Chattahoochee, but found none of them suitable for the purposes of an insane asylum. The State is maintaining, at great expense, six of its insane at asylums outside the State, and sixteen at private houses in the State, while two are confined for safe keeping in the State-prison. Among other acts passed by the Legislature was a general law for the incorporation of railroads and canals.

An election was held on the 3d of Novem-

ber, for Representatives in Congress and members of the State Legislature. William J. Purman, Republican, was elected to Congress in the first district, by a majority of 668 over the Democratic candidate, Mr. Henderson; and Josiah S. Walls was chosen by the Republicans in the second district, by a majority of 371 over his Democratic opponent, Mr. Finley. The total vote was as follows: First district—Purman, 10,045; Henderson, 9,377. Second district—Walls, 8,549; Finley, 8,178.

The Legislature which assembled January, 1875, was classified as follows:

PARTIES.	Senate.	House.	Joint Ballot.
Democrats	12	28	40
Republicans	12	24	36
Democratic majority	0	4	4

The views of the Republican party in the State may be regarded as expressed in the following resolutions adopted by the convention in the first congressional district:

Resolved, That this convention reaffirm the principles of the Republican party, as laid down by its founders at the Chicago Convention of 1860; that our faith in those principles is as strong as ever, and our confidence unbounded in their ultimate acceptance by every true patriot as best calculated to secure to each and all the blessings guaranteed by the Constitution, viz., life, liberty, and the pursuit of happiness; that we point with pride to the record of the party in the past, and hereby pledge our renewed and continued efforts for the success of the party of progress and reform—the only party which has the courage to purge itself of all unworthy members and to rectify abuses and wrongs without fear or favor.

Resolved, That the President of the United States, Ulysses S. Grant, twice elected to the presidency by the Republican party, has faithfully upheld the standard under which he was advanced to the highest civil position in the United States. He has sustained the rights of all people, preserved good order throughout the nation, opposed all dangerous and gigantic monopolies, introduced into our national civil service greater purity, preserved a proper equilibrium between the various conflicting financial interests of the country, and, while affording American citizens every protection due to them as such, at the same time displayed the wisdom and statesmanship that saved us from foreign wars or violent disturbance at home. He has proved himself, therefore, a sagacious and patriotic President, a successful leader and administrator of the nation's affairs, and we express ourselves as unqualifiedly favorable to his renomination and reëlection to the Presidency *for a third term*.

Resolved, That the Congress of the United States has equally proved itself the friend of the people, and a wise guardian of the public welfare. It has never failed to declare itself on the side of the people as against every measure and policy that was oppressive, unjust, or anti-republican. If Congress has ever erred in legislation that proved unwise, it has always evinced a disposition to heed the advice of the people and retrace its steps; wherever any public corruption has shown itself to be identified with the Republican name, it has ever struck at the evil with all its force, and purged the party of its poison. Individuals may have proved recreant, as they do in all parties, but the grand principles of the Republican party have been preserved by Congress in unassailable purity.

Resolved, That our Senators and Representatives in Congress are entitled to our cordial commendations for their faithful promotion of the best interests of the State; for establishing numerous mail facilities for the benefit of the people; for obtaining large appropriations from the United States Government for the improvement of our rivers and water-courses, and for the reconstruction of the Pensacola Navy-yard, in this manner bringing wealth into the State, giving employment to labor, and greatly adding to the general prosperity of our people.

Resolved, That we favor all prudent measures for the improvement of internal communication between the different cities and ports of our State; that we regard the building of a canal through our State, uniting the waters of the Atlantic and Gulf, as a work of national as well as State importance, and request our delegates in Congress, present and prospective, to use their best efforts to urge its importance upon the attention of our national Legislature.

Resolved, That we pledge our support to the ratification of all the amendments proposed to our State constitution, looking to the economy, purity, and greater freedom and efficiency of our State Government.

Resolved, That we are strongly in favor of and urge the immediate extension of railroad facilities through West Florida, to a direct railroad and steam communication with Mobile and New Orleans; and we also equally urge an extension of present railroad facilities through South Florida to Key West, thereby perfecting communication with Cuba. The people demand these public improvements both in West and South Florida, and we will favor all proper and well-guarded measures for their speedy construction.

Resolved, That we hereby place ourselves on record as opposed to the imposition of taxes upon the people for the payment of principal or interest of the bonds issued by the State in aid of the Jacksonville, Pensacola & Mobile Railroad Company, or any other railroad company in the State, the same having been improperly issued and the proceeds thereof misapplied; and we heartily indorse the efforts of the State administration to enforce the lien of the State upon the railroad property, and thereby secure the return and cancellation of the said bonds by the road, and the relief of the State and people from any responsibility therefor.

Governor Ossian B. Hart died in Jacksonville, on the 18th of March, when Lieutenant-Governor M. L. Stearns became the Chief-Magistrate.

The following statement exhibits the indebtedness of the State on the 1st of January, 1875:

Bonds outstanding		$1,394,867 58
Add one year's interest on $312,522.50, old bonds yet to be exchanged		20,626 48
Add six months' interest on old bonds held by School and Seminary Funds		9,960 01
Add interest due on bonds of 1871		27,286 00
Add interest due on bonds of 1873		16,833 12
		$1,469,573 19
Deduct amount in Treasury applicable to this debt		52,871 68
Total bonded debt and interest, less funds in the Treasury applicable to its reduction		$1,416,701 51
Warrants outstanding	$185,646 14	
Deduct funds in Treasury applicable thereto	2,868 93	
Total floating debt, less funds in Treasury applicable thereto		182,777 21
Total bonded and floating debt outstanding.		$1,599,478 72
The total bonded and floating debt, January 1, 1874, was		1,620,809 27
Showing a reduction of the State debt during the past year		$21,330 55

Governor Stearns thus speaks of the finances of the State:

It is thus highly gratifying and encouraging that, while for many years the interest remained unpaid, and the volume of the debt was annually increased, during the last two years we have not only paid all our interest promptly, but have made an actual reduction of the principal. But while the wise provisions of the law of 1873, providing for the consolidation of all the bonded debt, except the seven per cent. bonds of 1871, and those belonging to the School and Seminary Funds, are being carried faithfully into execution, and have created an interest and sinking fund sufficient to secure the prompt payment of the interest and the gradual liquidation of the principal, and while the floating debt has been reduced during the past year from $190,585.79 to $185,646.14, yet the outstanding warrants on the Treasury still remain at a large discount. And this depreciation, as shown in the Controller's report, so increases our current expenditures as to be equivalent to the payment by the State of an interest of two and a half per cent. per month on its floating debt. And yet the amount of these warrants is less than three-fourths of the State tax proper in one year. Why, then, are they so far below par? The answer is found in the fact that our current expenses annually exceed the revenue provided to meet them. It will be seen by the reports of the financial officers for the present year that while our current expenses have been $280,887.87, the receipts applicable thereto are only $254,328.58, leaving a deficiency on current account of $26,508.79, by which amount the floating debt would have been increased had not a portion of it been funded into the bonds of 1873. Had the Legislature confined the expenses within the revenue, the actual reduction of the public debt for the year, instead of $21,330.55, would have been $47,839.34.

Besides the indebtedness above described, the State has issued, pursuant to the act of the Legislature, passed in 1870, $4,000,000 bonds in aid of the Jacksonville, Pensacola & Mobile Railroad, receiving as security mortgages on the road. For the reason that the State has held this security, which has been regarded as ample protection against the bonds, they have never been considered as part of the State debt proper. The suit brought by the State in the Supreme Court of the United States for the purpose of protecting and enforcing its statutory and mortgage lien upon the railroad property has not reached a final decision, but has so far progressed as to give hope of a decision favorable to the State. On the 4th day of April, 1874, this whole property, from Jacksonville to Chattahoochee, was taken possession of by the court, and placed under the management of Major Robert Walker, as receiver. This officer is held by the court to the strictest accountability, and, under his skillful management, the credit of the road has been redeemed, and the road materially improved in every respect. The State is now receiving the benefits of the income of the road in new iron and rolling-stock, and in the improved condition of the road-bed, whereby the security of the State is enhanced, and the inducement to the holders to exchange the bonds for the security is greatly increased. It is believed that, as soon as the State shall have demonstrated the validity of its security, and its undisputed title to the property, the holders will surrender the $4,000,000 of bonds, with accrued interest, to the State, in exchange for the property or the proceeds of its sale, thus relieving the State credit of a serious burden.

On the 1st of October, S. B. McLin was appointed to discharge the duties of the office of Superintendent of Public Instruction, left vacant by the sudden decease of Jonathan C. Gibbs.

The school-fund now amounts to $83,736. The seminary-fund amounts to $83,736. The two seminaries are in Tallahassee and Gainesville, and are State institutions. Their object, as declared by the act of the Legislature establishing them, is "the instruction of persons, both male and female, in the art of teaching all the various branches that pertain to a good common-school education; and, next, to give instruction in the mechanic arts, in husbandry and agricultural chemistry, in the fundamental laws, and in what regards the rights and duties of citizens." Each county is entitled by law to send as many pupils to one or the other of these seminaries, free of charge, as it has representatives in the Legislature, such pupils to be selected by the Board of County Commissioners in each county. The objects of these institutions have never been carried into effect, nor have the counties availed themselves of the privilege of sending students, or taken the benefit of their scholarships. It would seem that the people of the State have forgotten their interest in, and the object of, these seminaries, and have allowed them to fall into disuse as State institutions.

FOLEY, JOHN HENRY, R. A., the most eminent of British sculptors, born in Dublin in 1818; died in London, August 28, 1874. At the age of thirteen he became a student of the Dublin Royal Society, where he obtained first prizes in the schools for modeling and architecture. He went to London at the age of sixteen, and studied sculpture at the Royal Academy, appearing first as an exhibitor in 1839, when he displayed figures representing the "Death of Abel," and "Innocence." In 1840 he produced "Ino and Bacchus," which at once rendered him famous. In 1842 he exhibited the "Houseless Wanderer," and in 1844 was chosen as one of the three sculptors to execute the statues for the new palace at Westminster, and received commissions for statues of Hampden and Selden, both of which he executed successfully. Mr. Foley, who had become in 1849 an associate of the Royal Academy, exhibited in 1851 "The Mother," and in 1854 "Egeria," commissioned by the corporation of London, and now in the Mansion House of that city. In 1856 he completed in bronze "Lord Hardinge and Charger," a group which was greatly admired by the first authorities in British art, and a duplicate of it requested for London. This was followed in 1858 by "Cincinnatus," modeled for the corporation of London, and in the same year the author was made a member of the Royal Academy. His diplo

ma work from "Comus" was next executed, and henceforth his time was mainly engrossed in modeling portrait and monumental statues, the orders for which were invariably given without any effort on his part to secure them. Among the more prominent of the portrait statues he modeled were those of "Oliver Goldsmith," and "Edmund Burke," both for Dublin; "Sir Charles Barry," for the New Palace at Westminster; "Lord Herbert," for the British War-Office; "Father Matthew," for Cork; "Sir Henry Marsh," for Dublin; and "Lord Elphinstone," for Bombay. His later works have been the group personifying Asia, for the Prince Consort National Memorial, and a colossal equestrian statue of Sir James Outram, which was unveiled at Calcutta in 1864. Mr. Foley also modeled with great success a statue of Stonewall Jackson, ordered by British and Southern admirers of the Confederate general. The latest work which engaged his attention was a statue of John Stuart Mill, intended for the series of national statues which are to be placed on the Victoria Embankment, London. He was a member of the Royal Hibernian Academy, and in 1862 was chosen a corresponding member of the Belgian Academy.

FORCADE-LAROQUETTE, JEAN LOUIS DE, a French cabinet minister, and a special defender of the late Louis Napoleon, born in Paris, in 1820; died in that city, August 16, 1874. He was a half-brother of Marshal de St.-Arnaud, the zealous Bonapartist; was educated at one of the Parisian lyceums, studied law, and was admitted to the lower courts as an advocate in 1841, and in 1845 read a thesis before the Conference of Advocates, on "The Bar under Louis XIV.," which gained him a high reputation. He readily linked his fortunes with the Napoleon dynasty, and from being Master of Requests to the Council of State, in 1852, he was promoted steadily until he became Minister of Finance in 1860. He retained the latter office until November, 1861, when he was replaced by M. Fould, and assigned to other administrative duties. In 1863 he was sent to Algeria to investigate commercial questions there, and in October of the same year was appointed Vice-President of the Council of State. In January, 1867, he was recalled to the cabinet as Minister of Agriculture, Public Works, and Commerce, and conducted the International Maritime Exposition in 1868. In December of that year he was invested with the more responsible post of Minister of the Interior, and in that capacity zealously carried out the repressive measures of his imperial master, curbing the press as much as he could, as well as unblushingly manipulating the elections. Being dissatisfied with the liberal policy announced in the imperial message of July, 1869, M. Forcade-Laroquette resigned with the rest of his colleagues, but was promptly reinstated, and became a forcible defender of the empire against the democracy promulgated by Prince Napoleon. He went out of power at the advent of the Ollivier ministry, and had not subsequently been prominently before the public.

FOSTER, JOHN G., Lieutenant-Colonel and Brevet Major-General U. S. A., Corps of Engineers, a brave and accomplished officer in the late civil war; born at Nashua, N. H., in 1823; died in the same city, September 2, 1874. He graduated from West Point in 1846, ranking fourth in his class; was assigned to the engineers, and went with the corps to the Mexican War. His gallant conduct at Contreras, Churubusco, and Molino del Rey, won him the brevets of first-lieutenant and captain. In the last-named action he was severely wounded. He was Assistant Professor of Engineering at West Point from 1855 to 1857, and received his commission as first-lieutenant while there. In 1858 he was assigned to duty at the fortifications in North and South Carolina, and was especially in charge of the construction and fortifying of Fort Sumter. He was commissioned captain July 1, 1860, and made brevet-major for his share in effecting the transfer of the garrison at Fort Moultrie to Fort Sumter. He was one of the garrison of Fort Sumter, and, after its surrender, was employed for some time on the fortifications of New York harbor. October 23, 1861, he was commissioned brigadier-general of volunteers, commanded a brigade in General Burnside's expedition to North Carolina, and took an active and prominent part in the capture of Roanoke Island, February 8, 1862, and of Newbern, on the 14th of March; on the recall of General Burnside in July, General Foster became commandant of that Department and of the Eighteenth Corps, and military governor of Newbern. He had been promoted to be major-general of volunteers. The force under his command was barely sufficient to hold his position, without entering on offensive warfare, but he repulsed attacks upon Southwest Creek, Kinston, White Hall, and Goldsborough. In the autumn of 1862 he was reënforced by several new regiments, and, having compelled General D. H. Hill to raise the siege of Newbern, he followed him to Washington, N. C., and compelled him to retreat from that point. On the 16th of July, 1863, he was appointed to command the Department of Virginia and North Carolina, with headquarters at Fortress Monroe. On the 13th of March, 1863, he had been promoted to be major of engineers in the regular army. He subsequently commanded the Department of the Ohio (from December 12, 1863, to February 9, 1864), and was compelled to ask to be relieved in consequence of severe injuries from the fall of his horse; from February 9 to May 5, 1864, he was on sick-leave at Baltimore; commanded the Department of the South from May 26, 1864, to February 11, 1865, coöperating efficiently with General Sherman, and preparing to assist in the reduction of Charleston under Sherman's orders, when an unhealed wound caused him such suffering

that he was compelled to relinquish the command to General Gillmore. He was brevetted Brigadier and also Major-General, U. S. A., March 13, 1865; was commander of the Department of Florida from August 7, 1865, to December 5, 1866, and assigned to temporary duty in the Engineer Bureau from January to May, 1867. He was commissioned lieutenant-colonel, Corps of Engineers, in March, 1867. His subsequent service had been mainly in the Department of the Atlantic, and for more than a year previous to his death he had been at Nashua, in failing health.

FOX, Sir CHARLES, C. E., a distinguished British civil engineer, born in Derby, England, in 1810; died in London, June 16, 1874. At an early age he was articled to his brother for the medical profession, but a taste for engineering led him to devote to mechanical science every leisure moment, and the impression produced upon his mind by the opening of the Liverpool & Manchester Railway induced him to relinquish medicine and become an engineer. His first employer was Captain Ericsson. Mr. Fox struggled on as a lecturer, as a scientific assistant, and occasionally as a practical mechanist, until he was appointed by Robert Stephenson assistant-engineer to the London & Birmingham Railway Company, at the commencement of the construction of that line. He remained with the company until a year after the opening of the line, in all five years, when he joined the late Mr. Bramah in establishing the firm of Bramah, Fox & Co., the name of which, on the retirement of the former, was changed to that of Fox, Henderson & Co. Their business was railroad-building and the execution of other engineering works. His greatest triumph was the construction of the building for the Great Exhibition in Hyde Park, in 1851. The drawings for this edifice occupied Mr. Fox eighteen hours a day for seven weeks, and he received the honor of knighthood in recognition of his genius and skill. He constructed the Crystal Palace at Sydenham, and executed many extensive railway and other engineering works.

FRANCE, a republic of Europe. President, Marshal Marie Edmond Patrice Maurice de MacMahon, Duke of Magenta, elected May 24, 1873. Chief of the Cabinet, Colonel Robert; Secretary of the President, Viscount d'Harcourt; Vice-President of the Council of Ministers, at the close of the year 1873, was General Cissey. The National Assembly consists of 738 members. President, Louis Joseph Buffet.

The area of France, according to the official report on the census of 1872 (*Statistique de la France*), was 204,092 square miles.* The population, according to the census of 1872, was 36,102,921.

* The area of the several departments, as published below, agrees with the table given in the ANNUAL CYCLOPÆDIA for 1873, except for the district of Belfort and the department of Vosges. The *Statistique de la France* gives for the former 233.44 square miles (instead of 234.72), and for the latter 2268.93 (instead of 2268.17).

The table on the next page exhibits the area and population of each department, and the movement of population during the year 1871.

A comparison of the population in 1872 with that of the present French territory in 1866 shows a decrease of 356,715, or of 1.2 per cent. of the total population. This decrease is exclusive of the loss which France sustained by the cession of Alsace and Lorraine to Germany. The movement of population from 1866 to 1871 was as follows:

YEARS.	Births.	Deaths.	Surplus of Births (B.), or Deaths (D.).	Percentage of Increase (I.), or Decrease (D.), of Population.
1866....	1,006,258	884,573	B. 121,685	I. 0.33
1867....	1,027,515	886,887	B. 140,628	I. 0.31
1868....	984,140	922,038	B. 62,102	I. 0.15
1869....	948,536	864,330	B. 84,206	I. 0.21
1870....	944,115	1,046,909	D. 102,794	D. 0.26
1871....	826,121	1,271,010	D. 444,615	D. 1.23

The excess of deaths over births in 1871 is greater than in any former year, and exceeded by far the expectations of French statesmen and statisticians. A comparison of the table on the next page shows that the excess of deaths appears in all departments except three, Creuse, Loire Inférieure, and Marne. The losses suffered during the war are far from accounting for this alarming fact, for the number of military persons deceased in 1870 was only 33,164, and in 1871, 61,165; figures which, though necessarily incomplete, are yet altogether without proportion to the entire mortality of the country. The decline of the French population has, however, been going on for years. The proportion of births to the total population, which, in 1827, was still 3.11 per cent., did not average, from 1848 to 1868, more than 2.62 per cent; it was 2.57 in 1869, 2.55 in 1870, and 2.26 in 1871. While from 1817 to 1854, there was one birth to every 34.3 inhabitants, and less from 1847 to 1871, in the following proportions:

1847–1854	1 birth to 37.4	inhabitants.
1854–1860	1 birth to 37.3	"
1860–1868	1 birth to 37.9	"
1869	1 birth to 38.8	"
1870	1 birth to 39.4	"
1871	1 birth to 44.2	"

Considerable surprise has been caused by the remarkable increase of suicide. In 1826, when official returns on this subject were first prepared, they numbered 1,739; in 1831, they were 2,084; in 1836, 2,340; in 1839, 2,747; in 1841, 2,814; in 1845, 3,085; in 1847, 3,647; in 1852, 3,674; in 1860, 3,920; in 1869, 5,114; and in 1872, 5,275. It was feared that in 1874 they would reach 7,000. As regards Paris alone, there were 567 suicides in 1872, and 660 in 1873; while the total for 1874, it was thought, would approach 1,000.

The number of boys born considerably exceeds that of girls. From 1800 to 1860, the proportion of boys to girls was 106 to 100; from 1861 to 1868, it was 105; in 1869, 105.02; in 1870, 104.79; in 1871, 104.87. In conse-

Vosges	2,269	397,981	392,968	8,898	14,563	2,679
Yonne	2,868	372,599	363,608	6,698	10,047	2,224
Total	204,092	36,469,836	36,102,921	836,121	1,271,010	262,476

quence, however, of the greater mortality of the male sex, the number of females always exceeded that of the males. The excess in the different census years since 1800 was as follows:

1800	725,295	1846	318,738
1806	481,725	1851	193,242
1821	868,835	1856	299,024
1831	669,083	1861	97,217
1836	619,506	1866	88,906
1841	445,382	1872	187,899

The proportion of marriages to the total population was:

1825–1828	1 to 128 inhabitants.
1829–1833	1 to 126 "
1834–1838	1 to 123 "
1839–1844	1 to 125 "
1845–1868	varying from 142 (1847) to 118 (1858).
1869	1 to 121 inhabitants.
1870	1 to 165 "
1871	1 to 189 "

The number of illegitimate children has, since 1825, been invariably from seven to eight per cent. of all the children born. There is, however, a marked difference in the towns and in the rural communities. In the department of the Seine they constituted, in 1871, 24.50 per cent.; in the towns, by which name the French statisticians designate all the communities with more than 2,000 inhabitants, 10.87; in the rural communities, 4.89. The same proportion has substantially prevailed since 1864.

The proportion between the town population and the rural population is steadily changing in favor of the former, as will appear from the following table:

POPULATION.	1846.	1851.	1856.	1861.	1866.	1872.
	Per ct.	Per ct.	Per ct.	Per ct.	Per ct.	Per ct.
Town	24.42	25.52	27.31	28.86	30.46	31.06
Rural	75.58	74.48	72.69	71.14	69.54	68.94

It is especially the larger towns whose population rapidly increases; and while the total population of France showed, from 1866 to 1872, a remarkable decrease, the towns with upward of 10,000 increased, as the following table will exhibit:

TOWNS WITH FROM	Population. 1866.	Aggregate Population, 1872.
1,000 to 15,000 inhabitants...	992,877	1,035,430
15,000 to 20,000 "	532,653	541,590
20,000 to 30,000 "	710,207	739,234
30,000 to 40,000 "	405,681	417,576
40,000 to 50,000 "	343,244	358,491
50,000 to 100,000 "	686,845	686,756
100,000 to 200,000 "	785,173	808,895
Marseilles	300,131	312,264
Lyons	322,264	323,417
Paris	1,825,274	1,851,792
Total	7,055,039	7,275,905

In 1869 the number of marriages was larger than it had been for many years back, with the only exception of the year 1858, when it was 1 to 118. During the year 1870, when all the young men were called into the field, it was smaller than it had ever been in any year since 1825. After the close of the war, there was at once a large increase.

The following towns, with a population of more than 30,000, showed, however, a decrease:

TOWNS.	Population in 1872.	Decrease since 1866.
Caen	41,210	354
Brest	66,272	13,675
Toulouse	124,852	2,084
Bordeaux	194,055	186
Orleans	48,976	124
Cherbourg	35,560	1,635
Lorient	34,660	2,995
Boulogne	39,700	551
Clermont-Ferrand	37,357	338
Lyons	323,417	587
Toulon	69,127	7,999
Poitiers	30,036	998
Total		31,971

With regard to nativity and nationality, the inhabitants of France were, in 1872, divided as follows:

INHABITANTS.	Number.	Per. cent.
I. French	35,362,253	97.97
1. Born in the department in which they resided at the taking of the census	30,676,942	
2. Born in other departments	4,542,764	
3. Alsatians and Lotharingians residing in France, or having chosen the French nationality	126,948	
4. Naturalized foreigners	15,308	
II. Foreigners residing in France	730,844	2.03

The foreigners constituted, in 1851, 1.06 of the population; in 1861, 1.33; in 1866, 1.67. Their number has therefore steadily increased since 1851.

The fluctuation in the number of foreign residents of different nationalities is shown by the following table:

NATIONALITIES.	1866.	1872.
Alsatians and Lotharingians	.....	64,909
Germans	106,606	39,361
Austro-Hungarians		5,116
English	29,856	26,008
Americans	7,223	6,559
Belgians	275,888	347,558
Dutch	16,058	17,077
Italians	99,634	112,579
Spaniards	32,656	52,954
Swiss	42,270	42,834
Russians	2,263	1,963
Poles	9,883	7,538
Scandinavians	1,296	1,008
Turks, Greeks, Roumanians	1,654	1,173
Asiatics	.....	311
Others	10,276	3,843
Unknown	19,541	9,594
Total	655,096	740,968

The Germans, owing chiefly to the hostile feelings produced against them by the war, have decreased more than one-half; though the deficiency has almost been made up by the Alsatian and Lotharingian residents, who, at the time the census was taken, had not yet chosen the French nationality. On the other hand, there has been a remarkable increase in the number of Belgians, Italians, and Spaniards.

The following table, giving the number of voters at the municipal and general elections, has a special importance in view of the efforts made by the present Government to reduce the number of voters:

DEPARTMENTS.	General Election.	Municipal Election.
Ain	104,088	103,929
Aisne	153,884	150,717

Vienne (Haute)	85,261	84,273
Vosges	112,909	110,473
Yonne	111,321	110,210
Total	9,992,339	9,855,705

According to recent statistics, the total area is about 125,000,000 acres. Of these, natural pastures are estimated to occupy 12,500,000 acres; vines, 5,000,000; arable land, 62,500,000; gardens and orchards, 5,000,000; woods and forests, 20,000,000; and barren waste, 20,000,000. The acreage occupied by the vine, no greater than that of inclosed orchards and gardens, may surprise those who regard France as *par excellence* the country of the grape. The average wine production of France has been computed at 50,000,000 hectolitres, and the state finds in it resources valued at 155,000,000 francs. In 1874 the wine-crop was supposed to be nearly fifty per cent. in excess of the average annual production. In 1862 France possessed 2,914,412 horses, against 2,882,851 in 1872. The same disproportion exists in the cattle, which were 12,733,188, against 11,284,414; and in sheep, which were 30,386,263, against 24,766,496.

The results of the census of 1872, relative to the religious denominations of the inhabitants, were as follows:

DENOMINATIONS.	Number.	PER CENT.	
		1872.	1866.
Catholics	35,397,703	98.03	97.43
Protestants:			
Reformed..... 467,531			
Lutheran..... 80,117	580,757	1.60	2.33
Others..... 33,109			
Israelites	49,439	0.14	0.23
Other non-Christian religions	3,071	0.01	....
Persons declaring no religion or whose religion was not known	81,951	0.23	0.06

The separation of Alsace and Lorraine from France has largely decreased the percentage of Protestants and Israelites.

Educational statistics were for the first time included in the official census of 1866. In order to make these statistics as perfect as possible, the population was divided into three groups: 1. Children below the sixth year of age, who are supposed not to be able to either read or write; 2. Children and youths from the sixth to the twentieth year of age, the time of life during which instruction of different degrees is obtained; 3. Persons of more than twenty years of age, who may be regarded as having completed their education. The following table exhibits the general results of this special census:

PERSONS	Below 6 Years.	6 to 20 Years.	Above 20 Years
Not able to read or write	3,540,101	2,063,338	7,702,362
Able to read only	292,348	1,175,135	2,805,180
Able to read and to write	151,595	5,488,097	13,073,057
Unknown	38,042	70,731	214,005
Total	4,022,086	8,786,281	23,294,554

If the latter class is not taken into account, we obtain the following table of percentage:

PERSONS	Over 6 Years.	6 to 20 Years.	More than 20 Years.	Upward of 6 Years.
Not able to read or write	68.85	23.89	33.37	30.77
Able to read only	7.33	13.48	9.99	10.94
Able to read and write	3.82	62.63	56.64	58.29

Leaving the children below six years of age aside, it appears from the table that about thirty per cent. of the population of France are unable to read and write. For the male sex alone, this proportion would be 27.41 per cent.; for the female sex, 33.47 per cent.

The differences between the departments, as regards the statistics of illiteracy, is marked, the number of illiterates ranging from 6.9 per cent. (Doubs) to 61.8 per cent. (Haute-Vienne). The following table shows the proportion of every department:

Departments.	Per cent.	Departments.	Per cent
Doubs	6.9	Charente-Inférieure	32.2
Meurthe-Moselle	8.3	Saône-et-Loire	32.3
Marne (Haute)	8.4	Loiret	32.4
Jura	9.3	Maine-et-Loire	32.4
Meuse	9.7	Mayenne	32.7
Vosges	10.0	Gard	33.1
Seine	11.4	Loire-Inférieure	33.1
Marne	11.8	Ille-et-Vilaine	34.6
Saône (Haute)	11.9	Puy-de-Dôme	35.9
Seine-et-Oise	12.0	Herault	36.1
Aube	12.4	Ardèche	36.4

Loire	29.5	Landes	57.6
Pas-de-Calais	29.6	Dordogne	60.3
Alpes (Maritimes)	31.8	Vienne (Haute)	61.8
Loire (Haute)	31.8		

The budget for the year 1875, voted by the National Assembly, comprised the following sources of revenue and branches of expenditures.

REVENUE.	Francs.
Direct taxes	383,721,200
Special taxes, assimilated to the direct taxes	20,263,494
Stamps and enregistrement	608,498,940
Produce of forests	33,064,680
Duties	262,013,000
Indirect taxes	963,424,000
Produce of posts	111,004,000
Miscellaneous receipts	138,281,310
Extraordinary receipts	43,500,000
Total	2,563,460,624

EXPENDITURES.	Francs.
Public debt and donations	1,223,199,474
Ministries:	
Ministry of Justice	33,777,473
Ministry of Foreign Affairs	111,365,500
Ministry of the Interior	95,976,049
Ministry of Finances	19,956,950
Ministry of Public Instruction	96,859,514
Ministry of Agriculture and Commerce	17,063,040
Ministry of Public Works	156,949,219
Ministry of War	493,776,331
Ministry of the Navy	127,131,711
Administration of Colonies	31,467,831
Revenue collection	247,902,849
Deficits and repayments	19,143,900
Total	2,584,452,831

The public debt, according to the budget of 1873, was as follows:

DEBT.	Interest.	Capital.
Consolidated debt	748,808,652	49,910,366,500
Capital that may be called in	322,338,998	3,582,640,000
Dette viagère	122,976,162	.....
Total	1,198,618,742	23,293,000,000

On January 1, 1873, the new army law of August 16, 1872, went into operation. Its first article enacts universal liability to military service. Every Frenchman capable of bearing arms must serve for twenty years, namely, four years in the standing army, five years in the reserve of the standing army, five years in the territorial army (Landwehr), and six years in the reserve of the territorial army. By a law of July 24, 1873, on the reorganization of the army, France is divided into eighteen districts, each of which is occupied by an army corps. One army corps, moreover, is organized in Algeria. Each of the eighteen army corps consists of two divisions of infantry, one brigade of cavalry, one brigade of artillery, one battalion of engineers, one squadron of the train, a general staff, and the subordinate staffs. The composition of the army, in time of peace, will be as follows:

Infantry (156 regiments, 505 battalions, 2,445 companies)	279,936
Cavalry	67,888
Artillery	58,096
Engineers	13,551
Train	11,496
Total	441,007

To this number may be added the second division of the yearly contingent, amounting to about 60,000 men, who serve from six to twelve months, and swell the number of the army to 501,007 men. In time of war, the army will be composed as follows:

Standing army	705,000
Reserve of standing army	510,000
Territorial army	592,000
Reserve of territorial army	626,000
Total	2,433,000

The navy, according to the budget for 1875, was composed as follows:

VESSELS.	Iron-clad.	Unarmed	Total.	Men.
Vessels fitted out	7	85	92	28,431
Vessels for service in the ports and on trial	19	43	62	
Total	26	128	154	28,431
Reserve	31	47	78	....

According to the plan for the reorganization of the navy, it is to be composed in future as follows: 12 iron-clads, first class; 12 iron-clads, second class; 20 iron-clad gunboats; 8 frigates, 8 corvettes, 38 avisos, 25 transports, 32 gunboats; and, besides, a number of school-ships, tenders, etc.

The following table exhibits the movement of French commerce from 1856 to 1872 (in francs):

YEARS.	GENERAL COMMERCE.		SPECIAL COMMERCE.		GOLD AND PRECIOUS METALS.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1872....	4,501,600,000	4,756,600,000	3,570,300,000	3,761,600,000	388,000,000	334,000,000
1871....	3,953,400,000	3,278,000,000	3,566,700,000	2,872,500,000	301,000,000	502,000,000
1870....	3,497,800,000	3,455,800,000	2,867,400,000	2,802,100,000	416,000,000	261,000,000
Annual average, 1866–1870....	3,928,100,000	3,697,100,000	3,028,800,000	2,934,700,000	733,000,000	465,000,000
1861–1865....	3,231,100,000	3,448,800,000	2,447,400,000	2,564,800,000	576,000,000	526,000,000
1856–1860....	2,521,160,000	2,812,800,000	1,792,700,000	2,037,900,000	701,000,000	339,000,000

The foreign countries chiefly interested in the trade of France, in the years 1871 and 1872, were the following (the value being expressed in francs):

COUNTRIES.	Imports, 1872.	Exports, 1872.
Great Britain	662,600,000	921,900,000
Belgium	440,400,000	478,900,000
Italy	275,200,000	238,800,000
Germany	211,700,000	402,600,000
Alsace-Lorraine	146,800,000	294,500,000
Switzerland	97,400,000	112,800,000
Spain	123,500,000	41,500,000
Russia	120,400,000	9,900,000
Turkey	150,400,000	14,400,000
Egypt	48,700,000	9,200,000
United States	204,800,000	332,500,000
Brazil	40,400,000	78,400,000
Argentine Republic	103,800,000	101,300,000
British India	101,100,000	4,600,000
Algeria	188,100,000	140,600,000

The movement of shipping, from 1870 to 1872, was as follows:

FLAG.	ENTERED.		CLEARED.	
	Vessels.	Tons.	Vessels.	Tons.
French	1,026	2,327,000	9,181	2,188,000
Foreign	19,662	4,395,000	18,375	2,986,000
Total, 1872....	29,923	6,772,000	27,556	5,174,000
" 1871....	?	6,276,000	?	3,989,000
" 1870....	?	6,582,000	?	3,979,000

The merchant navy, in 1872, was composed as follows:

VESSELS.	Vessels.	Tons.
Sailing-vessels of more than sixty tons	4,799	902,096
Steamers of more than sixty horse-power	816	240,273

According to the report of the Committee of the National Assembly on Railroads, there were, on June 1, 1873:

	Kilometres.*
In operation	19,974
In course of construction	6,647
Total	26,621

Algeria has three roads in operation: from Algiers to Oran, 420 kilometres; from Philippeville to Constantine, 86 kilometres; and the little road from Bona to the mines of Aïn-Mokra, 30 kilometres.

The number of letters forwarded by the French post-office in 1873 was 359,433,000. The revenue of the department was, in 1873, 91,454,850 francs; the expenditures, for administration, 51,755,000 francs.

At the end of the year 1871 there were 46,500 kilometres of lines of telegraphs in operation, comprising 127,500 kilometres of wires. The number of telegraph-offices was about 3,800; the aggregate revenue, in 1872, 11,994,000 francs; the expenditures, 12,695,000 francs.

The area and population of Algeria, according to the census of 1872, were as follows:

PROVINCES.	Area in Square Miles.	Frenchmen.	Foreigners.	Mohammedans.	In Government Institutions.	Total.
Algiers	39,120	67,008	42,181	757,908	5,854	872,951
Oran	111,831	51,729	47,433	411,874	2,456	513,493
Constantine	107,366	45,438	25,902	953,268	3,174	1,027,775
Total	258,317	164,175	115,516	2,123,045	11,483	2,414,418

In the column of Frenchmen are included 34,574 native Israelites. The total number of Europeans is 245,117, against 217,990 in 1866; 192,801 in 1861; 159,282 in 1856; 131,288 in 1851; 99,801 in 1845; 85,927 in 1841; 14,561 in 1836; 7,812 in 1833. The number of Frenchmen has, ever since 1841, been about one-half of the European population, it being 16,677 in 1841; 66,050 in 1857; and 129,621 in 1872. The number of Spaniards in 1872 was 74,000.

The imports of Algeria were valued, in 1872, at 199,000,000 francs, the exports at 206,000,000. The movement of shipping in the same year (entrances and clearances) was as follows:

FLAG.	Vessels.	Tonnage.
French	944	128,601
Spanish	2,554	124,328
Italian	1,110	82,546
English	654	273,229

The French colonies and dependencies had, according to the latest official reports, the following area and population:

* One kilometre = 0.62 English mile.

COLONIES AND DEPENDENCIES.	Area, sq. m.	Population.

At the beginning of the year 1874, the Broglie cabinet found itself supported by only a feeble and wavering majority. Great trouble was caused to it by the pastoral letters issued by a number of French bishops in response to the Papal Encyclical of November 21, 1873, and denouncing directly or indirectly the German Government for its attacks upon the Catholic Church. The Emperor of Germany considered himself personally insulted by a pastoral letter issued by Bishop Plantier, of Nîmes. The Bishop of Rodez, Bourret, called the church laws which several European states had recently adopted "conspiracies of thieves," and declared that these abominable usurpations and manifest thefts would justify all attacks upon private property and all revolts against the present rulers of the states. In consequence of the remonstrances from Berlin, the Minister of Public Worship, M. de Fourtou, issued on December 26, 1873, a circular to the bishops, recommending moderation. The German Government, however, observed that the circular in no wise blamed the bishops, but merely gave them a friendly warning to be cautious on account of the difficulty of the times. It was impossible, therefore, for Germany to accept the circular as a reparation. The French Government yielded to the pressure brought upon it, and soon after suspended the *Univers* for two months for having published a pastoral letter of the Bishop of Périgueux, though the language of this letter was generally regarded as more moderate than that of the bishops of Rodez, Nîmes, and other dioceses. The Italian Government was greatly offended by the presence at the port of Civita Vecchia of the French steamer L'Orénoque, which had been placed at the disposal of the French embassy and of the Pope, and, in consequence of its remonstrance, the French Government deemed it best to give assurances of its peaceable intentions. A passionate interpellation by General du Temple, who it was thought desired to precipitate a war with Italy, called forth from the Minister of Foreign Affairs, Duke de Decazes, on January 20, 1874, new assurances of a peaceable policy.

On January 8, 1874, the National Assembly adopted, in spite of the vigorous opposition of the ministry, a motion made by the Legitimist Franclieu, to postpone the discussion of the bill giving the Government absolute power to name the mayors in all the 36,000 communes of the country, and to take up the municipal bill first. The motion was adopted by a majority of 42 votes (268 against 226), and the ministry consequently offered its resignation, which the President, however, refused to accept, on the ground that the number of voters had not been large enough to show the opinion of the majority of the National Assembly. The majority soon confirmed the opinion of the President by giving the ministry an expression of its continuing confidence. On January 13th, M. de Kerdrel, a member of the Right, expressed the opinion that, though ministerial crises do not possess as much gravity as before the 20th of November, they are, nevertheless, injurious occurrences, and cause serious inconvenience in the administration of the country. The ministry had shown too much susceptibility. The sitting of January 8th was not numerously attended, and the Government had certainly not the majority against it. M. de Kerdrel concluded by asking the ministry for a reply such as would satisfy the Assembly and reassure the country. The Duke de Broglie in reply, said that by the vote of January 8th, the Assembly withdrew from the order of the day a bill of which the ministers demanded the immediate discussion; the ministers were bound to give in their resignation, without considering the peculiar circumstances attending the vote. The strength of the Government must reside in public opinion as well as in the Assembly. The ministry asked that the bill on the nomination of mayors should be declared urgent; because they were convinced that the measure was necessary, not because they wished to delay the introduction of the organic law which they desired, nor from party con-

* France has abandoned a large portion of its former possessions in Senegambia.

sderations, but because they were sure that the present condition of the municipalities could not continue without endangering the regular administration of the municipal districts, and impeding the exercise of the central authority. The Assembly having refused what they asked as a Government necessity, their dignity required, and their duty prescribed, that they should resign. The President, M. Buffet, then read an order of the day expressing the confidence of the Assembly in the ministry. It was signed by the Presidents of the ten bureaux, in which the Right are in the majority. M. Raoul Duval accused the ministers of being representatives of the monarchical parties. He maintained that Marshal MacMahon ought to select his ministers from among men not bound by party ties, and he proposed an order of the day expressing these views. M. Picard accused the ministry of tolerating attacks upon the republic. It ought not to allow shouts to be raised of "Long live the King!" or "Long live the Emperor!" nor permit petitions to be signed in favor of the Comte de Chambord. After another speech from the Duke de Broglie in defense of the ministry, M. Picard demanded the adoption of the order of the day pure and simple. This motion was rejected by 355 against 316 votes. The Assembly then voted in the ordinary manner upon M. de Kerdrel's motion, expressing confidence in the Government, which was adopted by 379 votes against 221. M. Delsol, a member of the Right, then moved that the mayors bill should be taken up immediately. This course was agreed to, the ministers withdrew their resignation, and on January 20th the Assembly adopted the law by 361 against 324 votes, after having voted down several amendments. The chief speech against the law was made by Louis Blanc, who declared it to be a violation of the electoral law and irreconcilable with the love for freedom, order, and country.

In view of the manifest impossibility to restore any form of monarchy at an early date, the conservative party and the large majority of the National Assembly rallied round the "Septennate" of President MacMahon as the best government attainable for the country under the existing circumstances. The President himself abandoned his usual reserve, and on February 4th, in a reply to an address from the president of a commercial court, declared his determination to preserve, uncurtailed, the powers conferred upon him for the term of seven years by the National Assembly, and to enforce on all sides a due respect for the existing constitutional laws. The Legitimists were divided on the best policy to be pursued; while some never ceased to demand the immediate restoration of Henry V., others believed that his time had not yet come. The Duke de Broglie, on many occasions, averred his desire to maintain the Septennate, but also avowed his intention to surround it with monarchical institutions. The new law on the appointment of mayors was regarded as the first step in this direction, which was soon to be followed by a curtailment of the electoral franchise and other similar measures.

The new supplementary elections for the National Assembly, which on March 1st were held in the departments of the Vaucluse and Vienne, resulted in the election of Republicans. One of the successful candidates was the old chief of the Radical party, Ledru-Rollin, who, after having lived for more than twenty years in exile and retirement, now returned for the first time to an active political life. As he was a candidate in the Vaucluse, a department reputed to be the most "red" in all France, his success was never doubted. That he did not poll as large a number of votes as his friends expected, was partly accounted for by the fact that a large section of the Republican party looked coldly upon his candidature. The Paris Liberal journals, the *Siècle*, *XIXme Siècle* and *Événement*, protested against it at first, fearing that his name, like that of M. Barodet in Paris, in 1873, might scare moderate Republicans, and encourage reaction. Another reason why M. Ledru-Rollin has scored 5,000 less votes than any Radical elected there before him was found by his friends in the existence of the reign of terror inaugurated by the prefect. It was reported that a great display of artillery and troops of the line was made in the Vaucluse to intimidate evil-minded electors, and that all the practices of the empire in support of official candidates were revived in favor of M. Ledru-Rollin's opponent, the Marquis Biliotti. Of great political importance was the election of a Republican in the Vienne, which was considered a "rural" stronghold. At the general elections of February 8, 1871, this department returned three anti-Republicans—MM. Ernoul, Murveilleux Duvignaux, and Rochethulon. When, in July, 1871, a vacancy occured, M. de Soubeyran, then a timid Bonapartist, but at all events an anti-Republican, was returned triumphantly by 32,000 votes against some scattered voices for Republicans. Now M. Lepetit, the *bâtonnier* of the Order of Advocates of Poitiers, had come forward on a decided Republican platform, backed by a letter from M. Thiers. His opponent was M. de Beauchamp, the brother-in-law of the wealthy M. de Soubeyran, who was charged with spending 200,000 francs on the election. The prefect and a number of new mayors, substituted by Government for those elected by the commune, did their utmost to support M. de Beauchamp; and yet the peasants, in a district essentially agricultural, returned M. Thiers's nominee, by 34,146 against 31,160 votes. The letter of Thiers in favor of the candidature of Lepetit made a powerful impression. The distinguished statesman warmly recommended the efforts made for establishing a moderate and lasting republic. He declared

restoration of monarchy to be impossible in spite of the spirit prevailing among the greatest possible split among the monarchical parties. The electors, therefore, would do well to support the National Assembly by the election of moderate Republicans, without fearing it. The result of the election was on all sides considered to be the endorsement of this letter. The following week Thiers again expressed his opinion that the permanent establishment of a Republic would be agreeable to a French deputation from New York, which in the name of the French residents of the United States presented him with an album. M. Thiers wrote: "The noble example of Washington should be a model for us all. Those who govern or may govern France should have this great model before them. They will be fortunate if they unitedly succeed in es-

LYONS.

offence at the declaration that at the right point of time only two forms of government would be face to face, the empire and the republic. Prince Napoleon, on the other hand, declared that he could not recognize the Septennate, as it was not based on universal suffrage, and that he remained a firm adherent of democratic principles. On March 16th the majority of the Prince Imperial was made the occasion of a great Bonapartist demonstration, and a much greater success attended this demonstration than a short time ago could have seemed possible. All the great personages of the party came over, numerous deputies and senators, and crowds of dismissed imperialist prefects. There were, too, a sufficient number of humbler adherents to show that imperialism has a large hold on the affections of some who do not expect to get any personal gain out of a restored empire. The Duke of Padua made

show that in the [illegible] Gironde the Republican [illegible] majority of votes over the [illegible] other parties combined; and that the [illegible] own and the Imperialist candidates [illegible] these, polled not far from six times the number of votes given to the representative of the Duke de Broglie. In the case of those whose election had been annulled and were only lately returned for the first time on account, the Government [illegible] more favorable return, and [illegible] were [illegible] elected. Thus after a session [illegible] passed a full exposition of the ministerial [illegible] by the Government and the [illegible] Assembly were condemned from [illegible] of France.

The National Assembly reassembled on May 16th, and reelected M. Buffet as President by 359 of 357 votes, the Left not taking part in the voting. On May 19th the Duke de Broglie proposed the bill for an Upper Chamber, to be called the Grand Council, and to be composed of 300 members. Of these 100 were to be [illegible] the Executive power [illegible] by the Government, in the [illegible] and [illegible], the Ministers, [illegible] were [illegible] have [illegible] powers [illegible] sembly, and moreover [illegible] vio- [illegible] ment of [illegible] be elected by the Grand Council itself. In the case of his death or resignation, the Grand Council would be invested with all the rights belonging to the Executive power until further order. In case of the vacancy of the Executive, the President of the Grand Council would become *ipso facto* President of the Republic *ad interim*. He must immediately convoke the National Assembly, and the two Chambers united in Congress would at once replace the President of the Republic without being bound to invest the successor of Marshal MacMahon with the same title or the same powers. On the next day, May 18th, the ministry suffered a crushing defeat upon the question of the Electoral Bill, by 381 votes against 317. M. Batbie, reporter of the Committee on the Constitutional Laws, asked the House to fix the first reading of the Electoral Bill for the following Wednesday, whereupon M. Thery, of the Right, proposed to give precedence to the Municipal Bill. M. Raudot, ministerialist, proposed a compromise; but the Duke de Broglie rose and, on the

part of the ministry, insisted on the demand of the reporter of the committee, not for personal reasons, but because it recognized in it the answer to an urgent want, and a pressing appeal from the country. M. Lucien Brun said he and his friends were anxious to have that Political Electoral Bill discussed as soon as possible, but he urged the Government not to make the question of priority a cabinet question. M. de Broglie again insisted upon the importance of the vote, and the division was then taken, the result being that the ministry were in the minority. The hostile majority was composed of the different sections of the Left, with the exception of a very few Deputies of the Left Centre, of eighteen Bonapartists, almost the whole group, and more than fifty Legitimists. Immediately after the rising of the Assembly, the ministers gave in their resignation, which was accepted. Marshal MacMahon requested them to retain their portfolios until their successors should be appointed. M. Buffet and M. d'Audriffet-Pasquier both declined to undertake the formation of a ministry. M. de Goulard agreed to try his hand at forming a new cabinet, but was not successful. On May 23d a new ministry was at length constituted, consisting of the following members: General Cissey, Vice-President of the Council and Minister of War; Decazes, Minister of Foreign Affairs; Fourtou, Minister of the Interior; Magne, Minister of Finance; Caillaux, Minister of Public Works; Grivart, Minister of Commerce; Cumont, Minister of Public Instruction; Taillhand, Minister of Justice; Montagnac, Minister of the Navy. The new ministry had no policy of its own; it was to avoid any conflict with the National Assembly and to oppose none of the resolutions passed by the National Assembly. It was supposed to agree with the President, especially in favoring the interests of the Church.

The result of a supplementary election held in the department of Nièvre, on May 25th, produced a more than usual excitement, as it strongly impressed the public mind on the rapid progress of Bonapartism. The department, which in October, 1873, had elected a Republican, now chose M. de Bourgoing, the chamberlain and equerry of Napoleon III., giving him 27,599 votes against 22,157 cast for the Republican candidate and 4,527 given to the Legitimist.

On June 1st the National Assembly began the discussion of the municipal electoral law. On June 6th it adopted, by 403 against 283 votes, Article I., which provides that the electoral lists have to be drawn up by a special committee, consisting of the *maire*, a delegate of the administration and a delegate of the municipal council. To Article V., which fixes the age of voters at twenty-five years, Lafayette moved an amendment, substituting twenty-one for twenty-five, and the amendment was adopted by 348 against 337 votes. On June 18th, the Assembly adopted an amendment, moved [illegible] the method [illegible] out need by the [illegible] the system of [illegible] committee, [illegible] council an [illegible] ent taxes. [illegible] desired to [illegible] its [illegible] 570 against [illegible] by Berthauld, [illegible] report, which [illegible] the cumulation [illegible] amendment by [illegible] may elect [illegible] case, [illegible] was rejected [illegible] June 25th Pres[illegible] ing in the [illegible] took occasion [illegible] presidency and [illegible] for their great [illegible] movements, the [illegible] with himself [illegible] of the public [illegible] mission which [illegible] longs equally [illegible] er to the [illegible] theory of the [illegible] The President [illegible] with great [illegible] except the [illegible]

The Count [illegible] a new manifesto [illegible] duce the [illegible] rather than [illegible] Legitimists [illegible] lence the [illegible] that the [illegible] tion, and [illegible] ond of [illegible] but that he [illegible] cal debates in [illegible] Larochefoucauld [illegible] July 7th, for the [illegible] was promptly [illegible] suspended the [illegible] had been published [illegible] posed by Lucien [illegible] suppression of the [illegible] large majority; [illegible] other hand, rejected [illegible] posed by M. Paris, [illegible] ernment, the ministry [illegible] The President refused [illegible] tion, but on July 8th [illegible] the Assembly, in [illegible] action on those [illegible] regarded as indispensable [illegible] his Septennial powers [illegible] 30th, explained the [illegible] more fully, denounced [illegible] organic laws on the [illegible] Chamber, and the [illegible] of the right to dissolve [illegible] with the consent of [illegible]

the Constitutional Committee of Thirty laid before the National Assembly the draft of the organic laws on the Government of France. It proposed, in accordance with the wishes of the President, the erection of a First Chamber, gave the President the right to dissolve the Second Chamber, even without the consent of the First, made the President personally responsible for high-treason, while the ministers have to assume the responsibility for all acts of the Government. In case of the death or resignation of MacMahon, the Senate and Chamber of Deputies are to decide conjointly on the future form of government.

An important discussion took place on July 13th, on a motion by Casimir Perier to proclaim the republic as the definite form of government for France. The motion had, on June 15th, been declared urgent by the National Assembly, and referred to the Constitutional Committee, which now reported on it adversely. General Cissey, in the name of the Government, also declared against it; the country expected at present the organization of the powers of the President, and the Government expected that its rights be defined; in future, the country would be at liberty to dispose of its destinies. In accordance with the declaration of the Government, the Assembly rejected the motion by 374 votes against 333. A motion by Maleville, declaring the National Assembly dissolved, was also rejected by 369 against 340. On July 31st, a resolution was adopted to adjourn from August 6th to November 30th. The Minister of the Interior declared on this occasion that the Government engaged during the adjournment of the National Assembly to oppose any plot against the powers of the President. Motions for raising or suspending the state of siege where it still existed were rejected. In the standing committee, which was to represent the Assembly during the adjournment, all parties were represented except the Bonapartists.

Shortly before the adjournment, a partial modification of the ministry had taken place. The Minister of Finance, Magne, on July 15th, offered his resignation because the Assembly had rejected, by 362 against 265 votes, a motion by Goulart for doubling the salt-tax, which he warmly recommended, and because all his efforts for covering the deficit of 500,000,000 francs by additional taxes had failed. He was followed, on July 17th, by Fourtou the Minister of the Interior, and like himself a representative of the Bonapartist party. Their places were filled by the appointment of M. Mathieu-Bodet as Minister of Finance and of General Chabaud-Latour as Minister of War. General Chabaud-Latour, who belongs to the Right Centre, is a Protestant and a friend of the Princes of Orleans, and the choice of a military man as head of the home office, was regarded as an indication of a policy of firmness on the part of the Government. M. Mathieu-Bodet occupies in the Assembly a position between the Right Centre and Left Centre, and belongs to the group of members presided over by M. Target, whose influence was decisive in the event of May 24, 1873, when M. Thiers was overthrown. All parties in the Assembly agreed that the appointment of the new Ministers of the Interior and Finance was a blow to the cause of the Bonapartists.

On August 16th the Bonapartists obtained another great victory at a supplementary election for the National Assembly in the department of Calvados. Of the 77,286 electors who voted for the Bonapartist candidate, M. le Provost de Launay received 40,794 votes; M. Aubert, Republican, 27,272; and M. de Fontette, Monarchist, 8,978. In 1872 the number of voters was 63,000. M. Paris, the deceased Republican deputy, obtained 28,000 votes; M. Fournist, Legitimist, 17,000; M. Jorel Desclosières, Orleanist, 15,000; and M. de Colbert Chapannais, Bonapartist, 3,000. A comparison of these electoral statistics shows that, while the strength of the Republicans has remained about the same, the Bonapartists have almost wholly absorbed the two other monarchical parties.

During a tour which President MacMahon made in August and September through Brittany and the northwestern provinces, he was everywhere warmly received. In his replies to the addresses with which he was welcomed, he strictly adhered to the policy which he had consistently pursued during the session of the National Assembly, and carefully avoided expressing a preference for any permanent form of government. He eagerly showed his personal devotion to the Catholic religion, without, however, giving any encouragement to the political publications of the bishops.

At a supplementary election held in the department of Marne and Loire, on September 19th, the candidate of the Republicans was elected over the monarchical candidate, in whose support all the other parties had united. The elections for the French Councils-General took place on October 4th and 11th. Of the members elected—1,486 in number—673 are Republicans, 604 Monarchists, and 158 Bonapartists. The result was, like that of nearly all the supplementary elections, favorable to the Republicans and the Bonapartists, the former gaining 30 and the Bonapartists 53 seats. Through these elections the Republicans attained a majority in 38 Councils-General and the Monarchists in 44. In three departments —namely, Aude, Ardèche, and Gard—the Republicans and Monarchists are equally divided. Among the prominent men who were not reëlected to their seats was Prince Napoleon. In consequence of the attitude assumed by him toward the Prince Imperial and the Empress, the Bonapartist members of the General-Council of Corsica, who had elected him to the presidency of the Council, were so incensed against him that they absented them-

selves from the April session, and a quorum could not, consequently, be obtained. At the fall election they nominated, and successfully elected against him, Prince Charles of Canino, whose father, as a member of the Roman Constituent Assembly in 1849, voted for the deposition of the Pope.

On October 18th the Orénoque was recalled from Civita Vecchia, where, ever since the month of August, 1870, she had remained at the disposal of the Pope, in "case he wished, contrary to the desire of France, to quit Italy." "The departure of the Orénoque," the *Journal Officiel* said, "implies no change in the sentiments of devotion and solicitude of France toward his Holiness." A fresh vessel will be placed at his service, but it will remain in one of the French ports of the Mediterranean. Immediately beneath this notice was an announcement that the Kleber had been ordered to leave Toulon and proceed on a special mission to Corsica.

The municipal elections, which took place in November, were even more favorable to the Republican party than the supplementary elections for the National Assembly and the elections for the Councils-General. In the large towns the Radicals met with a marked success over the candidates of the moderate Republican party, which was a remarkable feature of the electoral contest. In Marseilles the Radicals returned their candidates by a large majority, beating those recommended by M. Labadié, a well-known and violent Republican. In Lyons, thirty-four Radicals and one moderate Republican were returned almost unanimously, the Conservatives not giving themselves the trouble to vote. The last Municipal Council elected by universal suffrage in the second city of France was dissolved by M. Thiers, and replaced by a special commission, and the Conservatives of Lyons probably thought they would not have to endure the new Council for any length of time. Several Right-Centre deputies, and M. Grivart, the Minister of Commerce, were defeated, to the great delight of the opposition. No troubles worth mentioning occurred, military precautions having been adopted in dangerous localities. The Municipal Council in Paris consists of twelve Conservatives and sixty-eight Republicans; but while sixty-six of the latter were supported by the Radicals, all of them are not themselves Radical—in round numbers 180,000 for Republican, and 78,000 for Conservative candidates. At the election of a deputy in April, 1873, M. Barodet, the Radical candidate, obtained 180,000 votes, while M. Rémusat, the moderate Republican, and Colonel Stoffel, the Bonapartist, mustered together 162,000, so that 342,000 electors in all voted.

The new session of the National Assembly met on November 30th. M. Buffet was re-elected President by 348 votes, 205 blank votes being cast. At the first balloting Martel, Benoist d'Azy, and Kerdrel, were elected Vice-Presidents by 422,327 and 287 votes. At a second ballot, which was necessary for the election of the fourth Vice-President, the Duke Audiffret-Pasquier, of the Right Centre, was elected by 283 votes over Rampon, of the Left Centre, who received 251 votes. The members of the bureau were then drawn for by lot, amid much conversation and noise.

The message of the President was delivered on December 3d, and read by the Vice-President of the Council, General Cissey. The message states that the President during the recess had endeavored to strengthen peace and maintain order. The relations of the Government with foreign powers had become more and more friendly, and the economic condition of the country had at the same time sensibly improved. There had been an exceptionally good harvest, the prosperity of the country was increasing, and a larger revenue might be expected from existing taxation. In passing through some of the departments he had everywhere been struck with the love of order displayed, and the desire prevailing that the power he exercised should be strengthened in order that it might fulfill its mission. The House would shortly be called upon to examine this question, and he hoped that an understanding would be arrived at. He would not shrink from responsibility, nor would the intervention of his Government be wanting. He accepted power not to serve a party, but to carry out the work of social defense and national restoration, and in the accomplishment of his duty nothing would discourage him. He would remain at his post to the last day of his seven years' term, with unshaken firmness and a scrupulous respect for the laws.

An excited debate was called forth in the National Assembly by M. Jaubert's bill for freeing superior education from state control. M. Challemel-Lacour having, on December 4th, spoken against the bill and complained of the encroachments of the Catholic hierarchy, Bishop Dupanloup, of Orleans, on December 5th, in reply, reproached him with having placed Catholics outside the pale of law. The bishop asserted that the danger arose from those persons who said that the Archbishop of Paris ought to have been shot. At these words violent protestations came from the Left, and it was with difficulty the president obtained silence. M. Challemel-Lacour replied with great bitterness, and concluded by referring the personal attacks of Monsignor Dupanloup to the judgment of the honest men who sat in the Assembly, and generally to those who had any regard for the dignity of the French episcopate. M. Buffet protested against the language used by M. Challemel-Lacour when addressing a man who was one of the glories of the French episcopate. Quiet having been restored, other speakers addressed the House, and the Assembly decided, by 553 against 133 votes, that the bill should be read a second time.

The Spanish Government has ever, since the

outbreak of the Carlist war, suspected the French authorities of favoring and encouraging the Carlists. Spain repeatedly remonstrated against this conduct, and France replied that all precautions which could be required by international usage had been taken. These assurances were, however, not regarded as satisfactory in Madrid, and in October the Spanish embassador in Paris presented to the French Minister for Foreign Affairs an elaborate diplomatic note, which is in fact a pointed and detailed indictment of the conduct pursued by France toward Spain since the outbreak of the Carlist war. That some such formal accusation was pending had been conjectured from the cold and guarded language used on one side and the other by the French embassador at Madrid and by Marshal Serrano when the embassador presented his credentials. The remonstrance which the Marquis Vega di Armijo was instructed, after full consideration, to bring under the notice of the Duke Decazes, is neither cold nor guarded. The note is couched in language which is much more direct and concise than is commonly met with in diplomatic literature. It does not confine itself to vague appeals and complaints, but challenges direct issues, specifies times and places and persons, attacks individual servants of the French Government, and demands redress of a specific kind in the most uncompromising tone. The Marquis Vega di Armijo, in protesting against the failure of the French Government to observe the obligations of neutrality toward Spain, retains a sufficient remnant of official courtesy to assume that his renewed remonstrance is rendered necessary by the default of the subordinate officers of the French Government. He reminds the Duke Decazes of the repeated engagements which had been entered into for regulating the relations of France toward the Spanish Government and the Carlists, and insists that these engagements have been broken by the direct acts or the supine and studied indifference of the prefects and lesser officials of the frontier departments of Southern France. The traffic in contraband of war goes on, it is alleged, as merrily as ever; the Carlist conspiracy is actively and openly at work in Bayonne, Perpignan, Pau, Oleran, and other populous places of the southern departments; and Carlist leaders and soldiers, with scarcely an attempt at disguise, parade streets of French towns as freely as they might the headquarters of the Pretender at Estella. The Prefect of the Lower Pyrenees is distinctly charged with permitting the passage of Carlist leaders and partisans to and fro between the headquarters of Don Carlos and Bayonne. The same functionary is charged with shutting his eyes to the traffic in contraband of war, with turning a deaf ear to the demands of the Spanish consul for the "interment" of notorious Carlist partisans, and with attempting to deal harshly with Spanish soldiers of the national armies who had been captured by the Carlists and thrust across the frontier. The conduct of the Prefect of the Gironde is on similar grounds assailed. Finally, the Marquis Vega di Armijo charges the French Government with the breach of an "understanding"—which, though only a verbal one, was to have had, as he asserts, the force of a convention—between the French *chargé d'affaires* and the Spanish ministry; the former spontaneously promising and the latter accepting the assurance that all the leading Carlists, whether military or civilian, found in France should be sent to the Swiss or Belgian frontier, and that those of less mark should be forced to reënter Spain. Neither part of this engagement has, according to the Spanish embassador, been carried out by the French authorities.

The French answer to this memorandum was forwarded to the Spanish embassador on December 18th. In this communication, couched in conciliatory but firm language, the Duke Decazes confronts and discusses with precision all the allegations enumerated by the Spanish embassador against the conduct of the French authorities on the Pyrenees frontier, thus accepting the responsibility of the measures of the various governments incriminated since 1869. With regard to the chief of these allegations, such as the entry of Don Carlos into Spain, the duke finds himself able to cite the authentic testimony of the Spanish authorities, and of M. de la Vega's predecessors, who have rendered homage to the attitude of the French Government and to the zeal of its agents. He finds, moreover, in a speech by a foreign minister, an emphatic reply to the accusations which have been preferred. After this examination of the complaints put forward by the Spanish embassador, the Duke Decazes explicitly claims for the French Government the right of nominating and maintaining its agents in the plenitude of its independence and responsibility, and he expresses surprise at any indication being given by Spain on this subject. He does not consent to follow the embassador in examining the eventuality of measures which should be taken on the frontier to insure common action of the military forces of the two governments. He sets aside this suggestion, as also the example of Portugal, which seems to him opposed to it, and which he does not consider convincing. As to the reproach that France has pursued in Spanish affairs a policy contrary to the liberal sentiments of the French nation, the Duke Decazes replies that France wishes well to Spain, and desires that it may regain internal order and political security. As to the French Government, while regretting that the integrity of its conduct and the loyalty of its proceedings have not hitherto been better understood, he hopes that in future Spain will render full justice to it. The dispatch is followed by voluminous appendices, which discuss all the details of the various measures taken by the Government on the Pyrenees frontier during the last five years. An important report was, in December, presented to the National Assembly by the Minister of Marine and Colonies, upon the condition of the convicts in New Caledonia. The documents contain various topographical details relating to the Peninsula Ducos and the Isle of Pines, and gives particulars of all the convict transports dispatched between the months of May, 1872, and July, 1874, specifying the measures of sanitary precaution taken antecedently to embarkation and during the passage. It further gives a full account of the establishment of the convicts in the colony upon their arrival; tents and huts have already been prepared for them, constructed with all possible speed in the time between the Governor's receipt of the notification concerning the dispatch of the convicts and their arrival, the number being estimated at 2,000 individuals; the barracks destined for the guards, for the quarters of officers and troops, and depots for provisions, as well as two ambulances for the sick, were all ready. The convicts located on the Isle of Pines were three times as numerous as those on the Peninsula Ducos, the entire body being subdivided into five groups or communes. Each group was called on to elect nine of their number, whose names were submitted to the Governor for him to select therefrom three delegates, to represent the entire group in all relations with the administration, being also charged with the duty of looking after the welfare of their comrades, presiding over the various distributions, becoming the medium for the ... and representa... tion by arbit... delegates are ... degradation, and states that continual efforts must be made to contend against these two chief obstacles — idleness and drunkenness. With this object it has been considered necessary to proscribe the sale, not only of spirits, but also of wine, in the canteens of the convict districts. After entering at some length into the questions which arose in relation to the provision of remunerative employment for the convicts or the alternative enforcement of task-work or "hard labor," the report concludes as follows: "Finally, two facts result clearly from the careful studies of actualities, viz.: 1. That the Peninsula Ducos is an unsuitable and badly-chosen locality for the purpose; and, 2. That the right of idleness cannot be conceded to the convicts. The evil effects of such a privilege have already been amply manifested; no such right can be deduced from the law of 1850, the authors of which never contemplated the withdrawal of the convicts from the operation of that primordial and higher law, whereby, from the Creation, all mankind are condemned to labor and to die."

In December a report was distributed in Paris, drawn up by the late M. Perrot, on the operations of what is called the Eastern Army during the war, in which Garibaldi is very roughly handled. The report says: "If Garibaldi had been a French general we should have been compelled to raise formally the question as to whether he should not have been tried by court-martial for his conduct in having deliberately, and without fighting"— these last five words are in italics in the report — "abandoned positions which he had been ordered to defend, and having thereby occasioned the loss of a French army, and brought about a military disaster without a parallel save those of Sedan and Metz." In other words, the report lays down that when the French army, after Villersexel, was driven into Switzerland, it was Garibaldi's fault. This accusation has caused great sensation.

In March, Henri Rochefort, Paschal Grousset, the Minister of Foreign Affairs under the Commune, and some other Communists, escaped from New Caledonia, to which they had been banished. They left the island in a small boat, and after three days passed in the southern seas were picked up by an English sailing-vessel, bound for the capital of New South Wales. The Governor of New Caledonia, who was absent on a tour of inspection at the time, commenced a rigorous inquiry into the circumstances; and the French Minister of Marine, on the first report of the escape, ordered a general officer to proceed to New Caledonia, invested with the necessary powers to take the measures that might be required in so serious a case. Before his return to Europe, Rochefort paid a visit to the United States, where he gave a course of lectures.

A considerable sensation was produced in France by the escape of Marshal Bazaine from the Island of Sainte-Marguerite, near Cannes, where he was to pass the twenty years of seclusion into which President MacMahon had commuted the sentence of death pronounced against the marshal by the court-martial. His wife, who had been permitted to join, with her children, the fate of the marshal, but was not subjected to prison *régime*, and at liberty to walk about the island, had, in union with her brother, prepared the means of escape, for which the aid of Lieutenant-Colonel Villette, the ex-Captain Doineau, and several warders, was secured. Their case came, on September 8th and 9th, before the Correctional Tribunal of Grasse, which sentenced Villette and two warders to six months', Doineau to two months', and another warder to one month's imprisonment. Subsequently, Marshal Bazaine gave to a reporter of the *Figaro* the fullest details of his escape. A few days before, Marshal Bazaine, in a very interesting letter to the *New York Herald*, dated Liége, September 6th, had, for the first time, presented to the world his defense against the charges which had been brought against him. The letter is an important contribution to the history of the great Franco-German War, and severely reflects upon the members of the court-martial which found him guilty, especially upon its president, the Duke d'Aumale, as well as upon President MacMahon, who, Bazaine insists, was liable to every charge which had been preferred against him.

On the recommendation of the Minister of Commerce, a commission was appointed early in the year to examine the means of extending the French export-trade. At the first sitting of the commission, which was held in May, the Minister of Commerce delivered a speech, replying at length to the various criticisms, particularly those made by the English newspapers, upon the appointment of the commission. The minister refuted the idea that France did not produce articles which could form a staple of a great export-trade, and, in answer to the arguments of English journals, made numerous comparisons between France and England. He said facts replied triumphantly in favor of France, the exports of which, in 1873, reached a value of four milliards of francs against six and a half milliards exported by England. All branches of French manufacture participated in the export-trade. With regard to the iron-goods trade, the minister said that French competition with England was becoming possible, and that France began to hold a good position in foreign markets. Respecting exportation to the East, the minister observed that French manufacturers could sell their produce in English colonies as elsewhere. Without doubt, the new taxes burdened labor, but they were inevitable, and did not disastrously affect production. Government had avoided augmenting the customs duties. Labor was still in a favored position in France, thanks to all the elements of wealth concentrated in the country. The working-population was daily acquiring greater aptitude, strikes were becom-

ing less frequent, and money was abundant. Entering upon the question of the nature of the labors of the commission, the minister said the first matter before them would be the examination of the consular reports, and the means of making them more widely known. He criticised the educational system in the colleges, as rendering young men unfit for a mercantile career, contrary to the practice in England and Germany. It was necessary, therefore, to examine the means of improving the system of commercial education. These two subjects would be intrusted to two sub-committees, while a third sub-committee would examine the transport question. The minister said the reproaches made against the French transport system were exaggerated or ill-founded. The foreign systems, and particularly the American and English, were far from perfect. The minister then adverted to the question of a credit for commercial operations abroad, and laid on the table a series of questions embracing the greater part of the matters to be examined. He also presented various comparative tabular statements respecting the trade of France, England, and foreign countries, and added that the commission would institute an inquiry, in which many leading merchants would be asked to state their views verbally. At the conclusion of the minister's speech, the commission proceeded to divide its labors on the plan suggested by him.

The foreign relations of the country during the year, and the free-trade policy pursued by the present Government, were reviewed by the Duke Decazes, the Minister of Foreign Affairs, at a banquet given him at Bordeaux, in October. M. Lalande, Vice-President of the Chamber of Commerce, in proposing his health, complimented him on his consistent advocacy of free trade, and his opposition to duties on raw materials, expressing a hope that he would take every opportunity of obtaining from other countries, especially from the United States, advantages analogous to those derived by the Gironde from the English treaty of 1860. The Duke Decazes, in reply, after alluding to his connection with the province by birth, remarked that fourteen years ago he advocated economic measures, which at that time appeared to be contrary to his personal interests. It was then alleged that French colliery and metallurgical industries had every thing to fear from a broader and more liberal economic policy. He never shared that opinion, and he was glad he had not, for he now saw more clearly than ever that the widest development of free trade was the most productive means of national wealth. He remained faithful to that conviction when he endeavored to resist tendencies which he believed to be fatal, and it had since induced him to exert his best efforts to facilitate commercial and consular relations with Russia, and to renew postal relations with the United States. The latter afforded ground for a hope at no distant date of more liberal commercial relations, which, he ventured to add, would be more advantageous for both countries. With the same convictions he had negotiated new treaties with Turkey, which would take the place of those about to expire. After stating that he was promoting French interests in La Plata and in West Africa, Japan, and Cochin-China, the duke continued: "There, as, indeed, everywhere, you ask of us liberal legislation, an effective protection, and peace. As for peace, Marshal MacMahon, that illustrious and loyal soldier, who has taken charge of France for seven years, has confided to me the special charge of it. As long as I retain his confidence and that of the Assembly, I shall not be wanting to the duties which that mission imposes on me. Peace, in order to be fruitful and to be firmly established, can only rest on bases compatible both with our dignity and our interests. It is impossible to separate the two, and that is why we have placed it under a double safeguard—the affirmation of the rights of France and of our scrupulous respect for all our international obligations. In that consists the whole secret of our foreign policy, too frequently misunderstood and so unjustly attacked, and it rests solely and absolutely on the rigorous and scrupulous execution of the treaties which bind us toward foreign powers. I shall not try at the present day—and you cannot blame this prudence—to provoke or aim at a modification of conventions which the past has bequeathed to us. I demand the strict observance of them, and I offer on my side the loyal execution of them. Is not this course dictated by our dignity and our interests? We should strangely misunderstand these serious duties if we allowed ourselves to be seduced into the abandonment of this footing. It is indeed the safeguard of France as well as the guarantee of the peace of Europe."

Much scandal and a little alarm were caused in France by the words which M. Piccon, one of the deputies from the Alpes-Maritimes, was reported to have spoken at a banquet at Nice. He was confident, he said, that Nice, the victim of Italian independence, would soon be won back by her true country. To that end he would sacrifice all the interests of himself and his family. These words raised such a storm that M. Piccon felt it needful to deny the accuracy of the report. His dignity, he added, did not permit him to be more explicit, and soon after he resigned as member of the National Assembly. It subsequently appeared that the report on the alleged secession tendencies of Nice and Savoy were gross exaggerations, and that many prominent men who were charged with favoring the secession movement, were really only in favor of a decentralizing policy which would allow Nice, like any other part of France, to adhere to its ancient provincial peculiarity.

The influence of the Catholic Church on society and on the legislation of the country

appears to be on the increase. Though the Minister of Foreign Affairs could not indorse the violent attacks which the bishops and the Catholic organs made upon the Governments of Italy and Germany, but even deemed it necessary to act in opposition to their demands, and though the President appointed a Protestant as Minister of the Interior, the efforts for restoring the influence of the Church upon the masses of the people were on the whole warmly supported by the Government and the immense majority of the provincial authorities. The pilgrimages continued to assume dimensions which by far exceeded the expectations of the opponents of the Church, and, in the province of public instruction, the bishops appeared to be sure of seeing all their demands substantially complied with.

Protestantism in France has severely suffered by the cession of Alsace-Lorraine to Germany. According to the census of 1872, the Protestants now constitute only 1.60 per cent. of the total population, whereas, in 1866, they still were 2.23 per cent. One of the two Protestant Churches recognized by the state, the Lutheran, has been nearly destroyed by the loss of Alsace; the other, the Reformed, split in 1874 into two sections (*see* REFORMED CHURCH). The reports of the Protestant religious societies of France, made at their anniversaries in April and May, showed the year to have been generally a dull one with them. The Bible Society of France reported its expenses during the year to have been 47,000 francs. It had circulated in the same period more than 20,000 copies of the Scriptures.

On March 15th, the French Vice-Admiral Dupré concluded a new treaty with the government of Anam, in Farther India, which was ratified by the National Assembly of France on August 8th. The treaty was to put an end to the persecution of the Catholic Christians which had again taken place in Anam. It ratified the provision of the first treaty, concluded by Anam with France and Spain in 1862, by which the French and Spaniards received the free exercise of their religion, and the natives of Anam the right to embrace Christianity. The new treaty was even more favorable to France and the Christians than that of 1862, and virtually places the entire empire under the protectorate of France. In article 9 the King of Anam engages to repeal and destroy all prohibitions which formerly were issued against the Christian religion, and allows all his subjects to embrace it and exercise it. The Christians may assemble in their churches for divine worship, and they cannot be coerced into any actions which are forbidden by their religion. They shall not be subjected to any particular enumeration, and shall be admitted to all examinations and public offices. The special lists of Christians which during the last fifteen years had been prepared, shall be destroyed, and, with regard to census and taxes, the Christians shall be treated like the other subjects of the King. The former prohibition to use, orally or in writings, offensive expressions against the Christians, is renewed. The bishops and missionaries may come into the empire without hinderance, and travel in their dioceses and districts, as soon as they have a pass from the French Government of Cochin-China which has been indorsed by the Anamese Minister of Rites, or the provincial governor. They may everywhere preach the Catholic doctrines, and shall not be subjected to any special superintendence. The villagers will no longer be bound to notify the mandarins of the arrival of missionaries. The bishops, missionaries, and native priests, have the right to buy or rent lands and houses, and to establish orphan-houses, schools, hospitals, and other buildings, for religious and ecclesiastical purposes. The property which has been taken away from the Christians will be restored to them. All these provisions apply to the Spanish missionaries as well as to the French. A royal rescript was to announce to all the communes of the empire the liberty granted to the Christians, immediately after the ratification of the treaty. The party opposed to the Christians and foreigners is, however, very numerous in Anam, and soon after the conclusion of the treaty a bloody revolution was instigated by this party, which raged for several months.

General ERNEST LOUIS OCTAVE COURTET DE CISSEY, the president of the Council of Ministers in the latter half of the year 1872, is descended from an ancient noble family of Burgundy, and was born in Paris, in 1812. From 1830 to 1832 he attended the Military School of St.-Cyr, and subsequently the school of the general staff. Having been appointed officer, he went to Algeria, where he served in the war against the Kabyles. He soon became adjutant of General Trézel, and took an active part in the battles of Constantine, Mascara, and on the Isly. In 1852 he returned to France, and in 1855 he served as colonel in the Crimean War, when he in consequence of his bravery in the battle of Inkermann was appointed brigadier-general. In 1865 he was appointed as general of division at Rennes. When the war against Germany broke out in 1870, he received the command of the First Division of the Fourth Corps (Ladmirault). As such he belonged to the Army of Metz, and took a brilliant part in the battles of Borny, Rezonville, and St.-Privat. When Marshal Bazaine, on October 22d, informed his generals of his intention to capitulate, Cissey declared energetically in favor of a last attempt to force a passage through the German army. On October 25th, after the useless negotiations of General Changarnier with Prince Frederick Charles, General Cissey was sent by Bazaine to Frescaty, a castle situated under the Fort St.-Privat, in order to have an interview with General Stiehle, the chief of the general staff of the Prussian army. In these new negotiations Cissey endeavored to separate the fate of the army from that of

the place, but did not succeed. In consequence of the capitulation, he was sent as prisoner of war to Germany. At the elections of February, 1871, he was chosen as deputy of the National Assembly from the department of Ille-et-Vilaine. Having returned to France after the conclusion of the preliminary peace, he was appointed by the Government of Versailles to a command against the insurgents of Paris, where he greatly distinguished himself. On June 5th a decree of the chief of the executive power appointed him Minister of War, in place of General Le Flô, who was sent as embassador to St. Petersburg. As minister of war, Cissey labored with extraordinary energy for the reorganization of the French army, and the reforms which have been introduced there are for a large part his work. When the law to bring Marshal Bazaine before a court-martial was presented, General Cissey endeavored to procure to his former chief the privilege of demanding for himself this rigorous measure. The majority of the Assembly was any thing but pleased with this indulgence, and for a time it was believed that Cissey would have to yield his position as Minister of War to General Chanzy. In the National Assembly General Cissey took his seat at the Right Centre. On May 23, 1873, he formed a new cabinet, in which he retained, besides the presidency of the Council, the department of war.

Duke Louis Charles Elie Amanien Décazes, next to General Cissey the most prominent member of the cabinet appointed in May, 1874, is the son of the prominent French statesman Duke Elie Décazes. He was born on May 9, 1819, and at an early age entered the diplomatic career. The Government of Louis Philippe appointed him minister plenipotentiary and extraordinary envoy of France near the courts of Spain and Portugal. After the Revolution of 1848 he retired with his father to private life. He was in 1869 elected member of the Council-General of the Gironde, but when he was in the same year a candidate for the Corps Législatif, he was defeated by the official candidate, Chaix d'Estange. At the general election of February, 1871, he was chosen by the department of the Gironde, of which he is a native, member of the National Assembly. Like Cissey, he belonged to the party of the Right Centre. In October, 1871, he was reëlected member of the Council-General. Though a less frequent speaker than other prominent men of the Assembly, he has been one of its most influential members.

Bishop Félix Antoine Philippe Dupanloup, of Orleans, is the foremost champion of the interests of the Catholic Church in the National Assembly and in the country. He was born in Savoy, on January 3, 1802, studied theology at Paris, and was ordained in 1825. In 1827 he was appointed confessor to the Duke of Bordeaux, in 1828 religious instructor of the Princes of Orleans, and in 1830 almoner to the Dauphine. Having lost this position in consequence of the Revolution of July, 1830, he founded the academy of St.-Hyacinthe, and two years later was naturalized as a Frenchman. As he had achieved a great reputation both as a religious instructor and a pulpit orator, he was appointed by Archbishop Quelen Vicar-General. Under Archbishop Affre, whose appointment he had opposed, he only retained the title of Vicar-General. At the close of the year 1845, he resigned both this title and the position of Prefect of Studies in the Petit Séminaire which he had held since 1834. Having been, in 1849, appointed Bishop of Orleans, he took a prominent part in the discussion of religious, educational, and other questions. He was supposed to sympathize with Montalembert, Lacordaire, and the other leaders of the so-called liberal Catholic party, whose organ was the *Correspondant*, and he not only severely censured the course pursued by the *Univers*, the chief organ of the Ultramontane party, but even forbade its circulation in his diocese. He specially defended, against the *Univers* and Abbé Gaume's work, "Le Ver Rongeur," the reading of the pagan classics in the Church school. On the other hand, he made the utmost efforts to obtain for the Church an unlimited control of her own literary institutions. He was consulted in the framing of the law of March 15, 1850, on the reorganization of public instruction, and accepted a position as member of the Supreme Council of Public Instruction, but resigned in 1852, as he entirely disagreed with the views of Minister Tortoul. When the Vatican Council was convoked, Bishop Dupanloup did not conceal his opposition to the declaration of the doctrine of papal infallibility, and at the Council he was one of the most prominent members of the minority which declared the dogmatization of that doctrine. When, however, the Council adopted and the Pope promulgated it, he was among the first to submit. During the occupation of his episcopal city by the German army, he successfully interceded with the German authorities in favor of the mitigation of some measures adopted by the generals. Having been elected a member of the French Academy in 1854, he prevented by his influence, in 1863, the election of the radical Littré; and when the latter was, in 1871, elected in spite of his opposition, he resigned, but his resignation was not accepted. In the National Assembly, to which he was elected by his Department, he belongs to the party of the Right. As president of the committee to which was referred the new law on primary instruction prepared by the Minister of Instruction, Jules Simon, he strongly declared himself against the principle of compulsory education. Of late he has specially interested himself in the canonization of the Maid of Orleans. He has been a prolific writer on theological and educational subjects; his chief works being "De l'Education" (3 vols., 1855–'57), and "Vie de N. S. Jésus-Christ" (1872).

FREE CHURCH OF ENGLAND. The chief features in the organization and government of the Free Church of England have been briefly stated as follows, by one of its deacons, in a published communication:

1. The constitution of the Free Church of England is defined by the deed-poll, duly enrolled in Chancery, and therefore cannot be varied.

2 and 3. The *Monthly Magazine* gives full information of what is going on.

4. The annual report gives full information of churches and ministers, with a list of the officers and governing council.

5. The Episcopacy of the Free Church of England differs slightly from the Episcopacy of the Established Church.

6. The Free Church of England acknowledges only *two* orders of ministers, viz., bishops, including presbyters, and deacons.

7. Every ordained minister in the Free Church of England who has charge of a congregation is a *bishop*, or presbyter, and is acknowledged as the bishop of that particular congregation.

8. Every layman, holding office in the church as warden or manager, is a *deacon* of the Free Church of England.

9. One of the bishops is chosen as primus or president of the whole body, otherwise his status is the same as the rest.

10. Every ordained minister is a bishop or presbyter, and becomes a bishop of a diocese when he takes the oversight and charge of any particular district.

11. Ordinations are conducted by the bishops and presbyters, the primus always presiding when present.

12. Bishops and presbyters in the Free Church of England are of equal order.

13. Confirmations are conducted by the primus or by any other bishop of the Church.

14. Ordained ministers from the Established Church or other denominations are received, if eligible, without reordination, at the annual meeting of Convocation, but they must be highly recommended, and submit to a very searching examination by the Examination and Discipline Committee, before they can be so received, and they must also be recommended by the district or diocesan meeting from which they come.

15. Both orders have equal right to be present and vote at Convocation on all matters whatsoever; the deacons (i. e., the laity holding office) outnumbering the bishops and clergy at least two to one.

16. There are at present about forty bishops or presbyters, and about one hundred deacons, constituting the Convocation meeting yearly. The Council consists of about forty members, carefully chosen, who meet monthly at Westminster and quarterly at Spa Fields, with full power to act for Convocation in all necessary matters.

17. Each of the fifty-two counties of England and Wales is a separate district.

18. These fifty-two districts are grouped into five dioceses, holding quarterly conferences, and having each a superior secretary in constant communication with the Council in London, through the principal secretary. The county secretaries are each in communication with the secretary of the district or diocese to which they respectively belong.

19. The five principal districts or diocesan secretaries are required to attend the Council in London at least four times a year.

The eleventh annual meeting of the Convocation of the Free Church of England was held in London June 23d and 24th. The bishop-president delivered an opening address on "Sacerdotalism." He then introduced the subject of the proposed union with the Reformed Episcopal Church of America, after which the following resolution, embodying the report of the committee of the Church on the subject, was adopted:

Resolved, That this Council heartily adopts the following articles of federal union between the Reformed Episcopal Church of America and the Free Church of England, humbly praying Almighty God to bless the union of the two Churches, to the extension of his kingdom throughout the world.

Whereas, The Council of the Free Church of England addressed to the Executive Committee of the Reformed Episcopal Church a communication under date of March 10, 1874, signed by the bishop primus thereof, proposing "some closer relationship than that of mere brotherly sympathy;" and—

Whereas, The Executive Committee of the Reformed Episcopal Church had previously desired, and still desires, such close relationship: therefore, be it jointly

Resolved, That the following Articles of Federative Union be submitted by the Executive Committee of the Reformed Episcopal Church at the General Council of said Church in May next, and by the Council of the Free Church of England to the annual meeting of the Convocation of said Church in June next, for the action of the respective Churches:

ARTICLE I. As an evidence of the union existing between the Free Church of England and the Reformed Episcopal Church, a delegation of ministers and laymen may be sent annually from the Convocation to the General Council, and from the General Council to the Convocation, with the right to take part in the deliberations of said bodies respectively.

ART. II. On the consecration or ordination of bishops or other ministers in either Church, the bishops and ministers of the other Church shall be entitled to participate.

ART. III. The ministers of either of said Churches shall be entitled to officiate transiently in the congregations of the other: and also, subject to the respective regulations of said Churches, shall be eligible to a pastoral charge in either.

ART. IV. Communicants of either Church shall be received by the other on presentation of letters of dismissal.

ART. V. Divisionary or other congregations of either Church may transfer their connections to the other on such terms as may be mutually agreed upon.

ART. VI. The two Churches, recognizing the fact that they are working together in the same great cause, and on the same basis, pledge each to the other their mutual coöperation, sympathy, and support.

The annual report contained an exposition and defense of the constitution of the Church, and especially of the doctrine that there are but two orders of the Christian ministry. The reports of the several districts showed progress and continued consolidation. Five ministers were recommended and received, either by ordination, or as ministers who had been already ordained. The Secretary of Convocation was requested by resolution "to compare the constitution of the Free Church of England with that of the Reformed Episcopal Church in America, and to adopt and adapt those canons of the latter which may be found suitable and practicable as by-laws to improve and complete the organization of the former, not aiming so much at uniformity as to render the

union of the two bodies easy and effectual in coöperation, and better to secure the common object for which both Churches exist; having done this, to submit the same to the standing Revision Committee, for that committee to revise and lay the result before Convocation for final approval and adoption." An effort was decided upon to adopt a prayer-book and hymnal in common with the Reformed Episcopal Church. Permission was given for the use in the mean time of the prayer-book of the Prayer-book Revision Committee, coupled with the reservation that it was "not to include the Thirty-nine Articles and the ordination service, nor the use of the Athanasian Creed." The Convocation refused its sanction to any minister becoming the pastor of any Church in which the "Hymns, Ancient and Modern," are used in public worship. Delegates were appointed to attend the General Council of the Reformed Episcopal Church in May, 1875.

A rearrangement of the diocesan districts was made, and the number of such districts was increased to seven.

FUEL, ARTIFICIAL. It is so evident that great advantages would be gained by coal-operators, and by the public generally, from the utilization of what is known as coal-dust, slack, waste, or culm, that it is to be wondered that manufactories to transform this worthless material into a marketable fuel are not erected everywhere in the mining-regions. The immense accumulations of coal-waste to be found in those regions are really a nuisance to the inhabitants and an eye-sore to the traveling public. It is generally admitted (says Mr. E. F. Loiseau, in a paper read before the Franklin Institute) that, on an average, from 40 to 50 per cent. of the entire coal production, both in America and in Europe, is converted into dust or waste. The utilization of this waste has been a problem which scientific and practical minds have tried to solve for a number of years. Partial results have been obtained, by which a certain amount of the waste of coal-mines has been utilized; and this only in Europe, where a gradual and constant increase in the cost of the natural coal has given to the manufacturers of artificial fuel a fair chance of profit; but it must be admitted that, compared with other branches of industry, the progress made in the utilization of coal-waste has been very slow. The enormous increase in the cost of coal in England, France, Germany, and Belgium, during the last three years, has, however, brought again before the public, and this time prominently, the question of utilizing the waste created everywhere that coal is handled.

Bituminous-coal dust will coke well, and it is much used for that purpose; but, the demand for coke not being in any way equal to the supply of bituminous small coal, from which it might be made, a great proportion of the latter is left underground. A small proportion of bituminous slack is used by blacksmiths, and even in peculiar grates, for engineering purposes, but the largest part above-ground is thrown into rivers or piled up around the mines. It is estimated that the quantity of waste exceeds thirty million tons.

Although several establishments have been created in France, England, and Belgium, for the purpose of converting coal-waste into marketable fuel, that branch of industry is at present quite in its infancy. France has twenty-eight and Belgium nine manufactories of artificial fuel. In England the principal seat of these manufactories is in South Wales.

Coal-dust can be manufactured into solid lumps in two different ways: by simple compression without the addition of any cementing material, or by agglomeration with cements.

In England, Messrs. Bessemer, Rees, and Buckwell; and in France, MM. Baroulier, Evrard, and Loup, have patented different processes for the compression of bituminous coal-dust into solid lumps without cement. The coal manufactured had a great heating power, but it could not bear handling and transportation.

Bessemer, heating previously the bituminous slack until it was brought to a plastic state, forced it, by a piston, into a long tube, whose diameter was gradually reduced, and from which the compressed coal was forced in a continuous cylindrical shape. By means of a revolving knife, the fuel was cut in sections of any required length as fast as it was forced out of the tube. This process required very powerful machinery. Bessemer was compelled to reduce gradually the length of the tube, and to increase its thickness, as it very often burst. The process required a large amount of natural coal to heat the dust to a pasty mass, and, while being heated, it eliminated from the coal the greatest part of its volatile constituents. The application of Bessemer's process has long ago been abandoned.

Buckwell and Evrard compressed the bituminous waste into moulds without heating it previously. Although a powerful pressure was applied to the fuel, the product could not bear handling.

Baroulier used circular iron moulds of a certain depth, open on top and at the bottom. These moulds were filled with coal-dust, and this dust was compressed by hydraulic pressure; more coal was then added, this again compressed, and so on, until the moulds were completely filled. The process, although a real improvement on Bessemer's, had some of its defects, and the manufactured fuel could not be sold in competition with the natural coal.

These are the only serious attempts which have been made to convert bituminous coal-dust into solid fuel without cement. Rees took out an English patent for a process similar to Baroulier's.

Among the cements which have been used

to a certain extent, may be cited rosin, asphalt, petroleum, coal-tar, and its derivative fluid, and dry pitch, lime, plaster, starch, and clay.

Prof. A. S. Bickmore, in a very interesting paper on "Coal in China," read before the American Association, says that "from time immemorial, in the north of China, coal is ground to dust and mixed with clay, that it may burn more slowly."

In 1603 a pamphlet entitled "A New, Cheap, and Delicate Fire of Coal-balls," was published in London by Sir Hugh Platt. This gentleman recommended, for use in common fireplaces, a mixture of coal and clay, moulded by hand, in the shape of *balls*. He also used another mixture, which consisted of coal-dust, tanner's bark, sawdust, and cow-dung.

Another pamphlet, also published in London, in 1679, and entitled "An Excellent Invention to make a Fire," contains the following recipe:

> Take three parts of the best Newcastle coal, beaten small, one part of clay: mix these well together into a mass with water; make thereof balls, which you must dry very well. This fuel is durable, sweet, not offensive by reason of the smoke or cinder as other coal-fires are, beautiful in shape, and not so costly as other fire; burns as well in a room even as charcoal.

In an article on the coal-basin of Eschweiler, M. Clère, a French engineer of great reputation, states that—

> At Liége (Belgium) coal-dust is mixed with clay, pressed by hand in the form of balls, dried in the sun, and stored away for domestic use. That kind of fuel is there called *hochets*.

Even to this day, not only at Liége, but everywhere in Belgium, coal-dust is used in the same manner.

There exists in Belgium a certain class of working-women, who earn a scanty living by converting the coal-dust into solid fuel. They call at every house in front of which a load of coal-dust has been dumped, offering their services. These poor creatures can be seen daily in the streets, always two or three together, each one of them pushing a wheelbarrow loaded with clay, in which stands a shovel. As soon as the price is agreed upon, they go to work in earnest; the coal-dust is shoveled all around so as to form a circular bed of about one foot in thickness. From 25 to 30 per cent. of clay is diluted with water and sprinkled over the coal, which is first well mixed with the clay by means of the shovels. Then, putting on wooden shoes, they commence to trample upon the coal, turning round the coal-bed from the circumference to the centre, and back again from the centre to the circumference, following each other like ducks. When the whole surface of the coal-bed has been trampled upon twice, the mixture is turned over with the shovel, and the trampling recommences. After five or six operations of the kind have been gone through, the coal and clay have been worked to a plastic mass. This is piled up in a heap, and, seating themselves on their wheelbarrows, these women proceed to compress the fuel in the shape of balls, by hand. These balls are then dried in the sun, after which they are ready for use.

In some parts of Germany the trampling on the coal is done by men on horseback. In the Rhine regions the mixing of the clay with coal is an affair of constant occurrence.

At Ham-sur-Sambre (Belgium), in 1859, under the direction of M. Darbois, machines, invented by M. David, a French engineer of merit, were erected for the purpose of manufacturing, by mechanical pressure, solid lumps from semi-anthracite coal-dust, mixed with 15 per cent. of clay. With these machines, lumps of cylindrical shape were pressed, also cylindrical lumps with perforations half an inch in diameter through the centre. These machines were very expensive, and their production was very limited. In 1861 they were replaced by cheaper and more productive machines, invented by Mr. Martin, from Liége (Belgium). These machines, making egg-shaped lumps, met with more favor, as the product was very similar to the lumps pressed by hand. Martin's press is still in operation at Ham-sur-Sambre.

At Tamines-sur-Sambre (Belgium), in 1862, under the direction of M. Cavenaile, the company of the "Charbonnages réunis de la Basse Sambre" erected also Martin's machines to convert the coal-dust into egg-shaped lumps, by using 18 per cent. of clay as cement. Martin's press made only one lump at a time. The feeding was very defective. This slow and very imperfect method of drying economized fuel, but required a large number of boys.

Baudry invented a drying-oven with shelves all around. It required two hours to dry the fuel. Labor being relatively cheap in Belgium, and coal selling high, no improvements have been made to diminish unnecessary handling. Notwithstanding the defects of Baudry's process, it is still applied in Belgium, the product containing 18 per cent. of clay, and not being impervious to moisture. The large percentage of clay and the fuel not being able to stand exposure to the weather are the greatest obstacles to the development of the manufacture of artificial fuel by the use of clay as a cement. Asphalt, rosin, and petroleum, as cements, have been found wanting in cohesive property, and also too expensive. Coal-tar and its derivative, fluid pitch and dry pitch, have been the most extensively used. The idea of mixing coal-dust with coal-tar originated with Peter Davey, an Englishman, who, in 1821, took out an English patent for it.

From 1821 to this day a considerable number of patents have been issued, both in this country and abroad, either for so-called new processes or for the machines to apply them.

Among the inventors who have really improved the means of manufacturing artificial

fuel, by using either coal-tar, fluid pitch, or dry pitch, the names of Grant, Rathwell, Cooke, Wylam, Warlich, Dobrée, Moreau, and De Heynin, are prominent.

Fluid and dry pitch formed a good cement for bituminous and semi-bituminous coal-dust, but it did not succeed as well with anthracite and semi-anthracite waste, which is mined in South Wales and in some parts of France and Belgium. Before the cement is consumed, the bituminous artificial fuel is coked, and consequently it does not crumble in the fire. It is not the same with anthracite or lean coal-dust. When cemented with coal-tar or pitch, or any other resinous material, the cement consumes in the fire more rapidly than the coal, and the particles of coal, having lost their adhesive coating, crumble in the fire and fall through the grates without being consumed.

Resinous materials expand when burning, while clay, on the contrary, contracts progressively when submitted to elevated temperatures. Clay, used alone, would not have given a fuel impervious to moisture. It was supposed that, by mixing clay and pitch with the coal-dust, the fuel manufactured would not only be water-proof, but would remain in the fire, without crumbling, until consumed, the skrinkage of the clay compensating for the swelling of the pitch.

Among the experimenters in that direction who have really improved the manufacture of artificial fuel, are Chabannes, Sunderlandt, Stafford, Oram, Geary, Goodwin, Mohum, Sterling, Albert, Newton, Holcombe, Smith. All these attempts were unsuccessful. The presence of pitch in the fuel made it unfit for domestic use, and the clay impaired its combustible character for manufacturing purposes.

Patents were also granted to several inventors for a mixture of bituminous and of anthracite coal-dust, and coking the mixture. The first one of these patents was granted, in 1823, to John Christie and Thomas Harper, in England. The result was the same as with Bessemer, Baroulier, and others. The machinery was too expensive, and the product was not marketable.

A large number of patents have been granted in this country for artificial fuel. Most of them are modified copies of foreign patents. Dr. Joshua R. Hayes, of Winchester, Pa. (patent March 4, 1873), uses coal-dust, clay, and asphaltum; but, although the manner in which he combines these materials is new and ingenious, the product will be liable to the same objections made against the fuel manufactured in Europe from coal-dust, clay, and pitch, by Stafford, Oram, Goodwin, Geary, and others.

The manufacture of artificial fuel, although being far from having attained the importance which it must attain in the near future, has been developed more rapidly in France and in Belgium than in England. English coal is harder than French and Belgian coal; and, until within the last three years, the price of coal in England was so low that there was no inducement for capitalists to invest their money for the development of an industry which presented but poor prospects of good dividends. But increase after increase in the price of coal during the last three years has entirely changed the state of affairs. Large companies were organized last year, with immense capital, for the manufacture of "patent fuel" by different processes. The last one patented in England, and which has also been patented in this country, is the invention of Martin Rae, of Uphall, North Britain. It consists in mixing with coal-dust 15 per cent. of what he calls a bituminous mastic. In this process we have again a mixture of clay, coal-dust, and some other bituminous material, fluid shale-pitch.

A company was organized in May, 1873, with a capital of one million dollars, under the name of "The Diamond Fuel Company," to apply David Barker's process.

In these two processes, as well as in the old one of cementing coal-dust with pitch, or rosin, or asphalt, a large amount of natural coal is consumed, not only to dry or carbonize the product, but also to heat the cement and the coal-dust itself. If the dust was not heated, the cement would not adhere to the particles of coal. There is also the unnecessary handling in carrying the fuel to the drying-oven, and removing it when dry.

Both Martin Rae and David Barker are inventors, not only of the process, but of the machinery for its application.

The mixing-machines in Europe are almost all constructed on the same plan: they consist of vertical or horizontal cylinders, differing only in height or in length.

Although the compressing-machines used in Europe are numerous, they are all modifications of four distinct mechanical modes of applying pressure: First, by means of rollers; second, by pistons in closed moulds; third, by pistons in open moulds; and fourth, by pistons pressing cylindrical lumps with a hole through the centre.

Most of the machines have also been tried to convert peat into a dense fuel. Some of them have answered the purpose very well—Milch's machine, for instance. Large peat-factories are in operation at Stalbach, Halle, Haspelmoor, and Neudstadt, in Germany, and at Montangin, in France.

I now proceed (continues Mr. Loiseau) to describe what appears to be their deficiences.

It is evident that no artificial fuel containing a resinous substance will ever be used for domestic purposes, on account of the smoke and of the bad odor. Another objection is, that such a fuel is liable to spontaneous combustion. No objection of the kind can be raised against artificial fuel cemented with clay and milk of lime.

In my process (says Mr. Loiseau) I use the

slack without heating it or drying it previously. The moisture which it contains varies with the state of the atmosphere. Therefore I am compelled to regulate the supply of lime-water accordingly. The difficulty of ascertaining the state of the materials inside the mixer suggested the idea of placing sliding doors around it. These doors facilitate the cleaning of the mixer and the removal of stones or pieces of iron which are found quite often in the coal-dust.

The pressure should be applied gradually in order to expel, as much as possible, the moisture contained in the mixture, and avoid cracks, which are the unavoidable result of a sudden pressure. An excess of compression spoils the fuel, prevents its free burning, and makes the ashes adhere to the surface of the lump, instead of falling through the grate into the ash-pan. The fuel must be sufficiently compressed to bear transportation and reasonable handling, and be still porous enough to insure free combustion. The shape of the fuel is also of great importance. Square lumps have too many sharp edges, which break off easily when the coal is handled; and the flat surfaces, meeting very often in the fire, prevent the free access of the air. Cylindrical-shaped lumps are better, still they have sharp edges left. Round or egg-shaped lumps are evidently to be preferred. It requires less power than is required to compress square ones of the same weight, as there are no corners to fill, and, as a result, less friction. With round or egg-shaped lumps, no matter what amount of coal is piled on the fire, there is always sufficient space between the lumps to secure a good draught, and to allow a free access for a good supply of oxygen.

For these reasons I have adopted the egg-shaped form, slightly flattened, and have modified Baudry's and Martin's presses, in order to obtain more and better products.

To render the fuel impervious to moisture, instead of mixing a resinous substance with the materials, the lumps are simply dipped into a liquid composed of rosin dissolved in crude benzine. By exposure to a current of air, the benzine evaporates and leaves each lump coated with a thin film of rosin, which closes all the interstices, and renders the fuel water-proof.

G

GABLENTZ, Ludwig Karl Wilhelm, Baron von, a Field-Marshal of the Austrian Army, an Austrian soldier and diplomatist, born at Jena, June 19, 1814; died by his own hand at Zurich, Switzerland, January 29, 1874. He entered in his youth the Saxon cavalry, and served in it for many years, but previous to 1848 entered the Austrian service. He was on the staff of Radetzky in the Italian campaign of 1848, distinguished himself at Custozza, and was appointed soon after chief of staff. He took a brilliant part in the Hungarian War. After the close of this war he was employed on several political and diplomatic missions. His military promotion was somewhat rapid, though earned by his gallant conduct. He had passed through all the grades from major to major-general before 1854, when he was in command of a brigade in the army of occupation in the Danubian provinces. From this he was transferred, in 1857, to a larger command in the Lombardo-Venetian Kingdom. He fought with bravery and distinction both at Magenta and Solferino, was promoted to the command of a division on the field of battle, defended Capriana, and covered the retreat of the Austrian army. In 1863 he was made lieutenant field-marshal. He commanded the Sixth Army Corps in the invasion of Holstein in 1864, but with no great success. In the seven weeks' German War of 1866 he was in command at first of the Tenth Army Corps, and at Sadowa of the Eighth and Tenth, but met with a disastrous defeat from the second Prussian army. In July, 1869, he was appointed commander-in-chief in Hungary, and remained there till the failure of his health, when he visited Zurich in hopes of its improvement, but, in a fit of either melancholy or mania, put an end to his life.

GEIGER, Abraham, Ph. D., a Jewish rabbi, scholar, and author, born at Frankfort-on-the-Main, May 24, 1810; died at Berlin, November 13, 1874. He received his early education from his father and elder brother, and subsequently pursued his studies at the Universities of Heidelberg and Bonn. In 1832 he was called as rabbi to the small Israelite community at Wiesbaden; in 1838 he was chosen assessor to the rabbinat at Breslau, and somewhat later elected rabbi of that flourishing community of Israelites. With a much broader culture than is usual among Jewish scholars, Dr. Geiger possessed also an independent and fearless spirit, and his publications urging the necessity of reforms and the absurdity of some of the old religious usages of the Israelites won for him in about equal numbers earnest sympathizers and violent opposers. To conciliate his opponents and to bring about harmony among the leaders of Jewish thought, he initiated a series of conferences of the rabbis, of which the first was held at Brunswick in 1844, a second at Frankfort three years later, of which he was one of the vice-presidents; and a later one at Breslau, over which he presided. The influence of these conferences upon the rabbis has been very great. Dr. Geiger had also been active as a writer both in defense of his views and on topics of general

Jewish literature. He had not yet received his doctor's degree at Bonn, when he wrote his essay, "What has Mohammed borrowed from the Jewish Religion?" which was awarded the philosophical prize of the university, and was published by order of the Philosophical Faculty. In 1835 he commenced the publication of the *Journal of Jewish Theology*, which has been from the first the ablest exponent of religious thought among the Israelite scholars of Germany. His other principal works are: "Melo Chofnajino" (1840), and "Hite Haamanim" (1847), two interesting monographs; "Studies on Moses-ben-Maimon" (Maimonides, the Jewish philosopher, theologian and legislator of the twelfth century (1850); "Concerning the Defense of the Israelites against the Attacks of Christians in the Mediæval Period," two vols. (1851–'52); "Isaac Troki, the Apologist of Judaism at the Close of the Sixteenth Century" (1853); a "Translation of the Divan of Castillan of Abul Hassan Juda ha Levi," with a commentary and a biographical notice (1817); and "A Manual of the Dialect of the Mishna" (1845). For some years past Dr. Geiger had resided in Berlin.

GEOGRAPHICAL EXPLORATIONS AND PROGRESS FOR THE YEAR 1874. The achievements in the domain of geographical science for the year 1874 bear witness to the more careful and scientific spirit which marks the exploratory enterprises of late years. The visions of wealth and the glory of conquest which have, down to the latest times, impelled adventurous spirits to strike out over untraveled ways have now but small influence upon the minds of explorers.

The unknown region lying between the colonies of South and East Australia has been crossed in two directions within the year. The seldom-visited portions of Central Asia are being made known through the efforts of recent explorers. In our own country the unexplored expanse in the Western Territories is now for the most part not only carefully examined but accurately surveyed, and the nation has been made acquainted with lands of extraordinary worth and promise. The opening of new commercial routes is now the most valuable material benefit to be looked for as a result of geographical research; and governments which are, by ancient prescription, the principal road-builders, originate many of the most important explorations and extend the aid of contributions of money and protection to others. Projects are on foot, promoted by powerful states, for the establishment of great highways through the centre of Asia in different directions, across the British possessions, and over new ocean-routes. The South American Continent has recently been brought into communication with Europe by an ocean telegraphic cable; and the plan of the Pacific cable between the United States and Japan is ripening, so that the time may soon arrive when the globe will be girdled with telegraphic wires, and the most remote countries brought into daily and hourly intercourse. The agency of science in rendering natural wealth available as well as in demonstrating the absolute value of the knowledge of Nature and of human history, finds more and more recognition. No marine or topographical survey of any importance is conducted without the coöperation of scientific investigators. The natural history and geology of many regions, of the islands of the Pacific, of broad mountainous and remote inland tracts of Asia and Africa, of the lands which lie in the frozen Northern seas, and even of considerable portions of our own Western plains, plateaus, and mountain-summits, are now undergoing the careful and thorough scrutiny of accomplished scientists. The hydrography of the Pacific, the courses of its currents, and the contour of its bottom, which have been heretofore but vaguely known, will henceforth be familiar, not only to our scientific men, but to the more intelligent of our officers of the naval and commercial marine, after the investigations of the Challenger and Tuscarora. The question of an open polar sea may soon be, if it is not already, determined; in any event the expeditions which are about setting out from England and Austria will bring back a fuller knowledge of the chorography and natural history of the polar regions. The next most mysterious portion of the globe, the great African Desert, may yet be traversed and all its secrets unfolded. The device employed by Rohlfs of carrying a supply of water in metallic vessels enabled him to accomplish a thirty-six days' journey through a waterless part of the Libyan waste, where the longest passage of the caravan has never exceeded seven days.

A favorable circumstance to the geographical explorer is the spread of European manners and the softening influence of the Western civilization among savage and superstitious nations. The fanatical peoples of the inner Soudan, who within a few years have slain daring travelers who ventured within their borders, received not inhospitably the courageous Dr. Nachtigal.

In this as in former years several travelers, while engaged in geographical explorations, have been overtaken by death, either from deadly malarious fevers, protracted exertions, with insufficient food, or the treachery and barbarity of the savage nations whose territory they were exploring. Dr. Stoliczka, the able geologist of the Forsyth expedition to Kashgar, died on the passage of the mountains on the 19th of June, at a point on the Shyok River, above the Lasser Pass. The death of Henry Grinnell is mentioned elsewhere (*see* GRINNELL, HENRY). Mr. Grinnell, who was the first president of the American Geographical Society, was succeeded in that office by Chief-Justice Daly, who has imparted to it a new energy. A memorable loss from the ranks of the followers of geographical pursuits was that

of Captain Garnier. This young and courageous French traveler, devoted to geographical pursuits with an impetuous zeal, was born at St.-Etienne in 1839. He was educated for the navy, and when only twenty-three years of age was intrusted with the administration of Saigon, the chief post in the French establishment of Cochin-China. Divining the importance to French commerce of a knowledge of the interior of Laos or Cambodia, he supposed that the natural route lay up the Mekong Valley. A mission was sent to make these explorations under Captain Lagrée, who, as related in a previous volume of the ANNUAL CYCLOPÆDIA, died after a protracted illness on the confines of China, and was brought back to be buried by Garnier with the greatest difficulty. After the Franco-Prussian War, Lieutenant (since Captain) Garnier left France again for Cochin-China, with the object of completing his researches. Finding it impossible to reach Thibet by way of the Mekong, and not having it in his power to organize an expedition through Anam, he went to China and explored the Yang-tse-Kiang River as far as the Waterfalls. Being then appointed a commissioner to Tong-King by Admiral Dupré, Governor of Cochin-China, he endeavored to pursue discoveries in that then disturbed province. Having gained possession of the capital, Hanoi, he established quiet and order there, but met his death in leading an attack upon some still disorderly rebels, at a little distance from the city.

Dr. C. T. Beke, F. R. G. S., F. S. A., a traveler who won deserved renown by his exploration of Abyssinia, 1840–'43, in which he settled the latitude of seventy positions, and acquired the vocabularies of thirteen languages, died in London, in the seventy-fifth yaer of his age. (*See* BEKE, CHARLES TILSTONE). Dr. Beke was the editor of De Veer's "Three Voyages to Cathay," in the Hakluyt series, and had written much on geographical topics.

Heinrich Baron von Maltzan, an eminent German geographer, who first distinguished himself by a daring journey to Mecca, died at Florence, February 22, 1874, while *en route* for the East. Baron von Maltzan had made extraordinary attainments in Oriental languages, and had also written largely and well on geographical topics.

Tyrwhitt Drake, of the English Palestine Exploration Society, died at Jerusalem, June 25th, from exposure to the malaria of the Jordan Valley.

Captain Farr, scientific member of the French mission to Burmah, died during the prosecution of explorations in the far East. He set out in company with Captain Moreau, in the spring of 1874, to explore the country between the Irrawadi and the Salwen, intending to reach Kiang-Hung on the Mekong; but, on the 11th of July, he succumbed to an attack of jungle-fever.

The Paris Geographical Society, appreciating the success of the Antwerp Congress for geographical science of 1871, have decided to call an international congress of geographers in Paris for the 31st of March, 1875. The chairman of the Geographical Society, Vice-Admiral de la Poncière Le Noury, will preside at the congress, in connection with which there will be an exhibition of books, maps, and instruments, and collections relating to geography. One hundred and twenty questions are proposed for discussion.

CHARTOGRAPHY.—In chartography the progress of the survey in the West, and the approaching attainment of a complete map of our country, is worthy of especial notice.

A map of the Dominion of Canada, on the scale of twenty-eight miles to the inch, has been completed and recently published from the office of Crown Lands in Ontario.

A valuable map of Mexico has recently been lithographed by Dumaine, of Paris. It was drawn with great care and labor by Captain G. Noix, during the occupation of Mexico by the French troops. The investigations from which it was constructed were made by reconnoitring parties, and correspondents communicating by telegraph with the industrious engineer who plotted the map.

The map of France, which has been in progress under the direction of the War Department since 1833, is now completed, with the exception of a few sheets representing portions of the island of Corsica.

The map made by Major Lovett, under the orders of Sir F. Goldsmid, is a contribution of some value to our topographical knowledge of Persia.

One of the most elaborate maps of the Swiss Alps which has yet appeared, has been published by the English Alpine Club under the direction of R. C. Nichols. It is on a scale of about one quarter of an inch to a mile, and contains very minute details.

The maps and charts of the Coast Survey, published the past year, possess great interest, those of the Pacific coast connecting with the triangulation of Nevada, Utah, and Arizona.

A New York publishing-house has been for some years past engaged in the preparation of atlases of counties in New England, New York, and some of the Western States, from actual surveys. While these belong rather to local topography than to general chartography, they are deserving of notice from their accuracy, even in minute details, and from their beauty. Some of these counties are considerably larger than some of the Swiss cantons, and their atlases vie with those of the Swiss geographers in their perfection of detail.

BIBLIOGRAPHY.—The results of the Hayden geological and topographical survey of the Territories have hitherto been made known to the public in a variety of ways. Of the great work, nine volumes of paleontology and one of geology have been published prior to January, 1875, and also eight volumes of general

reports, including the one on the geology and paleontology of Nebraska. These latter volumes contain thirteen charts, most of them representing the volcanic region of the sources of the Yellowstone and Snake Rivers. There have also been various separate publications, as—the tables of heights in the Western United States by Gannett, and the volume of meteorological observations in Utah, Idaho, and Montana, by the same; a manual of ornithology of the Northwestern Territories by Dr. Elliott Coues; a synopsis of the flora of Colorado, by Prof. Porter and J. M. Coulter; a catalogue of the photographs taken by W. H. Jackson; a supplement to the fifth annual report upon the fossil flora of the West, by L. Lesquereaux; and a synopsis of the new vertebrate animals of the Tertiary period in Colorado, by Prof. Cope. A Bulletin of the Geological and Geographical Survey of the Territories has now been commenced, which will, from time to time, communicate the results of the labors of the commission, thus preventing their being scattered through a great number of publications of various kinds. The first two numbers of the Bulletin are taken up mostly with accounts of the paleontology of the newly-explored regions by Prof. Cope. The demand for complete series of the reports of the United States Geological Survey of the Territories is so large that the first three annual reports have been ordered by the Secretary of the Interior to be reprinted. They are issued in a stout octavo volume of 261 pages.

The new geographical magazine, under the editorship of Guido Cora, bearing the title of *Cosmos*, which was started two years ago in Turin, continues in a successful career.

The able English periodical, *Ocean Highways*, has changed its form and title, but still continues to be published under the editorship of Mr. Markham. It appears monthly, under the name of *The Geographical Magazine*.

The commission of commercial geography, chosen conjointly by the French Society of Geography and the Syndical Chambers of Paris, have decided upon the establishment of a journal of commercial geography, to be called *L'Explorateur*, whose objects are to be the publication of the labors of the Commission of Commercial Geography, and also of the French and foreign geographical societies, to keep up a bulletin of the prices of commercial commodities in distant markets, and to present news relating to commercial geography, and articles illustrative of subjects connected therewith, and principally to encourage French commercial enterprise in distant countries. It will appear at least as often as once a week, in handsome form, with maps and illustrations, and is likely to be well supported.

The following works are the most noteworthy of the geographical publications of the year:

Bulletin of the United States Geological and Geographical Survey of the Territories. F. V. Hayden, United States Geologist-in-Charge, Nos. I. and II. (Washington, 1874.)

Charles Nordhoff: Northern California, Oregon, and the Sandwich Islands. (New York, 1874.)

Dr. J. M. Toner: Dictionary of Elevations and Climatic Register of the United States; containing, in Addition to the Elevations, the Latitude, Mean Annual Temperature, and the Total Annual Rainfall of Many Localities; with a Brief Introduction on the Orographic and other Peculiarities of North America. (New York, 1874.)

Beadle: The Undeveloped West; or, Five Years in the Territories. (Philadelphia, 1874.)

Adolf Bastian: Die deutsche Expedition an der Loangokûste, nebst älteren Nachrichten über die zu erforschenden Länder. (Jena, 1874.)

Baker: Ismailia: A Narrative of the Expedition to Central Africa for the Suppression of the Slave-Trade, organized by Ismail, Khédive of Egypt. By Sir Samuel Baker, Pasha, F. R. S. 2 vols. (London and New York, 1874.)

Livingstone: The Last Journals of Dr. Livingstone in Eastern Africa, from 1865 to his Death, continued by a Narrative of his Last Moments and Sufferings, taken down from the Mouth of his Faithful Servants Chuma and Susi. Edited by Rev. Horace Waller, F. R. G. S. (London and New York, 1874.)

Koldewey: The German Arctic Expedition in 1869–'70, and Narrative of the Wreck of the Hansa in the Ice. By Captain Koldewey, Commander of the Expedition, assisted by Members of the Scientific Staff; translated and abridged by Rev. L. Mercier, M. A., and edited by H. W. Bates, Assistant Secretary R. G. S. (London and New York, 1874.)

Captain G. S. Nares: Reports, with Abstract of Soundings and Diagrams of Ocean Temperature in North and South Atlantic Oceans, in 1873. (London. Published by the Admiralty Department, 1874.)

Albert Hastings Markham: A Whaling Cruise to Baffin's Bay and the Gulf of Boothia. (London, 1874.)

Hübner: A Ramble round the World. 1871. By Baron de Hübner. Translated by Lady Herbert. (London and New York, 1874.)

MacGahan: Campaigning on the Oxus, and the Fall of Khiva. By J. A. MacGahan, Correspondent of the *New York Herald*. (New York, 1874.)

Henry Walter Bates: The Naturalist on the River Amazons. (Boston, 1874). A reprint of an old work.

Paul Marcoy: Travels in South America from the Atlantic to the Pacific Ocean. 2 vols. (New York, 1874.) A reprint of a work published some years since.

J. Thompson: The Straits of Malacca, Indo-China, and China, or Ten Years' Travels, Adventures, and Residence abroad; with Woodcuts from the Author's own Photographs and Sketches. (London, 1874.)

Henry Walter Bates: Warburton's Journey across Australia: an Account of the Exploring Expedition sent out by Messrs. Elder & Hughes, under the Command of Colonel Egerton Warburton, giving a Full Account of his Perilous Journey from the Centre to Roebourne, Western Australia; with Illustrations and a Map, edited with an Introductory Chapter. (London, 1874.)

Blake: Captain Tyson's Arctic Adventures; Arctic Experiences, containing Captain George E. Tyson's Wonderful Drift on the Ice-Floe, a History of the Polaris Expedition, the Cruise of the Tigress, and Rescue of the Polaris Survivors; to which is added a General Arctic Chronology; edited by E. Vale Blake, with Map and Illustrations. (London, 1874.)

Thomas J. Hutchinson: Two Years in Peru: with Exploration of its Antiquities. 2 vols. (London, 1874.)

J. L. Geiger: A Peep at Mexico, Narrative of a Journey across the Republic from the Pacific to the

Gulf, in December, 1873, and January 1874; with Maps and Photographs. (London, 1874.)

Schuyler: Turkistan, Notes of a Journey in the Russian Provinces of Central Asia and the Khanates of Bokhara and Khokand. By Eugene Schuyler, Secretary of American Legation, St. Petersburg. (London, 1874.)

H. W. Bellew: From the Indus to the Tigris, a Narrative of a Journey through the Countries of Beloochistan, Afghanistan, Khorassan, and Iran, in 1872, together with a Synoptical Grammar and Vocabulary of the Brahoe Language, and a Record of the Meteorological Observations and Altitudes on the March from the Indus to the Tigris. (London, 1874.)

Charles New: Life, Wanderings, and Labors in Eastern Africa. With an Account of the First Successful Ascent of the Equatorial Snow Mountain, Kilima Njaro, and Remarks upon East African Slavery. (London, 1874.)

Thomas Belt: The Naturalist in Nicaragua. (London, 1874.)

Captain Spalding: Khiva and Turkestan. Translated from the Russian. (London, 1874).

Ernst Marno: Reisen im Gebiete des Blauen und Weissen Nil, im Egyptischen, Soudan, und den angränzenden Negerländern in den Jahren 1869 bis 1873. (Vienna, 1874.)

We turn now to our usual review of the geographical expeditions which have been sent out or have returned during the year, beginning with—

ARCTIC EXPLORATION.—The Austro-Hungarian Arctic Expedition returned from their perilous voyage without making any important accessions to our knowledge of the polar regions. The object of the expedition was to find a northeasterly passage toward the pole from some portion of the Arctic Sea north of the coast of Siberia. The Tegetthoff was a screw-steamer of 300 tons burden. There were on board stores for three years. The crew of twenty-four men was composed of Lieutenants Weyprecht and Brosch and Ensign Orel, two engineers, fifteen selected Dalmatian sailors, Lieutenant Payer, of the Jägers, a member of the Alpine Club, with two Tyrolese mountaineers, and the surgeon, Kepesy. The vessel sailed from Bremerhaven June 13, 1872. At Nova Zembla they took leave of the two patrons of the expedition, Count Wilczek and Baron Sternberg, who came to meet them in the yacht Isbiörn, bringing stores, which they deposited in the cavity of a rock. The ships took leave of each other August 1st. For two years no news came from the explorers. During this time they were icebound in the Siberian Sea. The Tegetthoff was frozen in, in latitude 76° 30′ north, within sight of Nova Zembla. The crew remained with the ship fourteen months. The mass of ice which inclosed them was steadily carried to the northward. The drift in the ice-floe was remarkable as being the first one which had ever taken a northerly direction. In the autumn of 1873 they sighted an unknown mountainous coast, which they explored from latitude 79° 54′ to latitude 83°. To this they gave the name of Franz-Joseph-Land. Animal and vegetable life was very scanty. The prevailing rock was dolomite; the mountains, conical in form and rising to the elevation of 5,000 feet, were covered with immense glaciers. In latitude 83° they sighted a headland, to which they gave the name Cape Vienna. Two tracts of land, Wilczek-Land and Zichy-Land, are separated by a wide sound—Austria Sound—which extends to the north from Cape Hansa to latitude 82°, where Rawlinson Sound forks off to the northwest. The vegetation upon the newfound territory was far poorer than that of Greenland or Nova Zembla. The only plants seen were solitary bunches of grass, a few species of saxifrage and *Silena acaulis*, except moss, which grew in dense beds, and lichens, of which the most frequent was the *Umbilicaria arctica*. Many ice-bears were encountered by a party which explored Rawlinson Sound. In May, 1874, the ship had been raised up and warped out of shape by ice-crushes, and was no longer seaworthy; and on the 20th of that month the crew abandoned her. They were ninety-six days making their way with boats and sledges; and on the 24th of August, after sailing nine days down the coast of Nova Zembla, they were taken on board of a Russian schooner, which landed them at Vardoe, in the north of Norway.

A second Austrian arctic exploring expedition, it is said, will be started next summer. One-half of the expedition, under command of Lieutenant Payer, purpose advancing northward by way of East Greenland, and the other half, under Count Wilczek, by way of Siberia. The object of the projected expedition is to ascertain whether the newly-discovered Franz-Joseph-Land be a continent or an island.

The steamship Diana, belonging to the polar-voyager Lamont, was sent out under Captain Wiggins, for the double purpose of crossing the Sea of Kara into the Gulf of Obi, with reference to a commercial route between England and Central Asia, and of searching for the Austro-Hungarian expedition, and bringing them relief if needful. Weighing anchor the 4th of June, she passed through the Waigatch Straits, through the Gulf of Mundely and into the Gulf of Obi. From their surveys it appears that White Island (Bieloi Ostrow) is located about 60 geographical miles too far to the westward upon the chart. They met the Austrians upon their return at Hammerfest. Captain Wiggins reports that the Carian Gulf is free from ice up to the middle of October, and he knows no reason why an annual steamship connection should not take place between England and the Gulf of Obi. The Diana sailed farther to the eastward than any vessel had before reached in the Siberian Polar Sea, touching latitude 76° north, longitude 82° 30′ east. They put in at Dundee harbor on their return, September 25th.

An English expedition into the arctic region is now being fitted out for extended explorations. Captain Nares, of the Challenger, has been selected to command the fleet. The chief object of the cruise is to make collections of

specimens of the fauna and flora of the high latitudes. Commander A. H. Markham, of the Sultan, will also take part in the command. Captain Nares has the experience of the arctic voyage of 1852–54, in which he distinguished himself on board the Resolute. The conditions are favorable for a prosperous voyage, according to the accounts of Captain David Gray, who, making his observations from the coast of Greenland, concludes that nearly all the ice was driven out of the arctic basin last summer. The whaling-steamer Bloodhound has been purchased, and is destined to be the principal vessel of the squadron. The expedition is not to start until June, 1875. The Polaris reached a latitude of 82° 16′. Living objects were observed in the highest latitudes attained, in a not-decreasing frequency. Musk-oxen were shot in latitude 81° 38′. Flies, beetles, butterflies, and mosquitoes, were found, and seventeen different kinds of birds were killed, in latitude 82°. The English expedition will consist of about a hundred officers and men, and will be provided for a long cruise. The consideration of the non-success of the Austro-Hungarian expeditition, and of the results attained by the Polaris, will induce them to choose the route of the latter vessel up Smith Sound, as the only practicable way to the pole.

The Oceans.—The United States steamer Tuscarora sailed from San Francisco December 20, 1873, to make soundings over a line from San Francisco to San Diego, and thence on the line of a great circle to Honolulu, to the Bonin Islands, and to Yokohama, to ascertain the most feasible route for a telegraphic cable across the Pacific Ocean. This voyage has yielded important hydrographical results, in addition to the satisfactory accomplishment of its special purpose. At 50 miles from the coast of California a depth of 2,200 fathoms was found; this was the deepest sounding made before arriving at San Diego. The ocean's bed declined on an average 90 feet to a mile to the depth of 1,900 fathoms, 115 miles out from San Diego. Thence to latitude 28° 10′ north, the point of the greatest depth, 3,053 fathoms, the slope is three feet to a mile; and thence to Honolulu, a distance of 400 miles, the upward inclination averages 45 feet per mile. On the passage from Honolulu to Yokohama, six submarine mountainous elevations were crossed, with level plateaus between. The average depth was 2,450 fathoms. The course from Cape Flattery to the Aleutian Islands, passed over between October 17 and October 30, 1873, showed a rapid shoaling off Cape Flattery, from 1,500 to only 600 fathoms depth; and from that point up to the last cast, latitude 54° north, longitude 153° west, where the depth was 2,534 fathoms, there was a gradual declension of one fathom to the mile. The soundings from Yokohama to Tanaga Island showed, for 1,000 miles, depths ranging from 300 to 2,270 fathoms. A remarkable depression was found, latitude 52° 06′, longitude 171° 15′ east, where the depth was 4,037 fathoms. The entire results go to corroborate the estimate of 2,500 fathoms as the average depth of the Pacific, based upon the theory of the earthquake wave. Throughout the survey careful observations were directed to the ocean-currents. The results attained strengthen the theory of ocean circulation, and supply important data for the hydrography of the Pacific Ocean. Along the shores of Kamtchatka and the Kurile Islands a counter-current was observed setting to the southwest, reaching to longitude 164° east, with a surface temperature of 49° Fahr. There they came upon the Kamtchatka current, a branch of the Japan Stream setting through Behring Strait, which is here about 350 miles in width. From 174° eastward flowed the cold Behring Strait current. From the observations of the ocean-currents the following deductions were arrived at: The Kuro Siwo, or Japan current, takes an easterly course toward the American coast, with its northern limit extending to the southern shores of Vancouver Island. The same stream passes down to the southward, in what is called the California cold current. Below this flowed an under-current, setting to the northwest, which reached the surface in latitude 50° north, and then set to the northward, along the British-American shores, from there gradually turning to the westward. In latitude 53° 30′ north, longitude 157° west, the current took a southeasterly course at a depth of five fathoms; nearer the islands the current was to the southwest and close to the islands to the westward. It was conjectured that a part of the water taken to the northwest by the under-current returns to the northern branch of the Japan current in longitude 157° west, passing southward along the western shore of America as part of the surface-current, and that the part west of longitude 157° west, setting toward the southwest, passes as an under-current beneath the Japan stream. A rapid fall in temperature, from 57° Fahr. to 47°, within a few miles in the Ounimak Pass, revealed that the northwest shores of the Aleutian Islands are washed by the Behring Strait current. The northern route for a telegraph-cable, as indicated by the results of the investigations, would be 4,200 miles in length, while the southern course must be 6,000 miles in length. The difficulties of the northern course are a sudden declivity of the Aleutian Islands, as well as frequent fogs, and the cold and unfriendly climate, embarrassing to workmen in laying and repairing the cable. In the course from Cape Flattery to Atcha, in the Aleutian Islands, off Cape Flattery, the depth suddenly decreased from 1,500 to less than 600 fathoms. From that point as far as the last sounding, in latitude 54° north, longitude 153° west, there was a gradual decrease of one fathom a mile, the last depth being 235 fathoms.

The voyages of the English ship Challenger, a frigate-built steamship of about 1,500 tons, commanded by Captain G. S. Nares, R. N.,

have added materially to our knowledge of ocean hydrography. Her departure from England was in December, 1872. The purpose of the expedition was the investigation of the deep-sea currents and the ocean-bottom, and observations of marine animal and plant life in all parts of the world. Besides the staff of naval officers, a corps of naturalists accompanied the expedition, to pursue scientific investigations, and make collections of natural objects, under the direction of Prof. Wyville Thomson. The first voyage was across the Atlantic from Teneriffe to St. Thomas's Island. The depths increased to 3,150 fathoms at a distance of 1,150 miles from Teneriffe. In the western trough of the Atlantic the depth continued a little over 3,000 fathoms. The bottom was entirely composed of *Globigerina* ooze in the lesser depths, and red clay in the deep soundings. The red earth, which was found to cover the largest part of the ocean-bed, is, according to the theory of Prof. Thomson, the residue left after the deposits which are found unchanged in the lesser depths have been acted upon by the solvent power of carbonic acid, which accumulates in the deep waters. One of the prescribed voyages of the Challenger was to the island of Kerguelen, to decide upon a site for the observatory of the transit of Venus, and thence southward, to make observations upon the approaches to the south pole. They sailed away from Kerguelen Island, February 1, 1874, toward the antarctic ice-girdle, reaching 94° south. They passed at one point 120 miles to the southward, and at another point within six miles of the supposed position of Wilkes's Termination Land without sighting land, thus probably determining the non-existence of the supposed antarctic continent. The antarctic icebergs, a great number of which were observed from the deck of the Challenger, did not present fantastically-jagged forms, according to the former descriptions, but were found to be smooth-topped and tabular, still preserving the snow-coverings of the glaciers, their originals. The investigations of the Challenger tend to confirm the belief in the impenetrability of the southern ice-belt. The dredgings demonstrated that the Southern Pacific is so full of life that it may be looked upon as the original birthplace of the occurring species. The marine fauna of the Southern Ocean was found to be nearly identical with that of the north. Soundings all showed a bottom of an alluvium, composed either of the shells of the *Globigerina*, which is a tiny surface animal, or of the skeletons of the *Diatomacea*, a floating alga. The process of the formation of geological strata of the future world is here so rapid that a large object falling to the bottom is speedily covered over by the ceaselessly sinking particles. The observations of the Challenger in the South Atlantic show that the drift-current which is caused by the constant westerly winds drives the waters so strongly against the African coast, that the Agulhas current is checked in its course. A small portion mingles with the drift-current, which turns to the north upon striking against the African shore. The mean temperature of the water in the South Atlantic, to the depth of 1,500 fathoms, is 4½° Fahr. lower than in the Northern Ocean. It seems likely that in the South as well as in the North Atlantic there is an elevation of the bottom in mid-ocean. From the Cape of Good Hope as far south as latitude 46° 16′ they found no greater depth than 1,900 fathoms. The Challenger arrived at Melbourne, March 17th. In July she had again sailed on her course from the Feejee Islands to the New Hebrides and Torres Straits.

In the voyage from Australia to New Zealand it was made apparent that the bottom off the southeast coast of Australia falls off suddenly, and that Australia is separated from New Zealand by a trough of 2,600 fathoms depth. The ascent from the greatest depth to the New Zealand coast is very gradual. These results disprove the theory of Peschel, that Australia, New Zealand, and New Caledonia, once formed a single continent, similar in form to Africa, a theory which the great difference in the flora and fauna of the islands had previously rendered doubtful. The dredgings produced a specimen of the sea-porcupine, genus *Porocidaris*, of which most of the species are extinct. In the deepest soundings were brought up several *Bryozoos*, a *Crangonida*, and the spicula of a *Hyalonema*.

In a survey of the Dardanelles and Bosporus by Commander Wharton, of the British naval vessel Shearwater, the existence was proved of strong under-currents setting counter to the surface-flow, which is invariably from the Black Sea into the Mediterranean.

A scientific expedition has been organized by the German Government, under the direction of Dr. Meier, for the purpose of exploring the German seas.

M. Staritzky was engaged during a number of years in investigations in the Sea of Japan and along the eastern shores of the Russian Asiatic possessions. He determined the astronomical position of thirty-eight points. By his soundings it was demonstrated that the depth of the Sea of Okhotsk is not great. The volcano of Koriak, in Kamtchatka, was found to be 11,000 feet in height.

The ship Basilisk returned to England recently, after four years spent in surveying the coasts of the British Eastern possessions. Among the results of this survey is the addition of twelve first-class harbors, several navigable rivers, and more than one hundred islands, to the chart. It has discovered a new and more direct route between Australia and China. The shores of Eastern New Guinea, hitherto unexplored, have been surveyed, and two lofty mountains discovered. On these shores dwell a copper-colored people, peaceable and intelligent, and far surpassing in intel-

ligence the black tribes of other parts of the island. An Italian naturalist, L. M. d 'Albertis, recently ascended the Arfak Mountains in New Guinea, and has departed a second time for that region, with the intention of penetrating the southern portion of the country, the parts adjacent to Torres Straits, where there are mountain-ranges of considerable altitude. The natural history of this part of New Guinea is entirely unknown.

The uninhabited and hitherto little-known Kerguelen Island, named after the French captain, Kerguelen, who visited it, as did also Cook on his first voyage, and Ross in 1841, was chosen as a station for German and English observatories of the transit of Venus, and has consequently been very thoroughly explored. It is volcanic in its character, and has a harsh and stormy climate. Remarkable basaltic columns, which had been noticed by Captain Cook, were examined. The number of vegetable species found was 150; among them 18 were phænogamous plants. Woody vegetation was totally wanting. The celebrated Kerguelen cabbage abounds in the lowlands. A range of snow-capped mountains, the highest of which is Mount Ross, with 6,000 feet altitude, traverses the island from northwest to southeast. Sea-elephants are numerous; a small variety of duck is abundant; but no land animals were found. The island is visited by American captains, who cruise for whales (which abound in its immediate vicinity), and who kill sea-elephants upon the beach.

The enterprising Italian traveler, Dr. Beccaria, has been engaged in exploring Kandari, a strange region of southeast Celebes. He was subject to constant dangers from hostile inhabitants and treacherous servants. The results of his physical and ethnologic observations are interesting; and several of the plants and animals which he met with are new to science.

The Dutch Geographical Society have concluded to send out an expedition for the exploration of the eastern coast of Sumatra. The river Jambi flows through an unknown country, which is believed to be very fruitful. Parts of Palembang, also, and the district of Korintji, remain still to be explored.

In North America, in an exploration of the northern coast of Alaska, Mr. Dall discovered a glacier, three or four miles wide and twenty to thirty in length. He computed the altitude of Mount Elias, which he estimates at over 19,000 feet.

A committee of Icelanders were sent out from the Wisconsin colony to examine the Territory of Alaska, with a view to the establishment of a colony of their countrymen there. Jon Olafsson, the leader of the company, reported that Kodiak and Cook's Inlet are exceedingly well adapted for settlement. The waters they found swarming with salmon, and the temperature and productions such as would render Icelanders happy and contented.

The one-thousandth anniversary of the national existence of Iceland was celebrated in August, 1874, with great rejoicing. The King of Denmark, who is also sovereign of Iceland, was present, and with him a large number of scientific men, explorers, etc., from Europe and America. The occasion offered the opportunity, which was zealously improved, of acquiring a more accurate and exact knowledge of the geography and topography of the island.

A survey of the Canadian Dominion has been in progress since 1871, with the object of selecting a route for the projected Canadian Pacific Railway. Considerable information has been derived from the surveys respecting the character of the country, the distribution of forests, the mineral deposits, and the limits of the great river-basins.

The survey of the Adirondack region, which was ordered by the State government of New York, has been reported to the Legislature by Mr. Colvin Verplanck. The surveyors have made a much more exact triangulation of that tract than had previously been attempted. One important conclusion of the report is, that most of this region is not adapted to cultivation, and that the best uses to which the State can put it are its reservation for a State park, and such an aggregation of its abundant water-courses as to form a reservoir sufficient to supply the Hudson River and its upper affluents with a plenty of water even in the seasons of greatest drought.

From the labors of the United States Coast Survey it appears that the Jersey Flats are increasing in area, and that the tidal deposits are made upon the shores, and not, as formerly, on the extended surface.

The geological survey of Ohio, by Dr. Newberry and others, begun in 1869, and to which reference has been made in preceding volumes of the Annual Cyclopædia, has been carried out with great thoroughness. One of the results of their labor was first to make known the valuable Hocking Valley or Straitsville coal, which now enters largely into commerce. The able papers of Mr. Edward King, in *Scribner's Monthly Magazine*, on the "Great South," combine with very vivid descriptions of life in the South a large amount of important geographical knowledge of the Southern States. Very interesting papers on the descriptive geography of the States of the Union have also appeared during the year in *Harper's Monthly* and in *Appletons' Journal*. Some of the articles in the last-named periodical on these subjects have been unsurpassed in interest.

Western Kansas, Western Nebraska, and portions of Iowa and Minnesota, have been subjected to a devastating visitation. Swarms of locusts overspread many counties, sweeping off the vegetation, and leaving a large part of the population without food.

Prof. Buckley, State geologist of Texas, reports that the State contains deposits of iron and coal vastly greater than had been supposed.

Salt and gypsum mines, and copper-ores, in many places, have also been found.

The survey of the Western Territories, by order of the War Department, under the direction of Lieutenant G. M. Wheeler, has for its object the mapping of the entire Territorial regions. When completed, this survey, with the Coast and Lake Surveys, will embrace the whole surface of the country. This last year there have been nine parties in the field, and their labors extended over portions of Utah, Nebraska, Colorado, New Mexico, and Arizona. A number of civilians, distinguished for their attainments in physical science, have been attached to these exploring parties. Among them were Dr. H. C. Yarrow, U. S. A., a geologist of note, whose departure in the middle of the season left Prof. Cope in charge of the geological observations; Dr. Rothrock, an experienced botanist; Mr. H. C. Henshaw, who assisted Dr. Yarrow; M. S. Severance, ethnologist; and Dr. Loew, an able analytical chemist. A pass over the main range, inferior only to the Coochetope and Tennessee Passes, was discovered in Colorado by Lieutenant Marshall. The limits of the Block, or San Francisco Forest, were approximately determined. It appears from the survey that this is the largest forest south of the 40th parallel, extending from longitude 107° to 114° west, and varying in width from thirty to one hundred miles.

The detailed portions of the survey were south of the Spanish Peaks, which lie mostly within the boundaries of New Mexico. The operations for 1874 extended over the Arkansas, Cimarron, Mora Pecos, the Rio Grande, and San Juan basins, comprising an area of 35,000 square miles. The labors of the scientists we rewarded with the discovery of large numbers of fossils, many of which were types yet strange to science. In the valley of the Rio Grande, below the Pecoris Mountains, were found the skeletons of mastodons belonging to species not occurring in the Eastern States, and the remains of protomorphic camels and horses, and animals of the Equine family, which must have once inhabited this region in droves. A singular variety of deer, which did not shed its horns, was discovered. In the northern part of the Zandia Mountains of New Mexico, Prof. Cope found the fossils of about one hundred vertebrate species, two-thirds of them mammals, and a large proportion new to science; they represent the oldest mammalian fauna of America. The largest species belonged to the genus *Bathmodon*, resembling the elephant in the form of their feet and legs, and the tapir in their heads, which were armed with powerful tusks. In these mountains the remains of human habitations were found in rows on the crests of lofty rocky upheavals, and on all the most inaccessible points of the hills. They were frequently found in ledges but a few feet wide, and looking down on one or both sides into abysses of many hundred feet, or sometimes perched upon the walls of cañons in positions which were only approachable by dangerous climbing. These dwellings were often remote from water, sometimes twenty miles away.

The chemist of the expedition, Dr. Loew, analyzed the waters of all the thermal and mineral springs which were discovered during the surveys.

The maps which are being made from the late surveys are on a scale of one-eighth of an inch to a mile. The atlas, when finished, will contain maps of the entire section of the country west of the 100th meridian. The surveys will take several years yet to complete. The whole region is divided into rectangles of about 18,000 square miles each; and each map represents one of these divisions.

The surveys conducted by Prof. J. W. Powell, under the control of the Smithsonian Institution, were placed by the action of the last Congress under the direction of the Department of the Interior, and the plan of the survey has been reorganized, so that it and the geological and geographical survey of the Territories, conducted for the department for some years past by F. V. Hayden, will mutually aid and supplement one another. The latter is called the First Division and the former the Second Division of the United States Geological and Geographical Survey of the Territories. The two companies have been working this last year in neighboring Territories—Mr. Hayden's in Colorado and Mr. Powell's in Utah.

The Hayden expedition in 1873 was divided into three sections, to each of which was assigned a strip of country sixty miles wide, which corresponded to the three sections of the Territory, the Middle Park, the South Park, and the San Luis Park. The three parties made the secondary survey, while the great primary triangulations from the prominent summits upon which their calculations were based were made independently, under the direction of J. T. Gardner.

The expedition set out from Denver on the 15th of July, 1874. It was composed of sixty men, and was divided into eight parties, three of which carried on the secondary surveying and mapping work. During 1874 they have completed the triangulation of Central Colorado, and have surveyed westward as far as the 110th meridian, comprising a tract of about 18,000 square miles of the highest land, on the average, in the United States. In the San Juan mining country over fifty mines were located. Many specimens of ores, fossils, and relics of Indian art, were forwarded to Washington. Among the most interesting discoveries were the ruins of the towns of an extinct race of Indians, and remarkable fortifications of hewn stone and mortar among the cañons. Peculiarly-glazed pottery also was found, indicating, together with the stone embankments and dwellings, a much more advanced civilization than is to be found among the surviving

races of Indians. Among the altitudes measured were those of Capitol Peak, 13,800 feet; Mount Daly, 13,700 feet, a peak situate near the end of Elk Range; Snow Mass, 13,785; and Sofris, 12,800. Several others, among which are Pyramid, Gothic, Maroon, Castile, and Italia, range between 12,000 and 13,500 feet. Prof. Hayden's expedition was divided into seven parties. A photographic party, under the charge of Mr. Jackson, obtained more than two thousand negatives of the scenery and products of the Yellowstone region. In the hitherto unexplored regions of the Elk Mountains, the peaks range from 12,000 to 14,700 feet in height, and wear a constant covering of snow and ice. They are composed of granite and sedimentary rock. The mountains abound in large game, elk, antelopes, deer, and grizzly bears.

The expedition under Mr. Powell has been engaged in surveying the central and northeastern parts of Utah. The positions of the more important deposits of metals have been determined. Extensive beds of coal have been discovered. In this region also ruined towns of the ancient inhabitants were discovered in considerable numbers, in which were found hieroglyphical writings and ancient stone implements.

Other similar ruins were discovered by General James H. Simpson, on the Rio Chaco, in New Mexico; thick walls of sandstone, with thin plates of stone introduced between the blocks. The bases of the doors and windows were slabs of stone and wood. The ground-floors are divided off into narrow compartments, with low communicating openings, often not more than two and a half feet square. Some of these walls are four stories high. One of them is seven hundred feet in circumference in the interior and twenty-five feet high, while the scattered fragments around the base indicate a much greater original altitude.

The cañons of the Colorado Valley, which have been described by Major J. W. Powell, have been well explored during the surveys. Among the most remarkable are the Cataract Cañon, below the junction of the Grand and Green Rivers; the Glen Cañon, whose walls are the bright-red homogeneous sandstone of the Triassic age; the Marble Cañon, extending from the mouth of the Paria River to the mouth of the Colorado Chiquito, whose sides are of limestone, and near the foot are of a crystalline structure, which receives a beautiful polish; white, gray, slate-color, pink, brown, and saffron-colored marbles are here found, carved and fretted by the waves of the river and polished by the floods of sand which are poured over the walls during the seasons of showers, giving to the walls of the cañons, which have assumed architectural forms on a giant scale, an appearance of great beauty and grandeur. The deepest of them all is the wonderful Grand Cañon. Another singular feature of this region is the lines of bold, often vertical, precipices, hundreds or thousands of feet high, between higher and lower levels, which extend sometimes for hundreds of miles. The most remarkable are the Brown Cliffs, the southern boundary of the plateau which is cleft by the Cañon of Desolation; the Azure Cliffs, the edge of the plateau of the Gray Cañon; and the Orange Cliffs, a broken escarpment, which stretches from the foot of the Sierra la Sal across the Grand and Green Rivers, and then turns its direction toward the southwest, running parallel to the Colorado for fifty miles, and again changing its course to the southeast, ends in the Sierra la Sal, fifty or sixty miles from where it started. At the point where the Grand and Green Rivers flow together to form the Colorado, the Sierra la Sal rises up on the east, and on the other three sides the perpendicular barrier of the Orange Cliffs looms up to a dizzy height. "On every side a façade of storm-carved rocks is presented. The Indian name for this basin is *Tumpin wu-neir tu-weap*, the land of standing rocks. Buttes, towers, pinnacles, thousands and tens of thousands, of strange forms of rock, naked rock of many different colors, are here seen; so that before we had learned the Indian name we thought of calling it the Stone Forest or Painted Stone Forest; and these rocks are not fragments or piles of irregular masses, but standing forms, carved by the rain-drops from the solid massive beds."

Prof. O. C. Marsh, who has visited the extreme West annually for some years past, for the purpose of collecting geological and paleontological specimens for Yale College, has explored this last season the Bad Lands of Dakota. The remains which he met with were those of tropical animals belonging to the Miocene era, some of them entirely new species, including the hipparion and many other genera of the Equine family. Later in the season, with a few daring and courageous companions, he visited and explored the fossil district in the Black Hills region, and at great risk unearthed and brought to Omaha many tons of fossils, all of them vertebrates, and the larger portion of them mammals of many hitherto-unknown genera. These treasures, so bravely won, will make the paleontological collections of Yale College the richest in the world in fossil vertebrates.

The long-projected exploring expedition under the command of General Custer went over the region of the Black Hills during the summer. The regiment, consisting of 700 men, with 150 teamsters, cooks, and civilians, 100 army-wagons, and 650 horses, started on the march from Fort Lincoln on the 2d of July. Colonel Ludlow was the engineer of the excursion; Prof. Winchell went as the geologist, and Mr. Grinnell to study the paleontology of the regions explored. They entered the mountains from the western side, passed over the eastern and southern chains, explored a considerable part of the interior, and passed out

into the plains upon the eastern side. Gypsum was found in unlimited quantities, and variegated marble, muscovite and talcose slate, suitable for whetstones, occurred in sufficient abundance, as well as iron-ore, in the southeastern parts. Gold was reported to have been found at various points upon the surface, and veins of gold-bearing quartz, it was said, were observed cropping out on the hill-sides. General Custer declares that he has seen in no portion of the United States richer pasturage or purer water than in this region. The climate of the hills is delightful; there is abundant fine timber and a sufficient quantity of arable soil to sustain a dense population. The vegetation indicated an uncommonly well-irrigated and fruitful soil. The flora is the richest and most varied of any section east of California. After ascending the Inyan Karan, a prominent peak in Wyoming, which was found to be 6,600 feet in height, they crossed a remarkably fertile valley, to which the name Floral Valley was given; it was covered with flowers of exquisite colors and perfumes, of which they counted 125 species, some of them entirely new. Harney's Peak was found to be the summit-point of the range, rising to a height of about 9,000 feet above the sea-level. The centre of the granite formations is in the southern and southeastern portions. The expedition occupied two months in their explorations. The whole route was found passable for the wagon-train.

A geyser-basin has been discovered in the eastern part of Montana, twenty-five miles southeast of Mount Washburne, which is reported to be larger than any previously-explored basin, and to contain geysers of greater force and size than any before known. One of the geysers is said to cast a volume of water 40 feet in diameter to a height of 500 feet! Mud-volcanoes, surpassing those of the Upper Yellowstone, are also said to exist at this place.

The remarkable sterile tracts called the Bad Lands, which lie along the Yellowstone and Little Missouri Rivers, are described by General Custer as having an average width of fifteen miles, stretching through the valleys of the rivers, which intersect them in the middle. They do not reach, however, to the banks of the rivers, whose immediate shores are covered with a fine growth of timber, and, in spots, with rich pasturage. The fertile strip sometimes expands to the width of miles. The line which divides the Bad Lands from the adjacent country is as plain as the shore of a stream. In some places exposed veins of coal are visible. These Bad Lands extend two hundred miles. Their appearance is a forbidding landscape, presenting a succession of hills separated by wide gorges. The Yellowstone River is found to be 550 miles in length, and navigable for 350 miles.

An expedition under Captain Jones, which explored the Yellowstone country, found the Yellowstone Lake Basin covered with pine-woods. Dr. Hilzinon discovered fish living in hot-springs whose temperature was 124° Fahr.

South America.—A telegraphic cable has been laid between Brazil and Europe, over which the first message was sent June 23, 1874.

In Peru rich saltpetre-mines have been discovered. Thomas J. Hutchinson's investigations in Peru refute the current notions of Peruvian history. The architectural and art-remains in Peru he ascribes to a period reaching far back of the Incas. Extensive guano-deposits have been found upon the southern coast of Peru. They are computed to contain about seven million tons.

In Patagonia Messrs. Moreno and Berg have explored the Rio Negro, which in the preceding year Colonel Guerries had attempted to navigate, when his boat was overturned and one of his companions murdered by the savages. Colonel Guerries describes the country between the island Choëlechel and the Andes as very beautiful.

M. Pertuiset, in company with Captain Maguin and Viscount Bourguet da Punta Arenas, from an exploration of Terra del Fuego, report that the land presents interesting geological features; woods are infrequent, and the trees of feeble growth. Luxurious growths of grass and herbs were observed everywhere; but a scanty flora, save on the southern shore of Useless Bay, where ancient forests are standing, and thickets of laurels and fuchsias, and clumps of cinerarias, camellias, and other brilliant flowers. The natives they found very timid; they wear long hair, like the Patagonians; their food consists of fish, eggs, wild-ducks, rats, and guanacos, which they kill with arrows; their hue is a brownish white.

Europe.—Hon. John M. Francis, late minister to Greece, testifies to a marked progress in that country within the last generation. At the close of the Greek Revolution, Athens did not contain 1,000 souls, while now it has over 50,000 inhabitants. Its architecture will bear comparison with that of any city of its size. Other places are rapidly growing: the Piræus, the port of Athens, has a population of 12,000 to 15,000; Syra has 25,000 inhabitants; Patras, the chief depot for the currant trade, with a population of 30,000, has the largest foreign commerce of any Greek town; Zante has 20,000, and Corfu, the summer residence of the court, a larger population. There are now in operation flourishing banking, insurance, and steamship companies. The mercantile marine, in proportion to the number of inhabitants, is the largest in the world. Railroads are being rapidly constructed, and a ship-canal is to be cut across the Isthmus of Corinth. Great attention is being paid to improved methods of agriculture, a matter in which the country has always been backward. Cotton has become an important product, and 5,500,000 pounds are annually raised. The largest exportations are of Zante currants,

olives, wine, and the manufactures of silk and cotton yarn.

General di Cesnola has been continuing his excavations upon the island of Cyprus. In September he struck the site of ancient Curium, the Greek Kuri, where he unearthed numerous inscriptions and remains of art.

From the new surveys of the island of Corsica several of the charts have been completed. From the recent triangulation it appears that the highest point upon the island is not Monte Rotondo, as has been supposed, but Monte Cinto. Recent excavations in Rome have resulted in the unearthing of several statues of Carrara marble and of bronze, of extraordinary beauty. One of these, a Venus, in marble, is thought to surpass in beauty that of the Medici. They are supposed to belong to the time of the Emperor Claudius.

Asia.—The explorations in Western Asia have not been fruitless.

J. A. Paine, of the American Exploration Committee, pursued with assiduity his researches east of the Jordan, and succeeded, probably, in identifying Mount Pisgah; and in a careful exploration of the land of Gilead he came upon indications which, in his view, establish the site of Mount Gilead. He discovered ruins, supposed to be those of the town of Gaza, and determined the sites of various scriptural spots.

The geology of the land of Moab has been searchingly examined by Dr. Tristram.

The explorer of the English Palestine Fund, M. Clement Ganneau, discovered significant Hebrew inscriptions between Jaffa and Jerusalem.

Maudsley, an English explorer, disinterred antique baths, an interesting ancient lime-kiln, and mosaic pavements, upon Mount Zion.

One of Dr. Beke's latest investigations was devoted to the solution of the question of the real site of Mount Sinai. He believed, and for many plausible reasons, that he had discovered its real location many miles distant from that assigned to it by Dr. Robinson and other Oriental scholars and explorers. The question is one of great difficulty, and cannot be considered as yet satisfactorily settled.

The German Exploring Expedition in ancient Phœnicia, under the direction of Dr. Sepp, excavated the Christian cathedral at Tyre, discovering the tomb of Barbarossa and the remains of early paintings, episcopal robes, and gold and silver ornaments. The pagan temple of Melkart was also uncovered.

Lieutenant Conder, of the English Palestine Survey Expedition, has reported the discovery of important ruins in the hill-country of Judea.

By the observations made during the progress of Sir Frederick Goldsmid's commission of arbitration to Seistan, in Persia, it appears that there anciently existed a great canal, whose name was Jūi-Gershasp, extending fifty or sixty miles through the desert to the southwestward from Roodbár, watering the ancient capital Ram-Sheheristan, the Greek Agriaspe. The other canal, which watered the town of Zaranj, was probably the branch which leaves Helmend at the Bend-e-Kohek; and the site of the celebrated city of Zaranj is, therefore, according to the opinion of Sir H. C. Rawlinson, to be sought among the ruins in the neighborhood of Sikoha, while Doshakh, or Jellelabad, supposed by Kinnier to be Zaranj, would be the Qurnein of the Arabs.

The Russians have actively pursued explorations of Northern and Central Asia, as well beyond as within their own borders.

M. A. Charoschin has explored the sandy plain of Kizil-Kum, which stretches between the lower Jaxartes and the Oxus. The natives affirm that the sands are drifting year by year to the south, and threaten to cover the northwestern part of Bokhara, as far as Zarafshan.

The railway to be constructed by the Russian Government through Siberia will take a circuitous route by the way of Orenburg, instead of proceeding direct from Nischnii to Troitsk.

An expedition, dispatched by the Imperial Russian Geographical Society, under the management of Colonel Tillo, for the purpose of taking a series of levels between the Aral and Caspian Seas, returned to Orenburg in November. Their computations make the level of the Sea of Aral 250 feet above the Metevi Kooltook Bay of the Caspian, or 165 feet above the ocean-level.

M. Scharnshorst, during the Russian expedition under Kaulbar to Kashgar, succeeded in determining thirteen new astronomical positions.

During the stay of the Russian troops in Khiva, partial investigations were made of the lower Amu-Daria and its delta. The Russian Government dispatched an expedition, under Colonel Stoletew, to explore the beds of the Oxus and complete the work left undone. They commenced the passage of the Aral Sea in July, 1874, charged with the duty of making complete geodetic, botanical, zoological, meteorological, and ethnographical researches. At the same time a corps of observers, organized by the Society of Naturalists, was to make researches into the natural history of the Sea of Aral, taking in, in its operations, only part of the territory traversed by the other expedition.

M. N. M. Prjewálski, under the auspices of the Imperial Russian Geographical Society, accomplished a remarkable journey into the interior of Central Asia, making his way through Koko-Nor and Northern Thibet as far as the upper course of the Yang-tse-Kiang, between September, 1872, and June, 1873. The Koko-Nor, 10,000 feet above the level of the sea, he found to be a beautiful lake; and the neighboring steppes form a rich grazing country. Ten new kinds of birds were noticed. In the south of the chain Burkhan-Buda, which forms the boundary of the cold or high land of Northern Thibet, lies an immense plateau, at an altitude of over 14,000 feet above the sea-level. In the Thibetan mountains he found everywhere great herds of yaks, gazelles, antelopes, orongos, and ados of new varieties, and mountain-sheep in

herds of many hundreds. In Kansu, Koko-Nor, and Tsaidam, dwell four distinct races—Chinese, Mongols, Tangûts, and Daldûs. The latter are a peculiar race, who approach more nearly to the Mongols than to the Chinese in their character, and speak a language which is said to be a hybrid between their two tongues. The tribe of Mongols is the most degraded and repulsive offshoot of the race. The Tangûts recalled to the traveler the European Gypsies, by their thievish dispositions and other characteristics.

The diplomatic mission of Douglass Forsyth from the Indian Government to the court of Kashgar afforded a favorable opportunity to obtain geographical information of the vast region between Yarkand and Samarcand in one direction and Kashgar and China Proper in the other. In company with Forsyth were Dr. Stoliczka, who gave his life as an offering to science before their return, Colonel Warburton, Lieutenant-Colonel T. E. Gordon, and Captains Trotter and Biddulph. The great gain of the expedition consists in the trigonometrical measurements taken on the route, by which the great Indian system of triangulation was carried up to meet the Russian triangulations, so that the two systems now lap by about fifty miles. Departing from India September 19, 1873, they reached Kashgar on the 9th of December. On the 21st of May a party detached by Forsyth, in which were Captains Trotter and Biddulph and Dr. Stoliczka, under the leadership of Colonel Warburton, departed from Yengihissar for the western mountains. They reached Kila Pandsha, in Wakhan, on the 13th of April. The Emir of Kashgar did his utmost to aid the expedition, furnishing them with attendants and yaks and horses. Snow fell during the entire passage, and they were twenty days in deep snow. The Pamir they found to consist of a number of upland valleys instead of one great level steppe. The watershed between East and West Toorkistan, or the basins of the Lap and Aral Seas, is not Pamir, as has been supposed, but the Kyzilyart Plateau, which lies in the east-northeast, and has a much inferior elevation. It appears that the entire way between Khokand and India lies in the domains of the Emirs of Kashgar and Cabul. Wakhan, it appears, contains not more than a thousand inhabitants, poor in condition but of an independent nature. On the return of the expedition the geologist, Dr. Stoliczka, died while crossing the Sasser Pass. The observations of Dr. Stoliczka, made during the progress of the Forsyth embassy to Kashgar, demonstrated that the Himalayas, the Karakorum, and the Kuenlun, are, in respect to their geological character, entirely distinct from one another. The Eocene formations of the first end at Ladak, on the Indus. North of that river are found no later rocks than the Triassic; while the Kuenlun consist only of the earliest primary formations. The geological character of the Singling-Chian chain, which runs parallel with them, is the same. The basins of Kashgar and Yarkand consist chiefly of chalk formations.

H. Fritsche made a journey in the summer of 1873 from Peking to St. Petersburg, through East Mongolia and by the way of Irkutsk and Barnaul, upon which he established the geographical position and level of fifty-nine places. The mountains are nowhere over eight thousand feet in height. Dolo-Nor, the principal town in the southeastern part of Mongolia, is a place of 30,000 inhabitants.

Lieutenant François Garnier, in the exploration in which he lost his life, found a portion of the Yang-tse-Kiang River flowing underground. This phenomenon he discovered to be so common in that country, that he was led to suppose that the parts of the rivers which are lost in the earth are as great as the visible parts. Great streams come flooding out of the sides of mountains, and again sink into chasms, to reappear at some distant point.

Baron Richthofen accomplished a successful journey in 1871–'72 from Peking, through the provinces of Shansi, Shensi, and Sze-Kuen, and made valuable additions to our knowledge of the geography, natural productions, agriculture, and trade of the regions visited. His report affords interesting information concerning the coal-mines of Chaitang, on the high-road between Singan-fu and Ching-tu-fu, on the remarkable beds of rich loam which coat the soil of nearly the whole of Northern China, and which are the cause of the great fertility which supports its enormous population. Baron Richthofen's theory of this formation is that the fine dust of decomposing rocks is precipitated over the surface by easterly, rain-bringing winds. The coal-fields of China, of which the first mine has just been opened, cover an area of 400,000 square miles. There are also unlimited supplies of iron in the empire.

AFRICA.—The discoveries of George Schweinfurth gave the chief impulse to the formation of the German African Society. Schweinfurth's travels have been published within the past year; English and French translations have also been issued, and they have been reprinted in this country. When he passed out of the Nile Basin, and, on reaching the Mbruole, entered the land of the Nyam-Nyams, he found a territory exhibiting a great resemblance in its fauna and flora to the west coast. In the inhabitants, also, he remarked striking race-affinities with the tribes of the western side. The discoveries of Schweinfurth have been vigorously followed up by others of his countrymen, who have proved themselves, in late years, capable of the most perilous and daring explorations.

An expedition left Europe in June, 1873, under the direction of Dr. Güssfeldt, and the military command of Dr. Lohde, who, on account of ill-health, has been relieved by Major von Mechow, to follow up the discoveries of Schweinfurth and the succeeding German ex-

plorers. The Berlin African Society have also sent out a second expedition, under the management of Captain von Homeyer, which is to proceed to Canandge, on the border of Angola, and thence to endeavor to penetrate to the capital of Mnata Janivo. In March, 1874, Dr. Güssfeldt followed up the river Loango Luz, or Chilvango, as far as the junction of the Luculla and the Loango. The German expedition into the interior will start probably at the commencement of the rainy season of 1875. Prof. Bastian, setting out in June, 1873, spent three months upon the Loango coast, searching for the most favorable point of departure for the German expedition from the west coast. Upon his return he published an interesting account of his observations. The territory is divided into four kingdoms, Angoy, Kakongo, Little Loango, and Great Loango; farther inland lies the forest country, Mazûmba, which extends as far as the mountains which separate the coast from the interior. His accounts of the dwarf race, Babongo (the Obongo of Du Chaillu), and of the information that gorillas are found upon the coast, are matters of interest. Dr. Lenz set out independently to explore a portion of unknown Africa, intending to trace the course of the Gabun and Ogowai Rivers. The Okanda, the northern tributary of the Ogowai, has been traced some distance higher up by the French Marquises de Compiègne and Marche. They passed through the country of the Okatas, who live poorly, and sustain themselves chiefly upon a sweetish, doughy, wild fruit abounding in the forests, and traffic in slaves. They passed afterward through the land of the Apingis, a gentle, industrious people, who cultivate the soil and collect honey and caoutchouc. A rapacious tribe, the Oszebas, prevented their pursuing the journey to some large lakes, of which they heard many reports.

Bayard Taylor, in a visit to Egypt in the beginning of 1874, saw at Cairo two specimens of the pigmies which Schweinfurth had met with in the country of the Nyam-Nyams. Their country, called Naam or Takkatikát, lies below the equator, beyond that of the latter. It is described as a table-land, covered with low, dense thickets, in which the pigmies take refuge. They are said to prove no despicable foe to the neighboring negroes. Schweinfurth designates them under the name of Akka. They appear probably in the Abongos of Du Chaillu again; and the name itself is detected in the Bakka-bakka pigmy tribe, which Bastian observed on the Loango coast, and which was known to the Portuguese in the last century. It is possible that, as Schweinfurth supposes, commercial relations exist between the west coast and the Nyam-Nyams, and that their King Munoa draws a tribute of salt from the coast-lands. Schweinfurth found no salt in the country traversed by him. Their cannibalistic habits, the coffee-brown hue of their skins, the monthly festival with dances in the first-quarter of the moon, the nocturnal orgies, the practices of wearing ox-horns, of filing their teeth to a point, and of wearing their hair in many braids, the chieftains' robes of leopard-furs, and the red-staining of their skins—all tend to strengthen the probability of the conjecture of Schweinfurth, of ethnological affinities between the Nyam-Nyams and the western nation of the Fans.
